It is strange to hear students express amazement at being told that they have to take religion as a subject in college. Some of the remarks go something like this: "I've had it since the first grade and I have to take it all over again." "Holy smoke, don't you ever get enough of that stuff?" Think of the terminology of the word "stuff" when religious is the stuff of which the world is made. Those remarks come from students, but it is far stranger, and almost lamentable, to hear parents say that they feel their children have had enough religion in grammar and in high school, and should get away from it for a while. Maybe this so-called getting away from it is the cause of our common problem, known as juvenile delinquency. No one can get away from Him, the beginning of all things, for everything and everyone eventually returns to Him.

The important job in a college education is to mold men and women to be the best that an institution of higher learning can make them. That does not mean just a successful career and the securing of financial gain; it does not mean only the acquiring of the highest place in the social world; it does not mean merely winning the greatest fame in the business or political world. These are worthwhile ends in themselves, but the methods of attaining each and all of them may be wrong.

To win these and to ignore the principles of ethics, of morals, and of religion is to mock the whole purpose of life itself.

Education must train the mind to knowledge, the hands to skill, and the body to strength; but it must not stop there. It must train the will to virtue. Character is more than talent or wealth. The wise man is he who makes all his actions work together for his eternal good. The Christian faith is an integral part of truth and its mightiest source is virtue. In training young men and women for life, it may not be, and cannot be, ignored as though it did not exist, or at any rate was not a vital factor in life.

Any college, to be worthy of the name, should seek to cultivate in each student a strong character, high ideals, and a worthy purpose, as well as keen intellect and a critical insight. It is the shaping of strong character and high ideals that makes the place of religion and of God in education so important.

And in the question of education, a point most overlooked, and yet a primary one, is that of how can you fit a man's mind for living if you do not know what the purpose of man's life is? You can have no reasonable understanding of anything if you do not know the purpose.

And the only sure way to find the purpose of anything is to find its Maker. Otherwise you can only guess. And the purpose of education is to see the Divine Teacher, who said what He made man for: To point his every action, his every word, his every thought toward an ultimate end, God Himself.

That is the real purpose of a college education; that is the real function of a college as Cardinal Newmann said: "To train youth to take its place in an educated world, equipped, ready, to be numbered among the cultured." But what kind of youth should the college of today develop.

It should be the young college graduate who sees his responsibilities; the youth who remembers the prayers at a mother's knee; the Rosary after dinner; the creed of the catechism: "God made me to know Him, to love Him, and to serve Him in this world, and to eternally be happy with Him in the next."

It should be the college graduate who will be the leader in the affairs of government, be they city, State, or national, remembering always the command: "Render to Caesar the things that are Caesar's and to God the things that are God's." It must be the youthful statesman who is devoted to the principles of honesty, integrity, and justice.

It should be the graduate who will live in peace and harmony with his neighbor, be he local, national, or worldwide, keeping ever in his heart the words from the epistle of St. Paul to the Corinthians: "But the greatest of these is charity."

It is the college man who takes his place in science in the new atomic and hydrogen world, but always with the knowledge that God alone is the Great Scientist—the Devine Scientist, who said: "Let there be light," and darkness exploded into brilliance. It is the firm belief in the One who issued a command to nothingness and from His fingertips tumbled the planets and found their proper place in the plan of the universe.

It should be the college-trained, intellectually great, yet humble enough to respect the dignity of parents, remembering always the divine commandment: "Honor thy father and thy mother." For first in the home are grown those who assume their full stature in the world of men.

It is the college graduate who looks longingly toward his God, hearing His words, and keeping them always in his heart: "Believe in Me, and I shall give you hope."

And now may we become essentially specific and to the point in this matter of the importance of religion in education. We can take Merrimack College from which I come and which is now an integral part of this area. (In passing I might mention that our young institution, started in 1947 with approximately 90 students now has an overall enrollment of more than 1,100). Now what is the aim of Merrimack in education? It is to carry on the twofold tradition that every Catholic college in America inherits—the democratic and the Christian. It is her aim to train young men and young women to be primarily intellectual, but foremost and most important to see the real purpose of their education: That is the final and ultimate end of life iself—God, Himself.

A young man or woman, leaving college with these principles will be ready for the challenge of today's problematical world. They will be a bulwark against every kind of dishonesty in business; against every unscrupulous act in politics; against every false ism and ideology against Christian and American belief. They will be, in the last analysis, truly educated.

[1] Religion: The Key To Order, by Jaime Castiello, S. J. (New York: Sheed and Ward, 1936).

Thomas G. Masaryk, Czechoslovakia's "George Washington"

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. ANFUSO. Mr. Speaker, today, March 7, marks the 106th anniversary of the birth of Thomas G. Masaryk, who is sometimes described as the "George Washington" of Czechoslovakia. On the occasion of the anniversary of the founder and liberator of the Czechoslovak Republic, which flourished so successfully as a democracy in central Europe until it was crushed by the Communists, I send my greetings and sincerest wishes for the early liberation of Czechoslovakia and its people from the oppressive yoke of communism.

Democratic Czechoslovakia was the masterwork of this great statesman and philosopher, Thomas G. Masaryk, who undoubtedly ranks among the greatest of men in the 1st half of the 20th century. Masaryk nurtured the idea of an independent and democratic Czechoslovakia in the years prior and during the First World War, until its creation in the years following that war. The Czechoslovak state which flourished until a few years ago was a great monument to his ideals. It exemplified the finest ideals of a true democracy and the best traditions of the Czechoslovak people.

After about a quarter of a century of independent existence, the Republic of Czechoslovakia was destroyed by a ruthless tyranny which enslaved its people and robbed them of their freedom. But the indomitable spirit and the memory of Thomas G. Masaryk cannot be destroyed. These will live forever in the minds and hearts of the Czechoslovak people and of all those yearning to see Czechoslovakia rise once again to take her rightful place among the free nations of the world.

As we pay tribute to the memory of Masaryk, we in America must dedicate ourselves to give full moral and spiritual support to the people of Czechoslovakia in their struggle for freedom. Their struggle is our struggle, too, for a free Czechoslovakia will enhance the forces of the free world.

The New York Times recently published an article from its Prague correspondent, Sydney Gruson, which shows how the Communists are trying to eradicate the memory of Masaryk from the minds of the Czechoslovak people. The article reads as follows:

CZECHS PORTRAY MASARYK AS FOE—STUDENTS NOW BEING TAUGHT HE WAS A REACTIONARY—BENES ALSO BELITTLED

PRAGUE, CZECHOSLOVAKIA, January 24.—A new historical portrait of Thomas Masaryk, the "George Washington" of Czechoslovakia, is being drawn for this country's high-school students.

At Public School 16 today the history lesson for the 11th grade, which is the equiva-

lent of the senior class in an American high school, gave the visitor a glimpse of the new official picture: Dr. Masaryk was portrayed as a reactionary Socialist, the guiding spirit of a struggle in Czechoslovakia against workers' and peasants' demands for nationalization of banks and factories and for dividing the land.

Since the Communists seized power in 1948, there has been a vigorous campaign to deprecate the role portrayed by Dr. Masaryk and his successor in the Presidency, Dr. Edouard Benes. The campaign starts in the schools, but it is also conducted at other levels. The names of Masaryk and Benes have been removed from schools, streets, and hospitals and replaced by others more in keeping with the times.

To the American visitor, the swiftness and eagerness of the 11th-grade students during their lessons was impressive. The school director described them as the top class, all members of the official youth organization and mostly candidates for a university. The class was made up of 40 boys and girls, 15 to 17 years old.

QUESTIONS AND ANSWERS

The official picture being drawn of Masaryk began to emerge toward the end of a question-and-answer period. Following are some typical exchanges:

Question. What was the real cause of the First World War?

Answer. It was the struggle for colonies among all the imperialist powers.

Question. The German imperialists said they could not pay reparations after the First World War. How did France react?

Answer. By occupying the Ruhr. The German imperialists replied by devaluing the mark. The Americans took advantage of the resulting crisis to offer Germany a loan.

Question. What were the politics of the Czechoslovak Government in the first republic?

Answer. The same as the French. Our armies were misused in fighting for imperialist aims.

Question. Why the Western orientation?

Answer. It was good for the bourgeoisie, which wanted to lean on the West because of fear of the workers' revolutionary demands.

Question. What did the Red army's victory against the Polish intervention in 1920 mean for the struggle here?

Answer. The revolutionary movement was strengthened. That was the time when the Socialists could have taken the leadership in their own hands.

Question. Who was against it?

Answer. Masaryk. He advised the Rightists to bide their time. He tried to postpone the Socialist congress because he was afraid the delegates would vote to join the third international.

There was never any hesitation in the students' answers and, so far as could be judged, no doubts in their minds about the historical truth of what they were learning.

A Communist Party teacher was taking one literature class and a non-Communist teacher another.

"The quality of our teachers is not even," the school director remarked. "The non-Communist teacher taking this literature lesson is the better of the two. She teaches so well her pupils love the books. The Communist teacher has made her pupils detest the books."

The director, Mme. Josefa Klancikova, said 11 of the school's 40 teachers were non-Communist.

She displayed a notebook that is kept by all members of the 9th, 10th, and 11th grades. In front of the book was the student pledge of allegiance to the country's "progress, defense, and Socialist future." In addition, the students also pledged:

"I shall always love Soviet Russia, the protector of freedom, progress, and peace and I shall stand firmly in the ranks of the workers of the whole world in their fight against oppression and against imperialism."

A Tribute to a Great and Worthy Man, Thomas G. Masaryk, Whose Life Exemplified the Highest Ideals and Traditions

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. PATTERSON. Mr. Speaker, today we observe here in America the 106th anniversary of the birth of the founder and liberator of the Czechoslovak Republic, Thomas G. Masaryk.

At intervals in history, time and circumstance seem to call for men of unusually great stature to be leaders of other men. The Czechoslovak people were fortunate in having a great philosopher-statesman—Thomas G. Masaryk—as their leader at a critical moment in their history. Through his relentless efforts the Czechoslovak nation was able to declare its independence shortly after World War I and to lay the foundation for a new democratic state. In the national consciousness of the Czech people and the consciousness of freemen everywhere, Thomas Masaryk was a man of great ideals who had the courage to act on his convictions.

The story of the Czechoslovakian people reveals an inherent democratic outlook. They suffered for three long centuries the yoke of alien oppressors. Their faith had been condemned, their lands confiscated, and the use of their native language forbidden. In spite of these hardships, they never ceased throughout this long period to struggle against their oppressors. Constantly and consciously they looked to the day when they would be strong enough to throw off the heavy burden of tyranny.

That day finally came. It was Thomas Masaryk who sensed that the time was ripe for his people to win their freedom. The Czechs call him the "Awakener." He led the historic movement which freed his country and welded it into one of the most thoroughly democratic states in Europe. He became the new nation's first president.

Today, his great work is temporarily under the dark shadow of the hammer and sickle. Czechoslovakia is a Communist satellite of Soviet Russia. All her industries are nationalized, her farms collectivized; the economy of the country is geared to that of the Soviet Union. The regime maintains itself by its dreaded and efficient secret police. All traces of freedom are eliminated and contact with the free world is forbidden.

In spite of all this we are confident that the inherent democratic strength of the Czech people will eventually throw off this shadow and human freedom will again flourish in Czechoslovakia. It is heartening that in spite of the almost unbelievable restrictions and the rigidity of the life of these people, thousands of anti-Communists have succeeded in finding their way to the West. Within Czechoslovakia we know that there is relentles resistance to the Communist regime. By means of organized underground movements, brave and patriotic Czechoslovakians are risking their lives daily in the struggle to regain freedom. We know that the day will come when the Czech people will again enjoy that same freedom and independence to which Thomas Masaryk, that giant of human freedom, once had led them.

A Letter From Joe

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. HENDERSON. Mr. Speaker, a great number of people have said a great number of things about the state of affairs in America today. And a great number of the things that have been said have been tinted by the lights of politics so that what may be good government practice from one point of view is the blunder of the century when the other party sees it.

Not all of the things that the Government has done in the past 3 years have been bad as the Democrats would tell us. Many of the accomplishments have been genuine and real marks of progress for America's people.

I should like to bring to the attention of the House a letter which was printed in the Zanesville Times Signal on Sunday, March 4, and signed simply "Joe." "Joe" has been writing letters for years on a variety of subjects and his letters are eagerly read by the people of southeastern Ohio. I thought perhaps my colleagues in Congress would like to know what "Joe" thinks about our Government today:

Hon. JOHN HENDERSON,
House of Representatives,
Washington, D. C.

DEAR JACK: Confusion and collusion are on us again, hubbub and humbug form our daily fare, accusations and refutations follow each other in rapid succession and it all adds up to the fact that another election year is staring us in the face. The trouble it would appear, is that the fellows who are out are trying to get in and the fellows on the inside refuse to unbar the door. Wherefore the knocking grows thunderous and the decibel count of the tumult and the shouting has assumed annoying proportions. Of course the clamor of the "outs" is understandable, but it seems unfortunate that so many of them are intemperate in their criticism, granting nothing that is good to their opponents, harping constantly on the few Republican failures and labeling GOP successes not sufficient. These fail to realize the mutual dependence among us; will not acknowledge the rights and welfare of all concerned. It is an incontrovertible fact that in this country all share the risks and rewards, and it follows that intemperance

on the part of any group could be disastrous. But I believe that this time the "outs" are in for a sad disappointment. It seems to me that we are rapidly becoming a Nation of conservatives, especially since under a GOP administration more and more people are reaching the point where they have something to conserve. We have become increasingly distrustful of ideas which would disturb the status quo and it is my guess that those who try to lead the American people along a path where progress is jeopardized will find themselves repudiated by a public which has learned to beware of pied pipers. The time has come when our people wish to insure that domestic tranquillity which our forebears sought to attain for us when they framed the Constitution. Disturbers of the peace, political or otherwise, must be prepared to face the consequences of offense to the public will.

Yours,

JOE.

Thomas G. Masaryk: A Tribute

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. FRIEDEL. Mr. Speaker, today, March 7, is the 106th anniversary of the birth of Thomas G. Masaryk, the founder and first president of the democratic republic of Czechoslovakia, and I would like to join the Czechoslovak people in paying tribute to their great leader on this memorable occasion.

Like our beloved President Lincoln, Thomas Masaryk was marked with the sign of greatness. He opposed violence of any kind, as did Lincoln, but at the same time his purpose was to achieve freedom for his people. He answered the call of destiny and with his leadership inspired his people to victory and finally to independence.

On a foundation of the principles of liberty, tolerance and truth, Masaryk established a modern democracy, devoted to Christian ideals. The people of his democratic Republic made much progress in making their new nation strong, but this growth was cut short by foreign invaders—first Nazi Germany and then the Communists. The Reds continue their domination over this nation which is hungry for liberty once again. The Communists have initiated a campaign to wipe from the memory of the Czechoslovak people everything for which Masaryk stood. They do this because Masaryk, while living, was opposed to communism and all of its aims and purposes. Masaryk knew there was no salvation to be had from communism and for this reason joined forces with the Allies.

The people of Czechoslovakia who are living in exile and those suffering under Communist domination in their homeland will never forget the work and leadership and inspiration that Thomas Masaryk gave. His name, despite all the efforts of the Communists, will live forever. His life exemplified the highest ideals and traditions of free people.

I sincerely hope and pray that the brave people of Czechoslovakia will in the very near future again see the flag of freedom waving over their homeland and a return to the traditions that existed under their great leader whom we honor today—Thomas G. Masaryk.

Brooklyn Is the Market

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Andrew S. Roscoe, president of the Equitable Savings and Loan Association of Brooklyn, N. Y., before the sales conference of the Reuben H. Donnelley Corp. at the Hotel St. George in Brooklyn, on February 28, 1956. Mr. Roscoe is also president of the Downtown Brooklyn Association and adjunct professor of economics at the Polytechnic Institute of Brooklyn.

The address follows:

BROOKLYN IS THE MARKET

As a businessman with a stake in the future of Brooklyn, I want to thank you for the invitation to discuss some of the economic factors which make Brooklyn the great place it is. You sales representatives who bring to our thousands of business firms the story of Brooklyn as one of the world's greatest markets for goods and services are doing important work, not only for your own fine company, but for our entire community. Brooklyn has a remarkable story to tell—a story that needs no exaggeration, elaboration or fancy trimmings—and I am convinced that success in your field and mine will come to those who know this community and put their knoweldge to effective and practical use.

Let me say first that today as we meet together here in the Hotel St. George—which is, by the way, the second largest hotel in the United States—we are in a county which stands third in population among all United States counties, fourth in total buying power, and sixth in retail sales. If you had a free choice among all the thousands of counties in the United States, you could pick only 1 or 2 or 3 which exceed the County of Kings, which is Brooklyn, in any important respect.

This has been true for so many years that one might think our own people in Brooklyn should have finally accepted the fact that Brooklyn's economic supremacy is enduring, well-rooted, and not easily challenged by other areas. But it has been fashionable in recent years to speak reverently of the expanding suburbs—as if somehow the entire population of our urban centers were bent upon mass evacuation. Such is not the case. I am well aware of the unprecedented growth and residential attractions of such Long Island counties as Nassau and Suffolk. But I think it is well to point out to a group such as this that these 2 counties together do not equal half of Brooklyn's population. The combined retail sales of these 2 counties are only 50 percent of retail sales in Brooklyn. In our borough, comprising only 80 square miles, we have twice as much actual buying as is done in the prosperous Nassau-Suffolk area which is 16 times as large.

Those of us who have tried to keep the record straight in this regard have been heartened by the recent release of preliminary results of the 1954 census of business. Only within the past week has this material become available and I am using it today in a public statement for the first time. The preceding census of business was taken in 1948, and I think that a few comparisons will show that Brooklyn is continuing the kind of economic progress which means more business, higher incomes, and greater sales.

In 1948, Brooklyn's total retail sales amounted to $1,994,000,000. In 1954 the total was $2,224,000,000—or an increase of approximately 11.5 percent. Each year since 1948 Brooklyn consumers have been spending $38 million more than the past year in Brooklyn retail stores.

In 1954, Brooklyn had 12.3 percent of the retail sales in New York State and 24.7 percent of the retail sales in New York City.

Sales of Brooklyn food stores rose from $698 million in 1948 to $752 million in 1954. No county in the entire State of New York spent as much for food in 1954 as was spent in Brooklyn.

Retail sales of lumber, hardware, and building materials rose from $49 million in 1948 to $70 million in 1954, for a tremendous increase of approximately 43 percent.

A report from the New York City Department of Buildings indicates that this high level of construction activity continued through 1955. For the first 9 months of 1955, $57 million was spent to erect new buildings in Brooklyn—or 24 percent more than was spent during the same period in the preceding year.

An important category in retail sales is the automotive group, including new and used cars and accessories. Brooklyn's 425 automobile dealers had total sales of $208 million in 1954. Only one county in New York State had higher automotive sales. Brooklyn ranked first in the State in sales of gasoline, second in sales of drugs, and second also in general merchandise. I might remind you at this point that there are 62 counties in the State.

For you who are interested in wholesale statistics, Brooklyn had almost $2 billion in wholesale sales in 1954, ranking third among counties in New York State. Brooklyn's wholesale sales were approximately equal to the combined totals for the sizable counties of Westchester, Bronx, Nassau, and Suffolk.

But even more impressive than retail and wholesale sales is the story of Brooklyn's immense buying power. The recently published Editor and Publisher 1956 Market Guide estimates that Brooklynites had incomes amounting to $5.1 million in 1955. It projects a figure $60 million higher for 1956. In all of New York State, only the residents of Manhattan had total incomes higher than the people of Brooklyn.

In terms of effective buying power (total income less taxes) the Sales Management Survey estimates Brooklyn's disposal income at $4,671,000,000 for 1954. In the entire United States, only three counties had higher disposable incomes. The average Brooklyn family had $5,600 to spend in 1954, considerably more than the $5,274 which was the average for all families in the country. Per capita buying power was $1,716 in Brooklyn compared to $1,545 for the country at large.

With total retail sales in Brooklyn accounting for 50 percent of Brooklyn's buying power, it is apparent that Brooklynites spend a substantial portion of their money in Brooklyn. It is also apparent that this portion could be increased further by means of improved and expanded advertising and merchandising programs, I am sure that all of you can be of great assistance to our Brooklyn merchants in this undertaking.

I realize that I have given you a formidable set of statistics in one strong dose. But the gargantuan size of Brooklyn's economy can be demonstrated no other way. When we have thoroughly digested such statistics, it is easy to conclude that Brooklyn's economy is strong and prosperous, that its residents can spend billions of dollars every year on things they want, that Brooklyn merchants and manufacturers have at their doorstep a market which is unsurpassed, in many respects, in the entire world. These local conditions have become so commonplace, however, that we need to reexamine our assets lest we regard too lightly the miracle of American production and consumption which is Brooklyn. You men and women can be tremendously helpful in accomplishing this reexamination of Brooklyn's past and present.

And now, what of the future?

It is certainly unnecessary to tell a group such as this that business firms and consumers spend money most readily when the future looks prosperous and secure. This evaluation of the future is determined to a large extent by the condition of the community: Is it growing? Is it holding its business firms and adding others? Is it dealing effectively with the problems of the present? Is it planning adequately for the future?

Here in Brooklyn the answer to most of these questions is "Yes." And where the answer has not yet been found, you can be sure that the responsible leaders of the community are searching diligently for a solution. Our magnificent civic center, scheduled for completion in 1957 at a total cost of $125 million, is a symbol of our determination to maintain the eminence of Brooklyn in every field of endeavor.

(The next time you hear someone speak disparagingly about Brooklyn, ask him how many other communities are investing over a hundred million dollars in a few acres of property.)

A new citizens committee, of which I am pleased to be a member, is supporting a plan to make possible a first-class, modern stadium in Brooklyn, suitable for our world-champion Dodgers. The plan may have many hurdles to overcome, but I know of no other community in our State which has had the vision and determination to undertake such a project.

I can give you my personal assurance that such groups as the Brooklyn Chamber of Commerce and the Downtown Brooklyn Association are alert to Brooklyn's needs and are determined to keep Brooklyn one of the most productive and prosperous centers in the world. I believe that you can undertake your tasks with the confidence that money invested in the Brooklyn market is money well employed, and that you yourselves are making an important contribution to the well-being of our borough, its business, and its people.

Thank you very much.

A Great Democrat—Thomas Garrigue Masaryk

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. REUSS. Mr. Speaker, it is a privilege to pay tribute today to a great democrat, a man who drew strength from America for his historic task of building a democratic Czechoslovakia, and from whom we Americans can draw inspiration today in the continuing struggle to defend and extend human freedom.

That man is Thomas Garrigue Masaryk, the liberator, the founder, and the first president of Czechoslovakia. As we pause tomorrow to mark the anniversary of his birth, we recall how his faith and dedication carried him forward in the long effort to create an independent and liberty-loving Czechoslovakia. A philosopher as well as a statesman, Masaryk was a close friend of Woodrow Wilson, and it was in Washington, D. C., on October 18, 1918, that the Czechoslovak Declaration of Independence was formally published.

Today Masaryk's land is again under the tyrant's heel. Freedom is extinguished. But the spirit of Masaryk lives on. It lives on in the hearts of all those who admire and revere Thomas Masaryk. Americans of Czech descent, who have contributed so greatly to the building of our Nation, join their fellow citizens of all national origins in paying homage to a great leader of all humanity.

Springfield, Ill., Chapter of Reserve Officers Favors Bills To Secure Parity of Treatment of Regular, Reserve, and National Guard Officers

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include a resolution from the Springfield, Ill., chapter of the Reserve Officers Association of the United States of America, adopted the 2d day of February 1956, as follows:

RESOLUTION OF RESERVE OFFICERS ASSOCIATION, SPRINGFIELD, ILL.

Adopted by unanimous vote of the Springfield, Ill., chapter of the Reserve Officers Association of the United States of America requesting the active support of the United States Senators and Representatives from the State of Illinois on the following identical bills: S. 1643 and H. R. 6408.

Whereas it is the purpose of these bills to secure parity of treatment of Regular, Reserve, and National Guard officers in respect of retirement; and

Whereas such purpose was clearly endorsed by the Congress when it reenacted in 1949, the operative paragraph of the Pay Readjustment Act of 1942: Now, therefore, be it

Resolved by the Springfield chapter of the Reserve Officers Association of the United States of America, this 2d of February 1956, That the Honorable Senators and the Honorable Representatives from the State of Illinois be and they hereby are respectfully requested and urged to work and vote for the passage of the subject bills and particularly section 8 thereof.

We will definitely appreciate your help in securing early favorable recommendations of these bills from the Senate and the House Armed Forces Committees.

WAYNE PRICE, *President.*

Attest:

ROBERT G. CLEM, *Secretary.*

SPRINGFIELD, ILL.

What Is Wrong With the West?—Materialism Must Give Way to Ideas

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, former Ambassador Charles Malik of Lebanon in a speech before the United Nations Assembly more than 6 years ago expressed some thoughts that leaders in the free world should explore.

We have again reached that point in the current session of Congress when we will be considering highly important questions of foreign policy. From all over the world come reports that the prestige of the United States has seriously deteriorated. We may or may not agree with those charges but we must admit that the Communist dictators in the Kremlin are on the march and their philosophy appears to be making considerable progress.

Mr. Speaker, Congress has considerable responsibility in writing foreign policy. Too often we have been concerned with technical aspects of foreign policy and too little attention has been given to basic principles which should underlie these policies.

Dr. Malik charged:

There are many phases of western life which are repulsively materialistic. The spirit of business and gain, the maddening variety of things exciting concupiscence, the utter selfishness of uncoordinated activity, all this is not something to attract and inspire. To the superficial observer who is not able to penetrate to the core of love and truth which is still at the heart of the West, there is little to choose between the soulless materialism of the West and the militant materialism of the East.

Then he goes on to say that the leadership of the West in general does not seem to be adequate to the unprecedented challenges of the age.

Mr. Speaker, I am inserting at this point in my remarks all of the address given by Ambassador Malik:

THE EAST LOOKS TO THE WEST—THE SILENT EXAMPLE OF WESTERN FREEDOM IS NOT ENOUGH; MEN NEED IDEAS, TOO

(By Charles Malik)

It is fairly easy to work out a critique of communism. The doctrine is only a hundred years old, and its effective entrenchment in the Eurasian heartland is barely 30 years old. Besides, its basic literature is fairly compact: you have the writings of Marx, Engels, Lenin, and Stalin, which are fairly accessible.

It is far more difficult to elaborate a fundamental critique of the West. You do not have here a handful of masters, as in the Communist world; you do not have a well-marked-out body of official literature. Governmental action is not informed by rigid theory as in the Communist world. There is endless variety and difference, considerable looseness of connection, and a great deal of fumbling and muddling through and empiricism. Yet a general critique is necessary because war and peace are not only a function of communism; they depend also on the state of health or illness in western culture.

There are many phases of western life which are repulsively materialistic. The spirit of business and gain, the maddening

variety of things exciting concupiscence, the utter selfishness of uncoordinated activity, all this is not something to attract and inspire. To the superficial observer who is not able to penetrate to the core of love and truth which is still at the heart of the West, there is little to choose between the soulless materialism of the West and the militant materialism of the East.

There is a general weakening of moral fiber. One gains the impression that the great fund of moral strength which has been handed down over the ages is not being creatively replenished. There is thus a terrifying waste of substance.

Quality is in eclipse. Quantity and size dominate. Not the better and truer, but the larger and physically stronger; these call forth moral approbation.

I must say in all humility that the leadership of the West in general does not seem to be adequate to the unprecedented challenges of the age. There is a tragic dearth of men, men who are so genuinely in touch with the hearts of their fellowmen as to have only to open their mouths to be loved and followed. The world desperately cries out for masters; for it is only the voice of conviction and truth that is going to save us.

There is a corresponding bankruptcy of fundamental ideas. There is thus in this realm an unequal struggle for the hearts of men between communism and the West. Communism displays a set of generic ideas—I believe for the most part false—in which it passionately believes—I believe misguidedly—and for which it is willing to die. There is no comparable ideological passion in the West. The talk about democracy, freedom, representative government, is woefully inadequate: it deals for the most part with pure form, sheer external machinery. It does not satisfy man's deepest cravings for friendship and understanding and truth and love.

Nor does it do merely to reject communism. A positive alternative must be suggested. The only effective answer to communism is a genuine spiritualized materialism which seeks to remove every trace of social injustice without loss of the higher values which constitute the very soul of the West. Communism cannot be met by a mere nay; it requires a yea which will do full justice to man's material needs but will at the same time place them in their subordinate position in the scale of values.

The tragedy of the world today is that the traditions which embody deepest truth are not clearly, sufficiently, responsibly, boldly articulated.

Nor is it sufficient in this cruel century to be happy and self-sufficient. The West must step forth and lead and not only in material things. It is not enough to make good institutions and leave it to others to copy them. For man is not merely an ape; he does not only mimic the good example of others. Man thirsts after ideas.

* * * * *

If the West only exports the silent example of flourishing political institutions and happy human relations, it cannot lead. If the only export is a distant reputation for wealth and prosperity and order, the West cannot lead. Nor can it really lead if it sends forth to others only expert advice and technical assistance. To be able to lead and save itself and others, it must above all else address the mind and soul. Western tradition, rooted in the glorious Greco-Roman-Hebrew-Christian-European humane outlook supplies all the necessary presuppositions for leadership. All the West has to do is to renew the sources of life it already has.

The challenge of this epoch is not communism, but it is whether or not Western society, conceived in the joyous liberty of the Greek city-states and nurtured on Christian charity, can still recover from the worship of false and alien gods and return to its authentic sources. The challenge of the moment is whether modern man, distracted and overwhelmed by himself and the world, can still regain the original integrity of his soul.

Whatever the weakness of the West, it still has one saving glory: The church is free, the university is free. It is a great thing to preserve unbroken the tradition of free inquiry started by Plato and Aristotle, and the tradition of love emanating from God. Truth can still be sought and God can still be loved and proclaimed in joy and freedom. And this fact alone is going to save us. It will not be by pacts, nor by atomic bombs, nor by economic arrangements, nor by the United Nations, that peace will be established but by the freedom of the church and the university each to be itself. Communism does not know what it did when it subjected the church and the university to its own dictates.

We must hope and pray that there will develop in the Western World a spiritual renaissance which will rediscover and reaffirm its glorious hidden values, and fulfill mankind's longing for a more just order of things, a more beautiful world, a new heaven, and a new earth. Modern man sees before him the possibility of universal plenty for the first time in history, and grasps at any doctrine which seems to promise him the fulfillment of his dream. To ask communism to change its nature without satisfying the need to which it is a response, is to offer the world not bread, but a stone.

* * * * *

Communism is a doctrine of despair. Its only and complete answer, therefore, lies in the existence of hope. If the Western World can show a way to eradicate the shame and scandal of poverty, of exploitation, of oppression, of greed, without resort to social revolution and class struggle and dictatorship; if it can place these material values in their proper subordinate place within the context of a spiritual renaissance which will be revolutionary without being subversive and which will draw its substance from the infinite riches of the western positive tradition, then the necessity for communism will vanish, and the specter which now walks the earth will be laid forever.

One Hundred and Sixth Anniversary of Birth of Thomas G. Masaryk

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. FLOOD. Mr. Speaker, on this day, the free world pauses to commemorate the 106th anniversary of the birth of the great historian and statesman, Thomas G. Masaryk. He was a man of great faith and believer in both the ideals of humanitarianism and of democracy.

T. G. Masaryk never thought of himself as a man of destiny, and yet his every dream, his every act and his achievements were open acknowledgements that he was a person who inspired and led his people to the richer goals in life.

On October 28, 1918, when Czechoslovakia became an independent republic, T. G. Masaryk became its first President. Although his vision for an independent Czechoslovakia reached the culmination of his aspirations only briefly, because of foreign oppression and war, his view of life still guides the true lovers of humanity and liberty.

He remains a source of courage everywhere, for his forthright stand against alien domination and foreign aggression. The hope of the world and of the real representatives of national interests is that finally T. G. Masaryk's convictions will triumph over those of tyranny in justice, and that his aim for national freedom for his country shall prevail once again so that both peoples of Czechoslovakia will enjoy freedom according to their own choice.

Sugar Coated Pill

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include some interesting observations concerning administration views on old age assistance, contained in an editorial of the March 1956 issue of the National Welfare Advocate:

SUGAR COATED PILL

If Congress is to fill President Eisenhower's prescription for the ills besetting America's needy—then the old, blind, physically handicapped and dependent children may as well resign themselves to a series of sugar-coated pills designed to lull them into senselessness, while the burglars tippy-toe off with the family jewels, so to speak.

The President's reference to the present "high" level of public assistance in his state of the Union message must indeed come as a great shock to the recipients of such aid.

The fact that $52.50 (the present national average monthly old age assistance payment) wouldn't even keep Ike in golf balls for 1 month doesn't seem to disturb his rosy evaluation of the social welfare picture.

What Eisenhower says is in no way to be confused with what Eisenhower does.

While spouting phrases of the "preventive measure," "self-help," "timely improvements" variety, the Eisenhower administration has adopted a policy designed to slowly kill—not cure—the public assistance program.

What they plan to replace it with is not stated, but from looking over their recommendations, it's our guess that they think maybe they can just talk people out of being hungry.

As sugar coating on the bitter pill, the administration purposes a medical care program for the needy to the tune of a maximum of $6 a month, shared 50–50 by the Federal Government and States, for the old, blind and physically handicapped, and $3 per month for dependent children.

At the same time—at the very same time—if you please, the administration shoves forth a plan to slice Federal contributions to States for the public assistance program, which would have the effect or not only nullifying any added benefit the contemplated medical program might bring, but would depress present meager allowances even further.

While brazenly advocating that the law be changed to permit the sale of our so-called surplus foods to Communist countries as a means of solving the farm situation, our President through the Department of Agriculture, opposes the surplus food stamp plan to distribute American produce to hungry Americans.

The Eisenhower administration, not only opposing liberalization of the Public Assistance Section of the Social Security Act, but in downright sabotaging of the program, tries to excuse their actions by saying they expect the old-age and survivors insurance program to assume the burden.

This they say, while at the same time also opposing any liberalization of the OASI program, now being considered by the Senate Finance Committee.

Birthday of Thomas G. Masaryk

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1956

Mr. KEATING. Mr. Speaker, today is a notable date in the history of the struggle of man for freedom. It is the anniversary of the birth of that great world statesman and patriot of Czechoslovakia, Thomas G. Masaryk. It is a pleasure to join with the thousands of Americans of Czech and Slovak ancestry who are today honoring the memory of this staunch fighter for freedom.

It is fitting to pay tribute to this man, that we may take heart from his deeds and words. In a world still torn by strife, the democratic faith and ideals of Masaryk give courage and inspiration to those now locked behind the Iron Curtain.

Free Czechoslovakia was, in large part, the result of the work of Thomas Masaryk. He was a patriot who lived to see his dreams and labors to establish a democracy in his homeland come true. Between 1918 and 1937, when he died, he helped build Czechoslovakia into a vigorous and flourishing state. All Americans can be proud of the fact that during World War I, we contributed decisively to the rebirth of independence in this country by our support of Thomas Masaryk's democratic conception. We may also be happy that during World War II we gave much effective aid toward the liberation of Czechoslovakia from Nazi oppression. And since the war we have stood firm in our opposition to the encroaching forces of communism.

Thomas Masaryk was more than the liberator of his people. He was also a world leader, and in that role was one of the principal shapers of the concept we know as collective security. He was a sincere and stanch advocate of democracy everywhere and a great practitioner of love and respect for his fellow man.

Thomas Masaryk died before his land was assaulted by the evil henchmen of tyrannical imperialism. But he knew the nature of these powers and fought against them all his life. They are not dead yet, as we know. They are to be found today in the forces of communism which swept over Czechoslovakia in 1947.

Of all the tragedies of recent years, none is more keen than the loss of freedom in liberty-loving Czechoslovakia. The work of Masaryk and his compatriots has been temporarily blotted out by the intrigues and pressures of the Soviet invaders.

Though freedom for the moment is banished, the work of Thomas Masaryk cannot die. When any beacon light is snuffed out—and Thomas Masaryk was such a light—the world sustains a loss. Yet, we must remember that the light shed by such men during their lifetime carries on in the hearts and minds of men, enabling them to live in accordance with the principles of liberty and freedom.

Mr. Speaker, the spirit of Thomas Masaryk lives on. Czechoslovakia will rise again. It is my fervent hope that the day when she will be restored to the family of free nations is not too far distant. It cannot be too long delayed if we would be true to the spirit of Thomas Masaryk.

Report to Constituents

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1956

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report which I made to my constituents through the medium of a newspaper published in my congressional district, Town and Village, under date of February 16, 1956:

It is, I hope, generally known that a Congressman representing a district as large as mine, has an enormous list of duties and responsibilities, of help to his constituents, the fullest participation in legislative requirements, and detailed activities in committees. Heavy, as are these duties, we still, Congressmen as well as private citizens, have the primary duty to think about national issues. The President's state of the Union message gave me an occasion to review my thoughts on the issues dealt with in that document.

My thoughts took the form of questions; and I feel that I will be sharing an important process in the mental life of a Congressman, if I review these questions with the readers of Town and Village.

I was struck, in the first instance, by a statement by President Eisenhower as to our national income. His exact words were "virtually all sections of our society are sharing in these good times." Is it, however, an equal sharing? Is the prosperity one in which all American people have a full and proportionate part? Is it not significant that corporation profits have gone up 26 percent in 1955 as compared with a comparable period in 1954; whereas the average worker's income has gone up only 7 percent? Is it not significant that stockholders' income has gone up 10 percent while farmers' income has gone down 11 percent? That big business failures have declined 15 percent, while small business failures have increased 21 percent?

"Our defenses", the message stated, "have been reinforced." Yet, is it not significant that General Ridgway should have stated unequivocally that defense appropriations have been subordinated to fiscal and political considerations? This, mind you, is revealed in a magazine which has steadily been a supporter of the policies of the Republican administration.

"Taxes have been substantially reduced", the state of the Union message pointed out. It is without significance that the only tax cut which the Republican Party initiated was the tax bill of 1954, whereby for every dollar of long run tax relief, corporations will get 73 cents, families with over $5,000 income will get 18 cents relief, and families under $5,000 income will get 9 cents relief?

The message went on to say "that the long standing and deep-seated problems of agriculture have been forthrightly attacked." Attacked may be the right word, but have the problems been solved when there has been an almost $3 billion drop in net farm income over a period of 3 years?

The message went on to speak warmly of the economic ties desirable in a free world partnership. But has this been anything more than a high-sounding statement which has been steadily refuted by actions?

There was much that the message dealt with on the state of the world affairs. How, however, can that be appraised when there was the almost simultaneous appearance of an article by the Secretary of State, in a partisan national magazine which refuted the appraisals in that message?

There was a noble statement about deficit financing, but the facts are that the administration's deficits ran in the billions during 3 peacetime years. And this, in contrast with the record of President Truman who built up a surplus of 4.3 billion over 4 peacetime years.

And how, I ask, can the kind words about the farmer be squared with the many cold-hearted statements by the Secretary of Agriculture and other Republican political figures? For surely it must be clear that whatever the words, there has been a sharp decline in farm income and the encouragement of a sentiment hurtful to the farmer?

What shall we think of the statement in the message that "I shall propose measures to remove controls wherever possible" * * * when, according to the New York Times, "the Eisenhower administration set up the most rigorous controls in the history of Federal price supports today."

Then there is the matter of help to small business, and the important consideration of preventing and limiting monopoly. For all that may be said about them in the state of the Union message, it is still true that small-business profits are down some 66 percent since the last half of 1952, and that small-business failures are very much on the increase; and that in 1 year alone, the share that small business had in the defense procurement program shrank from 25 percent to 20 percent.

It is very pleasant to hear genial words about the importance of medical research. Nevertheless, is it not significant that we are now 1 year further away from the realization of the objectives of medical research because of the administration's cuts in the funds last year?

I could ask, too, about the public housing, where the administration proposes authority to contract for 35,000 additional public housing units; at a time when the Democratically controlled Senate in 1955 provided for 135,000 units.

These are some, by no means all of the many questions that arise in my mind and that I think are properly to be asked also by every voter and by every American. For the way I see it, the wholesome development of our country and its safety depend upon our ability to pierce the cloud of words, that are agreeable in themselves, but that obscure

realities quite different from what the words seem to convey.

I can think of no service that the American voter can do for himself that can be more effective than asking himself or herself such questions; and trying, as I am trying, to find the realistic answers.

Catholic Cultural Congress for Peace

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1956

Mr. ANFUSO. Mr. Speaker, the International Catholic Cultural Congress for World Peace has just been concluded in Ciudad Trujillo, Dominican Republic. It was opened on February 28 with notable addresses by Cardinal Francis Spellman, of New York, and Generalissimo Rafael L. Trujillo, of the Dominican Republic, and the conference ended on March 6.

Among the items on the agenda of the conference were peaceful uses of atomic energy, education of the citizen for national and international life, human rights, and a number of other significant topics. Of particular interest are the tow addresses by Cardinal Spellman and Generalissimo Trujillo, in which both touched on these and related subjects.

This is unquestionably a most timely conference. I find that the views expressed in the addresses of Cardinal Spellman and Generalissimo Trujillo are along the lines of my own views and opinions which I have been espousing for some time now. It is highly significant also that this conference should be held in the Dominican Republic, known as the cradle of the Americas, which has always maintained strong ties with our own country.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a press release on the conference, which contains excerpts from the two addresses referred to above:

TRUJILLO AND CARDINAL SPELLMAN OPEN INTERNATIONAL CATHOLIC CULTURAL CONGRESS FOR WORLD PEACE, IN DOMINICAN REPUBLIC

(NOTE.—The following story on the International Catholic Cultural Congress for World Peace in Ciudad Trujillo, Dominican Republic, was cabled by Richard Klemfuss, of the Dominican Republic Information Center. It includes the addresses by Cardinal Francis Spellman, of New York, and Generalissimo Rafael L. Trujillo, of the Dominican Republic.)

Generalissimo Rafael L. Trujillo keynoted opening Tuesday, February 28, of International Catholic Cultural Congress for World Peace in presence of Cardinal Francis Spellman and Carlos Maria De La Torre, of Ecuador, warning that peace does not reside in "the treacherous Russian dove," and can only be found in the "whole complex estate of Christian culture." The Dominican statesman and stanch foe of communism in the Caribbean told 166 world delegates and diocesan priests gathered at the Dominican Republic World's Fair now in progress here that Pius Twelfth "Has been the greatest defender of the right of humanity to live in peace and justice" and that institutions as well as individual men must, to achieve world peace, be oriented in Christian purpose.

Francis Cardinal Spellman, of New York, cited the material progress of the Dominican Republic since its founding as "the cradle of the Americas," terming himself a "Catholic of the Americas." The Cardinal said:

"Even more significant than the buildings and monuments, highways and ports, the Dominican Republic will be remembered in history for a great act of social justice. Shortly after the outbreak of the war representatives of 38 nations met at Evian, France, to study the refugee problem created by Hitler's campaign to eliminate the Jews from Germany. At the time the President of the Dominican Republic, Generalissimo Rafael L. Trujillo, opened the doors of this island to the first haven anywhere for the oppressed Jews of Europe, the now famous colony at Sosua on the north coast. In memory of this generous act the Jewish colony last month erected its beautiful marble monument symbolizing Generalissimo Trujillo's 'open door' policy and commemorating this 'humanitarian act'."

Cardinal Spellman said:

"The Dominican Republic has been among the first in the world to recognize the need for the solidarity of the Americas. You have been among the first to recognize the threat to the Americas of world communism. Perhaps long after your physical achievements have disappeared you will be remembered for your courage and wisdom in this regard." The cardinal recalled his recent visit to Korea to spend Christmas with American troops saying "once again I saw how communism would enslave the peoples of the earth." He said he was "thankful to Almighty God for the strong Christian tradition of the Americas. That tradition is well symbolized," he said, "in the strength and faith of the Dominican people as expressed in your magnificent International Fair for Peace and Progress."

Delegates here for the conference until March 6 will discuss via three language translation system and make final declarations on numerous topics including the use of nuclear energy in the service of peace, education of the citizen for national and international life, cinematography and other topics. Each day will begin with mass in one of the many historic churches in the city. On Sunday Archbishop Spellman said mass in the Cathedral of Santo Domingo, oldest in the New World. The delegates will tour the World Fair, the historic Columbus related shrines and Dominican industrial sites.

Generalissimo Rafael L. Trujillo said:

"This congress is gathering at a time when the world is witnessing a general devaluation of basic conceptions of Christian morality. The noblest human rights are used nowadays to blindfold the truth and to broadcast falacious information, thus raising walls of misunderstanding between men. If it is abominable to deny Christ by defaulting any one of the commandments, it is also abominable to default liberty by abusing its conquests, corrupting people's feelings.

"Religion is consolation, duty, and hope for humanity. It is also the stimulating force for resistance and a sample of sacrifice for the people. Without God, no nation is able to face destiny and time; without religion the strongest nation will perish. Organized atheism is currently threatening the world with martial subversion by the so-called Red army; it is imperative to activate the spiritual forces and to reinforce the imponderable defenses now offered by our religion.

"Now is the time to decide without hesitation, inspired by irrevocable faith, between the two opposing systems now struggling to dominate the world, namely, the materialistic conception and the Christian conception of life and history. * * *

"I am deeply convinced that the Christian culture can contribute to establish a sound regime of human rights, morals, justice, and peace. These are the reasons for my having initiated and sponsored this international congress. The Holy Father has stated again and again that the world can only build the basis of this much-sought international peace on the words of Christ.

"Jesus Christ said, 'He who is not with me is against me,' thus marking the way to mankind. In these times of universal turmoil it is necessary to bring men to God, to let the voice of the church be heard by those who by not wishing to hear have dry souls and wingless spirits.

"While communism roars and threatens everywhere and the materialism continues disseminating false dogma it was my wish that this Dominican land—proud of its Catholic tradition, and firm in its battle against the anti-Christian attitudes, would raise its potent voice of Catholicism, pointing out to the roads of well-being, justice, culture, and peace. I strongly believe that the immaculate white flags of Christ will triumph over evil.

"Peace can spring out with the help of a complex combination of good actions carefully elaborated by Christian culture. Child education, economic life of the family, welfare of workers, the spirit of cooperativism, respect for the authorities, orientation of both written and oral press, radio, and other media are most important to achieve the goals of universal understanding and fraternity. Your agenda covers many and more of these vital points, which together with your love for mankind and your strong Catholic feeling will ratify and disseminate with utmost advantage the orientations as taught by the Holy Father.

"Upon inaugurating this International Congress of Catholic Culture for Peace of the World, I beg that God's will be done here."

Cardinal Spellman said:

"This is an occasion I shall long remember with affection, not only because of the hospitality you have shown me but also because of the inspiration I have received by being among you. I accept your welcome not as a tribute to my own presence, but as a salute from the great Catholic people of the Dominican Republic to their friends in the United States of America. For a Catholic—a Catholic of the Americas—to set foot on the soil of this Republic is to surround oneself with the richness of your historical tradition. For one who, as I do, has his origins in New England, the birthplace of American Independence, this historical tradition is particularly precious. For your beautiful island has been aptly called by the historians "The Cradle of the Americas." Here the Americas themselves were born. In the mind's eye one can visualize the dedicated men under the leadership of Christopher Columbus who took possession of this fair land in the name of the Catholic King and Queen of Spain, Ferdinand and Isabella and christened it La Espanola. One thinks of those dedicated nand and Isabella, and christened it La Isabella the first Catholic church in the Americas.

"This republic is known to history as 'the land that Columbus loved' and one visualizes the great navigator instructing his brother Bartolome to found a city on this soil. Today that city, now called Ciudad Trujillo, is the oldest in the Americas. Here the Catholic faith has flowered in our Hemisphere and I rejoice to be here at last. I rejoice to be at the city of the first convent of the Americas, the first hospital of the Americas, and the first university of higher learning in the Americas, founded by the Dominican Fathers. In the mind's eye one can still see Friar Bartolome De Las Casas, the young lawyer of this city who later became the first priest to be ordained in the New World. It was from here that De Soto

set forth to discover the Mississippi and Pizarro to make his way to Peru. It was from here that Cortes began his famous voyage to Mexico. Reflecting on these glorious traditions, the mind moves to the Dominican Republic of today, host to all the free world in this, its International Fair of Peace and Progress. Here 30 nations salute the people of this Republic and honor them for their achievements. New and magnificent edifices have risen to stand alongside the ancient Cathedral of Santa Maria La Menor, San Nicolas De Bari, San Francisco, Santo Domingo, San Miguel, and others. The people of the present generation are adding to the richness bequeathed them by their ancestors. The proof is all around us. New hospitals and clinics, new roads, new industries, greatly improved social and sanitation facilities, new housing, new ports, and new public works, a higher standard of living and education. At the same time there are rising in the Republic new churches and new convents and magnificent new schools to educate the future generation of your citizenry. But even more significant than buildings and monuments, highways and ports, the Dominican Republic will be remembered in history for a great act of social justice.

"Shortly before the outbreak of the war representatives of 38 nations met at Evian, France, to study the refugee problem created by Hitler's campaign to eliminate the Jews from Germany. At that time the President of the Dominican Republic, Generalissimo Trujillo, opened the doors of this island to the first haven for the oppressed Jews of Europe, the now famous colony of Sosua. In memory of this generous act, the Jewish colony last month erected its beautiful marble monument symbolizing the 'open door' and commemorating this humanitarian act.

"My friends of the Dominican Republic, you have been among the first in the world to recognize the need for the solidarity of the Americas. You have been among the first to recognize the threat to the Americas of world communism. Perhaps long after your physical achievements have disappeared, you will be remembered for your courage and wisdom in this regard. Only last month I returned from a trip around the world. For the fifth consecutive year I spent Christmas with the American troops in Korea, still devastated by the years of war. With my own eyes I saw once again the results of Communist aggression. Once again I saw at first hand how communism would enslave the people of the earth.

"In the sad faces of the heroic men and women of south Vietnam I saw the human destruction that communism can wreak. Once again I was able to appreciate the strength of spirit which our holy Catholic faith had given to those people of heroic Vietnam as it had to the magnificient people of South Korea. And above all, I was thankful to Almighty God for the strong Christian tradition of the Americas. That tradition is well symbolized in the strength and faith of the Dominican people as expressed in your magnificient International Fair.

"Once again I recited to Almighty God as I would like to recite to you now a few lines which I have written in invoking a blessing upon our beloved America! 'Father in heaven, God of all nations, bless the Dominican Republic, bless Thou the world, bless Thy peoples with Thy truth, that they may be all-truthful with Thy mercy, that they may be all-merciful with Thy wisdom, that they may be all-wise. Bless us O God, with Thy spirit of peace, that we may know peace and may sow peace upon the earth for the sake of Thy glory. O God of justice. Inspire Thy family of nations with the sense of Thy Fatherly providence, with the passion for brotherly unity, with the national spirit of good-neighborliness. Glorify Thy fatherhood on earth by presiding over all nations as Thy sons. O Gracious God, grant, we beseech Thee, that all nations may become one in mind, united for the purpose of abiding peace, one in heart, united by universal good-will, one in spirit, united by love and by law, do Thou, O God, glorify Thyself on earth this day, for Thy spirit is health and wealth, Thy spirit is power and peace, Thy spirit is Lord of a nation's destiny. O Heavenly Father, Thou, Who Art God, teach all nations the mystery of Thy peace and grant to Thy family of nations the blessing of enduring peace. Amen'."

Subscription Television: The Camel's Nose Under the Tent

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. RABAUT. Mr. Speaker, one of the most hotly discussed issues before the American people today is pay-as-you-go television. The pros and cons have been argued at great length in press releases, brochures, radio programs, and so forth. There has been a great deal of heat and very little light.

The question that comes to my mind is not which electronic approach is superior but rather how are the countless TV owners throughout the Nation going to be affected. I believe the American people, while not organized, or having access to the propaganda media available to the large radio companies, are nevertheless asking the question: "Is it going to hurt us?" The answer is definitely "Yes."

In a sense, subscription television is a betrayal of those to whom the television industry owes its very existence. The people in this country have invested millions of hard-earned dollars in TV sets in the last 10 years. They have through the purchase of these sets created thousands of new jobs in a field that was virtually unknown in 1945. They rightly expect a great deal of enjoyment for the money spent. Has the television industry in return given the customer the entertainment they deserve? It has not. Now when it is an acknowledged fact that a great many shows produced are not worth watching, permission is sought to charge for the work of other groups, that is, sports, legitimate stage, and movies. In other words, certain leaders in the television field feel this is the way to get off the hook. How much thought are these same people giving to improvement in script writing and production of the conventional presentations?

Now, let us just suppose that subscription television were incorporated into the existing facilities. Would the quality of shows be materially improved? Not necessarily. We have been assured that first-run shows and special sport events would comprise the bulk of taxed time. Conceivably, the net effect of the proposed system would be to take the small percentage of decent shows now on the air and sell them, leaving no free entertainment worthy of the name. Who will govern the amount or type of shows for which a fee shall be levied?

It is my feeling that pay as you go television is to the detriment of the American people as a whole; the extent to which it can be abused is easily imagined. The idea should be regarded as "the camel's nose under the tent" and stopped before it gets started.

Plan for a 10-Year Atomic Race for Peace

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. ANFUSO. Mr. Speaker, on July 14, 1955, on the eve of my departure for Paris to attend the NATO Parliamentary Conference as a member of the United States congressional delegation, I proposed the idea of a 10-year moratorium on war. In my statement issued at that time, I suggested that the effects of a moratorium on war "would be almost limitless in their benefits to all mankind." I cited specifically that it would allow scientists of all countries to concentrate more fully on the peaceful uses of atomic energy.

Again today I feel the necessity of reiterating that plea in connection with another project which would make a moratorium, once an accomplished fact, not an end in itself but rather a beginning. In essence the proposal is as follows:

First, a 10-year moratorium on war.

Second, a nuclear race for development of atomic energy for peaceful uses in which all nations would participate in a uniform and coordinated manner.

Third, a traveling atomic world's fair showing the benefits to all the world.

Fourth, a provisional International Atomic Energy Commission to supervise these projects, preventing duplication of research and using bilateral agreements as a foundation.

Fifth, an open letter to the Soviet Union giving her a last opportunity to share in this peaceful project.

At the present time, right here in the United States, 12 nations, including Soviet Russia, are meeting in Washington to further discuss the creation of an International Atomic Energy Agency. More than 2 years ago President Eisenhower originated this proposal, and yet discussion is still at the embryonic stage. At least 24 nations, not willing to wait further, have signed bilateral agreements of cooperation with the United States, so that work on peaceful nuclear development has already begun.

Can we not use these instruments to create a provisional commission until a permanent agency becomes a reality? In that way an interchange of ideas can

continue, initial costs for nuclear research be greatly reduced, and a substantially greater output of nuclear ideas be realized. Furthermore, such a commission could commence work on an unveiling of these miracles through the medium of an atomic world's fair. A project of this nature would provide immeasurable incentive to nonstrategic atomic developments, appealing to the competitive spirit of all nations, including the Soviet bloc.

The impending threat of hostility would be removed for at least a decade, allowing the great minds of our era to concentrate on more humane developments to make this a better world in which to live, not to perish. The President in his atoms-for-peace speech in 1953 included Russia as an essential party to any plan for permanent peace. Let us contemplate the problems which mankind faces today.

Never in the history of civilization has the world situation been so complex and so fraught with danger as it is now. Two of the most powerful nations on earth, the United States and the Soviet Union, are in the midst of a nuclear arms race which reaches more staggering proportions with each passing day. The time is rapidly approaching when a devastating atomic attack launched against one country will be instantly met with an equally devastating retaliatory attack against the aggressor. The result for both would be total destruction. In short, it would be a war with no victor.

This is a terrible thing to contemplate. But the consolation is that we are still able to contemplate this whole dire prospect in the hope of finding a more reasonable and humane course of action. We can seek to rechannel the thinking and the attitudes of the peoples of the world along more hopeful and constructive ways. We can also seek to adjust our international relations to the changing situation in the world and to develop more concrete and positive approaches toward greater amity and better understanding.

Unfortunately, at the present time our international relations are nothing more than a tangled mess of meaningless words, endless debate, and cold hostility, which lead nowhere. In the meantime, however, Soviet Russia continues to chip away at the free world, knocking off a piece here and a corner there, gradually spreading its tentacles to encircle and eventually crush pivotal nations—not by revolutionary means, but by exploiting parliamentary and democratic methods which serve her purposes best. France and Italy are examples of such exploitation.

The Communists are now concentrating primarily on the 800 million people in the so-called neutral or uncommitted nations, making up 27 percent of the world's population and about 40 percent of its land area. Hunger and privation still constitute a very serious problem in these and other countries, notwithstanding the fact that more than a decade has passed since the end of World War II. The Communists are constantly inciting these people by pointing the finger of guilt at us, by seeking to convince the peoples of Asia and Africa that we and our allies stand in the way of human progress.

How do we answer this problem? By outright grants of money and other material gifts, which surprisingly enough is being resented by many of the beneficiaries in various countries. They regard it as charity, hence their resentment. Little or nothing is being done by us or any of the nations we are aiding to keep step with expanding populations, the growing requirements for food, development of resources, raising the standard of living, and expanding economies. Instead, all emphasis is being placed on war, on the development of bigger and more terrible weapons, and on preparing for a colossal war to end all wars by destroying the earth and all its inhabitants.

All of this adds up to a tremendous waste of money, material resources, manpower and energy. We are wasting many billions of dollars and irreplaceable resources. We are wasting the talents and the time of the greatest minds of our era. We are also wasting the precious knowledge which we have acquired about the atom and its unlimited uses for peaceful means.

Surely our people and the peoples of the entire world deserve a better outlook for the future. With the imprint of a great war still fresh in their minds, the yearning for peace is paramount and universal. This is the bond that transcends even the iron curtain. Ironically, the key to that man-made curtain is the atom.

Ever since that fateful day at Hiroshima more than a decade ago, scientists and leaders of nations have discussed the peaceful application and uses of this great force. Various peaceful projects have been suggested. On December 8, 1953, President Eisenhower delivered his atoms-for-peace address before the United Nations General Assembly in which he proposed the creation of an International Atomic Energy Agency, whose task it would be "to find the way by which the miraculous inventiveness of man shall not be dedicated to his death, but consecrated to his life."

At the atoms-for-peace conference in Geneva in August 1955, in which 73 nations participated, it was emphasized that huge sums of money would be needed for research, development, and capital investment. The United States expressed the hope "that the initial costs can be reduced by countries sharing with one another what they have learned and developed" at future technical conferences.

A meeting of the representatives of 12 nations began in Washington on February 27 and will last for approximately 2 weeks. Its purpose is to continue in the preparation of a draft statute acceptable to all nations regarding the proposed International Atomic Energy Agency. The 12 nations are Australia, Belgium, Brazil, Canada, Czechoslovakia, France, Great Britain, India, Portugal, Union of South Africa, United States, and the U. S. S. R. This setting might provide an excellent opportunity for presenting some specific plan or suggestion which will speed creation of this new agency.

The proposals that follow are not meant as a panacea, for permanent and lasting peace cannot come from men's minds but rather from their hearts. But, if nothing else, it will guarantee a temporary truce and give this tension-filled world a chance to collect its thoughts and attain some semblance of normalcy.

The following tentative plan is suggested as an outline for further development:

First, a provisional board or commission is to be set up to regulate nuclear projects for peaceful purposes, using the bilateral agreements as a basis or foundation until a final draft statute of the International Atomic Energy Agency is drawn up and accepted by the participating nations.

Second, the bilateral agreements for cooperation are uniform in content; hence, they can be distributed to all member nations of the U. N. or to any other nation for early acceptance.

Third, nations that have the resources to conduct their own nuclear development, should be given an added incentive to join the provisional body.

Fourth, the provisional body, therefore, should be provided with a concrete plan to start immediate work on projects capable of creating still unimaginable miracles for the betterment of mankind. Four stages of development are necessary:

(a) Instead of waiting 3 years before another technical conference takes place, as is now planned, one should be scheduled within the coming 12 months with all nations invited. An interchange of ideas can then continue so that all nations will have the opportunity to compete equally with those who have already commenced nonstrategic nuclear research. The initial costs of atomic research would be greatly diminished since nations would be sharing the knowledge already acquired and developed.

Estimated time, 1 year.

(b) Following the initial stage, all countries would be permitted to branch out from this common foundation. The provisional body would draw up a list of nuclear projects from which each country could choose one or more, depending on its capabilities, but avoiding duplication of research. A supply of fissionable material and financial aid should be made available to the provisional body by nations more generously endowed for distribution to all nations. Annual reports can be submitted to the provisional commission by each participating nation. Information can be codified and made available to all members. Yearly visits can be arranged between scientific groups for a further interchange of ideas and a friendly check that fissionable material obtained is being used for peaceful purposes. Among projects suggested are atomic propulsion, therapeutic atomic radiation, nuclear-generated electricity, food preservation through radiation, atomic agricultural techniques, and so forth.

Estimated time, 4 to 5 years.

(c) After research and development will have been completed, the International Atomic Energy Agency—by this time the provisional body will have given way to a permanent agency—is to arrange a traveling "Atomic World's Fair" throughout the world in which each country will unveil its discoveries and inventions for the benefit of mankind, and by the same token instill hope in the hearts of millions.

Estimated time, 3 to 5 years.

(d) The wonders of the atomic age are now ready for production. Each country will have approximately a 10-year lead in its specific project and the resulting products, which it will make available to mankind.

Stage 3 and 4 can occur simultaneously.

In order to set this plan into motion, a 10-year "atoms for peace" moratorium should be set aside, commencing in 1957, during which all nations will be able to concentrate on a nuclear race for peace instead of war. Let me emphasize that there can be no objections to this general plan since nothing of a strategic nature will be under scrutiny, nor will the encroachment of the sovereign rights of any nation be a question. Certainly, this would seem to be more palatable than the so-called open skies inspection proposal. Indeed, the beneficial result of such a project would most certainly compensate for the outlay of money, time, and resources.

Here are some of the obvious benefits or advantages to be derived:

First, nuclear developments would become a reality much before the tedious deliberations of today could bear fruit.

Second, this plan could be effectuated regardless of the existing world situation. It could be implemented either through a 10-year moratorium on war, through disarmament, or even under the difficult and trying conditions of a continuing arms race. The first two obviously are preferable.

Third, in any event, the thoughts of the peoples and nations would be diverted from thoughts of nuclear war, total war, guided missile war, and so forth, and channeled toward the possibilities uncovered by nuclear developments for a better and more peaceful world.

Fourth, all nations would stand to benefit economically since their industry would boom as the products of their own atomic developments would reach the commercial markets of the world.

Fifth, a feeling of national pride would be fostered since scientists, who previously might have been hindered in nuclear research through lack of material or other resources, will help their nation take its place alongside others in the nuclear field.

Sixth, the standard of living of all nations would be greatly improved as new ideas and developments are put into production, and more jobs and conveniences for living are created.

Seventh. All nations will have a greater degree of dependence on one another since the developments of one would be in demand by the others. This would result in better understanding and a feeling of harmony among them.

Eighth. Since economic stress and privation in all parts of the world would be greatly alleviated, the Communist propaganda and its false promises would lose much of its luster and appeal.

In the light of the present international situation, the United States as the leader of the free nations should take the initiative in suggesting worthwhile proposals to divert the nations from their emphasis on nuclear weapons. The great minds of our time should be occupied with more humane developments, concentrating on making this a better world in which to live, not to perish.

Insofar as Soviet Russia is concerned, I would suggest that we write a strong letter to her but in plain and simple language embodying this thought:

Since World War II you have continuously conducted first a cold war and later a peace propaganda, while at the same time you have annexed more territory and subjugated more nations than was acquired in any war in the history of mankind.

If you really want peace for your people and are not talking just for propaganda purposes, then we are prepared to meet with you to discuss the above plan in a closed session without fanfare or publicity of any kind and to continue talking until we have completed a plan for peace which we can both honorably present to the peoples of the world.

I plan to submit copies of this outline of my plan to the President, the members of his Cabinet, the members of the Atomic Energy Commission, to the President's adviser on disarmament problems, to our representative in the United Nations, and to other interested officials. I shall, of course, call it to the attention of all my colleagues in Congress and will welcome any comment or views on the subject.

Internal Security

EXTENSION OF REMARKS
OF
HON. JAMES O. EASTLAND
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Wednesday, March 7, 1956

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three articles written by David Sentner, chief of the Chicago American Washington bureau. The articles deal with the internal security of the United States.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

REDS OUT TO SABOTAGE UNITED STATES PASSPORT SYSTEM

(By David Sentner)

WASHINGTON, February 22.—Moscow is planning to break down the American passport system. The global Communist conspiracy is after:

1. Exposing our underground agents who have infiltrated into the ranks of the Communist Party and the Soviet apparatus abroad. This would sabotage the entire counterespionage setup of the United States and its allies.

2. Forcing passports to be issued to Red spies, couriers, and propagandists to carry out world missions.

3. Securing American passports for duplication and counterfeiting purposes in the Communist passport mill.

4. Making propaganda hay from the argument, upheld by certain lower court rulings, that an applicant has the constitutional right to be confronted by his accuser if he is turned down for a passport.

The Communist Party has earmarked $175,000, one-half of its budget for legal expenses, mainly in espousing passport cases.

FIND AIMS MIXED UP

The protests of such leftwing do-gooder groups as the Fund for the Republic, is mixed up with the idea they are defending loyalty cases. (The fund recently assigned $25,000 to the District of Columbia Bar Association to survey the passport situation.)

Passport cases in Federal courts are not loyalty cases. The latter have various shades of allegations and circumstances. The State Department passport turn-downs all involve Communists, based on official intelligence data.

The evidence regarding Communist connections or sympathies are based on factual reports from Army or Navy intelligence, the FBI, the CIA, or the counterespionage systems of allied nations of the West.

TRAINED AGENTS

The State Department does not obtain its information from transient informers. They are trained agents planted inside the Red conspiracy. In many cases in the top Communist echelon. In other instances they are veteran intelligence agents working for our allies whose names are not even known to State Department security officials although their credibility is officially established.

If their identity were disclosed, it might blow up the entire counterespionage system of the free world.

For this reason, and it is something for the American public and congressional committees to immediately be upset about, the State Department has deliberately fallen on its face.

TEN CASES CITED

At least 10 rejected cases, involving evidence of Communist connections or espionage tie-ins, have resulted in granting of passports to protect the identity of official underground agents in the Communist global apparatus. Court rulings forced the compromise.

If a congressional committee ever gets around to probing the latest threat to national security in this cold war No. 2, it might supena the archives of the State Department showing a veritable Red rogues gallery of Soviet spies and global Communist leaders who have blatantly used fraud to obtain American passports.

There are photogenic samples of Earl Browder, former Communist Party commissar in the United States of America, using different names on three different passports.

FOSTER ON TWO

William Z Foster, current head of the Communist Party, is in there with two different names on passports.

Incidentally, it is grimly comical to see the grimacing and silhouetting of top Communists posing for passport pictures, the easier to lose identity for a repeat performance under another name.

Would Browder and Foster today be able to obtain a ruling from our courts, on the grounds of constitutional rights, which would force our Secretary of State to give them passports?

Aside from the opportunity of Communist officials and Soviet spies to counterfeit and alter for the global Red passport mill through possession of an American passport, there is another big advantage.

PRESTIGE, PROTECTION

The added benefit is the prestige and protection provided by an American passport.

Of couse, this same advantage applies to all Americans traveling abroad. Western nations recognize its integrity and drop requirements for police registration, regulations, or visas.

PASSPORT RULING PERILS UNITED STATES SECURITY SYSTEM—COURT DECISION WOULD EXPOSE IDENTITY OF OUR SECRET AGENTS

(Second of a series)

(By David Sentner)

WASHINGTON, February 23.—Once again our counter-espionage system at home and abroad in cold war II is endangered today.

Decisions by Federal courts maintain alleged Communists are entitled to be faced by Government undercover agents if this is the secret basis for refusing them passports.

The State Department cannot comply without sabotaging the entire anti-Communist apparatus and our entire national security organization.

The recent ruling by Federal District Judge Youngdahl along this line is due to be reviewed by the United States Supreme Court on appeal of the Justice Department.

When pressed by such court decisions, the State Department is permitting proven Communists to be granted passports rather than expose the precious identity of our top agents and those of our allies in the Communist Party and the Moscow hierarchy.

ASSAILED TALEBEARERS

In his ruling Judge Youngdahl castigated the secret Government informer and "faceless talebearer whose identity and testimony remains locked in confidential files."

The case was that of Leonard B. Boudin, New York attorney, denied a passport because of charges he was a Communist. Boudin has represented a dozen or so passport cases involving alleged Communist applicants.

A scrutiny of the case record by this correspondent disclosed that the court brushed aside the detailed evidence of Secretary of State Dulles to support his contention that granting a passport to Boudin will support the Communist movement.

MANY LEFTIST GROUPS

The sworn affidavit of Dulles named the following associations and activities of the plaintiff as disclosed or inferred from State Department files:

He was a member of the Communist Party in the 1930's and 1940's as well as a member of the Young Communist League.

In 1947, he was a member of the faculty of the Jefferson School of Social Science, cited by the Attorney General as Communist.

In 1947, he was president of the Downtown Communist School which has been said by an admitted member of the Communist Party to have been founded by herself and several other persons affiliated with the party.

In 1936, he was a director of Science and Society, Inc., publishers of Science and Society, an alleged Communist publication cited as such in 1944, by the special Committee on un-American Activities.

ADVISED OUSTED UNION

After 1948, in addition to being general counsel, he was an adviser in other than legal matters, and closely associated with the activities of the United Office and Professional Workers of America, a group expelled from the CIO in 1950 because of consistently pro-Communist policies and activities.

He has from time to time contributed articles to the New Masses, an official Communist publication.

Dulles added the following reason for denying Boudin a passport:

"In the light of the number of pro-Communist associations and activities of the plaintiff over a lengthy period of time, including reliable reports as late as 1950 of actual membership in the Communist Party, I considered that these associatitons and activities, coupled with the plaintiff's refusal to state under oath whether or not he had been a member of the Communist Party prior to June 3, 1954, when he last received a passport warranted me in concluding that he was still a supporter of the Communist movement."

PASSPORT SETUP HIT BY RULING

(This is the third and final article of a series)

(By David Sentner)

WASHINGTON, February 24.—India has protested to the State Department concerning the pro-Communist speechmaking of an American passport holder scholar to the Indian population, it was learned today.

The American rabblerouser was at first denied a State Department passport due to charges of Communist affiliations. However, credentials were later issued to him because the Department feared contesting the case in court would expose the identity of our undercover intelligence agents within the Communist Party.

The Senate Internal Security Committee plans to probe the confusion and threats to national security arising from a Moscow-ordered campaign for subverting our passport apparatus plus paradoxical court decisions.

Here is an outline of the virtual breakdown of the American passport system, as far as preventing its use as a tool by the global Communist conspiracy:

One Federal judge in the District of Columbia has ordered the State Department to bring out its accusers against an attorney denied a passport on the grounds of Communist affiliations.

Another Federal judge in the District has ruled against the plaintiff, in a similar passport case.

The State Department, in order to protect the FBI, CIA, and our Military Intelligence at home and abroad, has dropped court fights in a number of cases and reluctantly issued passports to known Communists.

This is in violation of a recent internal security measure passed by Congress which provides a penalty to any official granting a passport to a Communist.

The United States Supreme Court in time must clarify the contradictory passport decisions of lower Federal courts. However, Justice Department plans for such an appeal on technical legalistic grounds rather than on a fundamental constitutional basis.

Since Red Russia has turned toward winning the cold war through infiltration and subversion, Intelligence sources report a virtual army of Soviet agents have been ordered into the United States to corral nuclear and defense secrets.

It has been the policy of our State Department security section not to give passports to American nuclear scientists who are considered unreliable.

Such an allegation by the State Department was involved in the case of Weldon Bruce Dayton, who was charged with associating with a friend of atomic spy Julius Rosenberg. Federal District Judge McGarraghy upheld the denial of the passport.

Dayton requested a passport for a 3-month appointment at the Tata Institute of Fundamental Research, Bombay, India. Bernard Peters, atomic scientist, whose name has been linked in congressional testimony with a Soviet atomic espionage ring, has been teaching at the Tata Institute for the past 3 years.

An examination of the court action by this correspondent revealed the following excerpts from the sworn affidavit of Acting Secretary of State Herbert Hoover, Jr.:

"The reasons for my decision to deny the plaintiff facilities were as follows:

"Dayton has had a long and close association, both socially and professionally, with Alfred Sarant, an admitted Communist in 1943–44, and acquaintance of Julius Rosenberg who fled the country shortly after the latter's arrest. * * *

"Because of this pattern of association extending over a protracted period of time with persons of questionable loyalty, I concluded that the plaintiff's travel abroad would not be in the best interest of the United States."

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Utah State College Veterans' Organization

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. DIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following petition which was received from students at the Utah State Agricultural College, Logan, Utah, who are receiving GI educational benefits. I am placing it in the Appendix to the CONGRESSIONAL RECORD since it is addressed to Congress, thereby allowing Congressmen to become more aware of how much interest there is in increasing GI college benefits.

UTAH STATE COLLEGE
VETERANS ORGANIZATION,
Logan, Utah.

We, the undersigned veterans of the Armed Forces attending Utah State Agricultural College under Public Law 346, 78th Congress, Public Law 550, 82d Congress, Public Law 16, 78th Congress and Public Law 894, 81st Congress believe the monetary training allowance under said Public Laws are grossly insufficient to maintain minimum living standards and hereby attest that hardship is experienced by those veterans attending college who do not have a supplementary income.

We hereby petition the Congress of the United States to favorably consider Senate bill 533, now pending before the Senate Labor and Welfare Committee for the following reasons:

1. The increase in cost of living.
2. The increase in cost of books and supplies.
3. The increase in school tuition and fees.
4. Shortage of part-time jobs and low pay scale.

Happy Birthday, Pope Pius XII

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following editorial written by Mr. Harry H. Schlacht for the East Side News, a weekly publication, issued in my Congressional District. I am sure my colleagues will find Mr. Schlacht's remarks to be most cogent and they will all join in the hope that Pope Pius XII will continue to enjoy good health for many years:

HAPPY BIRTHDAY, POPE PIUS XII

(By Harry H. Schlacht)

We salute with joyous acclaim Pope Pius XII on the 80th anniversary of his birth.

From every God-loving heart, from every creed and race, comes the happy refrain: "Many happy returns of this blessed day."

Catholics throughout the world will unite in the commemoration of three glorious celebrations:

His Holiness' 56 years as priest, 26 years as cardinal, 16 years as Pope.

The Holy Father was born Eugenio Pacelli on March 2, 1876.

In his birth we have seen the unfolding mercifulness of God in raising up a figure which shines forth as a great beacon in our times.

He is a true benefactor of humanity.

He is a courageous leader of the century.

He is a man of his time.

He was the first Pope to fly in a plane to the United States.

He was the first Vatican secretary of state to be elected Pope.

He was the first Roman elected to the Papacy since Benedictus XIII.

He was the first Cardinal of the Curia to become Pope in a century.

He was the first Pope to be crowned outside of St. Peter's Basilica since 1870.

Pope Pius XII is the 261st successor to Saint Peter.

His reign is marked by a vigorous crusade against the curse of atheistic communism, the curse of state totalitarianism.

God's truths will pierce the Iron Curtain.

Pope Pius XII fears no human power when duty bids him speak the truth.

He has proved himself a fearless flayer of injustice wherever it has raised its ugly head.

The justice of God is the inspiration of his every utterance.

He is a simple man of God.

Today we can see his figure bowed before the tabernacle,

His saintly face raised to the uplifted chalice,

His long, thin fingers folded in prayer.

Like a decade of Gothic spires aspiring heavenward in supplication for the prayers of mankind.

He is ready to shed his heart's blood to become the seed for the rebirth of enslaved nations.

He is armed with God's Grace and a martyr's will.

He is standing at the ramparts of man's battle for liberty.

His armaments are the weapons of wisdom.

His armies are God-loving peoples everywhere.

His words echo the agony of the divine plea: "Father forgive them, for they know not what they do."

It is unshaken by the waves of time.

It is unchanged by passing vicissitudes.

It is changeless in the writ of its foundation.

It is sealed with the Blood of Christ.

With the passing of these dark days, in which so many are living in terror, there will come the brilliant fulfillment of the hopes of faithful souls.

May the Angel of Light wave his torch among the remotest confines of darkness.

May God preserve Pope Pius XII for many years in the faith of goodness, of justice, of peace.

Excerpts From Address by Senator Wiley at the University of Wisconsin

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, March 8, 1956

Mr. WILEY. Mr. President, I have just returned from Wisconsin. While there, I was privileged to speak at the university. I ask unanimous consent to have excerpts from my address printed in the Appendix of the RECORD.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

SENATOR WILEY URGES ALL YOUNG PEOPLE TO CAMPAIGN FOR REPUBLICAN 1956 TICKET; STRESSES PROSPERITY, PEACE, PROGRESS, AS RALLYING THEMES; URGES APPEAL TO INDEPENDENT VOTERS

(Excerpts from address by Senator WILEY before University of Wisconsin Young Republicans, at Madison, Wis., on March 6, at the Modern Union Theater)

It is a joy to return to Madison to address your fine group.

I note with particular pleasure the progress which you have made in helping get across the Republican message here on the campus and throughout Dane County.

My theme tonight is simple: It is to urge you to redouble your fine efforts to help assure the victory of the Republican ticket in Federal, State, and local elections this coming November.

Under the leadership of our great President, Dwight D. Eisenhower, we will, I feel, assuredly be victorious this November.

But the results in almost all contests are very far from being in the bag; and there is no reason whatsoever for overconfidence on anyone's part.

We have strong faith, of course, in the victory of our presidential ticket, but even there, and especially in other races, we face hard battles.

WE NEED CANDIDATES WITH BROAD APPEAL

And so, one of the things which I urge you, most earnestly to do is to act constructively in connection with the forthcoming State nominating primaries for congressional and State positions.

I urge you to help make sure that in these primaries we select the strongest possible candidates who will merit the voters' thundering approval in November.

They must be qualified, experienced nominees. They must appeal not to a narrow, isolated segment of our population, not just to extreme partisans, say, of the far right. Rather, they must be candidates with a broad appeal to all the thinking electorate. They must be candidates who will definitely not lose the faithful, regular Republican vote. But at the same time they must be able to win the allegiance of great numbers of independent voters.

Remember, every public opinion poll shows that American voters consider themselves as tending to be pro-Democratic Party in sentiment rather than pro-Republican.

The ratio of sentiment between parties tends to be at around 5 to 3 on the average. That means that the Republican Party must always attract independent voters, just as Dwight Eisenhower did so successfully in 1952 and as he will do again.

AVOID BITTER PRIMARIES IF POSSIBLE

Meanwhile, in other races—senatorial, representatives, gubernatorial—independents will eagerly join our fold if the Republican Party closes ranks in support of men with a broad popular appeal—yes; closes ranks even before primary time.

I emphasize "close ranks." That means attaining as much party unity as possible as early as possible. It means cutting down on intra-party squabbling—intra-party sniping—to the greatest possible extent.

Let's concentrate on defeating the Democrats and avoid defeating ourselves.

Only in that way can we assuredly win. Only in that way can GOP candidates—all along the line—conduct the most effective possible campaign.

Let me point out that bitter primary campaigns in which personalities get smeared and deep wounds are cut—can hardly help our party.

WE NEED PRO-IKE CANDIDATES

But if there must be primary battles, let them come. And out of them must come candidates who will rally the whole party as well as independents, so as to win in November.

As I have indicated many times, they should be candidates who believe heart and soul in the dynamic middle-of-the-road policy, represented by Preident Dwight D. Eisenhower.

It is a middle-of-the-road policy which will assure a prosperous, peaceful, forward moving America.

It is a policy which definitely does not try to turn the clock back, which does not try to erase the great social advances of the last several years.

I refer to such advances as liberazing social security, liberalizing housing credit and small-business credit, improving the Nation's highways, protecting consumers, combatting monopoly, expanding our country's health facilities, improving our services for the Nation's 14 million old people, advancing opportunities for our veterans (particularly our disabled veterans), and yes, continuing our program of strong international leadership against communism in our enlightened self-interest.

This is the type of program which we Republicans need, and it is the type of program with which we will win in the 1956 election in Wisconsin and everywhere else.

OUR THREE BIG THEMES

What then should be our basic campaign themes? I suggest 3: Prosperity, peace, and progress.

Let's take each up in order.

GOP VICTORY ASSURES CONTINUED PROSPERITY

The facts of our national prosperity are so obviously abundant that even the most partisan Democrat must admit them.

In 1952, there were 61.3 million Americans employed. Today, there are 65 million. That includes employment in Wisconsin (over and above work on the farms), of 1.1 million Badgers.

Included in that 1.1 million, are more than 354,000 employees engaged in Wisconsin manufacturing. The weekly earnings of our production employees now average $85 per week, which represents a new high. Hourly production earnings have been $2.28 an hour here in Madison, on the average.

Our national income has gone up to $325 billion. Our gross national product—the total output of all goods and services—to the $390 billion mark.

Those are big figures, astronomical figures. When you get them down, however, into terms that the average American can see and feel, they become even more meaningful and inspiring.

Meanwhile, Government expenses have been cut by $10 billion and we will, with good fortune, get a balanced budget this year.

That spells good news for Mr. Average American.

PROSPERITY AND SECURITY FOR COMMON MAN

Consider this fact, too, for example: Today, 57 percent of the American people are homeowners—25 million of us, as compared to 22 million in 1952.

Fortunately, too, the cost of living has been evened out; the rise in the price index has been held to a minimum.

Meanwhile, more Americans have been given reasonable personal security.

At least 11 million more people are now covered by the Social Security Act. At the end of the Democratic administration in 1952, there was 46 million people with old-age pension coverage. Today, there are 57 million jobs included.

As you all know, we are fast approaching income-tax time in Wisconsin and throughout America. Let me remind you that individual taxes have been cut 10 percent, by more than $3 billion, and other tax reforms have saved the American people and American business $4 billion more.

ADMITTED PROBLEM OF FARM INCOME DECLINE

Of course, you and I are aware that the one big cloud on our economic horizon relates to the problem of our farmers.

This is not the time or the place to attempt a detailed review of the farm or particularly, our own dairy problem. Suffice it to say that regardless of present differences over some details of the farm parity issue, the President has launched a bold nine-point program (including added research and speeded-up disposal of surpluses) to help bolster farm income.

GOP VICTORY ASSURES PEACE

We turn to the second great issue of 1956. It is of course peace.

You young people know as well as I, what the resumption of war—even a so-called brush-fire war—could mean to you and to your families, because it is the young people who have to carry the brunt of overseas duty.

In January 1953 when Dwight Eisenhower took office, the guns were firing in Korea, but they are silent now.

We have made important advances on the path toward peace. We have strengthened our security pacts with our allies and our strategic bases.

Indeed, the Kremlin recently has had to shift its cunning tactics in order to cope with American diplomatic successes, now concentrating on trade and aid lures.

There is still danger, great danger, particularly in both the Middle East and the Far East. But fortunately, somewhat less danger exists than when Dwight D. Eisenhower took office.

Confirmation of Eisenhower polices in November will therefore mean a great victory for America's efforts for peace.

Republican victory will mean avoiding extremes. It will mean neither appeasement nor belligerence, neither starry-eyed giveaways nor arbitrarily turning our back and ignoring the world's needs. We will continue to take firm, bold steps for peace, particularly for the universal peaceful application of atomic energy. It is in this nuclear-peace objective that our own great university is pioneering in its laboratories.

THE TWO CONTESTING SYSTEMS

May I say now just a few paragraphs more on the matter of peace and liberty.

You and I must never forget that freedom can be lost. All history is replete with instances that those who fall asleep, as we did at Pearl Harbor, can lose their freedom.

When I went to Washington, in January 1939, Poland was free, the Baltic States were free, and many other now-enslaved nations were free.

Today the same evil that enslaved these nations—900 million people in all, including Russia and China—threatens our own American freedom. And so we face a crisis, and it is a continuing crisis. It arises from the basic fact that, as we are all aware, there are two political and economic systems contesting for the world.

The one, communism, still continues to seek to overcome by violence and subversion the other system—the system of freemen. This latter system is based on immortal, noble ideas and concepts that have existed generally throughout the world for centuries.

They include ideas stemming back to the Old and New Testaments and ideas conceived from the Magna Carta and Plymouth Rock and the Wisconsin idea of good, dynamic government, protecting all the people.

Meanwhile, our system of free enterprise has demonstrated that it is able to produce more goods—more comforts and conveniences—of better quality and at better prices for the average man than the Communist system.

Freedom-loving people everywhere—in front of and behind the Iron Curtain—hate communism because of its vicious, dictatorial tactics—enslaving mankind. They despise it for its atheism and its antireligion. But when we consider how powerful is this evil, dynamic force—international communism—we know that the struggle must go on relentlessly—everywhere—to help save freedom for freemen.

THE SHRUNKEN WORLD OF JET-ATOMIC AGE

I stress, too, this point at this time. Man's ingenuity has shrunken the world, so that every nation is today in every other nation's backyard.

Right here tonight we are only 5 hours away from bombing bases, located in Siberia. And up ahead, we are contemplating intercontinental missiles that would probably shrink the distance to 30 minutes.

Therefore, we cannot in the campaign up ahead so lose ourselves in possible partisan controversy, in bitter invective, that we lose the vision that is necessary so that this people does not perish.

In the battle of ideas that is before us, we must constantly show that we have a better system, a better bill of goods to sell than the Communists.

We have a better educational system, a better social system, a better system in every way.

The Reds have hurled down a redefined challenge at their 20th party congress. They expect to beat us at so-called competitive coexistence. They have changed their tactics. But we know the Communists have not changed their objectives.

Besides using violence whenever possible, and subversion almost everywhere, they are now seeking to try persuasion, to disarm fears and suspicions, to widen trading, cultural and diplomatic relations to further their plans for world conquest.

In a sense this makes them more dangerous and calls for more awareness, more competency, more adequacy on our part so as to meet this new campaign of the Communists.

If we are alert, if all the free peoples of the world remain alert, the outcome is clear. Even mighty dictatorships can disintegrate eventually. Not only will the people of the captive countries, but the people of Russia itself will rise up in due season and throw off this evil thing that has smothered them for so many years.

Every day is a day for greatness for us Americans, because we have been called unto a great responsibility—safeguarding freedom with all that those words imply.

THE THIRD PLANK—PROGRESS

Meanwhile here at home, campaigning on the two-fold platform of prosperity and peace, we can, I believe, again win the allegiance of the Americans people.

But there is another plank in our platform. And that is progress.

We Republicans, for too long, sat idly by, while we tended to be smeared as so-called "reactionaries." Far too long, we allowed the Democrats to get away with unfair charges to the effect that we were allegedly "the party of big business"; we were allegedly "uninterested" in the common man. We were told too, that the Republicans were wedded "to vested interests."

WHAT THE GAS BILL VETO SIGNIFIED

That charge has been debunked completely by recent events. Perhaps, the most significant of such events was the President's veto of the natural gas rate increase bill.

Admittedly, that bill had a good deal of Republican support—Republicans who earnestly felt that it represented a so-called free-enterprise bill.

Nevertheless a substantial number of Republicans, like myself, vigorously oppose it. We felt that the vast oil and gas industry could easily prosper and expand, even though there was some Federal control over it.

We felt that the interest of 30 million natural-gas consumers was superior to the interest of the handful of monopolistic oil and gas producers.

In any event, when Dwight D. Eisenhower vetoed the gas bill, he exploded once and for all the false giveaway charge which the Democrats had leveled against us.

We Republicans were supposed to be the party that gave away natural resources.

(Let me point out, however, that I, for one, have always been strongly in favor of retaining our national resources—our parks and forests—in all the American people's hands.)

THE DEMOCRATIC GIVEAWAY PARTY

But here in the gas bill we could very clearly see the utter falsity of the Democrats' giveaway charges.

Why? Because the natural gas (giveaway) bill was advanced by Democratic committee chairmen through Democratic-controlled Senate and House floors.

It was pushed by Democratic leadership on both sides of Capitol Hill. It was sponsored by Democrats for the benefit basically, of five Democratic-controlled States of the South and Southwest.

And it was vetoed by a Republican President.

As I have indicated, the issue was not completely sharply defined. A good many thinking Democrats valiantly fought against the bill, and I was glad to pay tribute to them publicly on the Senate floor. A Democratic President had also previously vetoed the gas bill.

But here, all could see that it was really the Democratic Party which was basically the giveaway party. For it, in both the Truman and Eisenhower administrations has been the moving force behind this dangerous legislation.

It was the Democratic Party which was ready, willing, and eager to see American consumers soaked to the tune of $800 million a year.

And it was now a Republican President (despite his openly expressed desire to protect what he genuinely felt is a free enterprise concept), who courageously vetoed the rate-increase bill.

He wisely did so, particularly because of the dark lobbying cloud over the bill.

He knew that this cloud could, if not cleared away promptly, tarnish the United States Senate's own integrity.

WE MUST NEVER BE BEHOLDEN TO ANYONE

That must never happen.

I say to you, too, that I believe that the Republican Party must never become wedded to any special interest, whether it be so-called big business, or by big labor. I believe that it must never be beholden to any one group in our population, or to several groups.

It must speak for all the people, must fight for all the people, must champion all the people's cause.

That is why I am so determined that the current lobby investigation to be conducted by the eight-man select Senate committee shall proceed all out.

Let the chips fall where they may.

If there has been influence peddling for the natural gas industry; if there has been an attempt to buy votes, then let the full facts be exposed.

And let the full facts be exposed, regarding lobbying from any other source. Those who have nothing to fear will welcome the investigation. Those who are afraid of their own shadows will run from it.

WISCONSIN'S FINE RECORD ON GAS BILL

This is the type of fearlessness, integrity, and progress which we of Wisconsin, with our great record of protecting the public interest, are particularly qualified to advance.

I am proud that a Republican governor of your State and mine—a Republican Attorney General—and a great Chairman of the Public Service Commission—worked night and day, with teamwork, to defeat the natural gas bill.

Every single Republican official in our State—mayors, board supervisors, councilmen, town chairmen, with but 1 or 2 isolated exceptions, supported me in this fight.

This is the type of Republican cooperation which is needed if the American people's confidence is to be maintained in the Republican Party.

THIS FAST-CHANGING WORLD

You young Republicans on this wide-awake campus can particularly well appreciate the need for cooperation which will meet the needs of today's fast-changing world.

All about us, as we look, there is flux and ferment. An earth satellite is to be flung into outer space.

Meanwhile, the Nations' cities are changing. The Nation's suburbs are booming.

The Nation's transportation and communications arteries are jammed.

Patterns of farming, patterns of industry are evolving under the impact of new techniques. There are constantly new developments in atomic energy and in electronics and automation.

Whole new occupations, particularly because of scientific research, are coming into being.

It is to fulfill the needs of this new America that we need a forward-looking, dynamic Eisenhower program.

JUDGE SENATOR BY VOTES ON MANY ISSUES

I want to conclude with this one thought: I have referred to only a few of the issues confronting our people.

I want to point out that, in any one session of the Senate, there may be as many as 250 individual votes on the Senate floor.

That means that the people of our State should try to scan as many of these votes as possible—should try at least to get an understanding of the principal votes. You, of the Young Republican movement, can help them in this task.

Sometimes our people may get the erroneous idea that a Senator should be judged, should be praised or condemned on the basis of a single vote.

I don't, however, believe in such a narrow stand. The gas bill was important, but it is definitely not the only important issue.

There are at least a score of key votes which should serve as a reasonable basis for your judgment. I refer to votes on issues like liberalizing social security, revising taxes, advancing conservation, strengthening defense, deepening the Great Lakes connecting channels, strengthening anti-Communist laws—all of these and others should serve as standards for judging your Senator—any Senator.

I hope that you will scan my own record, and that you will give me the benefit of your frank opinions on it.

Individuals in this audience and I may differ on this particular issue or that, but you can be sure that I will always welcome your candid judgment on the problems of our times.

YR'S ASSISTANCE IN PARTY NEEDED

On the Senate floor, I have emphasized time and time again that I want to secure the fullest possible contributions from our YR movement.

It is you who will be furnishing tomorrow's leadership in our party and in our country. Indeed, already, there are literally dozens of young men—in their late twenties and early thirties, serving well at highest echelons in our United States Government.

I welcome this trend. I don't believe in keeping young people "on the shelf." Let them contribute now—today—in every phase of party and governmental activity, rising up from the ranks, in accordance with their—your—ability and energy and devotion.

CONCLUSION

Dwight D. Eisenhower's program must be fulfilled by a party of youth. That doesn't mean that it is just a program for young people. But, rather it is a young-minded program, forward-looking, dynamic. It is not static, not backward-looking, not reactionary.

It is designed to meet the needs of our country in the jet-atomic age.

It has been a great privilege to meet again with the YR's here, and I hope that I will have another similar opportunity in the not too distant future.

Address by Hon. Joseph R. McCarthy, of Wisconsin, at Pro-America Rally

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, March 8, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered by the Senator from Wisconsin [Mr. MCCARTHY] at the pro-America rally held at Carnegie Hall in New York on February 22, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow Americans, as we come together tonight to honor the memory of George Washington, I cannot help but be reminded that America has always been blessed with great leaders in times of great trial. In the early days of our country a great general rose from the ranks of the people to lead his country in war, and thereafter pointed out the principles under which his country could live in peace, independence, and freedom. We are similarly blessed in our time: another great general has come along, who has led us brilliantly in war, has eloquently set forth the principles under which the independence and freedom of this country can be preserved, and has thus earned the undying affection and devotion of his countrymen. I refer, of course, to Gen. Douglas MacArthur.

I choose to make General MacArthur the focal point of my remarks tonight because, on the one hand, he proves that America is still capable of producing men in the great tradition of George Washington: MacArthur is the contemporary Washington; on the other hand, MacArthur's present exile is eloquent testimony to the fact the the reigning liberal bipartisan machine has also cast into exile the principles of national honor, national wisdom, and national freedom for which Washington stood.

You may be sure that neither Douglas MacArthur, nor Washington, if the decision had been his, would have extended the hand of friendship to the Soviet Union as was done last summer at Geneva. MacArthur knows, without having to find out the hard way, that free men cannot make friends with tyrants and murderers without abetting the cause of tyranny and murder.

And as we recall the bitter disgrace of Korea, we can say confidently that George Washington would have agreed with General MacArthur that American troops should not be committed to any war but an American war, fought under an American command—and that no assembly of foreign diplomats, such as the United Nations, should be permitted to repudiate the tradition that in an American war there is no substitute for victory.

General MacArthur's most valuable service—and I do not overlook his splendid war leadership or his brilliant supervision of our occupation of Japan, or, of course, his talent for keeping the little man from Missouri in his place—General MacArthur's most valuable service has been to put our fight against world communism in its proper strategic perspective.

General MacArthur has always insisted that the major present threat to the free world lies in the Communist attempt to conquer Asia. MacArthur knows that Communist strategy, from the day of Lenin to the present, has been to communize Asia as the first step in communizing the rest of the free world.

MacArthur, along with other right-wing Republicans, has been called by our liberal, Europe-oriented press, an Asia-firster. We are for America first, as regards the ends we serve, but as regards political and military strategy, the liberals are quite right. We do not believe the main Communist threat is in Europe; we are Asia-firsters precisely for the reason that the Communists are Asia-firsters, too.

General MacArthur has often said that to appreciate the effect of American policy on Asia, we must try to view our conduct through Asian eyes. As Asians see us, we are the world's leader in the fight to stave off Communist expansion. We are therefore expected to set the standard for maximum anti-communism; and the question I put to you tonight is: What kind of example have we set for the millions of Asiatics who we have been urging to become anti-Communists?

At the risk of covering some old ground that is surely familiar to most of you, let us review America's course on anti-Communism, lesson by lesson, as it was taught to Asia; we thus may get a feel of the impact of our conduct upon our Asian pupils.

Lesson 1, July, 1945. Japan has been driven to her knees, and asks to discuss terms of surrender. But, since Roosevelt has agreed that Communist Russia should enter the Far Eastern war, America turns a deaf ear to Japanese offers until the Red Armies have had a chance to grab a share of the plunder. Thus, as the Asian people see it, our first display of anticommunism has us sacrificing some 250,000 lives—most of them Asiatics during the unnecessary atom-bombing of Japan—in order to permit the world's chief Communist power to gain a military foothold in north China.

Lesson 2, September 1945: The war is over, and the Chinese people learn that 6 months earlier, at Yalta, America gave valuable portions of their country, if you please, to the Soviet Union. China, of course, had not been told that her territory was up for auction; she had fought, as America's staunchest

friend, for eight agonizing years against the Japanese and the Communists, and probably expected a different kind of reward.

Lesson 3, October 1945: The American Government agrees to let the Russians occupy all of Korean north of the 38th parellel. The Korean people thus wage a 35-year fight for independence, only to find that America has assigned half of their country to the Communist empire.

Lesson 4, December 1945: The American Government instructs the Chinese people that the only way to keep America's friendship is to take Communists into their government, and George Marshall is sent to China to convey what amounts to an American ultimatum to appease the Communists, or else.

Lesson 5, January 1947: We make good on our ultimatum. The Chinest government refuses to embrace Communists, so the Truman Administration deliberately cuts off military aid to Chiang. Free China is then routed on the battlefield, a victim of her own overly stubborn anticommunism.

Lesson 6, November 1950: American armies, fighting in Korea, are attacked by Communist China. The American Government orders its military commanders not to bomb Chinese bases and supply lines—even though American armies are in danger of destruction. The reason given: this might bring Red China into the war. Also we turn down Chiang Kai-shek's offer of 33,000 troops to help fight our common enemy. Also the American fleet is ordered to protect Red China against Nationalist raids on the mainland. So, as Asians see it, what started out as an American attempt to defend and liberate Korea, ends up an American effort, at the expense of American and South Korean lives, to guarantee the territorial integrity of Communist China.

Lesson 7, April 1951: General MacArthur is fired. The foremost symbol, in the eyes of Asiatics, of American strength and honor is summarily dismissed from his commands because he advocates winning an anti-Communist war. No American in history had ever enjoyed such universal Oriental respect. MacArthur stood for what Asiatics believed was good in America. When he went home, America's prestige went with him.

Lesson 8, June 1953: The Korean fiasco ends with a humiliating armistice. The country is physically destroyed; but there is no victory. Other Asian countries are henceforth on notice of the consequences of resisting Communist aggression.

Lesson 9, September 1953: The American people learn that hundreds of American servicemen, who should have been released under the Korean armistice agreement, are still languishing in Communist concentration camps. Asia watches to see what steps the most powerful nation on earth will take to rescue the young men who wear its uniform. And Asia sees the American Government commission a United Nations diplomat, to beg the Communists, over a spot of jasmine tea, to honor their obligations. Later, when 15 Americans are freed, Asians see the American Government conveniently forget that hundreds of prisoners are still unaccounted for.

Lesson 10, April 1954: Indochina is Communism's next target. President Eisenhower warns that if Indochina falls, all southeast Asia will collapse "like falling dominoes"; the Vice President threatens to send troops; the Secretary of State promises "united action." But Asia is learning fast that American anti-communism is long on words, but short on deeds. And sure enough, the American Government accedes to a deal by which half of Vietnam and 12 million human beings are clamped behind the Iron Curtain.

Lesson 11, January 1955: Red China threatens the Tachen Islands, which are still held by Free China. The American Government orders Chiang Kai-shek to abandon the islands.

Lesson 12, May 1955: Red China threatens Quemoy and the Matsus, which President Eisenhower has secretly promised to help defend. But the American Government refuses to make a public commitment, and Mr. Dulles finally announces the islands will be defended only if they are attacked in conjunction with an attack on Formosa. Asians believe the Communists will not make a joint attack—and thus fully expect America to back down again.

Lesson 13, July 1955: The American Government announces that any attempt by South Koreans to liberate the northern half of their country, or by South Vietnamese to liberate the northern half of their country, or by Free Chinese to liberate their country, will be regarded as an "aggressive war." Asians thus learn that the United States will affirmatively oppose efforts to release enslaved countries from Communist tyranny.

Lesson 14, July 1955: The President of the United States, at Geneva, proclaims to the world his belief that Communist leaders sincerely desire peace. Asians are thus authoritatively instructed to forget their fears about Communist aggression.

Lesson 15, December 1955: The American Government promotes the infamous "package deal" for the admission of Communist satellites to the United Nations. President Eisenhower sends three personal messages to Chiang Kai-shek, demanding that Free China not veto the admission of a Soviet creature called Outer Mongolia.

Lesson 16, February 1956: Asia learns that the American Government allows allies on its payroll to ship strategic war tools to Communist nations, including high-powered motors used in the development of hydrogen bombs.

Such is the example we have set. In such manner have we encouraged the Asian people to be anti-Communist. I ask you: Have we inspired them to fight for freedom, and encouraged them to resist Soviet expansion? Even more important, have we taught them that following America's leadership pays off?

I maintain that we have not taught anticommunism at all—that from Roosevelt, through Truman, to Eisenhower, we have taught the Asian people how to appease communism, how to retreat from communism, how to sell out to communism—how to surrender to communism.

So let us not be aghast when we hear of millions of Indians wildly cheering Khrushchev and Bulganin—and when the loudest cheering occurs in a town being built with American money; for we are only seeing the harvest of the crop we planted. And I must add that more money will not change things. Handouts, my good friends, are no substitute for a foreign policy. A few more billions won't keep Asia afloat; but some displays of strength and determination and honor—and anticommunism—might.

Let me now sketch briefly four ways in which we might rehabilitate the anti-Communist cause—especially with regard to Asia.

Last fall, when 11 American fliers were released by the Communists, our Government apparently hoped the world would think American honor had at last been salvaged. But the world knows better. The world remembers that as late as last May, the Senate Subcommittee on Investigations reported, on the basis of questioning top State and Defense Department officials, that 481 American prisoners-of-war were still unaccounted for and were believed to be in Chinese prisons. In November of 1954 the Communists announced with great fanfare that they held 15 American fliers. Last year, with great fanfare, and by making who knows what concessions to the Reds, we obtained the release of the 15. Which leaves 466 American fighting men whom the mightiest Nation on earth is evidently not lifting a finger to protect. I can tell you that George Washington would never have tolerated such a betrayal of his troops. I can tell you that Douglas MacArthur would have done his duty.

I say the world will never respect us—will never acknowledge us as a worthy leader in the anti-Communist cause—until it learns that when an American soldier goes overseas, he packs on his shoulders the entire strength of the United States of America. The Nation owes the same duty to the soldier as the soldier owes to the Nation.

I repeat what I have urged a hundred times before: that we put Red China in an economic straitjacket; that so long as American boys remain in Communist prisons, we refuse to give a single cent of American money to nations that trade with Red China—in strategic supplies or otherwise.

Which brings me to the subject of trade with the Iron Curtain countries. As I mentioned earlier, one of the results of the Geneva "friendship meeting" is that we are now permitting our alleged allies to ship highly strategic war supplies to the Soviet Union. This policy, of course, affects the Far East, as well as other parts of the world, since Communist China gets what she needs from Communist Russia. Let me give you an idea of the shocking revelations that were made to our subcommittee last week. We learned that, by executive fiat, the Soviet Union is now permitted to buy—and these are just a few examples—lead, zinc, aluminum, copper, machine tools, nickel, magnesium, railroad cars, electric generators, diesel engines, and steam turbines up to 60,000 kilowatts used for manufacture of atom and hydrogen bombs.

In other words, the American people are being taxed to send money to England so that England will be able to manufacture steam turbines which will be sold (at an English profit) to the Soviet Union for making Communist hydrogen bombs. I sometimes wonder if we deserve to win this struggle.

I suggest that you, my good friends, should bring pressure to bear on your Government—that you insist that American taxpayers be relieved of the obligation of helping to build a war machine that is designed to destroy them.

The third thing we must do and do immediately is renew efforts to expose Communist subversion. To give you an idea of the urgency of the problem, let me read a shocking passage from General MacArthur's reply, in Life magazine, to Harry Truman.

"What may well have triggered my removal was my recommendation, made in January shortly before my relief, that a treason trial be initiated to break up a spy ring responsible for the purloining of my top secret reports to Washington. My campaign plan, including those of the Eighth Army, were transmitted daily to Washington. General Walker complained constantly to me that the enemy was receiving prior information of his movements. We could find no leaks in Korea or Japan. Then suddenly one of my dispatches concerning the order of battle was published in a Washington paper within a few hours of its receipt. I insisted that those responsible be prosecuted in order that such subversive activity be stopped, but the case was never processed and I was shortly relieved of my command. It was not until the recent exposure of the British spies, Burgess and Maclean, that the true facts began to unfold. These men with access to secret files were undoubtedly links in the chain to our enemy in Korea through Peiping by way of Moscow. I myself have long been convinced that Red China's decision to commit its forces to the Korean peninsula was predicated upon assurances previously given through Moscow that such intervention would not precipitate retaliation against its attack bases."

Now if it is true—and we have it on the considered judgment of the most respected man in America today that it is true—that

Communist spies in the State and Defense Departments knew of the political restrictions on General MacArthur, and conveyed this information to Moscow and Peiping before MacArthur received his orders, it follows that our Government is at the mercy of traitors to an extent never before imagined. These traitors who, in General MacArthur's judgment, caused the death of countless American boys, and caused us to lose the Korean war, have not been exposed. The presumption, then, is they are still at large, in high posts of our Government, and are every day doing their bit to expedite the Communist conquest of the world. It is too much to suggest that these still-hidden traitors are partially responsible for our disastrous foreign policy? This situation requires an immediate and thorough congressional investigation of every Government official who had, or might have had, knowledge of General MacArthur's orders. It might be an appropriate time to stop attacking those who would expose Communists in Government, and turn our attention to Communists in Government.

Finally, and most important, we must reshape the basic strategic concepts of our foreign policy. We must abandon the defensive, and go on to the offensive. Coexistence with communism is neither possible nor honorable, nor desirable.

Our long-term objective must be the eradication of Communism from the face of the earth. Our short-term objective must be to encourage free peoples—especially those in Asia with armed forces at their disposal—to attempt to liberate their Communist-held homelands. The Free Chinese are willing and able to start liberating their homeland by guerrilla action and raids against the Chinese mainland. The South Koreans are willing and eager to attempt to liberate North Korea. The South Vietnamese are willing and eager to attempt to liberate North Vietnam. It absolutely beggars belief that the United States of America—the leading anti-Communist power in the world—should forbid assaults against the Communist empire.

There is no guaranty that Asian wars of liberation will succeed. But the United States cannot afford to miss what may be our last opportunity to defeat communism without the commitment of American Armed Forces. The free Asiatic peoples want to fight. In justice to them, and in justice to the millions of American boys who will otherwise be called upon to sacrifice their lives in a total war against communism, we must permit our fighting allies, with our material and technical assistance, to carry the fight to the enemy.

Anti-Communist words come easy, my good friends—as Harry Truman can prove by pointing to his memoirs. But anti-Communist deeds present a sterner test—as General MacArthur can prove by pointing to his scars.

We are honoring our First President today because of the legacy of courage and honor and high principle that he has handed down to us. God willing, America will be worthy of that legacy, and our children shall have similar cause to honor us.

Century-Old Voice of Freedom

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1956

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks, I insert in the RECORD an article which appeared last fall in the Cleveland Plain Dealer in connection with the 100th anniversary of the death in Constantinople of the great Polish poet of freedom, Adam Mickiewicz.

I was so impressed with this well-written article that I thought it might likewise be of interest to my colleagues.

The article follows:

CENTURY-OLD VOICE OF FREEDOM

(Sy Spencer D. Irwin)

Across the span of more than a century and piercing a curtain of Anglo-Saxon ignorance comes a voice that is as fresh and clear and prophetic today as when it sang among men. It is the resonant and challenging voice of Adam Mickiewicz, greatest of Polish poets.

One hundred years ago next Friday Mickiewicz died in Constantinople (Istanbul) where he had gone to raise a Polish regiment to fight against Russia in the Crimean war. Seven years before, in 1848, the poet had tried to recruit a Polish legion in Italy and failed.

In these closing years of his life—he was 57 when he died—Mickiewicz had turned to action, his writing and teaching days over. He was moved by that patriotism that imbues all Poles. And he may have died in the fever-infested metropolis of Turkey thinking himself a failure. But he was not and is not a failure. Mickiewicz has raised more legions and regiments than many generals. He has stirred thousands to action by his lines—and he stirs them still.

MICKIEWICZ, POLISH POET OF FREEDOM

Little known outside the Continent, for the English-speaking world is too preoccupied with its own heroes and too satisfied that its intellectual life alone is of importance, Mickiewicz is a force to be reckoned with today—not by the Poles alone, not solely by the Slavs, nor by Europe, but by the world.

The man who broke the confining bonds of classicism and gave poetic and everlasting life to the great legends, the picturesque stories, and the folklore that abounded in his world is more alive than the last communique from Geneva and more effective than the latest apologetic speech cloaking futility in generalities by an American Secretary of State.

Mickiewicz is alive, he inspires, he gives hope to the hopeless. What can stir the minds and hearts of men: The "we didn't do anything for freedom or peace" excuses from the Big Four conference or such lines from Mickiewicz's epic Forefathers' Eve as—

"But soon will shine the sun of liberty,
And from the West a wind will warm this land.
Will the cascade of tyranny then stand?"

Then there are some prophetic lines from his Books of the Polish Nation and of the Polish Pilgrimage, one of his few prose works, written in Biblical diction:

"For he that shall cast aside the summons of freedom shall be cast forth from her face."

There is much to ponder in another passage from this work since America, the land of freedom, is today the capital of the world:

"For when freedom shall have her seat in the capital of the world, she shall judge the nations.

"And she shall say to one nation: 'Lo, I was set upon by robbers, and I called to thee, thou nation, for a piece of iron for my defense and a handful of powder; but thou didst give me an article from a newspaper.' And that nation shall answer: 'My lady, when didst thou call unto me?' And freedom shall answer: 'Behold, I called unto you through the mouths of these pilgrims, and ye heeded me not; depart therefore into slavery, where there shall be the whistling of the knout and the clank of ukases.' * * *

"Verily I say unto you that your pilgrimage shall become a stumbling stone for empires.

"The empire rejected your stone from the building of Europe, and lo, that stone shall become the cornerstone and the head of the building that is to be; and on whomsoever it shall fall, him it shall crush, and whomsoever shall stumble on it shall fall and he shall not rise.

"And of the great political building of Europe there shall not be left one stone upon another.

"For the capital of freedom shall be removed elsewhere."

Is this a description of Europe after the three partitions of Poland and the Napoleonic wars? Or is it a prophecy of Europe and America in 1955? It is both, because it speaks in allegory of that freedom which is without time or place, the loadstone of all peoples.

And from the capital of the modern world what did Poland hear? The voice of freedom? Not a word of encouragement or hope from Geneva. Only a mention, on a week end junket to an Adriatic island, between Secretary of State Dulles and Marshal Tito, no champion of freedom, that it would be nice if the captive nations of the Kremlin could once again fulfill their own missions and destinies.

HIS VOICE IS STRONGER THAN GENEVA

Such patronizing is received with cynical disdain by the Poles, the Hungarians, the Romanians, the Czechoslovaks and the others. But the voice of Mickiewicz is known and listened to. It speaks louder than ever. So strong is the influence of this century-dead poet that the Communist regimes of central Europe dare not suppress his works. Instead, they have tried to capture his memory and falsify his life and works as forerunners of communism. In this country, on this anniversary, the Communist Polish Embassy in Washington is conducting an unidentified contest for essays on his career.

Mickiewicz knew the value of freedom. A graduate of Vilna University, he continued to associate himself with the secret patriotic student societies frowned on by the czar. With his fellows he was arrested, held in prison for 6 months and later exiled to the interior of Russia for 5 years. He never saw his native land again. He traveled through Europe, taught at the University of Lausanne in Switzerland, and later in the College de France in Paris.

But all the while his pen was tireless in seeking the freedom of his country. His poems, especially his Odes to Youth, inspired the young men of his day. His poetry inspires all men today. English readers know his Pan Tadeusz and his Konrad Wallenrod, the first the story of Napoleon's invasion of Russia, much of which he witnessed as a boy, and the other a story of the wars between the Teutonic knights and the heathen Lithuanians. This last, really, was a disguised tale of the long feud between the Poles and the Russians whose meaning was clear to everyone except fortunately, the Russian censor.

Mickiewicz's verse is difficult to translate. This accounts in part for our limited knowledge of him. But this should not bar Clevelanders from holding a proper appreciation. There will be a program in his honor next Friday evening at the public library. And this week an appraisal of the great fighter for freedom will be published in Cleveland under the editorship of Zygmundt Dybowski, editor of the Polish Daily News. Contributing to the anthology in English are Judge Joseph F. Sawicki; Dr. Joseph Remenyi, of Cleveland College; Dr. Fern Long, head of the adult edcuation division, Cleveland Public Library; George Maciuszko, foreign literature division, Cleveland Public Library, and Dr. Taddeus Mitana, of Duquesne University.

The pilgrims keep alive his memory that freedom may not stumble and perish in the modern world.

Put None But Constitutionalists on Guard in Congress

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Thursday, March 8, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered by me before the Abraham Lincoln Republican Club, Chicago, Ill., on February 11, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PUT NONE BUT CONSTITUTIONALISTS ON GUARD IN CONGRESS

There are many reasons why it is a pleasure for me to come here, to the capital city of the American heartland, and discuss the strategy by which Republicans can help reestablish constitutional liberty throughout our country.

Most important of all, you love our country. Perhaps you do not believe it, but patriotism is rapidly going out of style, at the centers of power, like Washington, New York, and Hollywood. We are told that we live in some kind of a new era, and therefore the ideas which our people cherished for centuries are out of date, and must be replaced by global ideas.

Patriotism can no longer be taken for granted.

You and I still believe that love of country is a good thing. Devotion to their country makes men stronger and braver than they would be, in their own interest alone. Some of the most heroic deeds of fallible human beings have been inspired by love of country.

You and I know that patriotism is not out-dated. Love of one's nation does not change when transportation changes from horse-power to steam, or from electric power to atomic energy. Love of country rests on man's willingness to sacrifice himself for others. It arises from generations of mutual sacrifice for the land and the people we call "our country," because we are united with our fellow countrymen in a common bond of beliefs and purposes.

Sometimes we call ourselves Republicans, or conservative Republicans, or Constitutionalists. Sometimes we try other means, but the strongest bond which unites us is love of our country and loyalty to others who love it. We insist that patriotism is important. We work best with other people who have dedicated themselves loyally to our country and who could never change their minds because of specious arguments that the world is somehow more round than it was in the days of Columbus.

The second reason why I am happy to speak to you derives from the first. You have courage.

Perhaps you do not realize that, at the centers of power, courage is going out of style. The vested interests which profit by big spending, internationalism, and global welfare are powerful. They are ruthless. They do not like people who question their answers. They denounce those who tell the American people to look at the bargains which are offered them in the name of international welfare, and see what the score really amounts to. Power seekers remember who are their friends and who are their opponents. They practice the rule of rewarding one's friends and punishing one's enemies. They have over $65 billion a year of your money, with which to teach people their importance.

There are men today who do not want to be internationalists or collectivists, but who do not have the courage to fight so gigantic a trust. They will always go along with the winning side. It is most important that you speak out and tell the waverers that you intend to hold fast to your ideas, no matter how powerful the people who seek to spend your money for globalism.

The third reason why I am glad to be here is that you are trying to think. That is most unusual.

Some of our people believe our Constitution is outmoded, for the silliest reasons. But they are not much more absurd than the good people who believe that we can preserve the American Constitution, in this world of change, demoralization, and hatred, merely by solemn appeals to the good old days.

You believe, and I believe, that our Constitution is still today the most revolutionary, the most nearly perfect, form of government which has yet appeared in all history. We wish to, and we intend to, live by the constitutional compact. But we must never imagine, for one moment, that it is any simple matter to preserve the grand design of our Constitution in a world in which material forces have changed as rapidly and as completely as the change from the horsepower of 1776 to the nuclear energy of 1956.

I like the story in the Bible, of Lot's wife, who kept looking over her shoulder to the city she had to leave, because she could not face the present, accept the fact of change, and free her mind of the past. You remember her punishment. The Lord turned her into a pillar of salt.

Many of our conservatives remind me of Lot's wife. They will not undertake the heavy burden of sorting out the best of the past, and adapting it to the present. Such people can contirbute nothing to preserving our Constitution, for a simple reason. The men who hope to destroy our Nation and our liberty rely not on force but on guile. They hope to delude our minds. They tell us—quite truthfully—that changes are necessary to cope with a constantly changing world. They tell us about their "simple" changes, but they never tell us that those "simple" changes will undermine all that was good in our Constitution and our liberty.

The story of Lot's wife means, I believe, that we cannot rest on the past, like an infant resting on its mother's breast, without the need to think or to exert its will. We can preserve the past only if we take up the challenge of life—to think and to use our wills. Thinking is the only way by which we can know what is the true gold in the past, and refine it from its temporary circumstances, so it can be used again and again. Using our wills is the only way we can resist men with a firm determination to destroy our country for their own petty gains.

The collectivists work—much harder than we do. They study, they think, they learn—much faster than we do. We would not, if we could, imitate their methods of deceit and delusion. But we would do well to imitate their hard work and their readiness to learn.

You are meeting here to think. You are asking how we can use our minds to learn what our opponents are doing, why their moves are so successful, and where we can find equally effective moves for the restoration of constitutional liberty.

That is the third reason why I am happy to be here today, because you are seeking the strategy by which real Republicans can restore constitutional government.

Many able speakers are discussing this question with you. I will take up one aspect of the broad question of strategy, because it is the one most often neglected: I believe the most important single step in restoring the supremacy of our Constitution is to elect a strong Congress, whose Members are militant in their determination to restore constitutional liberty.

We constantly hear people say that 1956 will be a year of presidential elections. That is not true. It is a year of presidential and congressional elections. We must never forget that our vote for Members of Congress is at least as important as our vote for President. In fact, some people believe the vote for Congress is more important for the preservation of liberty than the presidential vote.

For years now we have been listening to attempts to glorify the Presidency and change it into an office never envisioned by the Constitutional Convention. This was obvious under President Franklin Roosevelt, but it continued under President Truman and President Eisenhower. The President is pictured as an indispensable man. He is credited with sole responsibility for decisions and achievements that a superman could not make. He is protected against criticism. He is surrounded by soldiers and guards, heralded by pomp and circumstance.

The office is being changed from the American constitutional office of first citizen of the Republic into a European office much more like the early Roman Emperors.

I do not hold our Presidents responsible for this transformation. I am not sure they realize the change or like what they see. This glamorizing of the Presidency is the work of that bureaucratic elite which wants to rule the United States in the protecting shadow of a loved and trusted symbol. Kings, emperors, and fuehrers are built up by ambitious power seekers who could not be elected to office themselves. Our power seekers try to make our Chief Executive into a monarch and our sober constitutional executive branch into a glamorous imperial household, in which they will wield the hidden powers.

What becomes of Congress while this glamorizing of the Chief Executive is going on? We know the answer to that. They dare not abolish the Congress. Instead, Congress is to be given every opportunity to make the unimportant decision with a great show of conferences and consultations, but all really important decisions are to be made secretly by the elite in the executive branch. This is the essence of the struggle over the Bricker amendment.

You remember the Senate was asked with a great show of consultation to pass the Formosa resolution permitting the President to decide how to defend Formosa. The resolution was, of course, meaningless. For the short run, the President already had the power to support our Armed Forces if they were attacked, and, for the long run, Congress could not delegate its constitutional duty to vote on any declaration of war. Congress was never told the important facts in the story. Did the resolution cover Quemoy and Matsu? We do not know. Did it mean we should adopt the only possible military strategy and bomb the staging areas of the Red Chinese on the mainland if they struck against the islands? We do not know. Congress was never told.

But we still have not answered our question, What is the Congress? What is its constitutional role?

We say lightly that Congress "makes the laws." But what does that mean? It means, I think, something quite simple. The executive branch spends billions of dollars. It has millions of employees. It has the power of arrest, and its own jails. These jails are controlled by the Executive—not by the courts. But what keeps the reign on the Executive? Who is to manage the managers?

The answer is this—under the Constitution, Congress doles out our tax money to the executive agencies, and it says that the executive branch can use that money if it spends the money not for what it likes to do but only for those things which the people want done. Most of the laws which Congress passes are concerned with saying what

the Government may do and what it may not do, with your money. Laws on education or commerce or foreign aid or railroads, usually say what Government agencies can or cannot spend your money for. In all our history, the American people never permitted their Government to take their money, except as they spend it for what the people wanted done. Since the voters cannot come to Washington themselves, and say what the Government may do, they send their representatives to Washington to act as their agents. Congress is the council of these agents who represent the opinion of the citizens in one district.

The colonists expressed this demand in their insistence on "no taxation without representation." They meant that if they could not send representatives to decide in council how their tax-money was to be spent, they would not pay taxes. When the choice was forced on them, they were ready to die rather than to have their money taken from them for purposes they had not chosen. The colonists knew—what we forget—that their taxes were the fruit of their labor, and any government which could spend their earnings without their consent was imposing a species of slavery.

It is almost impossible for the Americans of today, after 175 years of freedom, to believe this simple fact. Any government which takes our money and spends it for anything except what we, the citizens, tell them to do, is reestablishing slavery. Any executive establishment which belittles or bypasses the Congress, which decides for itself what it will spend your money for, is reestablishing tyranny.

If our purpose is to preserve our liberty, it is not nearly so important to have a strong President as it is to have a strong Congress.

Congressional elections are a nationwide proxy battle. You remember the national interest that was aroused recently in the proxy battle for control of Montgomery Ward, and earlier of the New York Central. When important questions are at stake, the apparently indifferent stockholders suddenly care very greatly who are to be their managers.

What are the stakes in the nationwide proxy battle which we call the congressional elections of 1956?

I spoke at length in Congress last month to call attention to the collapse of American foreign policy.

I would like to remind you, at this point, of the frightening danger we face because, at one and the same time, the Soviet plotters are making fantastic gains in every quarter of the globe, while our foreign policymakers in the executive branch carry on with your money and mine, a vast nationwide propaganda, that all will be well. The Secretary of State says he has brought us to the brink, again and again, but by his masterly gymnastics, he has wheeled at just the right moment, and avoided going over the edge.

This picture of the Secretary of State of the United States, like the famous king of France, leading this country up the hill to the brink, and then down again, is supposed to reassure us. It is supposed to prove that the bureaucratic elite has some mysterious wisdom in dealing with the Communists which the rest of us do not share.

To me it is a shocking spectacle to think that an American Secretary of State would descend to explaining his foreign policy by giving a special interview to a magazine which has been called an administration house organ, and picturing himself as a great fellow because he has more gymnastic tricks than the leaders of the other side.

To me such a picture is nauseating. I think of the months and years our young men spent fighting, half way round the world, in the bitter cold, on the slopes of mountain crags, because we had a Secretary of State who was so smart he did not need to listen to the American people. I remember the daily casualty lists from the Korean War. I remember the days when I listened, at hearings of the Internal Security Subcommittee to the stories of brave men who spent 1 year, 2 years, nearly 3 years in Chinese prison camps, tortured by Chinese Communist experts in torture, because we had a Secretary of State who said Formosa was not important to American security, and the Secretary had an advisor named Owen Lattimore who said we should let Korea fall, but not let it look as if we pushed her.

You know, and I know, we are not playing tic-tac-toe with the leaders in the Kremlin. It is life or death for our country.

While our present Secretary of State says he was leading us to the brink, what were we really doing to halt the Communist offensive? I can give you a simple formula.

There are three kinds of nations in Europe—firm anti-Communist nations, soft anti-Communist nations, and anti-Communist nations which are captive satellites of the Communist empire. Our policy is to drag our feet in every effort to help the firm anti-Communist nations of Europe—Germany, Spain, Austria, Greece, Turkey. We have given vast sums of money and tailored our policies to help the soft anti-Communist nations like France, Italy, and, if you will, Yugoslavia. What did we tell the anti-Communist people of the satellites when we agreed to accept the status quo in Europe; that is, to do nothing? We told them there was no more hope for them. At the Geneva conferences our Government leaders appeared in the center of the world spotlight, shaking hands with the blood-stained leaders of communism. But that carefully stage-managed spectacle of surrender had a most sinister effect. The Communists and their allies stage-managed the conferences to show the firm anti-Communist leaders their fight was lost, because America had abandoned them.

Now let us test our formula on our Asia policy. What do we find? The same three policies. We are most kind and gentle to soft anti-Communist nations like India and Burma. We are harsh and unsympathetic to firm anti-Communist nations like Korea, which is wrestling with cruel postwar inflation. And our State Department has imposed on free China and free Korea terms for military aid which make it impossible for the patriots of either nation to free their enslaved people and regain their homeland. It is as if the French in our Revolutionary War had given us military aid, and said we could use it to hold Valley Forge but we must make no effort to recapture Boston or New York or Philadelphia.

In a series of articles which appeared in the Christian Science Monitor, written by Joseph Harsch, we have another story of our State Department policy, which is a startling contrast to that in Life.

In the Monitor, Mr. Dulles is credited with a policy called disengagement. This is a term used by Owen Lattimore to indicate that we are to drop anti-Communist nations but not let it look as if we pushed them.

According to the Monitor, Mr. Dulles has disengaged himself from free China by tying China up in a mutual aid treaty. He is also disengaging himself from the rearmament of Germany, as he did from Austria. He is withdrawing American power from all the points on the frontier of freedom where we contact the Soviet Union.

At Geneva we promised not to engage the Soviet Union at the center of its power by promising not to use the atom bomb. At the same time we are disengaging ourselves from the periphery of Soviet power by a series of planned retirements around the world. What then do the Communists have to fear? They have stepped up their timetable of subversions all over the world.

Isn't it fantastic that our Secretary of State should be engaged in a policy of planned retreat to an ever-narrowing circle of influence, at the same time that the Soviet leaders are planning continuous expansions to ever-widening circles of influence over what was the free world? Could our fifth column have planned it that way?

Now, there is a world of difference between the Secretary Dulles of Life magazine, constantly galloping up to the brink, and the Secretary Dulles of the Monitor, constantly moving our forces backward as the Soviet power advances. But I wonder if the riddle can be explained this way. The Christian Science Monitor is a paper for the intellecuals. Life magazine is for the crowd. Could it be that Mr. Dulles intentionally set himself up as a martial figure leading the embattled legions of anticommunism to the brink, as a way to fool the people, while his real policy was revealed to the small group of intellectuals working for a great collectivist one world, in which we shall sink to the level of a despised and looted province?

Now we can turn back to the problem with which we started. How can patriots stop this planned retreat?

I say to you that no President and no one in the executive branch can end the power of this dual government of the United States which talks anticommunism but silently, secretly, carries on a planned retreat before the Communist advance.

Congress alone can save the Republic, because Congress has the ultimate power, the power of the purse. Congress can tell the executive branch it must amputate every person and every agency which serves this dual government, or Congress will not give it your money to spend.

But we have one more problem. Congress can restrain the executive branch but who can make Congress decide to do it, to safeguard America?

The answer is you, the people. You and only you can make Congress cut all collectivism and one-worldism out of the executive branch. But we are not quite finished yet.

You have no power over Congress here. You have no power over Congress in Washington. There is only one place where you have influence over Congress. That is in your congressional district.

It was the intention of the Founding Fathers that the legislative branch should speak for local, not centralized opinion. The king and his court spoke for the center. The lovers of liberty knew they had to preserve the interest and influence of every separate area of the Nation in policymaking.

This does not mean at all that the Congress speaks only for local interests. Quite the contrary. It means that every local citizen should have a voice in the making of national policy. It means national policy shall not be made by an elite, as the elite proposes.

I listen to many people who tell me we can restore constitutional government only if we elect this man or that man for President.

Some of them hope to reform the Republican Party between February and November of 1956. Some expect to reform the Democratic Party. Some dream of starting a new party with a few months work.

Remember just one fact. You cannot elect a President unless you can win over about 34 million votes. You can elect a Member of Congress if you can win over a few thousand votes. You can elect a Senator if you can win over a small fraction of the Presidential vote.

I say to you that we shall never restore the Constitution and make a firm wall of resistance to communism, unless we have a firm pro-American, anti-Communist Con-

gress. But I say further that we shall never have a firm pro-American and anti-Communist Congress, until the pro-Americans of both parties are firmly in control of their own congressional districts and senatorial elections. Every gain we make in congressional elections counts. When the supporters of the Constitution are actively in control in half the congressional districts and senatorial elections, the victory is won.

You do not elect a Representative or a Senator on election day. You elect him every day in the year before he is elected and every day in the year after he is elected, and in the following years, until he comes up again for reelection.

I say to you that every congressional district, every senatorial election, is important to the collectivist one-world pro-Communists, for 365 days out of every year. If your congressional district, and your senatorial district, are not important to you, you have lost the war before you begin to fight.

I wish I could tell you simply that we can save the country by electing Republicans to Congress. But that is absurd. It is saying the Communists are not smart enough to borrow the Republican label to elect their best men or to seduce weak men on our side who cannot go it alone, or want to be on the winning side.

We cannot uphold the Constitution, unless we restore political power enough in the hands of constitutionalists. We can do that only if we recapture our congressional and senatorial districts. If the political power which believes in constitutional liberty, permits itself to grow weaker than the political power which is undermining the Constitution, then our Constitution will be only a memory.

I give you one slogan for 1956. It is not the whole strategy but it is the first step. I say to you, "Put none but constitutionalists on guard in Congress."

If you care about our country, you must go into your primary campaign armed with knowledge of your district and make sure only a true constitutionalist is nominated on your ticket.

Work with your Democratic friends to do the same in their primaries.

Then let the true constitutionalists in both parties work together to defeat any collectivist on either party. In districts where the collectivists are strong enough to nominate a leftwinger on both tickets, elect the weaker one. There can be no party loyalty which requires that you strengthen your party by electing a man indifferent to the Constitution because he carries your banner to hide his purpose.

Let us first of all recapture our congressional districts. Let us make our congressional districts and then our States into political fortresses in which collectivism cannot get or keep a foothold. Let these strong and vigorous districts send strong and vigorous pro-Americans to Congress and work to keep them there.

Then we shall have an instrument by which Congress can once again renew its ancient power to stand guard over the earnings of our people, and bar the ambitious in Government from using one dollar of tax money for any purposes except those which will make our country strong and great.

Put none but constitutionalists on guard in Congress and we shall have no difficulty in safeguarding our country against that dual government which has been so brilliantly successful in letting our strength leak away while the Communists advance.

Put none but constitutionalists on guard in Congress. Then the patriots in Congress can say as a patriot once said to the gangsters abroad, "You can have millions for defense of our country but you cannot have a penny of our earnings to destroy that liberty which is the cherished possession of our people and the only hope of the world."

A Little Learning

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 8, 1956

Mr. BENTLEY. Mr. Speaker, under leave to extend and revise my own remarks in the Appendix of the RECORD, I wish to include the text of a speech delivered before the University of Michigan Alumni Club of Washington, D. C., at its fourth annual congressional banquet on Friday, February 24, 1956. The speaker, Mr. Richard Lardner Tobin, director of public affairs of the New York Herald Tribune Forum, director of public relations of the National Citizens for Eisenhower, and a member of the class of 1932, gave a very thought-inspiring speech indeed:

A LITTLE LEARNING

Alexander Pope's admonition in the Essay on Criticism tells us that "a little learning is a dangerous thing," and that, having fully learned, it sobers us again. I am going to suggest to you tonight that the smattering of ignorance the great 18th century stylist recognized early is by now a near-disaster in our electronic 20th century world, and that it places an unfair and indeed impossible burden on those of us who teach, or try to teach, the English language at the university and even graduate level.

A few hours each week, for some 13 years, I tried to do this at Columbia University, and I found that most of my students were not able to spell, though they were esesntially "writing" people. God knows what an instructor in Freshman English is up against—I don't want God to tell me. I do know that as soon as my students learned to spell they all get master's degrees. And my wife and I received a despairing letter from an old friend on the English faculty at Dartmouth not so long ago which, after reciting his language travail with even the products of private school education, closed with these significant words: "Dum-de-dum, dum."

Since all higher education is based on reading and writing, and since public school teaching, in mortal combat with TV, radio, motion pictures, and comic books, seems to be progressively less able to teach these fundamentals, perhaps it is unfair of us to judge the university faculty too harshly. The ability to read and write seem, at least to one newspaperman and part-time educator, to be slowly decaying through disuse, through ignorance of the value of the printed word, and through the economics of public school education. Perhaps we should look at this side of it first.

One sort of American for whom the current economic boom means very little tonight is the man or woman on fixed income or in one of those public professions which, in boom times, seem always to lag behind reality. Does it pay, for instance, to be a schoolteacher nowadays? "Help Wanted" signs for teachers are going up in almost every school district in the United States. Indeed, people are leaving teaching jobs faster than new teachers are being trained. Low pay is the chief reason, but there are others. Nonteaching jobs, not requiring an expensive education, pay more than a teacher is likely to get for a great many years after leaving college.

In New York City, a college graduate teacher begins at $3,500. But the average driver of a trailer truck in New York earns $4,400. In Detroit, a beginning teacher gets $3,800, but the average Detroit carpenter makes $4,800, and the average Detroit tool and diemaker makes more than $5,000. Unlike schoolteachers, toolmakers and carpenters are paid while they learn their trades, and their formal education seldom if ever goes beyond high school, often stopping with junior high school.

Scholarship, more and more, has to be its own reward for the American teacher of 1956. It may be shocking to hear that the average railroad engineer in the United States now earns more than the average college professor in the United States. The engineer's real income has advanced 57 percent during the last generation, while the professor's real income has dropped 2 percent.

We shall be faced with 50 percent more teenagers than we have in school today in the next 10 years. That means that we shall need more than 1½ million new teachers in the next 10 years, but, at the percent rate, colleges will graduate only 800,000 new teachers in the next 10 years, only about half the number of new teachers we shall need by 1966. Moreover, many of those now being graduated as teachers will never actually teach, since other fields become more and more attractive to someone with a college degree and, presumably, higher intelligence.

Extra training, too, pays off less in teaching than in almost any other line of work. A young man or woman who chose teaching as a career in 1948 and spent 6 or 7 years getting a doctor of philosophy degree finds in 1956 that the public school system offers at most less than $100 a week as a beginning teacher. A friend of his who has spent an equivalent 7 years—4 in college and 3 on the job—can get even a routine civil-service position with the Federal Government at $130 a week. In private industry, a 4-year college degree and 3 years on the job mean at least $150 weekly in any one of scores of professions and businesses not involved with teaching. Even to those who climb to the top of their field, there is very little chance, under present pay schedules, for ateacher to make $10,000 a year or more.

How does this compare with other professions requiring long periods of college and postgraduate training? Well, by comparison, 41 percent of all doctors earn $10,000 or more a year and 30 percent of all lawyers earn $10,000 or more a year, including those just graduated and beginning their professional practice. By comparison, fewer than 5 percent of America's educators will earn $10,000 this year.

More discouraging still American colleges last spring graduated about 87,000 teachers, which is actually a smaller number than the 95,000 who left American school systems during that same year. It is a commentary on something or other that the average telephone operator in a small town in the United States earned more than the average small-town school teacher.

It's true that there is a certain amount of security in teaching and that there is a good deal of satisfaction in it too. The professions of teaching and the ministry always have had things in common—they are the very definition of "the professions"—that is to say, their work is essentially for the public good and does not primarily pay them a superlative income. But in a nation whose economic and political systems are geared to universal public school education and almost total literacy—at least in theory—these facts add up to nothing short of incipient disaster.

In a recent Gallup poll, about 30 percent of the adult Americans polled were unable to identify at all such names as Beethoven, Napoleon, and Shakespeare. Ten percent had no idea of who Columbus was, and about two-thirds had never heard of Karl Marx, Aristotle, Tolstoy, or Raphael. Eight out of 10 had never heard of Freud, and practically no one could identify Rubens. This cul-

tural survey included Americans who had graduated from grade school, from high school, and who had college degrees. Freud was described by one woman as the King of Egypt. Aristotle was identified by an American farmer as an ancient god. Another person said that Shakespeare was the founder of the dictionary and several thought that Shakespeare had had something to do with writing but they did not know just what. Karl Marx was described as a movie comedian, and Rubens was credited with discovering shirts.

In this quiz, the answer did not have to be specific—if he or she said that Aristotle was a philosopher or that Shakespeare was a writer, dramatist, poet, or playwright, or that Beethoven was a musician he or she was credited with being able to identify the name.

Even in privately endowed education, the standards are dropping dangerously, partly at least because of poor pay and the bleak future that lies ahead of any master nowadays. Latin is no longer required by any but a few American universities, and many at the Ivy League level will accept a substitute for Latin as an entrance language requirement.

The teaching standards have, of course, deteriorated wherever the curriculum has become easier. The matter of reading and writing simple English, in this era of television, radio, movies, and the automobile, has fallen to such poor quality that many large American business organizations have established remedial clinics, particularly for poor spellers and slow readers.

As even the present quality of public school teaching deteriorates, the basic old American theory of education for all rapidly is turning into education for none.

Universal instruction, however fine in theory, is beginning to substitute quantity for quality. This is particularly sad as more and more leisure time becomes available, and that leisure time comes more and more to mean simply staring endlessly into a badly lighted TV set, listening to one inanity or brutality after another, less and less ability to read and understand the printed word. Books are, believe it or not, still for sale, and the incredible increase in the number of paper-bound books now sold each year—something in the hundreds of millions, much of them, amazingly enough, good, standard writing, and not sexy trash.

The TV set is now an accepted part of the American home and in most cases it has been there long enough for the novelty to have worn off. The TV program will soon have to compete, in most areas, for the attention of the average American, to compete with movies, with automobiles, with radio, and even with reading. Magazine and newspaper circulations are beginning to rise once again—always a healthy sign. But tragedy lies in the title of a most popular recent book, "Why Johnny Can't Read." The very popularity of the title indicates how badly we are being first taught.

Too many adult Americans have to become self-taught after they have left their formal schooling with whatever diplomas are in their hands. And this is pertinent to any discussion of the political issues of the day—since it has already attracted the attention of the first general conference on education ever to be sponsored by the White House. This conference discussed teachers' salaries, methods, Federal aid, school buildings, and the whole general philosophy of teaching everyone at the public expense.

It is by no means a coincidence, I believe, that, as teaching standards have sunk, juvenile delinquency has risen—and it is heartening to report here tonight that in 1955 the FBI report on felonious crime among young adults has for once leveled off and even fallen in some categories. Young lawlessness is a task for all—ask not for whom the bell tolls, it tolls for thee. Idiotic educational methods, poorly paid teachers, half-day sessions in an old outbuilding simply add to our trouble.

The years of a man's life, for example, between his 17th and 21st birthdays are critical and precious years.

Too critical and precious to be wasted in casual jobs, haphazard training, or education by advertising agency. At any age, from first grade beginnings to post-graduate self-research, an American deserves the most carefully conceived program and skilled leadership the community can offer.

Since a major function of education is to provide adults with the capacity for self-advancement, widened interest and mature use of expanding leisure time, the basic teaching—the public school educational ladder—must be undeniably strong and capable. But it goes deeper than that—intelligent voting, intelligent civic life are utterly dependent on the ability to read a printed page and understand it, to communicate in writing and speech precisely what we are thinking, and to be able to separate the demagogue's dangerous nonsense from the truth. And how do we find this elemental function taught in our mid-century public schools of 1956?

Here are a few quotations which might interest you:

"I'm a college graduate. My husband is a lawyer. Yet our fifth-grade son can't pick up a fifth-grade book and read it out loud" (a worried mother at a PTA meeting in Boston).

"When I was in second grade, I could read better than most of them. Half of them don't even know the alphabet" (from a Los Angeles businessman who had interviewed 11 girls, all high-school graduates, before he could find one who could spell or read the simplest English).

"How can I teach Shakespeare? My students' level is Peter Rabbit (from a college professor in Ohio).

For hundreds of years, reading of the English language was taught by ear. In this phonic system, pupils were made to memorize the A B C's, and taught that each letter represented a spoken sound in the language. To read any word, therefore, a pupil who knew his or her A B C's by sound could literally read anything, albeit ever so slowly and perhaps humorously.

The opposite number is teaching to read by what is known as the sight method. Under this modern progressive system, most reading courses in the early grades lean heavily on sight, not sound. Children learn to read by recognizing the way the whole word looks. They are taught not merely to pronounce it, but to think about what it means. Therefore, a child may take a look at the word "house" and say "horse" and not have the slightest idea why someone laughs at him. And while it is probably true that the brightest pupils will actually learn to read faster by the sight method than by the sound method, it is pure fact, taken from many a United States teacher's unhappy experience, that nowadays even star pupils can't spell.

A star pupil who has been taught by the sight method could probably give you a good definition of a good many words, yet misspell most of them. It is hard to believe that such simple rules as "i before e except after c" don't make their way into far too many schools in the middle of the 20th century.

Of TV and its distractions we are all aware. It is a far greater menace than the movies ever were because a child had to pay to get into a movie, usually, while the TV set is free, at least to him. Many parents, even those who are well educated and have intellectual interests, fail to realize how widely artificial entertainment has replaced family reading as a pastime. Nothing is better for a child than reading out loud to him. A home where both father and mother have a book going most of the time seldom turns out a poor reader. So, if you're thinking that the modern "sight-reading method" is dispatching a generation of illiterates, if you are thinking that our school-tax dollars are being hopelessly wasted, perhaps some of the antidote may begin inside your own house.

I hold to the educational theory that if anybody who has made sacrifices, or for whom sacrifices have been made, to go to a good college or university is childish enough not to take advantage of his opportunity, the responsibility for being a fool is his and his family's, not the university's.

Perhaps it is not without pertinence to report to you here a really amazing statistics that came to my desk the other day. I find, from a beer-company handout, that almost exactly as many people now vote for Miss Rheingold each year as took the trouble to cast a ballot in our 1954 congressional elections.

So, we have more than the university faculties to worry about now—we have the American electorate, which is to say the very system by which we govern. The words of George Trevelyan, "Education has produced a vast population able to read, but unable to distinguish what is worth reading" might be altered in 1956 to say: "Education has produced a vast population unable to read and therefore disinterested in what is worth reading." In this atmosphere, a dictator, a demagogue, or a persuasive television personality might succeed in taking us over.

In the frightful phrase of Schopenhauer, "There is no absurdity so palpable but that it may be firmly implanted in the human head if you only begin to inculcate it before the age of 5, by constantly repeating it with an air of great solemnity." In the age of the god of advertising and television (and of great solemnity during the station breaks) we should not hold too accountable the university professor so bold as to flunk an extra 5 percent of his class because it can neither read nor write the language of our learning.

Indeed, a special sort of heaven must be reserved directly above Ann Arbor (and other cases) for men and women who now must teach what was once taught at the grade-school level in order to prepare the learner with the ability and tools to read and write his way to a liberal education.

I loved the University of Michigan totally when I was there—and I knew it at the time—and I have never loved a place more, nor shall I be able to repay the debt I owe Ann Arbor, and I think it is true of most of us. For most of us, myself included, were likewise taught to read and write, not in the grade and high schools we came from, but in Angell Hall, University Hall, Newberry Auditorium, or the sub-sub-basement of the Romance Language Building.

Freedom of Speech

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 8, 1956

Mr. SILER. Mr. Speaker, I have introduced in Congress a bill (H. R. 4627) seeking to ban the advertising of alcoholic beverages in interstate commerce. Hearings have already been held on the bill and I find that about the only serious objection to my bill appears to be based upon a fear of its possible infringement upon the freedom of speech guaranteed Americans by our Constitution.

Now freedom of speech is certainly a cherished and valued liberty that all of us would continuously preserve as a goodly heritage for ourselves and our children. But there is not, and never has been, any freedom of speech transcending the moral health and salutary climate of our sacred homes and growing families. I was quite interested to read recently what Blackstone, the great architect of English and American jurisprudence, had to say about liberty of the press, which is tantamount of course to freedom of speech, almost 2 centuries ago. He said, in defining what the forefathers meant by liberty of the press, that it did not consist of "laying no previous restraints upon publications, and not in freedom from censure for criminal matter when published. Every free man has an undoubted right to lay what sentiments he pleases before the public; but if he publishes what is improper, mischievous or illegal, he must take the consequences of his own temerity." In other words, says Blackstone, a person's oral or written speech is subject to undoubted restriction by the police power that exists for the constant protection of the moral health of the community, regardless of that outstanding and continuous basic freedom of speech vouchsafed to a free people under constitutional heritage and ancient tradition of the past.

Freedom of speech? Yes. Police power regulation, restriction and supervision? Always. The two go together under the Constitution. Neither is exclusive unto itself. This is the American way and the constitutional way. Do not be deceived or misled by the booze interests into believing that anyone whatsoever is trying to destroy the Constitution, for we have "come to fulfill, not to destroy the law."

Our Drift Toward World Government

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, March 8, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech of mine entitled "Our Drift Toward World Government," delivered at the patriotic rally under the auspices of For America, at New York, February 22, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR DRIFT TOWARD WORLD GOVERNMENT

When the War of Independence was won, General Washington resigned his commission, bade his officers farewell, and retired to private life at Mount Vernon. Like the Roman General Cincinnatus, who returned to his plow, Washington left a standard of devotion to the Republic which has been held high by American military men ever since.

Washington was soon called back to public service in the new Government of the United States. He saw in civil life the same danger of too much power in a few hands. He knew the young Republic must learn to watch civilian officials step down at the height of their power, and return to private life, while other men carried on the work they had started.

Washington announced his decision not to accept a third term in words which have become immortal. In his Farewell Address to the American people, he gave his political ideals for the new nation, especially in the most hazardous of all decisions, its relation with other countries.

For over 125 years our people followed the testament George Washington left us. We grew strong and prosperous with each passing year.

WE HAVE SURRENDERED OUR INDEPENDENCE ABROAD

Today we have turned away from Washington's advice. We are deeply enmeshed in entangling alliances. We have quit our own, to stand on foreign ground. We have surrendered the decisions of life and death for our country, to officials who do not need to ask our approval, and to alien councils where the opinions and needs of other nations carry more weight than ours.

This change was not made by amending our Constitution. It was made chiefly by our foreign policy agencies, in the executive branch, under the court interpretations of treaty law and executive agreements. You remember, Mr. Dulles testified in 1953 that the State Department had already entered into 10,000 executive agreements under the North Atlantic Pact alone. How many agreements have been made by now, under all our pacts, we cannot guess.

WE HAVE SURRENDERED THE SOVEREIGNTY OF THE PEOPLE

First, let us review, briefly, the machinery of government under which we enjoyed our great freedom and progress. The Constitution set up a national agency to carry out a few responsibilities, mostly those dealing with other countries. Executive authority was limited to legally established duties, and the laws were made by elected representatives answerable to the sovereign people.

Under our Constitution the American people were masters in their own house. Government officials could be removed from office, if necessary, by the following election day. When everything was going well, people were indifferent to election contests. But when the national security was involved, the American people could act, promptly and decisively, without asking anyone's leave. Our Government was no taller than the people, and the sky above us was open and clear.

That is what we mean by constitutional liberty. But that is not the governmental machinery we have today. We have kept the old forms, but we have superimposed new layers of government on top of them. It is time the American people looked clearly at the new governmental machinery which has grown up above and around our constitutional system.

NATO IS A LITTLE UNITED NATIONS

Let us look for example at our European defense system of NATO.

I am not going to talk about NATO's accomplishments in organizing military defense for the West. General Gruenther recently admitted that we still do not have enough military power in Western Europe to hold back a Soviet attack, though England, France, Germany and the other nations of Western Europe raised millions of fighting forces, in World War I and again in World War II.

I have never believed in the concept of regional defense. The Soviet forces are disposed by one grand strategy. Why should we divide our forces? It is folly. I have never believed the Soviet leaders intended to attack Europe. They have won most of Asia without large-scale war. They do not want to take over a Western Europe reduced to ruins by bombing. I even question whether we have not lost more, militarily, by applying ourselves with the colonial nations of Europe than we gained by NATO's armed forces. When five divisions of NATO troops appear in French Africa, to fight against Arabs who are asking for liberty, we lose military strength from Morocco to Pakistan. How much have the Communists gained in Asia, because we are allied with the European colonial powers? For all the billions we have spent on NATO, I see no proof that we are militarily stronger than we were 7 or 8 years ago.

But NATO is also political machinery. How much is it a threat to liberty here at home?

THE TWO FACES OF THE UNITED NATIONS

You are gradually beginning to see that the United Nations government has two faces. The benevolent face is sometimes called the "Town-Meeting of the World." There, we are told, the nations of the world sit down together, and their spokesmen get ulcers instead of starting wars. The other face of the United Nations is the world sovereignty which is being put together by bits and pieces, through the U. N. Secretariat, the international civil service, the various councils, the affiliated agencies, and the voluntary agencies which revolve as satellites about the U. N. sun.

You are gradually learning by what skilful moves we are being led to accept U. N. policies instead of American policies on foreign affairs, finance, education, medical care, labor, and social welfare. You are beginning to see how deeply we have enmeshed our foreign relations, our economy, our political system, our schools, even our churches, with policies made somewhere far above the American Government. You know how decisions made high up in the firmament may, by treaty or executive agreement, bind our Supreme Court judges in deciding a case about a private cemetery in Iowa. We face the threat that treaties planned somewhere above our own Government may even put an end to the rights guaranteed by the Bill of Rights. We have already deprived our servicemen in foreign countries of their constitutional protection against arbitrary imprisonment.

We are just beginning to realize that the United Nations constitutes a threat to our Constitution and our liberties at home, as great as its threat to our independence as a nation in foreign affairs.

THE TWO FACES OF NATO

Do you know the governing machinery set up in NATO? And how it fits, or supersedes, our Constitution?

You will understand what is happening if you remember that NATO is a small U. N., set up to do everything U. N. does, but for one region only. Like U. N., NATO has two faces. Its familiar face is represented by the military commanders of the Western nations, under the chairmanship of American generals, like Eisenhower or Ridgeway or Gruenther, sitting down to plan a joint strategy for defense of the West. The second face of NATO is like the U. N.'s supergovernment. Its task is to help manufacture the parts of a world government, and condition the member nations quietly to give up their familiar independence and their unique political ideals. Thus the governmental machinery of the superstate grows stronger and stronger.

NATO is much more than a military alliance. Lord Ismay, the Secretary General, says, the treaty makes it crystal clear "that the member countries believe they belong to a community of nations within which cooperation should be developed, not only for defense, but in all fields." We now have political, economic, welfare, and propaganda organs in NATO, above our Government and

our Constitution. This supergovernment operates far above the Supreme Commander, who, for show purposes, is an American. It operates far above the American fighting men in Europe whom President Truman made part of NATO's integrated military forces. You were told at the time that the Supreme Commander wore 2 hats, 1 for European forces, 1 for American, but did you know both hats were under NATO? But such a political community, with governmental organs, is a sovereignty, a supernational sovereignty.

NATO has a permanent executive and an international staff. It has a legislative body. But they do not represent you or me. They represent our executive branch only. Your State Department chooses the people who speak for foreign policy in NATO. They report to the State Department. The Defense Department and the Treasury chose some, but do not forget the State Department empire rules our spokesmen overseas. If you and I do not like our foreign policies, we the people may protest but the vast machinery of NATO is moved not at all. We, the people, may vote one party out of office and another party in, but the vast machinery of NATO is in fact changed not at all.

We cannot even find out what is going on. A 5-year report on NATO was compiled in November, 1954. When a few days ago, I asked for later information, I was told it was classified. That means—for executive agencies only.

NATO government agencies recommend the proper expenditures for Western defense, and the share of each member nation therein. They recommend policies on taxes, inflation, arms production, and economics. What the recommendations are, we in Congress do not know. They are classified.

That is not all. The NATO super government is very much interested in labor, especially the movement of immigrants from country to country. It has recommended that governments facilitate labor mobility between their countries. It praised President Eisenhower and the Congress for admitting 209,000 immigrants in addition to quotas, as a means of strengthening the Atlantic community. The one worlders believe nations have no right to decide who may be admitted or denied admittance to their country.

NATO is concerned with rules granting work permits to foreigners. It is interested in uniform social security for member countries.

NATO has a special consultant studying the best way for NATO to encourage cultural cooperation between countries. In the old days, Americans carried on cultural cooperation by buying a steamship ticket to Europe when they had enough money, or reading magazines like National Geographic, if they did not have much money. But in this epoch of cultural spoon-feeding, we must have a horde of international agencies working for cultural cooperation. Then we have a committee of NATO set up to find how NATO can get in the act by finding if there are any gaps in this supervision—and filling them.

NATO is making surveys to find out if you are interested in NATO, and if not, why not. It has its film programs, its tours for journalists, its Caravan of Peace, its NATO newsletter and its NATO West Point for training and indoctrination of the Armed Forces.

Politically NATO shows the means by which the one world superstate is being assembled from above through the U. N., and horizontally in NATO, SEATO, and the Organization of American States, which has replaced the Pan American Union and put the Monroe Doctrine firmly under the nations.

You remember Henry Ford's famous assembly line, with the chassis coming down from the ceiling, and the wheels and fenders coming in from the sides, all flowing together smoothly, by remote control, until the finished car rolled off the assembly line.

I do not say for a moment that the generals and admirals who are assigned to NATO take part in this carefully planned campaign to make us part of one world government by regional compacts. Quite the contrary. They are probably kept so busy they have no time to learn about it.

But some people—probably only a few people—in our Government do know about it, because they planned it that way.

ONLY CONGRESS CAN STOP WORLD GOVERNMENT

Do you seriously believe that, if another Korean-type war broke out, we the people, or the people's representatives in Congress, would be allowed by NATO or SEATO or U. N. to decide on a truly American policy to protect ourselves?

Let me ask you this. Do you like world government? Do you wish to lose forever the power of the American people and their Congress to choose our destiny as a Nation?

Do you like this governmental superstructure above your Constitution, above your Congress, your President, and your courts, controlling your fighting men, your economic life, your immigration, and your cultural cooperation with other nations, through thousands of agreements we never see? Do you really want global social welfare programs in place of the American Bill of Rights?

THE PEOPLE MUST FIGHT FOR A NATIONALIST CONGRESS

If you don't like this drift to world government, just remember one thing. You will have to stop it. It will not stop of itself. You will have to do something.

First let me tell you how not to end world government. In 1954, out of 100 million eligible voters, 58 million stayed at home. Probably the great majority of those who stayed home were constitutionalists. But I say to you that those Americans who stay home on election day, because they do not like the nominees, are helping internationalism. They are the best friends the one-worlders have.

What, then?

You know no president can solve this problem. Every President since 1933 has been the captive of the governmental elite. The Supreme Court will not do anything. The only political power left in this country which could stop the drift to world government is the Congress.

The reason is simple. You, the people, can get any kind of a Congress you decide to work for.

If you do nothing, Congress will become increasingly a rubber-stamp for one worldism. If you want an American Congress, you can get it.

You will have to tell your political leaders in both parties to nominate for Congress only those who will put America first. They will pay attention to you, if they think you mean business.

Don't tell me you don't know who your political leaders are. Find out. If you pay no attention to them, why should they pay attention to you?

Political party leaders, by controlling nominations, have power over who will draft your sons, how much of your money will be squandered by the welfare state, whether your country is going to remain free. The left-wingers, the Communists, and the One-Worlders know who are the party leaders. How much time is it worth to you to find out who they are?

Tell some one in your party you want no one nominated for Congress who does not put America first. Tell them internationalism, globalism, and one-worldism must go. Tell them you, the people, are going to stand watch, every day of the year, to make sure they put none but constitutionalists on guard in Congress.

If you do your part the Star-Spangled Banner, instead of waving over a province in a one world government, will once again proudly wave over the land of the free and the home of the brave.

Address by Hon. Estes Kefauver, of Tennessee, at Sigourney, Iowa

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Thursday, March 8, 1956

Mr. LEHMAN. Mr. President, our colleague, the distinguished senior Senator from Tennessee [Mr. KEFAUVER], when speaking in Sigourney, Iowa, on Monday, February 27, made what I consider to be a very fine speech, which has been called to my attention by one of my constituents.

While I am not a supporter of the senior Senator from Tennessee [Mr. KEFAUVER] in his quest for the democratic presidential nomination, I have the highest personal regard for him, and feel that he is doing a fine public service in the way he is presenting issues.

I ask unanimous consent that his speech at Sigourney, Iowa, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR KEFAUVER AT PUBLIC RALLY AT SIGOURNEY, IOWA, ON FEBRUARY 27, 1956

It is a real privilege to be able to attend this meeting tonight. I always like to come to Iowa and the great Midwest.

You know, I have come here to talk to you. But it isn't a one-way street. I benefit greatly, in fulfilling the responsibilities which I have, from listening to you talk to me.

Right now we in the United States Senate are considering the farm bill. We do so in a welter of statistics and cost and price indexes. We do so in a flurry of claims and counterclaims. We talk in terms of millions and billions, and trends and, I suspect, of theory.

But to really appreciate the farm problem in this country, I believe you have to talk to the men who know the problem best—because they live with it too—farmers such as you.

The other day one of your numbers showed be his bank statement of 4 years ago and his bank statement of today.

Four years ago he had 70 cows valued at $21,000; 80 to 90 calves and young beef valued at $12,000; sows and pigs worth $5,300 and tractor and equipment worth $7,500. Therefore, his assets amounted to more than $46,000 and he showed debts of only $12,500.

This farmer was good for a bank loan any time. He was what the bankers call a good risk.

He is a good farmer, but today, through no fault of his own, he is in real trouble.

His 70 cows are now valued at $7,000; his calves have dropped to $6,400; his hogs and pigs to $2,800, and his equipment, depreciated through the years, is carried at $2,500. Therefore, his assets now—through no fault of his own—are down to $18,700. And his debts have now mounted to $15,000.

Instead of being a good risk for a bank loan, now he's a bad one. Instead of having

assets of more than $48,000 he has assets of less than $19,000. He will have trouble putting in this year's crop.

And since he's a working farmer—a man who makes his livelihood from the farm—this man is in real trouble if he can't finance this new crop.

You and I know that when we talk about the farm problem, we just multiply this man's situation by thousands of others and that is the farm problem. You and I know that when we talk about the farm problem we're talking about the fact that there has been a tremendous slide in the ratio of the value of what you raise to what you buy. In 1947 it took the value of 468 bushels of corn to buy a two-row cornpicker. But today it takes 1,275 bushels. In 1947 it took the value of 31 hogs weighnig 200 pounds to buy a 20–29 belt horsepower tractor. Today it takes 64.

Therefore, you and I know that the farm problem is no myth—it's a fact which demands attention now, if we are going to avert real trouble throughout our economy.

You can be sure that my friend whose bank statement I mentioned isn't painting many barns or fences this year. He isn't buying any new appliances. His wife is making do with last year's hat, and the kids are getting their shoes resoled once more instead of new ones.

This in turn cuts down the business in the retail stores, in the drug stores, and among the other corner merchants here in Sigourney and in the other Sigourneys across the land. When you merchants fail to reorder, some workingman, somewhere, engaged in the production and distribution of goods is going to find himself out of a job.

Therefore, an economy such as ours is interrelated. We're all in the same boat. We might as well paddle in the same direction.

The farm bill as recommended by the administration or as reported by the Senate committee won't do the job that needs doing. Therefore, I want to talk with you tonight about a few amendments which I hope will be adopted by the Senate and made a part of the present farm law. All of these I have sponsored, or am supporting and they are now on the desks of Senators for their consideration.

In the first place, I am getting sick and tired of hearing the Secretary of Agriculture moan about the overburdening surpluses and blaming all the farmers woes on them.

An imaginative man—an imaginative administration—would consider the surplus not as something to cry about but as something to use.

I want to see it used.

A while back I announced that I would propose a food stamp plan. Under my plan the Secretary of Agriculture would make surplus foods available for distribution when requested to do so by a State or political subdivision. Food stamps, issued through regular State agencies, would be redeemable for foods or the surpluses list at any regular stores that participate in the plan.

Now who would be eligible to receive food stamps?

Any of those who are receiving benefits or assistance under the programs of old-age assistance, Federal old-age and survivors insurance benefits, aid to dependent children, aid to the blind, and aid to the permanently and totally disabled. Also eligible would be any of those receiving welfare assistance from State agencies or who in the opinion of those agencies are in need of welfare assistance.

We calculate that there are about 18 million persons in the United States who would qualify for use of the food stamp plan.

Not only would this help move the surpluses, but it would do so in a way that would improve the health of the Nation.

After I had mentioned my plans to file a food-stamp plan I was accosted by some of those people who have been taken in by the slogan "Everything's booming but the guns." They are the kind of people who believe the farmers are living in clover and riding in Cadillacs. Everybody knows that everyone in the country has plenty to eat, they said, and therefore there really isn't anyone to benefit under the plan.

Well, after listening to these readers of the Wall Street Journal, I was visited one day in my office in Washington by a very sincere young man.

He introduced himself and said that he was one of a group who gives his time in the operation of a center for assisting those who need a helping hand in Washington. He had heard of my food-stamp plan. He said that when he read of these "mounting surpluses" and "bulging warehouses" they tried to get some of the surplus to feed hungry people who come to their center.

They couldn't.

He brought along some of the letters that they receive daily—grubby, grimey, written on torn pieces of paper with pencil.

They were pitiful.

"Will you please send me some food for my three children and some milk for the baby please."

"Will you please send me a food order. My children haven't had anything to eat all day long and will you send some food please because I have five children."

"Will you please send me some food. I have six children. I will appreciate anything you can send me. Thank you."

He told me about a cute little blond girl, who comes by the center every morning to get a glass of milk before going to school.

The fact, my friends, is that while the mimeograph machines down at Republican National Headquarters a few blocks away are running off press releases about "Everything booming but the guns," there are children hungry right in the shadow of the Capitol dome.

The food-stamp plan, or food-allotment plan if you would rather call it that, would move some of that surplus out of the bulging warehouses Ezra Taft Benson talks about into the stomachs of those people.

The best thing about it is that we know it would work because it has worked. It worked wonderfully just prior to the war. The reports are on all the library shelves for anyone who doubts me. It moved surplus to the people who needed it; it improved diets; and it helped the farmer's income.

In times like these, it's worth another try.

Now this is not the only way the surplus ought to be used. This last fall I took a trip into the eastern part of the globe. There I visited those nations which are part of what is called the great neutralist bloc in the world. In particular, I spent some time in India. I talked with Prime Minister Nehru and with other leaders of India.

I came away convinced that while Nehru and the Indian Government aren't going to commit themselves irrevocably to the West, neither are they going to commit themselves to the Communist nations.

The reason they are neutralist, I think, is because they have just emerged from some 250 years of domination as a colonial possession. They are proud now in their new freedom. They are not unlike our own United States when we became free 180 years ago. Like the newly formed United States, they are determined to maintain their freedom of action.

However, they are a key nation in Asia—one which has established a democratic government, one which the other newly awakened nations in Asia look to for leadership.

India is an example of a great market for much of our surplus foodstuffs. We talk about foreign aid, but with just a little assistance in foreign exchange, India could take a third of our wheat surplus.

Again, an imaginative Secretary of Agriculture, an imaginative administration, would be leaving no stone unturned to move this surplus to points of the world where it is needed, both in trade and in aid.

One of the major criticisms that I have had of this administration is that it waited so often before acting and then only reacted to the Communist bloc.

For instance, I'll bet that if the Soviets shipped a big movement of wheat into India, you would see great excitement at the State Department and about 3 months later a shipment of wheat out of the United States into India.

Let's act on our own at least once in a while—motivated by our own good common sense and our own good will.

Before leaving the subject of the surplus, there is one thing that I want to make clear. I don't consider everything in those warehouses as surplus, as does Ezra Benson. I happen to be a member of the Senate Armed Services Committee. I have, therefore, been impressed with the necessity for strategic reserves. I can tell you that large reserves of cotton, wheat, and corn are just as important strategically to this Nation as reserves of oil. Another war, God forbid, would show us the importance. I have an amendment to the agricultural bill to set aside quantities of these commodities as a strategic reserve. I hope it will prevail.

Now there's another thing that I intend to see added to the farm bill on the floor of the Senate.

I want to establish—clearly and unequivocally—that we in this country believe in the family-type farm, rather than the big corporate-type farm, absentee owned and absentee controlled.

We are constantly hearing from Ezra Benson about the great costs of price supports—and how they just add to the surplus. Well, I intend to propose that price supports be graduated—not according to Ezra's sliding to the bottom, but according to income derived from the farm.

I intend to propose that we have 100 percent price supports from those farms showing a gross revenue of $7,000 or less; 90 percent on income between $7,000 and $20,000; 75 percent up to $50,000. This graduative will give the major benefit to the family-type farmer instead of the big ones.

I don't want to try to oversell this proposal to you folks. I don't know how much this particular thing will increase your income this year. But it ought to help—and, above all, it will let the Secretary of Agriculture know that we in the United States believe in family-type farming and are determined to preserve it.

All of this, I am convinced, isn't enough to do to this farm bill that has come out of the committee.

It still doesn't take care of the livestock situation which is so important to you right here in Iowa. I have two proposals on that which go together, as they say in the song, just like the horse and carriage.

The first gives authority to the Secretary of Agriculture to use in the marketing of hogs at 200 pounds or less and of livestock at 1,000 pounds or less. The plan would come into operation whenever the price dropped below 90 percent of parity or whenever the annual crop exceeds the average for the past 10 years. Whenever that happened the Secretary would be authorized to pay from $1 to $3 per hundred weight premium for hogs or livestock marketed under 200 or 1,000 pounds.

The result would be a voluntary reduction of production in a way which the farmer would get more cash for his animal than if he had kept it and fattened it up another few hundred pounds. It would tend to prevent additions to the surplus.

And now, finally, there is another proposal which I have been considering. I be-

lieve that we've got to adapt a system of support on livestock. I have been studying methods of accomplishing this and have concluded that the only effective way is by production payments.

Those floors should be 90 percent of parity or on the basis graduated from full parity down outlined in my small-farm plan. If established at 90 percent of parity that would be in the neighborhood of $19 on hogs and $27 on beef cattle. These production payments will also be incentive payments to bring about the reduction of livestock numbers. A man signing up for the production payments will have to cut his production. I am working on the details of how much this cut should be. The main thing is to get money into this livestock farming region and get it here fast.

You know what that means. Right now hogs are selling, I believe at around 53 percent. If we set the minimum level at 90 percent, then we would be saying, in very rough figures, that the income of hog farmers would be increased by around 30 percent.

I think that's the kind of vital assistance you need.

The cost of production payments in this instance would be limited by the graduated limitations I have already outlined which I have proposed be placed on the total support granted any individual farmer. In other words, there's a limit to how much an individual farmer could receive, so he would not be encouraged to overproduce. The cost also would be offset by lower consumer food costs, for the beef and pork would be moving onto the market at its own market level.

This same type of program has been put in effect by the Eisenhower administration for wool and it has long been in effect for sugar. Why not try it for livestock?

One of the most important features of this plan is that it will place a floor under the farmer's income so that he can get a loan on his new crop. Immediately the banker will see that your assets have risen in value.

Further more, this program certainly can't be called a prop for bad management, because one of its features is that the payment is based on the difference between the average market price and the support price. Therefore, there's no incentive for the farmer to dump his crop, thereby overloading the market. Instead there is an incentive for him to watch the market carefully, sell at the best possible price, and thereby have an additional premium.

And so, they say, this is a subsidy. Yes; it is—in a way—but what part of the country isn't subsidized in one way or another? The shippers and railroads and airlines get a subsidy. The post office gives a subsidy. Big oil is subsidized through tax provisions. Private power gets a whopping subsidy through rapid amortization provisions.

This Government has always been willing to assist that which it deems to be essential. I know of nothing more essential than the production of foodstuffs, and the maintenance of a stable economy on the farms.

And now one final word. As you know, I am campaigning for the Democratic presidential nomination in a number of States and I am anxious to see this program adopted not next year or the next—but this year. Therefore, whenever the point is reached where voting is about to begin on amendments to the farm bill, I will cancel out my engagements wherever they may be—here in Iowa, or Minnesota, or Wisconsin or New Hampshire—to return to Washington.

I will do my level best on the Senate floor to convince my fellow Senators that no matter what the Secretary may be telling them, there's a real emergency on the farms and bold action is necessary.

I have seen some of these notices that read: "Due to the fact that I am quitting farming, I offer for public sale a farm."

I don't like the notices.

What Is Wrong in the State Department?

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, March 8, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an outstanding address by Mr. Bryton Barron, entitled "What Is Wrong in the State Department?"

Mr. Barron is eminently qualified to speak on this important subject. He served for 26 years in the Department. It was he who did the research and compilation of the Yalta Papers. For his zeal in carrying out the wishes of Congress, that the papers be published in clear, unexpurgated form, he was, in effect, dismissed from his position by being placed on leave without pay, and then forcibly retired.

Mr. President, I urge with all the sincerity at my command that members of both political parties read this address. It spells out in clear language the perversion of free government which has come about in the Department of State. It points out how a self-elected elite has seized the reins of government away from the people.

Above all, it lays bare the hypocrisy, the falsehood, the outright duplicity of those in whose hands the management of our foreign policy rests.

I am informed by the Government Printing Office that the address will require four pages in the RECORD, at a cost of $320. If it helps to awaken the Members of Congress to the disaster which faces us, it will be worth any cost.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT IS WRONG IN THE STATE DEPARTMENT?

(An address by Bryton Barron delivered before the Abraham Lincoln National Republican Club in the grand ballroom of the Morrison Hotel, Chicago, Ill., on February 11, 1956)

We are here to do homage, in some measure, to the immortal Abraham Lincoln—to the great American who believed "in government of the people, by the people, and for the people." I wish to speak concerning the example he set and the leadership he provided in the field of foreign affairs. I do this because of my interest and experience in that field and because the proper conduct of foreign policy has become vital to the preservation of our form of government and to our very existence as individuals and as a nation.

I will begin by reading to you a page from history, in this case page 131 from a book entitled "The Department of State: A History of Its Organization, Procedure and Personnel," by Prof. Graham H. Stuart, of Stanford University. I would have you observe very carefully what is here recorded because it indicates how President Lincoln and his Secretary of State, William H. Seward, dealt with the Department of State when they came into office in 1861. I would have you note the extent of the staff of this Department in the days of Abraham Lincoln; most especially would I have you observe how Lincoln and Seward dealt with the problem of conflicting loyalties in the Department, at a time when the Union was threatened with dissolution, as a precedent for action these days when so many are quietly working to discard the Constitution and to submerge these United States in a world government. Now let me read to you what the historian records:

"Seward * * * made only one inquiry of his clerical force—were they loyal to the Union or did they favor Secessionists. Every one of the latter was dismissed and given orders that access to archives and papers should be denied them. All others, regardless of party, were kept, and their future, they were informed, would be determined by their fidelity to their official duties. A careful check of the personnel of the Department after this loyalty purge indicates that quite a number of changes occurred. The names of clerks of long experience, such as Francis Markoe and Edward Stubbs, no longer appeared; on the other hand, we find George E. Baker, Seward's old friend and biographer, as disbursing clerk, and his former townsman, J. C. Derby, was made librarian. The new superintendent of statistics, John A. Jones, of Illinois, was also a political appointee. Of the 8 clerks of the fourth or highest class in the Department as of September 30, 1861, 4 including Robert S. Chew, had been carried over and 2 had been promoted from class 3. The total number of clerks now numbered 24 as against 26 in 1859."

The historian notes that no changes were made in the organization of the Department at that time except for the creation of a temporary bureau "to take care of political prisoners and rebel correspondents." He goes on to quote a comment of an historian of the period which can be appreciated in view of what has happened in the Department in our time: "The Department of State functioned very effectively during the war and reconstruction period, "no duty of the Department was ever neglected; no paper ever lost; no state secrets ever betrayed."

Hand in hand with the foregoing as a precedent on how to make the State Department into a loyal and effective instrument of a new administration, I invite your attention to another precedent which he set, one which testifies to his recognition of the right of the people to a full and up-to-date knowledge of what is done by this Government in its relations with other governments. Here I hold before you four volumes entitled "Diplomatic Correspondence, 1864." These volumes were part of a series started when Lincoln sent to Congress his first annual message on December 3, 1861 and submitted therewith the diplomatic correspondence for the year. These volumes which I have here cover the year 1864, and the imprint on the title page shows that they were published in 1865, that is, in the following year. It was this series (the title was subsequently changed to "Foreign Relations of the United States" which has been continued down through the years and which has provided scholars and writers with exact knowledge as to what has transpired in the field of foreign relations.

The Yalta papers, which have been the subject of so much controversy, were recently published as a special volume in the series. I have a copy of the volume here. Evidently no such questions as have been voiced about the Yalta compilation could be raised concerning the volumes of diplomatic correspondence compiled in the days of Abraham Lincoln. Here I quote from an article in the Department of State Bulletin for December 22, 1952: "John Bassett Moore, as editor of the Digest of International Law, had occasion to examine Department of State records thoroughly, and in an article in the Virginia Law Review for June 1937, he stated that he could personlly attest to the fact that volumes for the Civil War and thereafter embraced all important diplomatic exchanges."

In other words, the papers which Abraham Lincoln and his administration gave the

American people with respect to foreign affairs were published promptly, and they were an accurate guide as to what had happened. If the precedent which Abraham Lincoln set in these matters of foreign affairs were being followed today, if there had been a house-cleaning in the State Department in recent years such as Secretary Seward instituted in 1861, if the present sprawling bureaucracy had been cut to the bone, if the publication of the diplomatic correspondence, which had fallen 17 years in arrears by 1952, had been promptly brought up to date, and if the diplomatic blunders of recent years had been fully revealed there would be no need for my speaking to you.

Some of you may not realize how much the Department of State has changed since the days of Abraham Lincoln. I will speak first of its expansion from an office of 24 to a bureaucracy of thousands, not that its overstaffing is the worst evil in the situation, but it is one that can be readily demonstrated. Let me read you the following from an announcement in a Washington newspaper dated January 16, 1956: "Architectural plans are now being drawn to complete a $50 million State Department headquarters which will occupy 4 city blocks and be the biggest office building in the District itself." According to the latest public list, the Department now has offices in some 20 different buildings, in addition to those in the structure originally erected to house the War Department. This total does not include the space and personnel of the United States Information Agency, which is corelated to the Department of State in its overseas propaganda activities. According to the latest official information obtainable this week from the Civil Service Commission, the total personnel of the Department, overseas and in Washington, is 29,063, of whom 6,935 are in the Washington offices. In addition, there are 10,500 employed by USIA, of whom 2,249 are in Washington.

It is interesting to note that budget estimates for the current fiscal year showed the personnel of the Historical Division of the Department, the unit which is charged with present-day compilation of diplomatic correspondence, as being composed of 46 persons. In other words, this Division, which has allowed the publication of diplomatic correspondence to fall so many years in arrears, is twice as big as the entire Department in the days of Abraham Lincoln, when the publication of the documents proceeded promptly and in unexpurgated fashion.

I do not suggest that the thousands of employees in this vast bureaucracy are not very busy or that they do not work hard. As one who has observed at first hand, I can testify that these employees are always very busy there. The officers write thousands of memoranda to each other and keep their secretaries busy typing them, since that procedure is so much better than sticking one's head in the other fellow's door and saying it in person. Then they have to spend years of man-hours in long conferences to decide who is mad at whom. On other occasions they spend hours and use reams of paper determining the composite of all their wisdom. Then they have ta repeat this essential truth to each other many times until they have hypnotized themselves into believing it.

Lest I be thought unfair in this, let me quote from a United States Senator who has studied the situation: "While the importance of the State Department has increased, there is every evidence that the personnel has been expanded at a much greater rate than is necessary. When the Department is given a problem to solve or a program to administer, such as the Voice of America and the point 4 program, the first step seems to be the assembling of a huge planning and administrative staff. The Department has a touching faith that, the more men and women it hires, the more readily can a problem be solved. It believes in intellectual formations in depth.

"In actual administrative life, however, excessive numbers do not have so beneficent an effect. Instead, they delay work and make it more difficult, for, in order to develop plans the subordinates have to clear matters with one another. Then they must start their projects upward through the administrative hierachy. At each level there must be consultations, discussion, and modification. By this system of horizontal, vertical, and traverse clearance and discussion much time and effort are consumed.

"The mills of the Department grind steadily and long but the actual grist is very small. The chief energies of the large staff are consumed communicating with one another. A much smaller staff would not be so administratively musclebound. It could accomplish much more in much time and at much less expense."

The Senator goes on to say: "There is much the same degree of overstaffing in the overseas branches of the Department of State. Staffs are multiplied, the pace is leisurely, and useless paperwork abounds, in order to create a semblance of business."

Let me add that this analysis of bureaucratic overstaffing and inefficiency in the Department which I have just read was made by a Democrat, the senior Senator from Illinois, in 1952. I trust I have not taken unfair advantage of the New Dealers in the State Department in quoting Senator DOUGLAS regarding their methods.

So much for overstaffing and inefficiency. Obviously it is a situation to which every good businessman and every taxpayer will object. Men and women of both parties should cooperate to correct it.

But far more serious is the problem which parallels that to which Lincoln and Seward addressed themselves when they purged the Department of Secessionists in 1861. I refer not to Communists alone, for the problem is not that simple. I say this despite a first-hand knowledge of the influence of Alger Hiss and others like him in the Department. I could relate incidents to demonstrate the power Hiss exercised, or I could pick up this Yalta compilation and show how he operated at a high level, even though the index of the volume, for some strange reason which I will let you guess, fails to list many of his more significant activities at that fateful conference. But the Nation must not limit itself to the purging of Communists from the Department. The same applies to the elimination of sexual perverts. In the alarm over the presence of Communists and other types of security risks in the very heart of the Government, many Americans have lost sight of the presence in the Department of a far more numerous element composed of individuals who secretly or otherwise regard our Constitution—the Constitution which they have sworn to preserve, protect, and defend—as having become outmoded. Step by step they would edge us into a world state and a world government. Some even openly urge a surrender of some of our sovereignty as a nation. Others in the Department urge us to recognize the bloody Red regime in China, despite all that happened in Korea. I tell you, ladies and gentlemen, Lincoln and Seward might more logically have retained the Secessionists in the Department in 1861.

Lincoln and Seward did not make the purge on party lines, and the same rule could apply today, for I have found Democrats in the Department who are as devoted as any Republicans to the preservation of our Constitution and our economic way of life. The internationalists and the one worlders, the giveaway artists and those who are more concerned with what foreigners may think of us than with the rights of the American people, and that dangerous group which feels that America should be governed by an "elite" may be found in either political party, but they should not be in the State Department.

We need a revival of the indignation of a few years ago when the American people demanded that the mess in the Department be cleaned up. You will recall that in response to that demand the Republican platform of 1952 contained the following pledge: "We shall eliminate from the State Department and from every Federal office all, wherever they may be found, who share responsibility for the needless predicaments and perils in which we find ourselves."

One of the first acts of the new Eisenhower administration in 1953 was to take steps to remove from office a certain few of the officials who had been the subject of unfavorable comment. There were, however, no sweeping changes of personnel, such as the American people had been led to expect. This is not a mere statement of opinion on my part. Secretary of State Dulles himself stated in an address in Columbia, S. C., on June 6, 1955, "I felt that that approach (i. e., sweeping changes in personnel) would have been a grave mistake." In some quarters there was a hesitation because of the feeling that newly appointed persons could not provide the background of knowledge and technical training which were required to carry on the work. Actually, of course, many of the so-called experts in the Department have no real claim to being regarded as such. I base this conclusion on a careful survey made by Professor McCamy of Wisconsin and published by him in his book entitled "The Administration of American Foreign Affairs." Professor McCamy found that in 1948 "77 percent of the officials in positions of influence * * * had worked in this Department less than 5 years."

How this failure to effect sweeping changes in the departmental personnel has worked out can be demonstrated by a simple comparison of the Department's telephone directory listings for November 1952 with, say, those in the telephone directory for October 1955. In the Historical Division, for example, we find in 1952 that G. Bernard Noble was chief, Wm. M. Franklin was assistant chief, Ernest R. Perkins was assistant chief and editor of Foreign Relations, G. M. Richardson Dougall was Assistant Chief in Charge of Foreign Policy Studies, and so on down the line. In the 1955 directory we find the same men in the same positions.

The effects of this situation were indicated in an article in Newsweek for November 1, 1954 entitled "The Behind Scenes Struggle Over Yalta Papers—What To Censor and What Not To Censor?" The article began by stating that in March 1950, G. Bernard Noble, then as now Chief of the Division of Historical Policy Research, sent a memorandum to the then Secretary of State Dean Acheson on the subject of the Yalta papers. According to the magazine, Noble advised against publication of the Yalta documents on the grounds that this would "embarrass" the officials of the Democratic administration and would lead to demands for publication of the minutes of other conferences. The magazine also noted as another reason for the slowness of work on the publication of the wartime records the "continued reluctance at the working level within the State Department itself to publication of the documents. Many Republicans attribute this delaying action to officials brought in during the Truman administration and retained in the Department."

I do not suggest, of course, that it was only in the Historical Division that there were no sweeping changes with the advent of the new Republican administration. On the contrary, in fact, if you were to look at the roster of the Department's Bureau of International Organization Affairs you would find still high on the list several officials

who served under Alger Hiss and in close association with him.

The new administration even proceeded to give promotions and attractive posts to men who had been closely identified with the policies of the Acheson regime and with the tragic blunders of the past. A case in point was that of Charles Bohlen who was made Ambassador to the Soviet Union despite his defense of what transpired at Yalta, which Conference he attended as an adviser. You doubtless read about the debate in the Senate over his confirmation as Ambassador. I will, therefore, not dwell on the matter at this time.

The recent nomination of Robert R. Bowie, chief of the Department's policy-planning staff, to the title and rank of Assistant Secretary, parallels in many respects the Bohlen case. Here I quote from Human Events for January 28, 1956: "Bowie apparently eschews public statements or speeches; but colleagues say that in private conversations, even at social affairs, he makes no bones of his feeling that Red China must be recognized and admitted to the community of nations; that Nehru and his stooge, Krishna Menon, are pretty good guys although slightly misled at times; that the United Nations is something sacrosanct which should not be criticized in any way."

In reporting on an important meeting which Secretary Dulles attended the other day, the newspapers added that he was accompanied by "his expert on Near Eastern affairs, Francis Russell." Some of you may remember the latter official as the head of the Department's propaganda mill under Secretary Acheson, who headed for the storm cellar when he saw Republican victory coming in 1952 and was assigned to Tel Aviv as his first post abroad in October of that year. Now, evidently on the basis of that one brief assignment, this propagandist is an expert on a vast troubled political area. Lest you may have forgotten how the Department's publicity program operated under Francis Russell and Dean Acheson, let me quote from an analysis by Felix Morley, former editor of the Washington Post: "It is a one-way four-lane highway of administration propaganda, designed to make the American public believe that whatever the Department of State decides, no matter how wasteful and contradictory, is in the interest of the general welfare.

"Although it claims to believe in two-way traffic the Department of State does not furnish for domestic information any criticism whatsoever of its shifting policies. Wholly unimportant speeches by minor bureaucrats are reprinted as documentary material in the weekly Department of State Bulletin. Defensive pamphlets, books, and reports pour forth from its Division of Publications. Lectures, editors, and corespondents are frequently called together, entertained and briefed on what they should say in support of departmental policies."

The first indication which the American public received that the housecleaning in the State Department was not proceeding as expected under the new administration came when Scott McLeod, the new director of personnel and security matters, spoke to the American Legion Convention at Topeka, Kans., in August 1953. Mr. McLeod told of the difficulty of placing Eisenhower followers in responsible positions in the Department of State. He pointed out the fundamental fact that policies which originated at the top must be implemented at the lower working levels and by the hold-over personnel often not sympathetic to the Republican point of view. He commented that until the hold-over officials are reeducated or replaced with proper personnel the progress made was sometimes very slow. He also told of the position he had taken with respect to opposing the employment or retention of Socialists in the Department.

The Secretary in a press conference a few days thereafter was asked if Socialists were proper employees of the Department of State. Mr. Dulles' reply (and this should be noted carefully) was that he had not become sufficiently familiar with the Socialist platform to know whether it contained anything which was incompatible with the type of foreign policy we are carrying out.

The failure to effect a housecleaning was the subject of a series of articles by Edward B. Simmons in the Standard-Times, of New Bedford, Mass., in November 1953, from which I quote:

"If public opinion had wielded the broom after the Truman administration was voted out, no department of the Federal Government would have been given a more thorough housecleaning than the Department of State. Since the Eisenhower administration took over, no department has had less.

"It is generally conceded here that former Secretary of State Acheson did one job consummately well. He created a State Department in his own image, especially as regards top personnel. A source of amazement, therefore, in view of the promised clean-up after Acheson, has been the retention of a powerful nucleus of the men Acheson trained and whose response to his policies brought them promotion in policy positions. They are not cracking the whip, but they are developing policies and putting their men into key posts. They are in a position, moreover, to intercept anything intended for the new Secretary (and the small group he brought with him) from the many lesser lights who resisted Acheson's domination at the risk of their careers.

"Of the 18 appointive top assistants to Dulles, 12 are career officials. Not one of the 12 is on public record against policies of Acheson, nor did they incur exile or demotion under the previous administration for opposing those policies within Department councils.

"Some of the promotions given Acheson holdovers can only be attributed to the continuing power of this group. A case in point is the high post given Robert J. Ryan to be head of the Division of Foreign Service Personnel. Ryan as one of the officials who came under fire when the McCarthy committee investigated stripping of personnel files to protect favorites. Ryan was recognized as such a confidant of Acheson's that when the latter left the Department, Ryan was picked to head the goodbye ceremony.

"'Mr. Secretary,' Ryan said to his outgoing boss, 'the employees of the Department and the Foreign Service are very proud of your many outstanding achievements. Your high sense of duty, your statesmanship, your courage, your patience, and your fortitude have been an inspiration to all of us. You, sir, are a true public servant. As you take leave may we express to you our sincere thanks and appreciation for your leadership and support.'"

When such views are expressed by a personnel officer who was subsequently promoted by this administration, it is not surprising that conservative employees in the Department have not fared well. I might add that it was the office in which that Acheson admirer worked that has served as a cat's paw for the holdovers, who have used it to press attacks on individuals who have shown any measure of independence and integrity.

Those who have never lived and worked in a bureaucracy, like the State Department, may find it difficult to comprehend the terrific and insistent pressures which such an organization can exercise on its members, on officers as well as on rank and file. I well recall the case of one earnest though inexperienced newcomer who placed on his desk soon after he came into the Department this slogan in Latin: "Don't let the bastards grind you down." Some months later a new motto appeared on the wall of his reception room, one which exhorted everyone to support the team. Within 2 years that official was quoted in the newspapers as having testified before a congressional committee to the effect that he could conceive of a situation in which he would appoint a Communist.

There was another middle westerner, a banker who was brought into the Department early in the new administration and from whom much was expected. Yet within a few weeks this same official was out making speeches praising the New Dealers under him.

Another successful businessman was given the important task of reorganizing the Department. I suspect that he found himself blocked at every turn, for he did not remain long and left, I presume, a sadder and wiser man. If he and others on the new team had not been so few in numbers they might not have been so quickly boxed in; vigorous support from above for a house cleaning would also have helped.

How these pressures operate down the line with the average employee is more clearly demonstrated by a conference which was held in the office of the chief of my Division in June 1953, with all members of the staff in attendance. There, in the presence of the Division Chief, a higher official, himself an outspoken admirer of Dean Acheson, told the members of the staff in no uncertain terms that there must be no further criticism expressed of the Division Chief. He followed this up by stating that any employee who thereafter dared to criticize the Division Chief would be subject to demerit and such demerits would be considered in any reduction of force.

And how these pressures may be applied in case of an individual has been graphically described by my associate, Donald Dozer, in a published statement which read in part as follows: "Of the records of the 12 wartime international conferences in which Roosevelt participated, the only papers which have yet been made available are the Yalta papers. But when the compiler of these records, Mr. Barron, submitted his compilation for review to the carry-over officials of the Historical Division in mid-1954, he was subjected to grueling brain-washing sessions as they tried to secure his consent to the deletion of important documents. Sometimes he carried the point only by threatening to appeal over their heads to higher authorities of the Department. As a result of changes and deletions in which he did not concur and the restrictions on his research, the compilation became, as he pointed out in a memorandum to Assistant Secretary McCardle in December 1954 a distorted, incomplete, badly expurgated compilation which tends to shield the previous administration and mislead the American people and cannot fail to bring criticism on the Department from competent historians and students of public affairs.

It was in 1953 that Dr. Dozer was officially assigned to the compilation of papers of the Cairo-Teheran conferences of 1943 and I to the compiling of those of Yalta. We would have been derelict in our duty if we had not pressed for prompt completion of these projects, particularly since the United States Congress had requested that the work be done and the Department had promised to do it. Nevertheless we were subjected to constant harassment in the Department. On the basis of flimsy charges, Dr. Dozer was dismissed from his job, reinstated by order of the Civil Service Commission and then dismissed again. His second appeal to the Commission is still pending. I was not dismissed but I was forced to accept premature retirement and put on leave without pay for several months although no specific findings against me were ever given. As individuals we were fighting for a principle, for the right of the people to know the facts about their Government.

Some of you may have expected me on this occasion to indicate the nature of the suppressed papers. This I cannot do because the material is still labeled "secret", even though much of the file was probably known to the Communists before they left Yalta. All too often the security restriction on such papers is retained today only to prevent the blunders of certain officials from becoming known. As I understand it, the Department must authorize me to do so before I could discuss the content of secret papers even before a Congressional investigating committee. You may be sure that I will cooperate to the fullest extent if permitted. The Department, on the other hand, is reported to have exerted pressure to prevent the investigation from coming to a head. The bureaucrats cannot deny the fact that they have failed to produce the conference papers as promised. In the case of Yalta it cannot be truthfully denied by them that certain documents were also censored and others suppressed, that files were not made available to me, and that some documents already in the public domain were reprinted while others which might have put the self-anointed "elite" in a bad light were carefully omitted from the compilation. Should any attempt be made to contravert what I have just said, I will certainly ask that sworn testimony be taken.

Before I leave this matter of the pressures which the Department exerts on its employees, let me just repeat one little quip which I heard recently: One employee commented to another, "Mr. X displays considerable courage and moral integrity."

Thereupon the second employee replied, "He must have another job lined up elsewhere."

One of the really distressing manifestations of our times is the extent to which thinking Americans, even Members of Congress, are dependent upon scraps of information for their interpretation and understanding of what is transpiring in many areas of our national and international life. Time and again I find commentators, writers, and friends basing their thinking on bits and pieces which bureaucrats have occasionally let slip. Sometimes the public is denied any information at all on a matter; at other times what is given out is a slanted version that is completely misleading. I find people starved for the facts, for specific, definite, reliable data. I tell you, ladies and gentlemen, such a state of affairs is all wrong. It is a denial of the right of the people to intelligent self-government. It leaves our citizenry at the mercy of the so-called elite. It breeds suspicion, distrust, bigotry. The American people should put a stop to this; they should assert their right to know the truth and the whole truth.

Just to show you how the State Department operates in this connection, I will in the limited time available give you a few examples.

One illustration of this can readily be given out of my own personal experience. You will recall that a few minutes ago I read to you a statement by Donald Dozer quoting me as describing the Yalta compilation as "a distorted, incomplete, badly expurgated compilation." Let me add to this the fact that at the outset of the work on that compilation and for many months thereafter I had complete responsibility for the collection of the papers—that is, until the matter was taken out of my hands by holdover officials because of my refusal to concur in the suppression of certain papers. On March 19, 1955, there appeared in the newspapers a story which purported to quote the "State Department officials who compiled the Yalta papers" and which tended to give the public the impression that all concerned regarded the compilation as a scholarly product. The officials quoted were indicated as "officials who worked on the Yalta project for years." I was, of course, the one official who worked on the Yalta project for years, but I was not interviewed on the subject and the views expressed were not my views. It was, indeed, a strange commentary on the candor of State Department officials and on the reliability of a great news service that such a misleading yarn should have been published.

Sometimes the newspapermen themselves grow impatient with the Department and say what they think about its propaganda. A case in point is an article by James Reston, special correspondent for the New York Times, in that newspaper for September 16, 1955. Because Mr. Reston is a correspondent of established reputation and because his comments depict the evil of which I speak, I will quote from his dispatch at length, as follows: "There has been a growing tendency in Washington since the war for the Government to put out not what it knows to be true, but what it wants the people to believe is true.

"This has been increasingly apparent in the field of foreign affairs, where professional diplomats too often appear in the role of amateur propagandists, and yesterday's announcement by the State Department on Chancellor Adenauer's visit to Moscow is a good case in point.

"The State Department characterized the establishment of diplomatic relations between the Soviet Union and the West German Federal Republic as a victory for the policies of the West. In a long, formal statement drafted by Jacob D. Beam, Director of the Office of Eastern European Affairs, and Deputy Under Secretary of State Robert D. Murphy, and approved by Acting Secretary of State Herbert Hoover, Jr., the Department sought to give the impression that it was pleased with the results of the Adenauer mission, that this marked the end of Moscow's bankrupt policies toward Germany, and that it indicated the weakness of the Communist regime in East Germany.

"This statement bore almost no resemblance to the analysis of the Moscow-Bonn talks cabled to the State Department by the United States Embassy in Moscow. It served a useful propaganda purpose in West Germany by backing up the German Chancellor, but it gave the American public a wholly inaccurate impression of what the State Department really felt and thought about the renewal of diplomatic relations between Bonn and Moscow.

"The State Department was being criticized in embassies today for putting out a statement it was under no obligation to issue; for pretending that it knew all along that Chancellor Adenauer was going to establish diplomatic relations with the Russians, when it did not; for claiming victories which its own top officials doubted; and for putting out a carefully written official statement under the guise of remarks by a spokesman.

"This sort of thing," comments Mr. Reston, "has been going on for quite a while. Officials have great power to produce news. They have become increasingly aware of this and there is now a tendency, more marked than in the past, to use this power as an instrument of their own diplomacy and propaganda."

Sometimes matters of extreme importance are long withheld from the American people. A case in point is the secret atomic agreement concluded by Roosevelt and Churchill at Quebec in 1943. Speaking on the floor of the Senate on April 21, 1954 Senator Bricker of Ohio remarked: "At long last the American people know the terms of this agreement." But he added, "They did not receive this information from their own government. It came to them by way of a debate in the British House of Commons. I can think of no incident in recent years that reveals so great a contempt for the people's right to know what their own government has done and is doing."

As I have already indicated, this compilation of the Yalta papers which I have here is another example of the fact that the American people cannot trust what the State Department gives them. On this point, Editor Buckley of the new National Review reaches the following obvious conclusion: "Nor does the compilation pretend to give a complete picture of relevant Yalta documents, public and nonpublic; else the compilers would not have left out Roosevelt's report before a joint session of Congress in which, among other things, he told Congress, a few short days after offering Stalin crucial concessions in Manchuria, China, and the Kurile Islands, that the Far East had not even been discussed at Yalta." The magazine adds, "The evidence mounts that the State Department has edited this compilation in loving memory of Franklin Delano Roosevelt." How right you are, Mr. Buckley.

I would suggest one caution in your thinking, and this applies especially to those of you who are businessmen or women. Do not make the mistake of thinking of the State Department as an organization which you would run as you would your own business. Recognize the world-wide scope of the Department and the infinite variety of matters handled by it; consider the foreign influences brought to bear on it; above all, recognize the need for experts in many fields and the dependence of men at the top on such experts. Realize, as Secretary Hull once said, that most foreign policy is at the desk level, that is, by those experts, who, taken as a group, make up what we term the bureaucracy. In all your thinking about the Department, keep the importance of that bureaucracy in mind. Only thus can you understand why it is said of an institution dominated by such a bureaucracy, as it used to be said of China, that it swallows up all invaders but is conquered by none.

In such an atmosphere the influence of a single individual, be he even the Secretary of State himself, is not always as freely exercised as is sometimes supposed.

Do not, I urge you, minimize the power of the bureaucracy in the State Department. In my 26 years there I recall only one occasion in which the elite were deterred by any great concern over public opinion. That was in late 1949 when Secretary Acheson and Ambassador Jessup were stopped on the verge of recognizing Communist China. Today that point of view is being pressed forward again. I saw that same elite trade upon the good name of Cordell Hull and, with Alger Hiss as one of its leaders, engage in the greatest selling campaign of our history, the campaign of the early 1940's in which the American people were sold on the idea of our entry into the United Nations. In recent years I have seen the Department help defeat the Bricker amendmen even though almost two-thirds of the Members of the United States Senate favored it. I have seen public funds used to entertain and court those elements and persons whose support was sought by the bureaucrats. The most insidious of all has been the use of public funds and personnel in the Department for undercover attacks on elected representatives of the American people. A recent demonstration of the defiance by the Department of the will of Congress has been the nonpublication of the records of wartime diplomacy. Although the Senate Appropriations Committee in 1953 requested the Department to allocate funds for the publication of those records, which the Department said in May 1953 it could have ready for publication in a year, and although the Senate committee in 1954 requested that the work be continued "aggressively and in unexpurgated form," and recommended the necessary funds which the Congress ultimately voted; nevertheless, to this day, none of the special documentation requested by the Senate, with the single

exception of the Yalta papers, has been published, despite the lapse of almost 3 years.

No wonder that Senator BRIDGES, on hearing the charges made by Dr. Dozer, immediately requested a congressional investigation, adding, "The gravity of this matter strikes at the very integrity of the operation of certain functions in one of our most important departments, and if the charges are true, indicates a deliberate attempt to thwart the will of Congress."

It was for such reasons as the foregoing that I recently made the statement that officials who block fulfillment of promises made to the people, who play favorites with the public press, who deceive the public by suppressing certain documents, or who come out with comments which reflect slanted history and massive hindsight, not only themselves embarrass the Department, they impede the operation of constitutional government. I emphasize that we must not lose sight of the fact that for a decade our diplomatic experts have steadily been losing ground for us in the cold war, despite the squandering abroad of billions of dollars of the taxpayers' money, and that in the shooting war in Korea "the State Department crowd," as our military leaders bitterly reported, would not let us win. Operating behind a curtain of regulations which conceals its workings and protects this bureaucratic empire, the State Department, as I have said, is now almost beyond the reach of the Congress and the people. Unlike other departments, it does not have to submit an annual report; neither can it be required to show important papers to Congress. The State Department, I repeat, is no longer a mere Government bureau; it has become a free-wheeling, almost independent branch of Government, a petty sovereign state, far closer in spirit to chancellories abroad than to the grass roots of America.

Such trends as I have observed in the State Department, duplicated in some measure elsewhere in our national life, leave many Americans in a pessimistic mood. I note, for example, that columnist George Sokolsky concluded his comments for February 1 as follows: "And that brings us back to our national debt and a great many mistakes that were made over the past 20 years, by a bureaucracy that really governed us for the first time in our history. We accepted their rule because it is more convenient to obey than to be a dissenter. Besides, dissenters have bad names; they are not pleasant people. So we as a Nation let a flock of bureaucrats take hold of us and govern us. They told us what to do. Now we need to straighten things out, and we cannot because historic errors once made move rapidly and fix themselves so rigidly that only wars and revolutions can change them. So we have to live in this new world or not live at all."

How can the Nation correct this situation? No one can claim omniscience in the matter; I can only offer such suggestions as seem appropriate to me on the basis of 26 years' experience in the Department. On some of these points the precedents set by Abraham Lincoln serve as a guide. Here are four suggestions:

1. Cut the staff of the Department down to more manageable proportions (probably not to exceed by 100 times the size of the staff in the days of Lincoln and Seward);

2. Break up the New Deal, pro-Communist elite by removing all who, by the record, are not wholeheartedly devoted to the retention of American sovereignty and the American way of life (using Seward's purge of Secessionists as the precedent);

3. Recognize from experience that new officials, when only a handful in number, can easily be surrounded by holdover elements, and therefore make it a rule that an average of not less than one position in every 10, including half the positions of policy advisers and top administrators, shall be filled at every change of the national administration with new appointees who reflect the will of the people; and

4. Put a stop to State Department propaganda, and follow the lead of Abraham Lincoln in the prompt publication of diplomatic correspondence, with this activity subject to review by the Senate Foreign Relations Committee.

Unless we adopt some such program as this and break the hold which the self-anointed elite have on the conduct of our foreign affairs, then "government of the people, by the people, and for the people" may perish from America.

Testimony of Senator Flanders Before the Senate Subcommittee on Disarmament of the Committee on Foreign Relations

EXTENSION OF REMARKS
OF
HON. RALPH E. FLANDERS
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Thursday, March 8, 1956

Mr. FLANDERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the testimony which I gave before the Senate Subcommittee on Disarmament yesterday. My reason for making the request is that I already have had a large number of requests for the testimony, and I think it will be useful for the other Members of the Senate as well.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

TESTIMONY OF SENATOR RALPH E. FLANDERS BEFORE THE SENATE SUBCOMMITTEE ON DISARMAMENT

Mr. Chairman and gentlemen, if this were to be a published book, as a foreword I might well use a quotation from the works of the great American strategist and philosopher, Admiral Mahan, who said: "The purpose of military power is to provide time for moral ideas to take root."

The objective of our moral ideas protected by military power, is complete, universal, and controlled disarmament.

To achieve this objective our military stength must be great, and must include the use of atomic weapons.

The use of these weapons must be regularized, in a way which advances the moral ideas.

Against the backstop of atomic strength we may persuade the Soviet to disarmament, by the policies of moral encirclement and moral penetration.

From these elements we can devise a progressive, effective program for disarmament.

COMPLETE, UNIVERSAL, AND CONTROLLED

Disarmament, of course, is no goal in itself. Our aim is security with a disarmament. The specific measures of arms control I shall advocate are those which do meet the test of enhanced security for our Nation and for freedom.

Disarmament must be complete, universal, and controlled. It must be universal because even though the great nations of the earth disarmed, a minor nation equipped with arms and having the will to use them could exercise a military power which would destroy the prospects for peace.

In every nation disarmament must be complete down to the minimum needed to maintain internal order.

The disarmament we seek must be controlled. It must be inspected to make sure that it is controlled and complete.

We must further recognize at this point that the attainment of an effective agreement on universal, complete, and controlled disarmament is not enough. We would then be left with a vacuum so far as concerns the settling of differences between nations. We must therefore take into account the need for a world court, for a United Nations organization to administer decisions of that court, and for a United Nations police force to enforce them. I merely mention these developments as necessary if we arrive at disarmament, but that is not the subject of this presentation. Disarmament itself is the subject.

Let us take a realistic look at the difficulties we have met with our endeavor to attain disarmament.

After World War II there was first a dragging of the feet in our own Government which merged into a too obvious endeavor to use the move for disarmament as a means of putting the Soviet Government on the spot. This did not last long, however. There developed a serious desire to attain the goal so greatly hoped for by the people of the earth. When our endeavors became serious and earnest, they were defeated by the unwillingness of the Soviet Government to submit to the inventory and inspection which alone would give assurances either to them, or to the Western World, that any agreements were being kept. Inspection and control we must have.

With the later development of atomic warheads, and of missiles for delivering them, the problem of inspection and control has become increasingly difficult, particularly with respect to the location of stockpiles of fissionable material. We are therefore facing difficulties which did not exist at the beginning of our endeavors for disarmament. New approaches are necessary and some of these I propose to describe. But first may I define the proper limitations on our effort.

PROPER LIMITATIONS ON OUR EFFORT

Some of the old limitations remain. We must not disarm unilaterally. With regard to this, if any new lesson is needed, we can learn it from the results of the Summit Conference at Geneva.

At Geneva the frankness and evident good will of our President broke through the Soviet suspicion to that particular point where the Russian delegations became convinced that the United States was not planning aggressive war on the Communist nations. It has been said that the change in atmosphere was nothing more than a question of smiles and pleasant words. I think we will have to admit that important results came from this new understanding of our intentions.

Was it not a fact that the lightening of the Soviet fears stiffened their determinations and policies in the cold war? If they are not to be subject to attack by us, they could proceed with less hesitation on their program, particularly for East Germany. It will be remembered that at the second Geneva conference we were met with the outright statement that there would be no reuniting of East and West Germany except on terms which would in effect bring the reunited state under Communist control. In other words the removal of a threat from us resulted in their taking a stronger and more definite position than before. We must draw a moral from this in relation to disarmament plans. Unilateral disarmament is out.

Another old limitation is that disarmament and peace must not come by surrender. This we have been unwilling to accept in the past and we must not do so in the future.

We must not accept, for instance, tacitly or formally, the conquest of the satellite countries and the enslavement of their citizens. This position of ours is not one of in-

citing revolt. It is one of keeping before the Soviet Government and keeping before the world our willingness to compromise with evil.

NO COMPROMISE WITH EVIL—THE PRIMARY LIMITATION

There is a limited area in which we can compromise in economic or political matters but there is no room for compromise with evil.

What is the moral evil of communism? Abraham Lincoln long ago so clearly said that this Nation could not long exist half slave and half free. Surely it is clear to us in this day that it is going to be imposible for the whole world to live in peace half slave and half free.

Slavery in our day is even more militant than it was a century ago. It rests not day nor night. It brings one people after another, one nation after another, under its dominion. There is no safety in waiting humbly until it chooses to overwhelm the rest of the world and us.

What we face is the old type of slavery of forced labor for millions, of heartless separation of families, of ripping whole peoples up by the roots and transferring them to alien scenes. This is old, but something new has been added. It is slavery of the personality and of the soul itself. Among all the peoples under the Soviet yoke, the destruction of individual thought and moral responsibility is a commonplace. It is practiced upon the plastic young as these millions come to the age of self-consciousness and even before. Their elders have already been seized and molded. Those who have determined to retain their individuality and moral responsibility are subjected to such psychological and physical tortures as history never before has witnessed.

The crime against outstanding individuals is great. The crime against whole peoples, with their innocent children, is incalculably greater.

We can never condone or acquiesce in this crime at home or abroad. This is the ultimate standard by which we must measure our compromises in all negotiations of differences.

We must then be very clear in our own minds as to whether we are compromising on different points of view in matters economic, social, and political, or whether we are compromising with evil. The one is justifiable; ultimately, the other is fatal.

At this point we have arrived at negative conclusions. Any arrangements arrived at with the Soviet power looking toward disarmament must not be unilateral and they must not involve surrender to evil.

LONG-RANGE PROGRAM

As to positive policy, I would like to propose to this committee first a long-range program for disarmament and follow that with certain shorter-range proposals on which we can move immediately.

As to the long-range program, we must start with a recognition of the fact that our necessary military preparations and resulting military strength can be of use only as defensive measures. They cannot of themselves be used for preventive war, nor to bring about disarmament. All they can do is to protect us while we perfect and put into operation devices that are not in the material sphere at all, but which consist in bringing up spiritual strength and in operating through moral power.

The first item in this long-range program is that of a moral encirclement of the Communist powers. We have vigorously to bring to the attention of the nations of Asia and of Western Europe that they and we are dealing with evil—that we not merely must not, but cannot, surrender to evil practically or morally. Surrender to evil brings no practically useful results. That we have seen in the surrenders made to Japan, Mussolini, and Hitler in the period between the wars. This lack of practical benefit in the surrender to evil is fundamental to the nature of the spiritual universe, and we might as well become practical people and recognize it.

Moral encirclement means that there will be no neutral areas. We will so define and exemplify the eternal religious and democratic aspects of the world situation that the Communist powers will be left unsupported by world opinion or policy.

As compared with the encirclement by arms, it has immense advantages. The Soviet Government has no defense against it except by the tightening of its Iron Curtain; and if we are vigorous in presentation, the Soviets will lack defense in the countries outside of the Curtain which are trying to stay neutral.

The second element is moral penetration. This means getting around, under, over, or through the Iron Curtain to the people who are imprisoned within it. We are doing this in various ways at the present time. We are doing it with the Voice of America and with Radio Free Europe. We are doing it with balloons. We are doing it by numerous other means, some of which are doubtless of a classified nature. We must not be persuaded or bullied into giving up these means of communication.

Innumerable messages of the sort I have enclosed as an appendix can be devised. They can be free from hatred. They can be free from anger. They can be persuasive. If we pour this type of friendly suggestion into the Russian ears and bring it before the Russian eyes through the upper air, through evasions of the jamming and by any other means which patience, persistence and ingenuity suggest, there is going to be an ultimate result on the Soviet Government itself. We can say this confidently because it has become clear that the pressures of dissatisfaction generated by the policies of Stalin evidently became so great that they could not be disregarded.

The present rulers of Russia climbed into power on the mass of those dissatisfactions. It is not too much to hope that future rulers will climb into power over dissatisfactions with the useless expenditures of labor and money with which the armament program of their government burdens them, if we persistently point out these burdens directly to the people who are burdened.

IMMEDIATE ACTION

Besides these long-range undertakings there are at the moment presented to us opportunities for immediate action which we must seize and organize. I refer to the mounting tension of the atomic arms race spreading out now into 1,500-mile guided missiles and in the near future to the ultimate of this development in the intercontinental ballistic missile with its range of thousands of miles and its accuracy sufficient to bring a hydrogen bomb to bear on the earth's great centers of population.

In this connection it is well to remember that the speed and intensity with which this ultimate missile is being developed has certain sinister effects on its capacity. It is probable that the crash program would develop very shortly a missile which could be placed only roughly within several miles of its target. To place it more accurately, say within a mile of the target, would take several years more. It is in the nature of the problem that the objective of accuracy must be lost in the present anxiously accelerated program. That such acceleration would lead to lack of accuracy is bad and is morally inconsistent with what our policy must be.

Neither the 1,500-mile guided missile nor the intercontinental one are military weapons in the old sense of the word. They are weapons of terror in which the effect on populations is primary and on military targets secondary.

The medium range guided missile is particularly adapted to holding the cities of Western Europe as hostages to impose the Soviet will. We have of course the same opportunity to hold as hostages the cities the other side of the curtain but with the disadvantage of having to extend the range beyond the friendly satellites if we are to reach the Soviet cities, while the satellite countries are available as launching platforms for an attack on the West.

Into this balance so uneasy, so dangerous, we must project a new principle of practice and of negotiation. The new plan is one which has had much discussion in England and which was first set forth in an article by Colonel Leghorn of the Air Force Reserve in the United States News & World Report of January 28, 1955. The title of the article was "No Need To Bomb Cities To Win War." The title which has been given to the plan is that of graduated deterrence.

The essentials of the proposed United States policy of graduated deterrence are that we renounce unequivocally the use of hydrogen or atomic warheads for mass destruction in attacks on populations, unless such Soviet attacks are first made on the populations of the nations outside the curtain. In that event we must retaliate in kind against the Soviet.

Added to this is the retention of the announced decision to use whatever atomic tactical weapons may be considered necessary to repel military aggression. In other words, we would propose using these weapons and all weapons on a graduated scale, penalizing each military attack according to the intensity of that attack. If we make known that we are ready to do so and that we are not planning to extend the use of these weapons beyond the necessary precise target, then our possession of them becomes, or can be made to become, a graduated deterrent.

Our Secretary of State has used the phrase "graduated reprisals." But this scarcely expresses the possibilities. A reprisal is a sudden decision and action and goes into effect after the surprise injury has been suffered. A deterrent is the firm assurance made long prior to an attacking power that the weapons will be used in the event of an attack. That certain knowledge warns clearly and precisely of the risks to the opponent before he proceeds to the decision of an attack.

Now let us see what there is in this plan which leads toward disarmament and peace, for that is what your committee is concerned with.

It is now broadly recognized that reliable inspection for nuclear weapons is impractical. Although there is hope for substantial control to detect the diversion of peaceful nuclear materials for weapons fabrication, these controls cannot be perfect enough fully to prevent leakage of peaceful materials into military channels. These circumstances mean that nuclear weapons will be with us for a long time; perhaps forever. In facing these facts realistically, we are led to two conclusions; first, to concentrate on controls and reduction of delivery systems; second, to consider controls on the use of nuclear weapons, as a prelude and supplement to controls on their possession. Those who have been giving serious thought to graduated deterrence feel that it offers the opportunity to control the use of nuclear weapons and thus to proceed toward our objective by a series of steps which I commend to your consideration.

FIRST STEP

The first step is that of initiating public discussion and disseminating by all communications media an understanding of the conditions surrounding the use of atomic weapons. In the first place we should all realize that the real decision to brutalize was taken both by Germany and the allies when it was decided to seek victory through the terrifying and the destroying of civilian populations. The blitz on London and Coventry, the saturation bombing of Berlin and other German cities were outside the

proper military sphere. So was our destruction of large sections of Tokyo by the dropping of napalm on that inflammable city. To kill old men, women, and children in an effort to win a war was pure savagery. This fatal step was taken before the atom bomb was developed.

The early atom bomb is in essence simply a more effective way of carrying out the policy of political savagery. As I just said, such use constitutes no part of proper military action. It is a barbarous political action of the worst sort.

Another thing which we likewise should all recognize is that armies, navies, and air forces of all the great powers of the world are now organized for and directed toward the efficient use of atomic weapons. While we have been praying that they might not be used, the necessities of the situation require that we be prepared to use them. The atom bomb, the atom rocket, the atom missile are with us now and the military forces of the world are being trained in their use.

This is inevitable because if we are to have Armed Forces at all they must be prepared to the highest pitch of effectiveness. This means that they must be supplied with, and be efficient in the use of, atomic weapons.

Further, we must accustom ourselves and educate the free world to the fact that there is a great difference between nuclear explosions with large radioactive effects and nuclear explosions with limited radioactive effects, whether they result from a bomb delivered from a plane, an atomic head in a rocket or an accurately aimed guided missile. The tactical weapons can be effectively discharged and used against military targets without the deadly fallout which results from the maximum use of the maximum weapons. The long series of experiments carried out in the deserts near Las Vegas have demonstrated the effectiveness and the safeguards of tactical use. Such weapons have now become a normal and effective aid in military armament.

On the other hand the radioactive effects of certain weapons used in certain ways are such that in an exchange of blows, the populations of both sides would be destroyed, and mankind itself imperiled. Therefore, the distinction between the relatively safe but effective and the barbarously and suicidally destructive must be made clear to all of us.

SECOND STEP

With these distinctions clear, the public of the Western World is prepared for the second step—a unilateral announcement by all the western powers that they will not use mass weapons for nonmilitary destruction in future military action unless first attacked in that manner. We do not have to wait to negotiate this proposal. For the United States, the West, to initiate warfare of that sort would be so morally reprehensible that we could not allow ourselves to consider it. We have the weapons for it, but we have the moral strength not to use them unless forced to do so. Note that this is not unilateral disarmament. We retain the arms and their deterrent effect.

THE THIRD STEP

The third step is the formal announcement, widely broadcast, that we are armed and are ready to use the new tactical weapons against any aggressive military action. If the attack were by massive conventional forces we would use nuclear weapons, if necessary, to reject aggression only defensively—that is, not across the preaggression political boundary. No more. We must always be ready to use such weapons defensively and any aggressor should be in no doubt as to that.

THE FOURTH STEP

The fourth step is to initiate negotiations among the great powers as to what constitutes open cities, what constitutes legitimate targets, what is the area or the set of conditions in which tactical atomic weapons may be freely used. This will be the specific content and agenda of legitimate and new negotiations. It strikes out into new territory. In this connection I wish to include, and will read, the concluding paragraph of an editorial in the Washington Post of January 27, 1956. The editorial was entitled "Illusion of Peace." I will now read the concluding words:

"Unhappily, the United States has seemed largely sterile and barren of ideas on disarmament since President Eisenhower put forth his aerial inspection plan. The drift, and the unconvincing explanations, respecting nuclear weapon tests are a case in point. Would it not now be possible to combine a restatement of the inspection proposal with a plan to control large nuclear tests through an international monitoring system that would detect and advertise violations? Would it not be possible indeed, to broaden such a plan to include tests of the intercontinental ballistic missile, about which so much is now heard? There are feasible means of monitoring large missile tests. Is is not worth an effort to control the ICBM, as the intercontinental missile is called, before one side or the other achieves one? Let us hope that Messrs. Eisenhower and Eden, if they can first agree on a common policy in the Middle East, will be able to devote some attention to positive joint steps on arms control."

This ends the quotation.

FIFTH STEP

Step No. 5 is suggested in the editorial. We should negotiate for the suspension of use and even of testing of the intercontinental ballistic missile, as an exemplary approach toward all future weapon development of a terroristic nature.

There are two reasons for doing this. The first is that at present it is an instrument of terror and does not belong in purely military armament. The second is that it has not yet been proved as a working weapon. In addition, there are no stockpiles of them. We are not too far from the beginning of its development to bring it under control, even while for the present we press forward its development.

We missed the opportunity to raise the warning signs at the beginning of the development of atomic energy, whether for peaceful or military uses. We again failed to raise the warning sign at the beginning of the development of the hydrogen bomb. Let us have one more try at controlling this latest instrument of savagery.

Let us promise not to test these weapons unless another nation does so first, and let us propose details of supervised, inspected banning of the testing of intercontinental ballistic missiles and international control of use of large rocket devices for peaceful purposes. Let us again ask for mutual inspection of launching sites.

There is now in the public domain information which suggests that such controls can be reliable and that a ban on tests would delay for a long time the existence of effective military weapons of this type. With the knowledge of the immense capacities for destruction on both sides of the curtain, perhaps inspection can be agreed upon. Whether openly by agreed-upon inspection or by classified means, we should endeavor to put a stop to this as yet uncompleted final assault on humanity. Yet, while we are negotiating, we must experiment, test, use, and stockpile.

FINAL STEPS

Our immediate attention to the critical problem of the intercontinental missile opens the way to the more general problem of conventional arms. If the unconventional can be solved, so can the other.

Mutual inspection and control extended to the conventional area are a simple extension of what is required to meet the unmitigated terror of the ICBM, as it has come to be called.

The final steps will be the negotiation for setting up the necessary political institutions—administrative, judicial, and military—for replacing war by cooperative judgment and for replacing the sanction of war as a means of settling international disputes. Along with that, for us at least, must go the economic measures required to redirect our defense effort into useful channels of human service.

As you will note, Mr. Chairman, this is an unusual approach to the problem of disarmament. It is a realistic approach to the extent that it recognizes the present situation and calls for the honest facing of it by our people. It does not depend on any sentimental aversion to war. It does not look forward to unimplemented agreements. It is based on the grim requirements of the situation we live in today.

We must at once intensify the program for the long pull. That is for moral encirclement and moral penetration. This will give us the background against which we can make a new try at negotiations which recognize the facts of the life in which we are living.

Mr. Chairman, I hope and expect that this committee will not end its deliberation in formal words but will instead frame definite proposals which it can bring effectively to the attention of the people and the Government.

APPENDIX TO DISARMAMENT TESTIMONY—PEACE FOR THE EARTH'S PEOPLE, INTERPARLIAMENTARY UNION, HELSINKI, FINLAND, AUGUST 25–SEPTEMBER 1, 1955

(By RALPH E. FLANDERS, United States Senator)

The place, the time, and the subject of this meeting combine to give it deep significance.

As to the place, we find ourselves gathered here on the doorstep of the Soviet empire, in a country which suffered from the first aggressive expansion of that empire. This fact demands a frankness in expression which would not be called for in a more remote gathering place.

As to the time, we meet in the afterglow of the friendly conference at Geneva in July, where for the first time in many years the heads of four great powers discussed sympathetically the stalemate in armament which has faced them and their people since the close of World War II. What we say here must support, not hinder, the continuance of that friendly, cooperative search for a means of dissolving that deadlock in the interests of all mankind.

As to our subject, which is the attainment of peace, it is appropriate to the place and the time and to the universal hopes of all people everywhere.

Let us speak in frankness. We talk much about tensions and the means of relieving them. On this matter it is necessary to say that, generally speaking, there were no tensions until the Soviet empire entered on its program of expansion. In absorbing the Baltic States, in retaining East Germany, in seizing control of Poland, Czechoslovakia, Hungary, and the Balkan States, that empire has added 392,000 square miles to its territory and 90 million people to its subject population. Austria alone has been relinquished.

While this was going on, my own country was releasing the Philippines; Great Britain accepted the freedom of India, Pakistan, Burma, and Ceylon, while the Netherlands agreed to the independence of Indonesia. Freedom thus came to 2,894,000 square miles of territory and 555 million people. When we consider the contrasts between these vast changes of a very few years, is there any wonder that tensions arose? Do we have to seek far for the cause of these tensions?

Of course, there remains hundreds of thousands of square miles of territory and hundreds of millions of people who do not yet enjoy self-government. Self-government comes easiest to those who have been prepared for it. It does not come automatically in every case when a colonial power simply walks out of its occupancy. That may result in nothing more than a change of masters. But who can doubt that the area of the free world is advancing, year by year? That all may achieve freedom is the deep desire of the American people.

Our people have no interests which conflict with those of the people of Russia. We do not need more land. What land we have raises an embarrassing abundance of grain and fiber, and of the flesh of beasts. We have great forests and rich deposits of ore. Our seas teem with fish. Everything we need we have, or can obtain by freely trading for it from our own abundance. What we do want is peace and freedom. When they are threatened, we arm.

That these things are true can easily be seen by anyone who visits our country with open eyes and open mind. Let such a one come to the United States and look for the worst in us. Let him search out our slums. Let him examine our race problems. Let him measure the extent of these evils against the past and as a proportion of our present general well-being. He will find them diminishing components of a self-governing society. He will assure himself that our people have no ambitions to hazard their own well-being by any projects of conquest. Nor would any American Government long endure which sought to persuade them otherwise.

To put it in a word, self-interest forbids that we should seek conquests, whether political or economic. I am here today to point out that the same self-interest, controlling the policies of the Soviet government, will dissolve tensions and lead to the abandonment of armies and armament as the main support of national policy.

Is it not reasonable to believe that the leaders of the Soviet Government who will most strongly establish themselves in the future will be the men who make the greatest contribution to the personal well-being of the Russian people? Can there be a more stable basis for power than a successful program for providing more and better food, better clothing and housing, and better educational opportunities for the people?

Dependence on military force wars against this well-being. The enormous military programs result in less and poorer food and clothing, inadequate housing, and lowered opportunities. Armies, supported in readiness for attack from without, are in the meantime opposing the happiness of the people within. Disarmament should be the great objective of the people everywhere.

It may be argued that for the Soviet Government armed forces are essential to hold the satellites in subjection. But if there is to be no attack from without, the ring of satellites is unnecessary Nor are the satellites economically profitable to Russia as virtual colonies. No people, formerly free, will be productive in subjection. Slave labor is uneconomical. A free people, benefiting from their own enterprise, is infinitely more profitable as a neighbor than is the most cowed and subjugated horde of consripts. In the theory and practice of free enterprise, a continuously expanding commerce leads to growing benefits to those who buy and to those who sell. Again, in a word—the same word—self-interest decrees the freeing of the satellites.

Bountiful blessings for the peoples of the earth and for their rulers depend on the establishment of disarmament—complete, universal, and controlled—and on the acceptance of the kind and degree of supernational government required to administer it. The negotiations to this end now underway will be long and difficult. They must be pursued with faith and diligence. Above all, as a practical matter, these negotiations must be continued on the basis of long-range self-interest. Otherwise they will fail.

Self-interest is the approach but it is tied in to something deeper and more powerful. Self-interest, apparently so selfish and narrow, can be long-range and can be intelligent. When it is both long-range and intelligent, it leads to the sort of action which can best be described as being virtuous.

This relation between long-range self-interest and virtue covers a great area of human policy and action. Whether this correspondence between the two is universal is a question I am not raising at this time. I am only saying that, in the situation we have just been reviewing, self-interest and virtue coincide.

Eighteenth District Opinion Poll

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. HOSMER. Mr. Speaker, recently I mailed 16 questions to the homes of the 18th Congressional District of California which I have the honor to represent. The response was widespread. I believe my colleagues will be interested in the views expressed by this large group of Americans as shown in the following tabulation:

18th District opinion poll	Yes	No	No opinion
	Percent	*Percent*	*Percent*
1. "What 'we' did"? [1]	87.6	5.5	6.9
2. "Where 'we' are"? [1]	85.8	6.4	7.8
3. Finance new highways from more highway taxes instead of general revenues?	67.0	24.5	8.5
4. Reduce national debt before cutting personal income taxes?	77.8	16.5	5.7
5. Foreign aid is a needed weapon for winning the cold war?	63.8	26.6	9.6
6. Repeal McCarran-Walter immigration law?	24.8	44.8	30.4
7. Raise 1st class postal rates to help cut post-office deficits?	65.6	28.5	5.9
8. Federal aid for school construction?	59.3	32.4	8.3
9. Federal "reinsurance" of private health insurance plans?	41.8	40.6	17.6
10. "Soil bank" and flexible supports instead of rigid farm supports?	79.6	9.4	11.0
11. Repeal Taft-Hartley law?	11.4	75.1	13.5
12. Federal water-power projects only where private financing unavailable?	81.2	13.4	5.4
OPTIONAL QUESTIONS			
A. Do you think President Eisenhower will run for a second term?	53.3	31.1	15.6
B. Do you think the Government is giving away our natural resources?	26.7	56.9	16.4
C. Do you think the net effect of "big business" is good rather than bad for the country?	75.5	16.0	8.5
D. Do you think the net effect of the CIO–AFL merger will be good rather than bad for the country?	23.9	58.6	17.5

[1] As set forth in the President's state of the Union message in which he stressed "we" means not just his administration, but also Congress—including both parties—and all American people, Democrats and Republicans alike

Editorial Comment on Time Magazine Article Relating to Senator Jenner

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, March 8, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial, which appeared in the February 27, 1956, issue of the Huronite and the Daily Plainsman, Huron, S. Dak., relating to a Time magazine article referring to me.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TIME MAGAZINE OUTDOES ITS IDEOLOGICAL SELF

Senator WILLIAM JENNER, Indiana Republican, is a Senator far removed from the Plainsman's circulation area and we have not followed his activities too closely as a normal result.

So by reprinting the article from Time magazine on JENNER, in accompanying columns, and wording this editorial on the subject of Time, we do not pretend to delve into Senator JENNER'S merits or demerits. We can note in passing, however, that his Lincoln Day speech paraphrases many things this newspaper has also said and all in all the speech is not one with which we would quarrel.

No; what this editorial strives to call to the attention of the reader is the deliberate propaganda which Time magazine employs. The article on JENNER is printed as news. It is not news. Read it. Note the use of opinionated adjectives, the manner in which Time attributes opinions to other people.

Time just flatly hangs a label of "crustacean—reactionary—fossil" on JENNER. Time makes Craig "forward looking." The Abraham Lincoln National Republican Club in Time's vocabulary is "bitter-right." JENNER'S talks are "rabble rousing."

There is really no point to the inclusion, with a picture, of JENNER, as far as topical news of the week goes. The sole purpose of the article is obviously and clearly just to attack JENNER. If it was to be treated as news, it should have been printed a week earlier. Time skirts its dilatory coverage that way by saying: "Last week Indiana was just catching up with a classic JENNER tirade, etc." What the Time editors meant was that Time was just catching up with the news event and converting it into a vehicle for out-and-out propaganda against JENNER.

Times does this sort of thing constantly, of course, in every field of coverage. But this is probably one of the best, or worst, examples of just how unprincipled Time can be in masquerading opinion as news.

If Time labeled itself an opinion magazine, it would not be bad. But it sells itself as a news magazine. And that it most certainly is not.

The trouble is, of course, that it has succeeded in getting a great many people to believe that it is a news magazine and many Americans are sucked into reading it as such.

Unless they are careful readers, they find themselves getting a weekly brainwashing.

Remember this: When you read Time, you are not reading news, you are reading Time's version of what news should be, you are reading their opinions of what people are, of what trends exist, of what issues there are.

Defeat H. R. 5550

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following statement I submitted to the House Ways and Means Committee on Tuesday, March 6, 1956, registering my opposition against H. R. 5550:

Mr. Chairman and members of the committee, I asked for time to appear before you in order to make known to you my great concern over H. R. 5550 which provides for United States membership in the Organization for Trade Cooperation, usually referred to as OTC.

I don't have to acquaint you with the connection between the OTC and the General Agreement on Tariffs and Trade. As H. R. 5550 is written, its approval by Congress would carry with it the approval of the purposes and objectives of GATT, since OTC is proposed specifically to administer GATT and to work toward the fulfillment of its purposes and objectives.

Whether I am for or against GATT is beside the point. What is of the greatest significance is that Congress is being asked to approve this very complicated 8-year-old agreement by a backdoor approach. The actual agreement, that is, GATT has never been submitted to Congress and is not now before us. Yet we are asked to take a step that would represent an acceptance of the agreement, whther we like the agreement or not, whether or not we believe that the State Department went beyond its authority in signing GATT in 1947 or whether we think that Congress should surrender its power in this field or not.

Speaking as one Member of Congress I can assure you that I have no intention of resigning my authority, or my responsibility to my constituents, to the State Department and much less to an organization that would sit in Geneva and in which the voice of the United States would be reduced to one vote.

Not only would I be letting down the people who elected me and who look to me to speak for them in the Congress and who expect Congress in turn to speak for the United States in questions of foreign trade and tariff policies, but I would be giving my assent to the virtual disfranchisement of my constituents in this field of national activity, should I support the OTC.

In this bill the State Department has contrived a well-hidden snare, preconceived as a means of taking out of the hands of Congress the power lodged there by the Constitution, without Congress discovering the stratagem until it was too late. By that time the word of the United States would be so pledged and cross-pledged in international agreements that in all good honor we could not withdraw. Our freedom of action in Congress would then be a mockery and that would be made all the worse because we would have no one to blame but ourselves. Our constituents would soon realize that their representatives in Congress had lost their power and that a vote in congressional elections was a vote wasted, so far as influence in our foreign-trade policy is concerned.

I am sorry that my feeling toward the State Department is marked by such a high degree of distrust. The distrust has, however, been of their own making. Why do they not come forward with a bill proposing that the executive and not the legislative branch should regulate our foreign commerce? That is their desire and their objective in this bill. I would respect them for it even though I would not agree with them. As it is I neither agree with them nor can I respect them for their tactics.

The reasons advanced for seeking the OTC, short of the real purpose that I have outlined, do not add up to good sense. For 7 or 8 years GATT has functioned without OTC, and has transacted much business. It has sponsored four international tariff-cutting conferences and has disposed of a considerable agenda at each of its annual sessions.

So, why is OTC necessary? If OTC is to be no more than the State Department claims for it, its existence would add little or nothing to what GATT already provides. It would be nothing more than an international sewing circle, offering tax-free jobs to an ever-growing list of international bureaucrats.

The logic of this reinforces my conviction that the State Department is after something far more meaningful than its repeated disclaimers suggest. The OTC proposal is nothing less than further prosecution of the Department's tireless quest for control of all of our foreign trade policy, including both its determination and its execution. It seeks the OTC as the stamp of approval of Congress itself for State Department management of our foreign commerce through GATT.

In my opinion we cannot consent to such a renunciation of responsibility; in fact, we should roundly condemn any scheme that seeks such an end by indirection. I deplore the State Department's attempt; I denounce it as an unworthy asault by one branch of the Government upon another and resent the method of it as a reflection upon the intelligence of Congress.

I strongly urge this committee to give the State Department the answer it deserves by defeating H. R. 5550 outright.

Announcement by Hon. John F. Kennedy, of Massachusetts, in Support of Nomination of Adlai Stevenson

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, March 8, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I made this morning.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ANNOUNCEMENT BY SENATOR KENNEDY, MARCH 8, 1956, IN SUPPORT OF NOMINATION OF ADLAI STEVENSON

We are about to begin, commencing in New Hampshire next Tuesday, a series of primary contests in several key States which will influence greatly the choice of the convention for Democratic nominee this summer.

Massachusetts will have no such primary. I therefore feel that now, not later, is the appropriate time for many of us to speak out on the candidate of our choice.

I supported Adlai Stevenson for the nomination in 1952. I shall support him again in 1956. No other candidate in 1952 possessed his unique combination of qualifications for that most arduous of offices. In the intervening years his intelligence, farsightedness, and temperate approach to difficult problems have not diminished nor been matched by any other potential nominee.

Consequently, Adlai Stevenson remains, in my opinion, the most outstanding choice for the Presidency in 1956, and he is the most deserving contender for the favor of the American people in November.

Governor Stevenson, beholden to no group or section, belonging neither to a left wing nor a right wing, represents indeed the finest traditions of our party and Nation. He is well equipped to resolve the clash of opinions and interests which confront our Nation at home, and to deal successfully with the baffling problems abroad which have increased in intensity in recent months. Speaking for myself, I intend to exert every effort for his nomination at the convention and his election next November.

Speech by Dan Smoot at For America Rally

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 8, 1956

Mr. DORN of South Carolina. Mr. Speaker, a few days ago a large rally was held in New York City sponsored by For America. The following speech by Mr. Dan Smoot, of Dallas, Tex., before this immense gathering is a challenging address, timely and worthy of consideration by all loyal Americans:

DAN SMOOT'S SPEECH AT FOR AMERICA RALLY, CARNEGIE HALL, NEW YORK CITY, FEBRUARY 22, 1956

Not long ago a correspondent from a newspaper in one of the Socialist nations of Europe—Sweden—came in to see me in Dallas. The fellow was making a tour of the United States and was sending back to his paper in Stockholm a daily column, reporting on what kind of people we Americans are and what kind of country we have.

By the arm's-length way in which he approached his interview with me, I could tell that he had evidently heard a little about me: namely, that I represent a queer kind of fossilized American as near to becoming extinct as the Texas whooping crane. He wanted to get a look at me before my kind vanishes from the face of the earth.

I didn't give him much information for his column. In fact, he didn't seem to want any. He was telling me.

He told me that we Americans are the luckiest people on earth. This fabulously rich country that we have inherited. One of our 48 States, he informed me, has more automobiles than the total of all automobiles in three of the biggest nations in Europe. We have more bathtubs than all other people on earth put together. And we have so much food that our Government has to prosecute people for trying to raise too much. And the oil is—is oozing out of our ears.

Americans are blessed of providence, he said, that they fell heir to this great favorite continent, marvelously abundant in natural resources.

I asked the Stockholm correspondent whether he had ever been in India.

He said he had, and he shook his head sadly over the grinding poverty he had seen there.

I told him that India is richer than the United States.

His mouth fell open as you can imagine.

"India richer than the United States?" he asked.

"Yes," I said, "in natural resources. The Indians still have all of the infinite resources which nature, through milleniums of times, has put in the earth. It's all still there safely stored in the ground, untapped. We Americans have ours up and in use."

The man didn't know how to deal with whooping cranes; but he wasn't a quitter; he made one more try at it.

"You are proud of your American heritage, aren't you?" he asked, rather craftily, knowing full well that he now had me cornered.

"Oh," I said, "pride in my American heritage is an exquisite passion in me; but we haven't been talking about my heritage."

"But that's the very thing I came in to talk to you about," he protested. "That's the purpose of my visit with you." "Oh, well, then," I said, "We had better start all over. You spoke of heritage in terms of bathtubs and automobiles; and I inherited neither. I was never inside a bathtub until I was in my middle teens, and I was a full grown man before I owned an old jalopy."

He could see that there was no point in talking with an unwashed person like me. But he did try to say something polite before he left.

"You Americans have done a proper thing in sharing your blessings with the rest of the world, through the Marshall plan and other overseas aid programs. I know you are proud of that."

I suppose I was needlessly blunt.

"I think our foreign aid is immoral," I said.

"It is immoral because it robs me of my substance for purposes which are harmful to my Nation (such as, the subsidizing of Communist and Socialist governments abroad) and it steals the freedom of my children before they even have a chance to protest."

The Stockholm correspondent didn't stay around to hear any more; and he never sent me tearsheets of his column on me.

I never got around to telling him about my heritage, but, perhaps, he wouldn't have understood anyway.

I was born free.

That was the rich patrimony my father left me—the richest a man can leave his son.

I was born free.

I have two sons who were born part slaves.

My little baby, before he can talk, already owes more than $6,000 as his per capita share of the national indebtedness—if you add to the official national debt the pending obligations of our Government under social security, veterans' benefits, and miscellaneous pipeline commitments to the whole wide world.

Never will my sons have the freedom to enjoy the product of their own labor. The Government will beat them to every paycheck they ever earn. The Government will take what it wants out of their salary before they ever get their hands on it—permitting them to have what is left. And the percentage they are permitted to keep decreases rapidly from year to year.

If they were grown and working today, they would be only about one-third slaves, two-thirds free. What will the ratio be 20 years from now? Two-thirds slave, one-third free?

How can any responsible adult American today look into the faces of his children without hearing the lost and wind-grieved ghosts of his own childhood crying.

"You were born free."

Why have we Americans given up so much that was unique and important in our own system in order to adopt European methods that were already worn out and proven to be harmful to freedom?

Consider our taxing system.

When we adopted the income-tax amendment in 1913, we removed the one constitutional limitation which made socialism in the United States impossible—and which made our form of government different from any other in human history.

Roosevelt was the first President to discover the full political potential of the 16th amendment. Since his first administration, the practice of buying votes with the voters' own money—of promising the people something to be paid for out of the Public Treasury—has become a fixed habit of both political parties.

And oddly enough, our national stampede backward into the night of history is hailed by modern liberals as progress in the service of our "enlightened self-interest."

One of the main things that Socialists of this century have subverted is language.

Nowadays, liberal means illiberal. Freedom means slavery, Justice means tyranny. And peaceful coexistence describes the ultimate serenity of an unarmed man who enters a cage with a hungry tiger. After the tiger has eaten him, they are both at peace.

Actually, as philosophies of government, modern liberalism, communism, and fascism are all essentially the same.

All of them believe that government should have unlimited power to do to and for the people what government thinks good for the people.

They differ on the superficial question of how government should get and exercise power; but they agree on the fundamental question of how much power government should have: all of them think that government must have absolute power—in order to promote the general welfare.

The trouble here is that when government has absolute power to promote the general welfare, government must also have absolute power to decide what the general welfare is.

Hitler's gas chambers were designed to promote the general welfare—as Hitler saw it. Stalin killed off whole races, provinces, and economic groups of people inside Russia and put millions in slave camps—to promote the general welfare—as Stalin saw it.

Within 5 years after they had taken over China, the Communists had murdered 50 million people—to promote the general welfare—as the Chinese agrarian reformers see it.

Today, it is liberal to take money from you and put it in a big Federal pot, on the presumption that politicians will make better use of your money that you would.

Yet, nowhere in the history of the human race is there any justification for this naive faith in political power.

From ancient times until now the welfare state, wherever and whenever tried out, has failed utterly to provide economic security—and it always ends in slavery.

Whenever a politician tells you that your Government has a warm, personal interest in you and that he wants the Government to be a big brother to you—that politician (no matter how popular he may be, nor how wide his grin) is misleading you into slavery.

The Soviets tried to legislate the perfect society; and today the average Soviet citizen has about as much freedom, and less comfort, than the inmates of American jails.

Yet, in our madness, we can think of nothing better than to imitate the Soviets.

Remember the period when we held the only decisive weapon in the history of warfare?

War for America was automatically outlawed then—with any kind of intelligent policy—because we held the ultimate weapon.

Did we employ our resources to maintain the lead which guaranteed the safety of our homeland?

No. We squandered our resources on uplift for a world which despised us for our efforts.

In our so-called national defense effort, we were penny pinching and halting in research and production of superweapons and of the craft to deliver them.

Instead, we mimicked the Soviets.

They were a police state, maintaining mammoth land armies. We tried the same system, although any bright child should know that we could never match the Communist world in the mobilization of military manpower.

While neglecting the only kind of armaments that would protect America, we drafted our young men—taking them away from the scientific training and industrial production that meant our salvation—and scattered them over the earth to fight the border wars and police actions and stand guard for other nations which appeased and traded with the enemy whom we were defending them against.

And while we were doing this, the enemy—with the help of traitors among us—obtained and developed that ultimate weapon that had been ours.

Now, war for America is no longer outlawed. It is at best stalemated.

A popular national magazine recently ran a remarkable article about this stalemating of military conflict between the U. S. S. R. and the United States of America, reporting that the Soviets are now shifting to industrial competition. They are bending all their energies to overtake and then surpass America in industrial production.

Do the editors recommend, therefore, that we free our economy of Soviet-type controls and relieve our people of crushing taxation so that our free economy can prove itself incomparably better than any police-controlled economy ever devised?

Not at all.

We must again mimic the Soviets.

We must create more and better Marshall plans and atoms-for-peace plans so that we can throw our national resources away more rictously than ever before.

Whenever the Soviets make a political gesture of suggesting aid to a foreign Nation, we must be prepared to rush in and smother that nation with gifts.

As a dog returneth to his vomit, so a fool returneth to his folly.

Having permitted the Soviets for 10 years to call all the signals; having neglected our own defense in the interest of international politics; having crushed much of the initiative out of our own people with destructive taxation; and having taken much of the mobility and flexibility out of our system with Soviet-type controls and taxes, we have helped the Soviets to close a part of the gap that separates their inefficiency from our efficiency.

And now all that is recommended is more of the same.

We must dream up new idiocies to replace the old.

What has happened to our faith in ourselves, in our own system, in our God?

Here is the threat to the life of our Republic:

Having begun our national life with assertions of faith in God—believing in the unconquerable power of individual man who has the faith to depend on God and the fortitude to rely on self—we have come to accept the Old World idolatry of State worship: Worshiping government as the great manmade god who can look after us and solve all our problems and converting our President into a kind of holy Caesar who can do no wrong.

Where runs the road ahead?

Remember these magnificent lines from Garet Garrett:

"There are those who still think they are holding the pass against the revolution that may be coming up the road. But they are gazing in the wrong direction. The revolution is behind them. It went by in the night of depression, singing songs of freedom.

"There are those who have never ceased to say very earnestly, 'Something is going to happen to the American form of government if we don't watch out.' These were the innocent disarmers. Their trust was in words."

In the 1930's our Nation was in trouble—deep trouble. There was nothing wrong or inadequate about our constitutional system. American capitalism was not sick of old-age or organic weakness: it was suffering from grievous wounds inflicted by the governmental meddling of World War I.

The proper solution for our economic problems was not to abandon our old American system but to return to it.

The American people knew this instinctively. That's why they listened in 1932 to a great voice that sang the song of freedom:

"Any government, like any family, can for a year spend a little more than it earns. But you and I know that continuance of that habit means the poorhouse.

"Let us have the courage to stop borrowing to meet continuing deficits—stop the deficits.

"If a nation, like a spendthrift, throws discretion to the winds, and is willing to make no sacrifice at all in spending; if it extends its taxing to the limit of the people's power to pay, and continues to pile up deficits, it is on the road to bankruptcy."

Those are passages from the 1932 campaign speeches of Franklin D. Roosevelt.

As Garet Garrett said, the people put their trust in words.

Tonight is a time for words. But tomorrow is a time for action.

We, here, who believe in the American fundamentals laid out in George Washington's Farewell Address, hold in our hands the hope of the coming years.

But we cannot realize that hope for ourselves and our children by merely talking to each other.

America has been travelling downward, away from her high destiny, because we have permitted the levers of political power to fall into the hands of men who do not understand, and who have no real faith in America.

We must act in this crucial year to place in high office men who know, who love, who understand, and who will uncompromisingly stand for America.

Proposal To Bar Radio and Television Advertising of Liquor

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, March 8, 1956

Mr. LANGER. Mr. President, I ask unaninmous consent to have printed in the Appendix of the RECORD a petition signed by 10,000 persons, more or less, in favor of the so-called Langer bill to bar television and radio advertising of liquor. I ask that the petition be printed in the RECORD.

There being no objection, the petition was ordered to be printed in the RECORD, as follows:

PETITION

To our Senators and Representatives in Congress:

We, the undersigned, respectfully petition you to exercise the proper discretion vested in you by passing legislation to prohibit the transportation of alcoholic beverage advertising in interstate commerce, and its broadcasting over the air, a practice which nullifies the rights of the States under the 21st amendment to control the sale of such beverages. At a time when 1 out of 10 drinkers is becoming an alcoholic there should be no encouragement to increasing the use of such beverages. Children and youth are being misled to consider them harmless, especially by the powerful audio and visual suggestions of radio and television.

Treatment of the American Indians

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, March 8, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Fred Pillsbury, which appeared in the February 26, 1956, issue of the Boston Herald.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NO MINORS, INDIANS, DRUNKS, OR DOGS

(By Fred Pillsbury)

There is about 1 worker in the United States Department of Indian Affairs for every 28 Indians.

Yet the Indian is the worst fed, the worst clad, and the worst housed of any racial group in the United States.

The Indian has the highest illiteracy rate. He gets the poorest schooling, the poorest medical care and the poorest Government services of anyone in the country.

While the average life of a white person in the United States is now 68, and that of a Negro is 60, the life expectancy of a baby born on the Papago Reservation in southwestern Arizona is 17 years. The figure is approximately the same for the Navahos, the Hopis, the Utes, the Sioux, and other reservation Indians.

The shameful plight of the modern American Indian is presented in no-holds-barred fashion in America's Concentration Camps, by Carlos B. Embry (David McKay Co., $3.50, pp. 242). Mr. Embry, a Kentucky newspaper publisher, former school teacher and State senator, roundly condemns this country's treatment of the Indians from colonial times right through the Eisenhower administration. From Washington's day on, Presidents, politicians, and bureaucrats have promised the Indian a new deal—and taken no substantial action.

NEGRO AND INDIAN

Perhaps Mr. Embry's most telling point is his comparison of how the Negro has fared in the last 100 years with how the Indian has been doing. "Usually," the author writes, "when we speak of racial minorities, segregation, fair employment, or the oppressed and persecuted, we think of the American Negro. But the Negro has come a long way from slavery in 100 years, while the position of the Indian has been practically static."

Negroes today own 14 banks, 200 credit unions, 60,000 retail businesses, 26 savings and loan associations, and 25 large insurance companies with assets of more than $100 million. They own and publish 150 newspapers and several major magazines. They own 184,000 farms, averaging 70 acres each; some 10,000 Negroes graduate from college each year; large numbers are found in all the professions, yet there has never been any Federal bureau of Negro affairs to help them out.

American Indians own no banks, no insurance companies, no credit unions or savings and loan associations except those sponsored by the Government, and few retail businesses. Few Indians graduate from college, one important reason being that few of the high schools operated on the reservation by the Government are accredited. For this reason, Indian veterans have been largely unable to avail themselves of the opportunity to attend college under the GI bill.

The number of Indians engaged in the professions is practically nil. The reservation schools are staffed with white teachers. The reservation doctors are white, and the reservation Indian lawyer does not exist. Most of the traders on the Indian reservation are white, an outgrowth of our Government's determination to have peaceable trade and intercourse with the Indians. Needless to say, the white traders run things just about as they please in the same arbitrary way that Washington runs the affairs of the Indians—with little or no concern for what the Indians themselves desire. "We know what's good for you," seems to be the attitude of the Department of Indian Affairs. According to Mr. Embry it never has.

This is an example of what happens (in direct violation of the Indian Reorganization Act, incidentally):

The Navahos were asked to draw up a budget of the tribe's requirements for 1950. Members of the tribal council left their jobs and traveled long distances to spend 3 days working it out. "But when they submitted their recommendations they found that the agency officials had prepared a budget and forwarded it to Washington."

"They were just kidding us," said one council member. "And the worst of it is that we could not even find out the amount of the budget or the items on it. They don't tell us these things, although we are supposed to see that the money is wisely spent."

CONSERVATION

Conservation has sometimes hit the Indians where it hurts. The sheep and goat have long been the backbone of the Navaho economy (the Navaho has been abused about as much as any tribe). The horse has been a prestige item. But now and then the Government has announced, without warning, stock reduction programs with no regard to how the vast bulk of the Navaho subsist or their cultural habits. And the reservation Indians have never been paid for not raising sheep or goats or horses.

What is to be done? The Indian, says Mr. Embry, "must be integrated into our regular governmental plan"—after the Federal Government has lived up to its many, neglected treaties and agreements. Land and funds held in trust by the Federal Government should be turned over to the Indians. The Indians should be given the right to govern themselves, the same right that other citizens have. It is elementary that State laws which deprive Indians of the right to purchase liquor and vote should be abolished. The Indian, in short, should be given control of property and destiny while the Government does something new—lives up to its obligations to the Indians.

Mr. Embry does not suggest it, but perhaps what the Indian needs to get this is an NAACP type of organization to fight his battles. But, of course, to have an NAACP there has to be some measure of freedom in the first place.

All Americans should read America's Concentration Camps—and wince.

Fifth Anniversary of Imprisonment of Archbishop Beran

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. KEATING. Mr. Speaker, the one thing above all else the Communists fear is the spread of truth behind the Iron Curtain. Their entire system is based upon the suppression of information from the outside world and stifling of opinion and thought within their tyrannical empire.

Recognition of this situation makes it doubly important that we pause today to consider that next Saturday marks the 5th anniversary of the imprisonment by the Communists of Archbishop Joseph Beran, Archbishop of Prague.

Archbishop Beran is one of the great churchmen of Europe, widely loved within and without the Catholic Church. Even in absentia, his spirit is a strong factor in the will of his countrymen to be free. He stands today—wherever he may be—as a symbol to the people of Czechoslovakia of their desire to rid themselves of the infamous Soviet rule which has temporarily rubbed out their proud heritage of liberty and freedom.

The Archbishop of Prague is but one of many noble men who have lost their freedom in service to their church in recent years. Cardinal Tien in China, Cardinal Wyszyski in Poland, Cardinal Stepinac in Yugoslavia, and Cardinal Mindszenty in Hungary are others who have suffered cruel imprisonment under the Soviets.

Mr. Speaker, the free world, by its stony silence, is sealing the fate of Archbishop Beran and his gallant churchmen. Does the fact that these innocent men are still suffering amidst the apathy of the rest of the world mean that we have given them up for lost? Does it mean that we are insensible to the crimes which have been perpetrated against them?

No, Mr. Speaker; we have not forgotten them. But we must intensify our efforts to set them free. Through the Voice of America and Radio Free Europe we must demand an end to the terror behind the Iron Curtain. By raising our voices in protest, we not only bring hope to those imprisoned under Soviet rule, but we also make sure that the entire world is informed of the true facts of religious persecution in the lands where the Red hordes have taken over.

As we pause today in sober commemoration of Archbishop Beran's tragic removal from Prague, let us reaffirm our opposition to the godless evil which has brought so much misery and suffering upon the world. We in the United States, as the world's great disciples of freedom, cannot in good conscience continue to pursue our present disinterested course. We must renew our demands that Archbishop Beran and others who are suffering a similar fate are given the freedom to which all men are entitled.

Ford Foundation: We Need a New Word for Philanthropy

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. RABAUT. Mr. Speaker, the Congress of the United States seems to me quite properly the sounding board for applauding the most recent of the great gestures of the Ford Foundation on behalf of the people of the United States. It is for this reason that I rise to add my voice to the paean of praise from everywhere that met the Ford grant of half a billion dollars for the Nation's private hospitals, colleges, and medical schools.

This bold impact of business largess on American life is giving a new dimension to philanthropy.

Philanthropy on this grand scale calls for some new word, and that word has not yet been coined. For what we have here is not philanthropy in the old accepted sense. What we have here is, indeed, philanthropy and social consciousness in its noblest form, joined with business and financial statesmanship of a high order. What we have is vast wealth in full and potent recognition of its responsibilities and financial resources employed in the public interest on an enlightened plane. The grant of $500 million views the current pattern of American life and seeks to give it the infusion of strength and stability where strength and stability are most needed and may produce the greatest good for the greatest number over the longest period.

The weakest spot in American life at this hour is education, in terms of financial need.

With precision, intelligence, and the most careful kind of planning, the Ford Foundation aimed at this most embarrassing phase of our generation and with a single blow lifted it out of the doldrums. The problem is too overwhelming to suggest that this donation brought with it total solution. But it made an extraordinary dent.

When in the history of American philanthropy—or philanthropy anywhere—has there been a comparable donation?

After the weak spot in American life which we have for long identified as the inadequate schoolroom, the underpaid teacher, and the lack of teaching personnel, came the Nation's other great need. This was the need for the support of the Nation's private hospitals. Thus the grant includes $200 million in outright gifts to some 3,500 voluntary, nonprofit hospitals. It means that each hospital listed will get from $10,000 to $250,000 to improve its services.

What do we have, then, in just money terms?

We have of this half billion dollars, $210 million to be disbursed for endowment grants, the annual incomes from which are to be used to increase faculty salaries at each of the Nation's 615 regionally accredited privately supported liberal arts and sciences colleges and universities. The grants range from $31,000 to $5 million. Secondly, we have $200 million for hospitals. And finally we have $90 million for privately supported medical schools.

Beneath this simple itemization what I would call modern, scientific philanthropy, rests a certain goodness of heart, and a policy of high-level executive planning which is—as I see it—without precedent in the history of our society. It is the American story reflected from a new angle of vision and it does us all proud for it involves the essential characteristics of the American tradition. The story of Henry Ford, both the generation that gave us the model T and the generation that gave us the Thunderbird, is in a very concrete sense and on a large canvas the story of the American people. Here is invention. Here is enterprise. Here is success. Here is faith. Here is above all the brilliant spirit of the pioneer. It is achievement in which, under the American system, everyone seems to share and in which untold millions of us were participants.

It is the story of the individual thriving in a climate of freedom and opportunity and joining with all America, and having all America join him, in the fabulous success of a fabulous life.

For me this $500 million gesture is the crowning touch of a philosophy of free enterprise and private finance capital and to the progress and the good fortune that it has produced. It is the finest example possible of great wealth being used beautifully and effectively—as a trust, for the benefit of mankind. In the great modern theater of the world's business there are few industries comparable to Ford. And in the great modern theater of vast accumulations of wealth we have here the profoundest example yet of huge finances, segregated in a mighty fund, and expended in a manner that without eccentricity has captured the imagination of the American people.

For what has been done has been done wisely.

What has been done has been done under the ablest counsel.

Each problem this fund sought to attack has been first carefully studied by experts. What we have is first the means, then the heart, then the wisdom.

The end result is a type of philanthropy for which I insist we need a new word.

Ford is a name woven deep ito American industrial history. In the smaller forms of business it has been repeated time without number. Every businessman is a potential Ford. For what conditions did he have that were not available to other Americans? In 1903, the Ford Motor Co. began with a total cash investment of $28,000. Since 1919 the Ford empire has been a Ford family enterprise. Today three of Henry Ford's grandsons are the operating heads of the company.

All that I have been saying about this $500 million grant stems from the organization of the Ford Foundation by the original Henry Ford and his late son, Edsel. It is now the largest philanthropy in the United States. Our laws and

Ford wisdom are to be lauded for the fact that the establishment of this foundation made it possible to prevent what would have amounted to the liquidation of this magnificent business enterprise because of inheritance and other taxes.

The American people gain as a result and all of us become the beneficiaries of Mr. Henry Ford's will.

It may be that the great gift of all to evolve from this Ford adventure in philanthropy is yet to come. For there are other great business enterprises and there is financial talent and goodness of heart in great abundance among our 165 million people. I can see in it an object lesson to legislation itself. Henry Ford, more perhaps than any other individual of his time, brought manufacturing to bear spectacularly on the history of American industrial progress. His grandsons are following in his footsteps to their great credit. Just as other manufacturers have followed where Ford has led, may our world not hope that other masters of vast accumulations of property may emulate him and his kith and kin in the world of enlightened philanthropy? Meanwhile, should not Congress take heart from this princely bequest? Ought we not reappraise our problems? Is it not for us to adopt an attitude, legislatively, toward education and medicine that will at long last bring us to the goal toward which Ford has so brilliantly advanced us? That goal is the betterment of life for all mankind by the intelligent use of the people's wealth for the people.

Thomas G. Masaryk, Great Leader

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. DOLLINGER. Mr. Speaker, I join with the many thousands of Americans of Czech and Slovak ancestry who are honoring the memory of Thomas G. Masaryk, who has taken his place in history as one of the great champions of the cause for freedom.

He is hailed as the founder and liberator of the Czechoslovak Republic; under his inspired leadership the people of Czechoslovakia achieved freedom, democracy, and independence. He was a great patriot who, by his high ideals, faith, and courage, led the people of Czechoslovakia so nobly that between the years of 1918 and 1937, when he died, they had built their country into a strong and flourishing nation.

The freedom of his country was short-lived, for shortly after his passing, Czechoslovakia lost its independence first to the Nazis and later to the Communists. However, the people of Czechoslovakia are ever mindful of the example set by Thomas Masaryk, his sacrifices in their behalf, his unwavering belief in the principles of freedom, democracy, justice, and honor; his prayers that his people should remain free from tyranny. Although the people of Czechoslovakia suffer under tyranny today, they have not forgotten their past freedom or the principles of the man who helped them achieve it. They will not miss any opportunity to grasp that freedom again for the spirit of Thomas Masaryk lives on in their hearts as it does all over the world where men adhere to the principles of liberty and abhor totalitarianism and dictatorship.

It is fitting that on the anniversary of the birth of the great Thomas Masaryk, we who are free of the shackles of bondage and tyranny, should rededicate ourselves to the principles for which he stood and to the tasks which lay before us. We must work unfailingly to preserve our own freedom and to do all we can to help others, less fortunate than we, to regain and to maintain theirs.

Goons Have Influence

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, Edward Chevlin was a witness who gave a congressional committee, holding hearings in Kansas City in an effort to check goon squads who were entering the construction of several Government projects and depriving thousands of union men of their jobs, valuable testimony which assisted in stopping the unlawful activities of Ring and his goons. What happened to Chevlin is briefly told by a February 6, 1956, editorial from the Kansas City Times which reads as follows:

THE STRANGE CHEVLIN CASE

Judging by comments around town the outcome of the strange case of Edward Chevlin and the prosecutor receives general approval. You wouldn't think of the erratic, loquacious Eddie Chevlin as material for a hero or a cause celebre. Yet circumstances combined to make him a passing TV star of this area, the subject of a national magazine story and the object of aroused citizen support.

In the summer of 1953, you recall, the whole area was aroused over the disastrous construction shutdown forced by O. L. Ring and dramatized by roving muscle men with guns. In that tense situation it was little Eddie Chevlin who was the star of the congressional committee's hearing, watched over TV by scores of thousands. He told a dramatic story of sluggings, threats and implications of chicanery—the situation that led him to carry a gun.

To Kansas City Chevlin became known as the No. 1 prosecuting witness for any legal action to be taken against the Ring crowd and its allies. The main puzzlement came some time after a county grand jury indicted Chevlin for brandishing a gun at the same time that the muscle men were being indicted on a long list of charges. It turned out that the indictments against Ring and his crowd faded out or were reduced to minor charges. And they seemed to be handled as routine cases by the prosecutor's office.

But when it came to the prosecuting witness, Chevlin, the prosecution was handled personally by Richard K. Phelps, the prosecutor. While the charges against the Ring crowd faded quickly, Phelps hammered away at Chevlin through 4 trials. Chevlin was kept under the shadow of a felony charge for nearly 2½ years.

The public couldn't pretend to pass on the legal merits of the many cases that came from a grand jury investigation. But the public does have a sense of fairness. And Eddie Chevlin has become more significant than he could have expected in his wildest dreams.

H. R. 9777: A Bill To Amend the Davis-Bacon Act

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. PELLY. Mr. Speaker, on Tuesday, March 6, I introduced H. R. 9777, a bill to amend the Davis-Bacon Act. The amendments proposed in my bill would, in brief, broaden the scope of the present law, making it a mandatory provision in any federally assisted construction program. The present act is obligatory only in those projects financed entirely by Government funds. Thus, whenever a bill comes up for construction which involves Federal money, it becomes necessary for representatives of the AFL–CIO and the building and construction trades, together with interested Members of Congress, to work toward the inclusion of the Davis-Bacon prevailing wage provision in the legislation. The remedy I propose is a simple one, involving a basic revision of the law to extend the coverage on a permanent basis instead of in piecemeal fashion as is presently the case. H. R. 9777 simply guarantees that all types of grants, loans or contributions made by the Federal Government to assist the various States and localities in needed construction must be automatically covered by the Davis-Bacon prevailing wage provision. In short, my bill is designed to make the Davis-Bacon prevailing wage policy uniform in its application.

In addition, H. R. 9777 requires the Secretary of Labor to predetermine not only the hourly prevailing wage, but also existing fringe benefits found to be the prevailing practice in any given area which have been established as a result of collective bargaining between employer and employee. For example, several instances have occurred in my own State of Washington, where outside contractors have met the prevailing wage provision, but failed to conform to the local prevailing fringe benefits, which obviously placed the local contractor at a great disadvantage. The bill would also require the Secretary of Labor to predetermine prevailing practices with reference to hours of work and overtime payment. H. R. 9777 points up a specific provision in regard to payment at a rate of not less than time and one-half the basic hourly wage for hours in excess of 8 hours per day, in excess of 40 hours per week, work in excess of 5 consecutive

days, and work on Saturdays, Sundays, or legal holidays. These provisions are primarily directed at placing all Federal construction on a comparable basis, bid-wise, and also to prevent the Federal Government from participating in any situation which would tend to destroy or undermine prevailing hours of work and rates of overtime pay arrived at through privately negotiated collective bargaining.

Finally, H. R. 9777 would confer the necessary authority upon the Secretary of Labor to make investigations and full enforcement power to carry out the provisions of the act.

It is my sincere hope that the distinguished Members of this House, recognizing the need for the maintenance of fair labor standards throughout the length and breadth of the Nation, will act favorably on this legislation when it comes to the floor of the House.

Benson Farm Program

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. OSMERS. Mr. Speaker, because of the tremendous interest in the pending farm legislation, under unanimous consent heretofore granted, I include in the CONGRESSIONAL RECORD, a letter received from my constituent, G. W. Johnstone, of Harrington Park, N. J. Mr. Johnstone is distinguished in the field of public information and is presently director of radio-TV public relations for the National Association of Manufacturers. His letter follows:

HARRINGTON, PARK, N. J.,
February 23, 1956.

Hon. FRANK C. OSMERS, Jr.,
House of Representatives,
Washington, D. C.

DEAR FRANK: I am writing this from my room in the Carlton Hotel, for, as you know, I have been in Washington for a few days.

I have just viewed a half-hour television program on CBS–TV and certainly am proud of our Secretary of Agriculture, Mr. Ezra Taft Benson. He ended his well-produced TV half hour, a defense of a 4-week previous program on the same network, with a fervent appeal to his viewers to write their Congressman. So I am losing no time. If you did not have the opportunity to view his program, by a copy of this letter of mine being sent to him, I am suggesting that his office send you a script of the entire half hour.

Secretary Benson, a farmer from his boyhood days, told the American public the facts of the present predicament of the American farmers. It was not colored with partisan flavor—he spelled out the reasons for the current situation, gave a most sensible and down-to-earth explanation of what can be done to alleviate the situation. And this is where you come in.

I know that you are on his side—that as a stanch and true Republican you will support his goals. But, with New Jersey an agricultural State there brings to my mind an additional way in which you can help the Secretary:

You are loved by the people of Bergen County—you have been their true servant through the years that you have served them. Even some—even many—of your partisan opponents will admit this. You can help the Secretary of Agriculture win his fight for all the farmers of the Nation by including, from today on, until the cause is won, your plea that your audiences stand behind Secretary Benson in his fight in every speech you make—whether it be on the floor of Congress, on a platform where you appear as a speaker, and even in your conversation with each and every person you meet.

You can do it—and I know you will do it.

Secretary Benson doesn't know me from Adam. But, as you know, next month marks my 34th active year in the radio (and now TV) broadcasting business. And persons who know their business, I believe, should support each other—particularly when they voice the truth.

As always,
Fondly,
G. W. (JOHNNY) JOHNSTONE.

Address by Roger W. Straus, Temple Emanu-El's Men's Club, Upon Being Presented With the Distinguished Service Award, New York, January 18, 1956

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I take pleasure in including an address by my good friend and constituent, Roger W. Straus, outstanding leader in business, civic, and philantrophic affairs. This address was delivered before the Temple Emanu-El's Men's Club on January 18, 1956, in New York City, at which time Mr. Straus was presented with the distinguished service award:

When Dr. Mark, Mr. Kahn, and Dr. Gordon spoke to me about the award that you have just given me, I was deeply touched and, I confess, flattered. Then they added their polite, but firm request: that, on the occasion of the presentation, I was to give a talk based on my experiences, observations, and reflections of over 40 years of adult life. I was, so to speak, to "sing for my supper."

I consented, with some misgivings and, above all, with the feeling that many of you must have had much the same pattern of experiences and arrived at much the same conclusion as mine. For, like many of you, I have lived through two World Wars, an economic depression of tremendous dimensions, and the continuing wars of world communism, both hot and cold in a challenge that is still with us. It is true that I have been active in these years in the world of business and in educational and in religious affairs. Perhaps more than is average, I have concerned myself with the strengthening of Judaism. I received my inspiration to do so from my lifelong association with Beth El and Emanu-El, especially from my teacher from boyhood, the late beloved Dr. Samuel Schulman. Indeed this led to vital interest in all religion; and with the work of the National Conference of Christians and Jews, an organization with which I am sure you are familiar. At any rate, my conclusion today, as it has been for decades, is that man has an overpowering need for religion: and that we Americans have a particular need for our religions in the Judeo-Christian tradition, which emphasize the value of individual human being. By this light, everyone is a son of God and therefore a brother to all other human beings. My conclusion is that this is the key-essential both for individual happiness and for world progress. In the words of our great teacher, Hillel, "All the rest is commentary."

Some 25 years ago, I had occasion to speak before a men's group of a synagogue and, at that time, I made the emphasis that "Judaism is becoming to the Jew." I feel that way even more strongly today, after all that has happened.

It is this background that makes me feel that, if I were called upon to nominate a "man of the year," I would suggest the unknown, ordinary, perhaps obscure, man who during a lifetime of trials, held fast to his trust in God. He is the man of faith, without name or recognition—the unknown soldier of life—who has seen much, and endured and suffered much, but who never faltered in his trust in a Supreme Being. He is the man who never yielded the humble awareness that, while he was part of a vast and mysterious cosmos, and though he was marked with faults and inadequacies, he was yet made in the image of God. My candiate for such an award, this year and every year, is the simple, steadfast believer who remembered and cherished the most important of the commandments of the decalogue: "I am the Lord, thy God. * * * Thou shalt have no other gods before me."

In the lifetime of this steadfast man of faith, he encountered and resisted many false prophets of many a false god. In all of those years, as now, these were to be found aplenty. They offered such an easy theology under the name of "ideology." They were so convicing and glib; they were so seductively satisfying—at least for a time.

And they were hollow.

Consider some of these baals and how they seduced and betrayed their followers and deceived the world.

Early in this century, there was the false god of science. Man's inventiveness was expanding with an almost explosive speed. We were mastering everything. We were plumbing the depths of the sea. We were ranging wide through the atmosphere and its endless reaches. We were conquering time and space. We were, it seemed, set to harness everything in a vast outpouring of scientific, mechanical, and industrial ingenuity.

These new inventions and developments were good things in and of themselves; or rather, they were potentially useful tools. In the service of God, they could have glorified Him and His creatures. But it was forgotten that they were only tools. What happened was that science came to be projected, and to be regarded, as a substitute deity, as the answer to all of man's needs, including his deep, spiritual needs. Until we were brought up short by the realization that this, too, had been accepted by many as a false god; that the scientific mastery of the elements could serve warmakers as well as men of peace; totalitarianism, as well as popular government. Greed and conquest, racialism, and imperialism, were all able to employ the ultimate achievements of science. It became quite clear that once deified, science turned into a false god.

It was a false god whatever its disguise or name and whether it came in the form of the latest discovery of atomic physics or of the planetary motions or of psychoanalysis. Pitted, however, against the awesome commandments, "I am the Lord, thy God. * * * Thou shalt have no other gods before me"; measured by the capacity for meeting man's deepest needs, they all, whatever their dis-

guise, revealed that they were idols with clay feet.

This deification, you remember, went back to the period before, and continued through much of, the two sanguinary World Wars that my generation has seen; wars which themselves threw the revealing light of gun flares and bomb bursts on the shallow claims of science alone as redeemer.

There was the period after the First World War; and most of us, I am sure, remember it. Everywhere there was a worship of the false god of materialism. Life was to be only a succeession of material and sensual pleasures. Until we found that these pleasures, too, were as dust in our mouths; that somehow, their increasing possession was an illusion; that they gave birth to new and greater torments and agonies, and finally, that they were dissolved altogether in the bust that followed the boom.

You need only turn to the newspapers of that period to see how shabby was this false god of materialism: the rackets and the corruption, the delinquency, juvenile and adult, the soaring divorce rate, the prevalent immorality and the inner unhappiness that this always indicates. There it stood and stands revealed; material progress without vision or meaning, without solace or comfort, a hollow, faceless shell that mocked our finest impulses. A pitifully false god, a Baal whose fires had scorched us; but which, we were determined, we would keep far from our children.

In shock and in horror, at what men saw, many of them turned away. Yet, as so often in the history of mankind, they turned, not to the religion of the Fatherhood of one God and the brotherhood of all men, but to still other and gaudier worships.

During that period, and in the despair at the "bust" that followed the "boom," there were many who turned to pride and racialism: to the hatreds of the Ku Klux Klan in this country; and abroad, to the brutishness of fascism and nazism, and to the venom of the class hatred of communism. All proved to be false gods. All were spawned out of the arrogance that man can create his own divinity, to suit his own appetites and passions. All stood revealed in their leprous nakedness, and all tumbled (or are doomed to tumble) in an agony of horror, bloodshed, and destruction.

This was the period of the so-called bright, young men. They strutted in their assurances that in man himself, without awareness or realization of, the Almighty, there was the final answer.

These were the bright young men who when they saw one man-made idol crumble in their hands set out to fashion yet another out of the same drab, common clay. If not science, it was material progress; then it was political power; then it was psychoanalysis; then it was religious skepticism. They even sacrificed their country to these idols. They were so sure that they had the answer, even if one answer succeeded another. They were so sure that the answer could be found everywhere except in the book known as the Holy Scriptures. I need not mention any one name to you. You will no doubt yourselves, think of those deceptively bright, young people, many of whom, like the idols they invented, crashed in their own filth. At this point I am tempted to name names. But to name those not proven guilty is unfair and to name those so proven is both unkind and unnecessary. These men were products of their time, and therefore all of us share their guilt to some extent. They followed false gods. Were we strong enough in our faith and obedience to the one God?

You are all, I am sure, familiar with the phenomenon that I am describing; and with the people who embodied this arrogant pursuit, always of a God of their own making, never for the Almighty, who made us all. They included men and women who had been born into the Christian faith, with its Sermon on the Mount. They included men and women who were once of the Jewish faith, with its 10 commandments and its prophetic urgings. They had only to look to their own tradition, to their own family fireside to see, enshrined in His hallowed place, a God of righteousness, of justice, and of mercy offering to all those very gifts which the human spirit craved most. But they did not look to the great truths of their own Judeo-Christian tradition. Always there was another false god to make out of the dross; another idol to worship; and to leave them, desperate and frustrate as each false god mocked their efforts and all but consumed the world itself.

Then something of a change seemed to come upon us; in the period just before and, even more, during the Second World War. It was not only in the foxholes that the number of atheists seemed to shrink to zero. The change seemed to affect others elsewhere; in fact, everyone; in shop and on the farm; in school and in factory; in office, and above all, in the some. Somehow it began to dawn upon many of us that all of our vast and increasing possessions, all our ingenious skill, all our seemingly unbounded knowledge were not enough to answer the voice—perhaps, the cry—within each of us. Somehow we realized that while we were sated with much, we still had an enormous void. We began to sense that we needed not only the gifts of life but a philosophy of life. Above all, we had need of a philosophy of the good life. And, we discovered, such a philosophy was within our reach. In fact, we had first learned it in our homes, at our mother's knees, and from our father's lips; and in our synagogues and churches, from our rabbis, ministers, and priests.

There we were, millions of us, caught in the web of a titantic struggle; itself the consequence of the deification of the state and of state power by the Nazis in Germany, the militarists of Japan, the Fascists of Italy. There we were, suddenly flung into a combat for sheer survival. In that dark hour we were united into a brotherhood of war that, had we all been true to our religious faith, might have been a unity of the brotherhood of peace.

We barely survived that combat. And when it was over we saw that while we had overcome one tyrant or another we had not defeated the ideology of tyranny or the satanism of false religion and man-made gods.

Still another of man's own devising had emerged, stronger than ever before. This time it was the force of worldwide communism, conceived by atheism and begotten out of economic materialism.

It was then we made the clearest discovery of all; that it was not enough to contend with this new dark power with material weapons alone, for in such there lay its own satanic strength. Only as these were inspired and touched by a spiritual flame, could we ever hope to counter the new threat to our lives, to our civilization, and to all that men have struggled for through the milennia.

After the Second World War, the agony continued; we went through a smaller, but not less horrible war in Korea; an inevitable part of the war of ideologies in which we all find ourselves today and which will probably be with us through our lifetime and extend perhaps beyond that period.

Out of this war of ideology, many men and women came to the point of no return, where they had to do some solid, hard, rethinking of their real values. It was evident that the basic economic difference between communism and democracy, however opposed they were, was not the crucial cause of the conflict. If it were that alone, we might concievably coexist. Something more profound and more fundamental was at issue.

Today they are openly contesting, one against the other, the force in world communism, of atheistic materialism and in contrast to it, the religions of the Judeo-Christian tradition and heritage. Here is the basic cleavage. We may be equaled and, for all we know, surpassed, if only material strengths and values are put on the scale. But it is also a struggle in which we are invincible if we bring up our heavy artillery of the spirit of man; if we enlist in our total armament the moral values that have come to us from the ancient fountains of our religions.

It is no accident that the forces of religion in this country as elsewhere are now gaining in strength and in numbers. The trend is worldwide and it derives from the observation that so many millions of people have made for themselves in these two score years of war after war, and crisis after crisis. The false gods we have, at long last recognized, are many. Their names are legion. Their disguises are numerous and endless, but by whatever name they are called, they remain in the end; false, corrupting, and destructive.

By circumstances beyond anyone's control, this fundamental clash of ideologies is embodied today in two continental countries. We of the United States have, by the organization of our God-given resources, acquired a world leadership in this miltonian contest. We will deserve that leadership; and we will use it to effective purpose, only as we remember the arsenal to which we have access and which our opponent cannot muster; our belief in the treasures of the spirit, our religious conviction that we are not robots to be enslaved by the State or to bow our head and bend our knee to any man-made idol; but that we are bound together in an invincible fraternity, a single, human brotherhood under the fatherhood of one God.

As we live by that awareness and conviction, we will make and keep America strong and free. We will help the world to acquire its strength and its freedom. For it is a conviction that all Americans can share and are sharing increasingly. All over our land there are signs of a new realliance on our covenant with God. American Christians are becoming, more truly so than in the recent past, Americans of the Christian faith. American Jews are, more and more, becoming Americans of the Jewish faith. It is a trend in which all of us of the Judeo-Christian stream, participate in equal degrees. It is a trend that, if continued and sustained, will strengthen us immeasurably for ordeals that are, perhaps, yet to come.

Thirty one years ago, I had occasion to speak before the Federation Social Service Forum of New York City on the need for religious education.

At that time, I said:

"Let us Jews of America become leaders in a religious revival in this country. Let us be an example to our fellow citizens of all faiths to show that religion as exemplified by the teachings of the Great religious leaders of the past, if thoroughly understood and honestly followed, is vital to the spiritual welfare of the country. If we do this, then we will truly have given our country something worthwhile and, will have lived up to our destiny as Jews by keeping faith with the ideals of the prophets of old."

We are witness today to something of such a religious revival. I hope that we, as American Jews, have taken our full part in that revival, and that we will continue to do so, for our own sakes, for the sake of our country, and for all civilization. I am sure that more religion for everyone, and especially more Judaism for we Jews, will make this world a better one for ourselves, our children, and our children's children. Yes, for all mankind.

Carl Hayden: Dean of the Congress

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. UDALL. Mr. Speaker, we have seen many tributes during the past month in recognition of Arizona's beloved senior Senator, CARL HAYDEN, who on February 19 completed his 44th year as a Member of the United States Congress.

The one characteristic perhaps above all others in Senator HAYDEN'S service has been his preference for getting work done rather than seeking praise or recognition for his various accomplishments. In these days of high-pressure publicity campaigns—utilized by politicians as well as soap manufacturers—it is particularly refreshing to have Senator HAYDEN'S fine example of simply doing his job without regard for publicity or praise.

Senator HAYDEN has always personified the old-fashioned virtues of honesty and humility. He would agree, I know, with the late Justice Oliver Wendell Holmes, who once wrote:

All that any man wants to do in life is do a good piece of work and leave it unadvertised.

A fair and objective appraisal of Senator HAYDEN'S conduct during his many years of service has been published in this month's issue of the CWA News, and I would like to call this tribute to the attention of our colleagues. It has, I think, exemplary value for us all:

CARL HAYDEN, Democratic Senator from Arizona, has been in public office for the past 54 years, and in that time, has never been turned down by the voters.

In 1902, at the age of 25, he became a member of the Tempe Town Council, continued through with 2 years as county treasurer, then 5 years as sheriff.

Arizona was still Federal territory during that early period. When the State was admitted to the Union—the 48th State—on Valentine's Day, 1912, the voters sent CARL HAYDEN to Congress. He's been there ever since, his seniority in the Senate being surpassed only by one man, Senator GEORGE, of Georgia.

While serving under eight Presidents—Taft, Wilson, Harding, Coolidge, Hoover, Roosevelt, Truman, and Eisenhower—Senator HAYDEN has worked loyally and effectively for his State, his country, and his party.

He is a modest man—we had trouble getting him to pose for the picture that accompanies this article. He is a hard worker. During a summer recess some time back, he had an opportunity to accompany an Appropriations Committee trip to Europe. Instead, he stayed home and studied economic problems of the coming session.

Politicians say his hard work is one of the reasons the voters keep on reelecting him.

A comment of Senate majority leader, LYNDON B. JOHNSON, covers the situation neatly. He says:

"There is something reassuring about the future of a country which can produce leaders like CARL HAYDEN. He is a modest man, an unassuming man. He is not given to snap judgments and passionate outbursts that end in flaming headlines. Yet, I believe all my colleagues will agree with me when I say there is no more influential Member in either House of Congress."

Reporters like HAYDEN. The Washington Post and Times Herald has said of him:

"The wry, shy Arizonan has come a long way without headlines. In the Senate his behind-the-scenes influence is second to none on the Democratic side."

Another reporter has written of Senator HAYDEN:

"He seeks no headlines, yet consistently is in the thick of historymaking news. He makes few speeches, yet his counsel is heeded as fact. And his persuasive power is staunch against the political whims, his role unchanged no matter which party controls Congress."

When he first came to Washington, he got some good advice he has followed ever since. It came from an old Confederate veteran, Representative Frederick C. Talbott, of Maryland. Talbott said to him after one of his early speeches:

"There are two kinds of Congressmen—showhorses and workhorses. If you want to get your name in the papers, be a showhorse. But if you want to gain the respect of your colleagues don't do it. Be a workhorse."

CARL HAYDEN'S long record of service proves the advice was well received. He's been quietly working for the people and gaining the respect of his colleagues ever since.

CARL HAYDEN was the first white child born in Hayden's Ferry, the town founded by his father. The adobe house that was his birthplace is today a landmark of Tempe.

As a boy, CARL HAYDEN was molded by the spirit of pioneers and by the cultural heritage of his parents. He swam in the Salt River, drove his father's cows in from pasture on the back of a bull, once rode a favorite horse to the Grand Canyon and back.

He's now been in Washington as a Representative or Senator for close to half a century. Many changes have taken place in America in that time, and HAYDEN has had an important share in molding those changes.

In the Senate he has made as his special fields highways, irrigation, reclamation, agriculture, and mining.

As the Senate leader in highway legislation, he made one of his most noteworthy contributions to Arizona and the West as coauthor of the Hayden-Cartwright bill that set the formula for distribution of Federal aid to highways on a basis which includes both area and population.

When Senator HAYDEN was awarded an honorary doctor of laws degree by the University of Arizona in 1948, the citation said in part:

"His services to the State have been various and unsurpassed. Particularly as a specialist in legislation affecting irrigation and Federal highways he has played a major role in the reclamation of her fertile acres and in opening her scenic, climatic, and industrial treasurers to new citizens and visitors from over the world."

Huge irrigation and power projects, green vistas of reclaimed desert, and uncounted miles of wide, straight highways will long endure as monuments to CARL HAYDEN, of Arizona.

Cotton for Export

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 8, 1956

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Journal of Commerce and Commercial, New York, Monday, March 5, 1956:

COTTON FOR EXPORT

Agriculture Secretary Benson's decision to offer the Government's surplus cotton for export this year may solve one issue the administration finds embarrassing, but before this disposal program is finished it will have raised others which may very well prove virtually beyond solution.

Not that we have any quarrel with Mr. Benson's objectives. He wants to restore to the United States its historical share of the world's cotton trade. There is very little doubt the Agriculture Department's new plan would start things moving in this respect. The sudden appearance of over 12 million bales of United States cotton on the export markets over the next 2 years or so would certainly discourage the expansion of cotton production elsewhere.

This would, it is true, tend to strengthen the position of United States producers in future export markets, if only by lessening the competition they would otherwise meet from overseas sources. But has the administration counted the cost of this move in terms of United States trade policy? If not, it should.

No dumping is involved, of course. Mr. Benson will offer the cotton at auction but with the restriction that prices shall be competitive, which doubtless means the Government will place a floor under its offering prices as it did in disposing of roughly a million bales of 15/16-inch and shorter staple cotton—which went at 6 to 8 cents a pound below the domestic price.

But to offer to sell at competitive prices is one thing. To assume that competitive prices the world over are not affected by the entry of the United States Government entire cotton surplus on the market is quite another. The administration does not look on this as dumping because it has pressing reasons for its action. But what foreign groups, accused of "dumping" in the past, have not had good reasons, too? However we may rationalize such an action here, cotton producers abroad will see it for what it is, just as American producers would see it if the shoe were on the other foot.

The effect of this action will be to create, as observers have previously noted, a two-price system for virtually all classes of United States cotton. There will be a domestic price, charged to the mills here. And there will be a lower price to cotton users overseas who take advantage of the Government's offer.

There is a reason for this, too. If United States cotton were offered only at the domestic price, precious few overseas buyers would come forward. In order to discourage the expansion of overseas cotton acreage, which is part of the plan, the export price must be lower.

But another effect of this will be to generate more and more pressure on Washington to place imports of cotton manufactured goods under quotas, or to raise tariffs. This is practically inevitable. The more the foreign price of cotton is forced down by the marketing of the United States Government, surplus, the cheaper foreign cotton mills can obtain their raw material. And the lower their production costs, the lower their export prices may be.

We sympathize with the predicament in which this threatens to place the cotton mills in this country. It simply is not fair that they should be penalized for the errors in our farm policy that are responsible for the accumulation of these embarrassing surpluses. Nor is it fair that American trade policy should have to suffer the effects of heavy additional pressures for import restrictions.

We have not mentioned the trouble this is likely to create for our diplomatic inter-

ests in sensitive areas like Egypt, but it is quite clear that whatever relief this disposal program offers to southern cotton producers will be provided at the expense of other groups of the population.

The expense will be borne by the taxpayers as a whole, inasmuch as they have had to pay for the accumulation of surpluses that are now to be sold at a loss. And it will be borne either by domestic cotton mills or—in the event the foreign sales are accompanied by tighter restrictions on manufactured cotton imports—by American exporters, whose overseas markets are invariably hit when Washington takes any action to cut imports.

All of this seems a high price to pay for the rectification of serious weaknesses in farm policy. Worst of all, there may be more to come.

It was the success of the administration's effort to sell overseas its million bales of fifteen-sixteenths inch and shorter staple cotton (below domestic market prices) that encouraged it to prepare now to dispose of its entire cotton surplus—7.5 million bales plus some 6.5 million due from last year's crop.

If this is finally disposed of successfully in terms of agricultural policy, what will be the next step? Will Washington be encouraged to go on to bigger and better things in terms of surplus disposal? Will its sense of pleasure at having relieved the massive pressures of the farm surpluses at home lead it to believe that the cost to the rest of the population is a matter of subsidiary interest? We hope not, but the plans now afoot give us rather little reason for our hopes.

A Good Picture of What Is Happening to the Family-Type Farmers

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1956

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks, I wish to include this letter from Mrs. Frances S. Pack who writes me from Webb City, Mo. Mrs. Pack has a good picture of what is happening to the family-type farmers. Here is her letter:

WEBB CITY, MO., *March 5, 1956.*

Hon. USHER BURDICK,
House Office Building,
Washington, D. C.

DEAR MR. BURDICK: I wish to encourage you in your valiant fight. I sincerely believe that the present farm program is deliberately designed to liquidate the middleman. With the farmer finished, what is left? We might better call the farm plan the liquidation of the Kulaks. We are all being liquidated in orderly fashion, and the masses are too brain-washed to comprehend.

Congress has permitted all this, and do they think they will all be commissars?

Regarding butter, why not give the American people something they have already paid for? My family has not used butter since World War I, and we see Italy get it for 15 cents a pound. If we were Russians, or English, or Italians, we would have it shipped to us, free and for nothing, or some absurd price. This is something already paid for by Americans, and they are denied the privilege of buying it at the price foreigners get it. I see emaciated children, with parents so emaciated that I am afraid to look, here in America.

When I see the Navahos, I am ashamed of and for Congress. They never see wheat or butter. Their sheep are scraggy, the wool brings a low price on the market. But they are Americans, not foreigners. Their sheep would go 10 miles for a handful of wheat. But they, too, are Americans. Here, there is talk of using wheat for fertilizer, or in industry.

If retribution ever comes to Congress, it will be in full measure.

As to Eisenhower, I feel that he will get sicker at convention time, or resign later.

You probably received a book from Dr. Hoxley, in re cancer. May I say that the writer had serious involvement of lungs and duodenum, and has recovered? Many people are dying unnecessarily. There again, Senators would rather go the hard way themselves than do right. AMA should be investigated. (See the Fitzgerald report to the Senate committee.)

With best wishes to you.

Faithfully yours,

FRANCES S. PACK.

Iowa Farm Girl Honored as Promising Young Scientist

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1956

Mr. GROSS. Mr. Speaker, it is with the utmost pride that I call attention to the accomplishments of an Iowa farm girl from my district who has been honored as one of the most promising young scientists in America's high schools.

Miss Margaret Ann Thorson, 17, has returned to her farm home near Floyd and Charles City, Iowa, after competing in the finals of the 15th annual science talent search here in Washington, March 1 through March 5. Designed to discover and develop scientific ability among high-school seniors, the science talent search is conducted annually for the Westinghouse science scholarships by science clubs of America and is administered by Science Service.

It is significant to note that this young lady from a rural area was selected as one of 40 finalists from among 20,828 contestants in every State in the Nation. She was the only Iowan to be so honored.

Miss Thorson is the daughter of Mr. and Mrs. Irvin B. Thorson, rural route 1, Charles City. She is a senior student at the Floyd, Iowa, Consolidated High School.

She is not interested in science alone, as a review of the varied activities in which she has participated will attest. One of the top students in her class, she plans to attend the University of Iowa to prepare for a career in medicine.

Miss Thorson has been active in 4–H work, and won the Floyd County 4–H achievement award in 1955. She was also honored last year by the Daughters of the American Revolution as the outstanding student in her American history class.

She is coeditor of the Floyd High School yearbook and is a feature writer and proofreader for the school newspaper. She has won the humorous reading title each of her 4 years in high school.

Miss Thorson can be justly proud of her achievements. She has demonstrated that a young person from a rural area is well equipped to compete with students from large schools in metropolitan areas. She has brought honor to her parents, her school, the State of Iowa, and to the youth of rural America.

What Happens in Alabama Affects Our World Position

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1956

Mr. CRETELLA. Mr. Speaker, I include for the RECORD what I think to be an excellent editorial from the Middletown (Conn.) Bulletin on the situation which has arisen in Alabama. There is no doubt that it is becoming increasingly difficult for the United States to maintain her position as a leader in the free world when the Communists can feed on the seeds of discontent, confusion, and hatred which result from the racial problems in the South.

WHAT HAPPENS IN ALABAMA AFFECTS OUR WORLD POSITION

The events which have been taking place in Alabama and which have attracted international interest in the South's colored problem are assuming proportions which are completely out of line with our national policy.

In a world in which the plight of underprivileged peoples has become a pronounced issue in the tug of war between the East and the West it seems somewhat ridiculous to have the problem crop up right in our own backyard.

The international propaganda mills of the Communist Party are working overtime telling the people of Asia and other uncommitted areas that a nation which tolerates second-class citizenship is hardly fit to give moral guidance to the almost billion persons in the world who are living in so-called depressed areas.

The Communist presentation of the facts is, of course, far from the truth, but how is the poor illiterate Asian or African to determine the real facts in the case? What does our country have at its disposal to bring home the truth to these countless millions?

The fact is that the Commuists have created a grassroots organization in many of the lands in question; that this apparatus which is financed by the Kremlin needs no smooth-speaking radio commentators or pamphlet writers; all they need and already have is people on a local level who are able to preach by word of mouth in the simple language that simple people understand the lies which are manufactured and disseminated by the Red propaganda chiefs.

The fight for the minds of men—a key weapon in the ideological fight being waged between communism and the free world must not be limited to short-wave radio broadcsats and to pamphlet balloons.

In leading that fight, all citizens of our Republic both here and abroad, must be guided by what is best for our Nation. The recent events at Alabama University do not make good publicity abroad or home. They give the impression that our entire Nation is in turmoil and that a pseudo-underground battle between white and colored is presently going on in the United States.

This is far from the truth.

There is no doubt that a few hotheads have been able to stir up pent-up passions in the South and that this problem will become yet more acute if some sober-minded leaders on both sides do not sit down and iron out basic policies.

All of us have a responsibility in not creating situations which will embarrass our Government in its international program and in its broader fight to dignify the basic right of every citizen in this Nation and the world.

How we exercise that responsibility will in the long run determine the success which our policies will meet abroad and the eventual triumph of our way of life over communism.

Explanatory Statement of a Bill To Improve and Simplify Credit Facilities to Farmers, To Amend the Bankhead-Jones Farm Tenant Act, and for Other Purposes

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1956

Mr. HILL. Mr. Speaker, section 1 (a) of the bill will amend the last sentence of section 1 (a) of the existing law so that loans for improvements, including housing and other farm buildings, may be made to all eligible applicants rather than to only existing borrowers under title I of the act, as this section is now limited. This latter change will also make this section consistent with the proposed changes in the second part of the proviso of section 1 (c).

Section 1 (b) of the existing act will be amended so as to be consistent with the proposed changes in 1 (a) by including the present owners of farms among those eligible for assistance under this title and by requiring that the applicant have received a substantial portion of his income from farming instead of the major portion as now required.

The changes proposed in section 1 (c) will provide authority to make loans for repair and improvement on those farms which are less than family-type units which constitute the residence of the owner-operator, if income from outside sources, plus income from the farm, will warrant the making of such loans.

Section 2 (b) will replace the existing eligibility requirement that an applicant be unable to secure credit at rates not exceeding 5 percent per annum prevailing in the community with a requirement that he be unable to secure such loans at such reasonable rates and terms prevailing in the community. The other changes in this section, with respect to loans made under the proviso of section 1 (c), will establish as the maximum amount of such a loan the fair and reasonable value based on normal market value of the farms constituting less than family-type units. Loans on family-type farms would continue to be based on the earning capacity of the farm. For a unit that is less than a full-time farming operation, factors other than the earning capacity of the farm generally influence its value; therefore, a normal market value determination provides a better basis for appraising such a farm.

The changes which will be made in the first sentence of section 3 (a) are necessary to correlate this section with the proposed additional authority. It is also proposed to amend this section by eliminating the second sentence which requires that no loan shall be made in excess of the average value of the efficient family-type farm units in the county. Loans will still be limited to farms that are not larger than family-size units and to an amount not exceeding the value certified by the county committee under section 2 (b).

Section 1 (f) of the bill will amend section 12 (b) of the act to increase from $100 million to $125 million the aggregate amount of mortgages or loans which may be insured under title I in any one fiscal year. This change is in anticipation of an increased volume of loans under the additional proposed authority.

The change proposed in section 1 (g) of the bill will eliminate the present limitation of insured loans to those not exceeding 90 percent of the fair and reasonable value of farms. The 90 percent limitation has operated to prevent assistance by means of insured loans to many applicants, otherwise eligible, who are unable to provide the balance of the cost of the farm and its improvements. Experience with direct loans has demonstrated that sound loans can be made up to 100 percent of the fair and reasonable value of the farm. The proposed language of the new section 12 (c) (5) will also make this provision consistent with the changes made in section 2 (b) relating to the determination of fair and reasonable value of less than family size units.

Section 1 (h) would modify section 12 (e) (2) in order to avoid the insertion of legislative language in the appropriation acts authorizing the use of one-half of 1 percent of insurance charges for any administrative expenses of the Farmers' Home Administration. As the act is now worded, funds so collected could be used only in connection with the provisions of the act relating to mortgage insurance. Without the modifications contained in appropriation acts in the past, it would have been necessary for each employee to keep track of the amount of his time spent on the mortgage insurance work so that it could be charged against this sum.

Section 1 (i) will amend section 16 (a) so as to add authority to insure loans which will be subordinate to an outstanding first lien. Second mortgages running to the Government for the benefit of the mortgage insurance fund would be taken in connection with such loans. An additional sentence is also proposed so that loans insured under section 16 (a) will be controlled by limits comparable to second mortgage direct loans as provided in the proposed section 3 (a).

Section 1 (j) will add a new section 17 which will provide the Secretary with temporary authority during the next 3 fiscal years to make and insure loans solely for refinancing existing indebtedness of farmers who qualify for assistance under the amended act. The total of such refinancing loans insured in any fiscal year would be limited to $50 million.

Section 2 of the bill will amend the title of title II of the act from "Production and Subsistence Loans" to "Operating Loans." The new title is believed to be more dscriptive and more understandable.

The proposed new section 21 (a) involves the following changes:

First. Loans will be authorized to operators of family-type farms, and to operators of less than family-type farms whose farms are of sufficient size to produce income which, with income from other sources, will enable the operators to pay necessary operating costs and the amounts which will become due on their loans. This change is proposed to permit the correlation of the operating loan program with other efforts being made to assist low-income farmers and to provide credit in designated rural development areas.

Second. Section 21 (b) will be amended to substitute a $10,000 limitation on the total outstanding principal indebtedness of a borrower under this section for the present $7,000 restriction on an initial operating loan to a borrower. In addition, a sum not to exceed 10 percent of the annual appropriation for loans under this section may be used for larger loans which would not exceed a total principal indebtedness at any one time of $20,000.

Third. The maximum term of loans, including renewals or extensions, would be changed by section 21 (c) from 7 years to 10 years.

Fourth. The following change will be made in the continuous indebtedness limitation of section 21 (d), which makes a borrower under this section ineligible for further loans unless he has liquidated his indebtedness within 7 years. In justifiable cases due to causes beyond the borrower's control, the loan could be renewed or extended for a total period of not longer than 10 years from the date it was made, and additional loans could be made during the extended period. Section 21 (d) also will eliminate the present requirement that debts incurred prior to November 1, 1946, must be included in the determination as to whether the borrower has liquidated his indebtedness under this section on and after November 1, 1953. Some persons who are still farming and who need further credit assistance have never been able to fully pay their indebtedness under the Resettlement and Farm Security Administration programs. The present language is ambiguous with respect to whether such persons have fully liquidated their indebtedness if such debts have been settled without payment of the entire principal and interest either before or after November 1, 1953.

Section 3 of the bill contains amendments to the authority of the Secretary with respect to making and servicing loans under titles I and II, including compromise powers, use of county committees, sale of surplus acquired security property, availability of other credit at

5 percent interest, and the authority to deal with security property.

First. Section 3 (a) will amend section 41 (g) of the act by extending the power of the Secretary of Agriculture to compromise, adjust, and reduce claims and modify the terms of contracts to those entered into or by the Farmers Home Administration under any of its programs. While most of the claims administered by this agency are covered by the present language, claims arising under the Water Facilities Act, the Wheeler-Case Act, the flood and windstorm appropriations, and the emergency loan provisions are not subject to the same administrative settlement authorities applicable to claims under this act.

The proposed change in section 41 (g) (1) will remove the $10,000 limit on claims that may be settled by the Secretary. This proposed change would expedite the settlement of claims in excess of $10,000, and provide a uniform basis for settling all claims arising out of transactions under any program administered by the Farmers' Home Administration. The factors affecting the settlement of larger claims are not sufficiently different from those of smaller claims to justify special treatment.

The provisions of section 41 (g) (2) do no permit the release from personal liability of those operating loan borrowers who transfer or convey their security property in satisfaction of their indebtedness to the Secretary. Under the revised language, releases of personal liability may be made to such borrowers. The changes in section 41 (g) (2) (B) are for the purpose of extending the provisions of that subsection to insured mortgage loans and to less than family-size farm units.

Section 3 (a) will also extend the Secretary's authority for cancellation and release of claims regardless of amount under certain restricted conditions. At present, claims of $100 or less may be canceled if those conditions exist. Under Public Law 518, the Secretary has concurrent authority to cancel these and certain similar debts not exceeding $1,000 principal balance. With the removal of the monetary limitation on the cancellation of debts where the debtor has no assets or apparent debt-paying ability, where the borrower is deceased and has left no estate, or where he has been absent from his last known address, is without known assets, and his whereabouts cannot be ascertained without undue expense, the bill will permit such action only after 5 years instead of the present 2- or 3-year limitations. It is also proposed that claims of $150 or less many be canceled if further collection efforts would be ineffectual or uneconomical. This change from $10 to $150 is prompted by comparison with the costs of litigation on such claims.

Second. Section 3 (b) of the bill will permit the establishment of county committees for areas not neecssarily limited to county boundaries. Topography and means of communication between county seats and parts of some counties make it expensive and extremely difficult to limit uniformly the jurisdiction of the county committee exactly to county boundaries.

Third. Section 3 (c) of the bill will strike the words "as family-size farms" from section 43 (d) in order to authorize the Secretary to sell and acquire farm units of less than family-type to persons who would be eligible for the less than the family-type farm loans proposed under section 1 on terms consistent with the modified loan authority.

Fourth. Section 3 (d) of the bill will substitute reasonable rates prevailing in the community for the present limitation of rates not exceeding 5 percent per annum as a guide to determining whether credit from private or cooperative sources is available to the applicant at the time the loan is made or at the time the borrower should refinance his indebtedness to the Secretary by means of such other credit.

Fifth. Section 1 (c) of the act will amend section 51 to permit the Secretary to service mortgages taken in connection with insured loans in the same manner as he is now authorized to service security for direct loans and will extend the authority to preserve and protect the security, bid at foreclosure or other sale, and the other provisions of this section to property involved in loans under any of the acts administered by the Farmers' Home Administration. This section of the act now applies to all of the acts administered by the Farmers' Home Administration except the credit sales accounts on water conservation and utilization projects transferred to the agency by the Soil Conservation Service and property which might be acquired under the special emergency loans pursuant to Public Law 727.

Some difficulty has been encountered by the lack of authority to grant easements of rights-of-way for roads and utilities while the security property is in the possession of the Government. The amended section will provide that authority.

The United States Constitution: A Barrier Against Tyranny

EXTENSION OF REMARKS

OF

HON. GEORGE W. ANDREWS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1956

Mr. ANDREWS. Mr. Speaker, for the 1st session of the 84th Congress it was my privilege to have a young man from my hometown of Union Springs, Ala., Charlie MacCrook, on my patronage as a page in the House of Representatives.

The thesis appearing below is a product of this promising young citizen, and won for him the Bullock County (Ala.) American Legion oratorical contest on February 24, 1956.

It is my thought that the people believing in these principles would be interested in sharing the views of this young man; therefore, I am setting out the speech in toto:

THE UNITED STATES CONSTITUTION: A BARRIER AGAINST TYRANNY

It has been said that "power is the essence and the peril of government." Any kind of government is an apparatus of power. Government has the power to make the rules for men to live by and it has the power to punish those who disobey the rules. However, when this apparatus of power, government, is placed in the hands of one man, his power to oppress and to take advantage of the people is enormous. In fact, the concentration of power into the hands of 1 man or 1 party is the very definition of tyranny. This has long been the problem of civilized man, to construct a government he could control, one that had the power to protect the citizens but without the power to oppress them. The problem of free government is not solved by simply electing an official and turning the government over to him; for once he is in office the vast powers of government are his and can be used to intimidate the people who elected him. The greater the power he has, the greater will be his ability to control the people. By buying one group or silencing another, it would be possible for him to stay in office indefinitely. Therefore, a means must be found of controlling him after he has been elected to office.

The solution of this problem has been attempted throughout history in many different countries, but never with any real or lasting success. This dream was finally realized in 1787, when the Constitution of the United States was adopted. This Constitution did what nations had been trying to do for centuries. It made the Government the servant, rather than the master, of man.

How was this dream accomplished? I have said that the concentration of the powers into the hands of 1 man or 1 party is the definition of tyranny. The Constitution merely separated these powers. It divided the Government into two separate divisions: the State government and the Federal Government.

The Federal Government itself is divided into three principal divisions; the legislative branch, which is Congress, the executive branch, which is the President, and the judicial branch, which is the Supreme Court. Each of these divisions is in turn subdivided into even smaller units. Stated simply, the situation is this: Congress makes the laws, the Supreme Court interprets them, and the President carries them out. The President has the power to veto any law passed by Congress. But Congress has the power to veto any appointment or treaty made by the President. Thus, each of these branches acts as a check on the other. The Supreme Court may declare unconstitutional any action taken by either Congress or the President. One of the few faults of this system is that there is no check or restraint on the Supreme Court. Later, I shall discuss this flaw in our barrier against tyranny.

Now we come to the second division, the State governments. In my opinion, this is the most important aspect of the "separation of powers" theory. The State governments obtain their authority from the 10th amendment. The 10th amendment says, and I quote, "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." For emphasis, I repeat this direct quotation from the 10th amendment: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

What our Founding Fathers were trying to prevent was a too centralized government. By ratifying the 10th amendment, they established a government which is now composed of 48 separate, sovereign, and in-

dependent republics, bound loosely together by a central organization.

It is significant that the Constitution went so far as to enumerate, specifically, which powers belonged to the Federal Government, and that it further specified, in the 10th amendment, that those powers not delegated to the Federal Government were reserved to the States. In other words, the Federal Government had only those powers which were surrendered to it by the States. Nothing could be clearer.

As I have said, many countries have tried to construct a government which could be controlled by the people. Take England, for example. To a degree, England has separation of powers. However, she lacked what we have in our 10th amendment. Although the country is divided into counties, they are merely geographical divisions. The county and local governments can be created, altered, or abolished, simply by an act of Parliament. These is no Supreme Court to protect the rights of the individual. Only in America has true separation of powers been attained. The German Empire, the Italian monarchy, the French Government, all of these were nations formed by a joining of smaller kingdoms or principalities; they were not a union of separate, sovereign republics, as are our States.

Yes, our forefathers had succeeded where many others had failed; they had made the government the servant, rather than the master of man.

Through the years we have come to revere our Constitution. It is well that we should hold in high esteem this great document, but it would be wise to remind ourselves occasionally that as nearly perfect as our constitutional system is, it was the work of men. Although they were men of exceptional virtue and ability, they were men. Therefore, it necessarily falls short of total perfection. The one flaw in this otherwise perfect barrier against tyranny is the fact that in our system of checks and balances, there is no check or restraint on the Supreme Court. No one can alter or veto any decision of the Court. This has been felt most acutely here in the South. It is perhaps this fault which has caused the present situation in our Government today.

Let us take a look at our Government today. Is it the same well-organized system of checks and balances which our forefathers laid down over 150 years ago? I think not. In my opinion the balance of power which the Founding Fathers set up between the Federal and State Governments is no longer maintained. Without any regard for the Constitution, or the rights which it grants to the people and the States, the Federal Government has usurped countless powers which it was never meant to have. Since 1930, farmers have been told by the Federal Government what they could or could not plant, wage and hour regulations have been imposed by the Federal Government, employees have been forbidden to move from one job to another, production of certain items has been forbidden, confiscation by taxation has been extended enormously. True, some of these regulations have served a good purpose. But the essential fact remains a fact. The Constitution has been violated. If the Federal Government can assume these ungranted powers, who knows what it will do next?

Now how has all this been accomplished? What authority does the Federal Government claim to have to impose these regulations? Except in one of the cases which I mentioned, the Constitution has not been amended or changed in any way. The answer lies in judicial interpretation. The Constitution has not been changed but the interpretation of it has. I find this hard to understand. For over 150 years, the Constitution was interpreted as its framers intended it to be interpreted. Now, the very framework of our Government has been changed from a Nation composed of sovereign States to one ruled over by a strong central power. This has been done, not by legal amendment to the Constitution, as provided for in that document but merely by interpreting it differently. Is the law what the Supreme Court says it is or is the law the Constitution?

A classic example of Federal interference with the States is the recent attempt of the Supreme Court to regulate schools. I do not intend to argue or discuss the technicalities of this issue. However, I do wish to point out that the constitutionality of this ruling is questionable. Nowhere in the Constitution do the States surrender to the Federal Government the authority to establish, support, or regulate schools. If the Supreme Court can ignore the 10th amendment and tell the States how to run their schools, then how do we know that it will not ignore the 1st amendment and deny us the freedom of speech, press, or religion?

For our Constitution to remain a true barrier against tyranny, the balance of power between the Federal and State Governments must be maintained. There must be a general reawakening to the principles upon which our country is founded. The responsibility rests with us, the voters, to see that the Constitution remains the law of the land and that Government remains the servant, rather than the master, of man.

Archbishop Joseph Beran of Prague

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 8, 1956

Mr. RODINO. Mr. Speaker, a basic policy of the Communists in their subjugation of the Iron Curtain countries has been the attempt to eliminate the worship of God and to replace it with the doctrines of Marxist-Leninist ideology. The Soviets recognized that communism and religion were incompatible and that complete control of the satellite countries was impossible unless the church was made subservient to the state. In an endeavor to accomplish these ends, campaigns of antireligious propaganda, and the liquidation of the clergy were initiated in these oppressed countries to assure complete sovietization.

Czechoslovakia offers an infamous example of the tactics employed by the Kremlin in its ruthless attempt to make the church servile to the state. The attack was concentrated on Archbishop Beran, the moral authority of the Catholic Church in Prague, Czechoslovakia. The archbishop had constantly fought for the maintenance of religious rights and freedom for the Czech people. He had previous experience with totalitarian terror tactics against religion when he resisted Nazi interference in church affairs. This struggle against Hitler culminated in his internment in the Dachau concentration camp in 1942 where he remained until liberated by American troops in 1945. After the war, he returned to Prague only to face still another tyranny beginning with the Communist coup in 1948. Since then he has continued his valiant struggle for religious and human rights against the atheistic Kremlin.

In an attempt to eliminate the church as a threat to Communist control of the country, the Reds instituted an intense policy of sovietization. All church property was confiscated and the clergy was made subservient to the state; the Catholic press, church-sponsored schools, and religious organizations were suppressed; and arrests and deportation of priests and religious leaders were numerous.

Despite these intolerable conditions, Archbishop Beran refused to sell his soul to the godless Communists. He resisted the Communist inroads on the Catholic Church and courageously announced that the Communists were attempting to undermine the church and supplement it with the atheistic ideology of Marxism. In a pastoral letter he demanded that the Communists discontinue their systematic attacks on the church.

The Communists, cognizant that the archbishop was an obstacle to complete control of the country, retaliated with a series of false accusations against him which resulted in his imprisonment in December of 1949 and eventually in his banishment from his diocese in March 1951. According to latest reports, his whereabouts is still unknown.

Archbishop Beran is a symbol of the courageuos struggle against atheistic Bolshevism which still exists in the satellite countries. This persevering resistance is tangible proof that godless ideology which teaches devotion to the state will never supplant man's belief in the worship of God, and his innate concern for individual rights and the dignity of the human being.

Doing Very Well, Thank You

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 8, 1956

Mr. ARENDS. Mr. Speaker, I should like to call to the attention of the Congress an excellent editorial, entitled "Doing Very Well, Thank You," which recently appeared in the Commercial-News, an outstanding daily newspaper of Danville, Ill.

The editorial relates to findings of the chamber of commerce in its annual "physical checkup" of the city; and the report is, I am pleased to say, that Danville "is in top physical condition"—better than she has been for quite a few years.

The facts presented in the editorial speak for themselves. They graphically explain what is meant by the terms "progress and prosperity" now being enjoyed on a national scale. More than that, they attest to the progressive character—local initiative and local ingenuity—of the community of Danville itself.

It is with a great deal of pride that I insert in the RECORD the following editorial:

DOING VERY WELL, THANK YOU

Danville has just been put through its annual physical, the check maintained by the chamber of commerce since 1931.

And the patient is in top physical condition, thank you. We all know that parking was improved in the last year, that a $3 million sewer bond issue was passed, that Gilbert Street was opened and that work was started on the bridge south.

But it remained for the chamber to find out and tell us that manufacturing payrolls jumped $9 million during 1955 and that employment was up 1,531.

The 1955 payroll in the 52 plants rose from $29,469,447 to $38,810,878 with employment jumping from 7,725 to 9,256, a record with an increased payroll of $9,341,431. And each of the 52 plants operated for the full 12 months.

What a far cry from the Danville of but a few years ago, dominated by coal mines and a brick plant. These rarely worked the full year and the economy rose and fell as they pretty much saw fit.

While the Tecumseh Co. plant's failure to reach its estimated 400 to 500 employment was a disappointment and the General Electric Co.'s unfortunate strike was trying, 1955 was a great year.

The months ahead should be even better. Olin-Mathieson at Olin, Ind., will open. Several major concerns are looking at the Tecumseh plant with an eye to buying and two others are almost at the point of making Danville their future home.

Patient Danville has every right in the world to feel skittish even though spring is just approaching.

Thomas A. Edison

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 8, 1956

Mr. ADDONIZIO. Mr. Speaker, the lovely city of Fort Myers, Fla., commemorates the birthday of the great Thomas A. Edison each year with an impressive Edison pageant of life memorial service. At this year's service the principal address was delivered by George E. Stringfellow, senior vice president of Thomas A. Edison, Inc., of West Orange, N. J., whose remarks, as always, were highly interesting and illuminating. The many-faceted nature of the brilliant inventor was vividly described by Mr. Stringfellow, his intimate associate for many years. As the Fort Myers News-Press commented in its editorial of February 11, there are innumerable incidents illustrative of Mr. Edison's warm human qualities as well as of his brilliant, resourceful mind.

The editorial entitled "On Edison's Birthday," follows in full, as I know the membership will find it well worth reading:

ON EDISON'S BIRTHDAY

As the pageant week schedule worked out this year, the annual memorial service for Thomas A. Edison was held last Monday, but it is today that his birthday occurs. The inventor was born at Milan, Ohio, on February 11, 1847.

Thus, with the kangaroo court this morning and the grand parade of light this evening, it is carnival horseplay and spectacle rather than solemn services that Fort Myers holds on Edison's birthday this year—and nothing would please him more. For the electrical wizard was not a religious man, although efforts have been made to depict him as one, and he was not a solemn man.

He was a fun-loving man and anecdotes about the practical jokes that he played on others or that he laughed at when they were played on him are endless. The speaker at Monday's memorial service here—George E. Stringfellow, senior vice president of Thomas A. Edison Industries, Inc.—devoted his entire talk to recounting light anecdotes about the inventor, perhaps in recognition of this.

But Stringfellow, who was closely associated with the great man for the last 8 years of his life, could have related many incidents illustrative of Edison's genius. One that he told on another occasion some time ago is remarkable.

The inventor was a great one for showering his assistants with questionnaires and Stringfellow one day decided to turn the tables on him. He explained: "Mr. Edison, there are many things about storage batteries which only you know. By questioning you, I'd like to extract these things from your mind." The inventor laughingly agreed and Stringfellow submitted about 120 questions.

Edison pencilled out the answers. Most he covered with a simple yes or no. In no instance did he require more than 20 words to explain his thoughts .

In 1937, 6 years after Edison's death, Stringfellow had occasion to remember these answers which he had locked in his safe. A shipment of iron for storage batteries had arrived from Sweden but the Edison people felt that it had too much nickel in it. If the iron could not be used, the plant would have to close temporarily and nearly 1,600 persons would be out of work.

Stringfellow went for guidance to Edison's answers. Fortunately, one question Stringfellow had asked was: "If there is an excess of nickel in the iron, what effect does it have on the cell?"

As from the grave, Edison's answer stared back at him: "No harm."

So the plant proceeded with the iron and the workers did not lose their pay checks. And Stringfellow commented that "Thomas Alva Edison is still my consulting engineer."

He is for other industrialists and scientists too, and always will be.

The Farm Problem

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 8, 1956

Mr. ALBERT. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to include a telegram which I received from officers of the State soil conservation board and the Oklahoma Association of Soil Conservation Districts, as follows:

The following contains the thought and feeling of the State soil conservation board and the Oklahoma Association of Soil Conservation Districts. As our champion, we appeal to you, for with your influence and backing we feel certain that our recommendations will be recognized by your colleagues of the Congress and will be made a part of the CONGRESSIONAL RECORD.

The economy of the farmers and all residents of agricultural communities are in dire straits. Current farm legislative proposals should contain contingencies to stabilize farmer income on par with the prosperity enjoyed by all other segments of our society.

In solution of the farm problems, basic thinking should be given to disposal of agricultural surpluses and recognition be given the fact that our farm productive capacity exceeds our needs, both domestic and foreign. We suggest a middle-ground approach, recognizing that the historic share of world markets must be regained to maintain a sound agricultural economy.

The new program must include emergency measures to restore agricultural income for 1956 and thereafter until long-range planning takes effect.

Therefore, we insist that 90-percent support prices should be restored for basic commodity crops and that other measures should be provided for adjustment of secondary crops to current needs.

We suggest that a substantial portion of storageable surplus farm commodities should be set aside as a strategic reserve and charged as such.

The Congress should specifically direct the Secretary to exhaust all avenues for disposal of the surpluses, above the strategic reserve, and the balance should be placed on world markets at competitive prices.

We are opposed to the acreage-reserve feature of the soil-bank proposal for the following reasons:

1. It is economically unsound, difficult of administration and also the wrong direction to take in disposal of the surpluses.

2. We have already reduced cotton 40 percent and wheat 20 million acres in the last 3 years.

If we resort to a program of scarcity or minimum farm operations as proposed in the acreage reserve, the resultant decrease in turnover of goods and services may develop an economic import on farmers, laborers, and businessmen of agricultural communities, which should not be borne or tolerated and will throw many of them into bankruptcy.

Money should be provided by the Congress to offset difference in the world price and loan price on these commodities, such program would prove a wise investment through collection of taxes from the resultant turnover of goods and services, continued employment of labor, and continued business operations would be provided.

The Soil Conservation and Domestic Allotment Act and the AAA as amended provide adequate democratic procedure for adjustment of basic commodity crops to reasonable market demands through producer referendums and public confidence should not be violated through use of an additional acreage reserve as proposed.

In the behalf of the producers of all nonbasic crops and the livestock industry, it is heartily recommended that a conservation reserve be created for our excess acres. The conservation reserve should be of such magnitude as would be necessary to adjust production of feed grains and similar commodities to the people's needs.

An adequate conservation reserve would supplement the basic law (Soil Domestic Allotment Act and AAA of 1938 as amended) thus providing better ways and means wherein all crops, both basic and nonbasic could be adjusted to our needs and productive potentials be stored in our soil for future needs.

A large conservation reserve would provide many benefits, such as conservation of soil and water, adjust feed grains to our need, raise and stabilize the price of feed grains and advance and stabilize the price of livestock. This program would be simple to administrate. Agencies for administration are already provided, the ASC, Extension Service, SCS, and 2,700 soil conservation districts, covering 90 percent of our land.

Harral Allen, President, Oklahoma Association of Soil Conservation Districts; R. C. Longmire, Pauls Valley; Spencer Benard, Rush Springs; Lowell Caskey, Stratford; Frank C. Dunaway, Jones; Otis Savage, Rush Springs; H. U. Gol-

try, Chickasha; Euel Lancaster, Chairman; Lawrence Drake, Vice Chairman; Marvin H. Guinn, Secretary; P. M. Mungle, Member; Claud Ingram, Member; Hershel Burrus, Executive Director; C. O. Abercrombie, Assistant Director.

Russia as a Military Threat to the United States

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, March 8, 1956

Mr. JACKSON. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial entitled "Is There a Threat?" published in the St. Louis Globe Democrat of March 7, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IS THERE A THREAT?

Astonishing as it may seem, there is still doubt in the minds of some people whether Russia is a military threat to the United States.

Last week in Kansas City, Congressman THOMAS B. CURTIS, of St. Louis, stated:

"When a Senator * * * starts talking about the grave military threat Russia is because they now have a fleet of 200 submarines, you can put that down as just so much hogwash devised to scare the American people to vote more military appropriations."

The Congressman, on that occasion, was trying to characterize Senator STUART SYMINGTON'S objections to our missile program as an attempt to make political hay—by whipping up a scare psychosis when none should exist.

As we have indicated before, we do not agree with Mr. CURTIS' view, for it is our belief that Senator SYMINGTON may very properly be talking facts on the missile program. In any event, the people should know the truth.

It now appears that on the very day that Mr. CURTIS was making his speech in Kansas City, Secretary of the Navy Charles S. Thomas, like Mr. CURTIS, a Republican, testified as follows before the Armed Services Committee:

"'Today, the Soviets have not 57 (the number Hitler had at the start of World War II) but 400 submarines. They are good."

About a month before that, Admiral Arleigh A. Burke, Chief of Naval Operations and, as such, top naval adviser to the President, said on January 18 before the House Committee on Armed Services:

"It is obvious the U. S. S. R. has one purpose in mind and that is to prevent United States naval forces and shipping from entering the waters surrounding Europe and Asia. Her submarine fleet now numbers over 400 of which a large percentage are new construction long-range boats."

That takes care of Mr. CURTIS' comment on Mr. SYMINGTON.

The most dangerous thing that can happen to America is to fail to take seriously the well-documented charges of responsible officials. Sometimes they are right and sometimes they are wrong, but they should always be examined, considered, and investigated, particularly when the author is as qualified on his subject as Senator SYMINGTON.

As a parallelism, the FBI investigates every complaint it receives, even though many of them are known to be false, maliciously motivated, or even psychopathic.

If the FBI subjects every complaint on an individual suspected enemy to gruelling scrutiny, can the Federal Government do less when the very security of the Nation is at stake?

Because Americans are an optimistic race, we are too frequently inclined to overestimate our own strength and underestimate the strength of a potential enemy. Many will remember our classic underestimate of the Japanese prior to Pearl Harbor, when it was common gossip that their ships would not sail, their guns would explode when fired, and that they were a comic-opera nation of toothy grins and nearsightedness.

Nothing could have been further from the truth, as anyone who participated in the almost 4 years of gigantic struggle it took us to beat Japan will testify.

It would be perfectly deplorable if we were to be beguiled, in this day of dreadful danger to the very security of the United States and the whole free world, into thinking that the Russians do not have a force-in-being, either naval, air, ground, or missile.

The fact of the matter is that the Soviets are a very great military power, and wishful thinking in the opposite direction will not diminish this strong reality of 1956 life.

There is no place in the world today for any second-best army or navy or air force. We must have the very best if America is to stay strong and free. This, unquestionably, is the very thing that the Chiefs of Staff are discussing at this very moment in Puerto Rico.

There never has been, nor will there ever be, any other answer for America.

Agriculture

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, March 8, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials, one published in the Washington Post of February 27, 1956, and the other published in the Minneapolis Sunday Tribune of March 4, 1956.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of February 27, 1956]

WAGES AND FARM PRICES

Secretary Benson's concern about rising costs in the food-processing industries, including higher wage rates, calls for careful deliberation rather than political popgun fire. The Secretary of Agriculture did not assail labor or deplore high wages as such. But he did cite facts and figures to show that when wages increase faster than labor productivity in the food-processing and food-distributing industries, so that the public does not get the full advantage of lower farm prices, the squeeze on the farmer is intensified.

In one of his recent speeches Mr. Benson pointed out that wage rates in food processing and distribution increased 43 percent between 1947–49 and 1955. Less than half of this increase, he said, was offset by gains in labor productivity. In the same period, the retail price of food rose 11 percent and the wage cost per unit of food processed and distributed rose 26 percent with farmers absorbing a large part of the difference.

Marketing margins on food have also gone up. While pork prices were sinking through the floor last year the marketing margin for that commodity was 13 percent wider than in the 1950–54 period. In the last quarter of 1955 the retail price of choice beef declined 5 percent, as compared to the previous year, and the farm price 19 percent. Marketing charges for beef increased 26 percent.

It would be foolish to say that these rising costs of handling food while farm prices are falling do not worsen the plight of the farmer. Much of what the farmer has lost in the form of lower prices for his crops has not gone to the consuming public but to processors, distributors and their employees. The remedy is certainly not to depress wages and profits in the food-processing and distributing industries, but some semblance of balance ought to be maintained in the national interest. The seeming inability of the country's independent-minded farmers to deal collectively with other well-organized economic groups is a powerful argument for governmental intervention to prevent the gap between farm income and industrial income from becoming too wide.

[From the Minneapolis Sunday Tribune of March 4, 1956]

AGRIBUSINESS FORUM

Make room in your vocabulary for a new word: "agribusiness."

Invented by John H. Davis, a former Secretary of Agriculture, it describes the partnership of agriculture and business which is now an established fact of American life.

The word aptly describes the theme of the Minneapolis Chamber of Commerce's 10th annual farm forum which opens Monday in the Radisson hotel. The forum has long symbolized the interdependence of farmer and business man, but it remained for Davis to bring home the reality of their present-day partnership.

"The truth is that modern agriculture is inseparable from business firms which manufacture production supplies and which market farm products," Davis wrote in an article for the Harvard Business Review reprinted on the Tribune editorial page Saturday. "It could not operate one week if these services were cut off. And by the same token, the business firms which serve agriculture would exist without purpose except for farmers to buy their supplies or sell commodities to them."

Research and technology, Davis pointed out, are powering the transformation of agriculture into agribusiness. As recently as 30 years ago, agriculture produced 70 to 80 percent of its own production supplies, buying only 20 to 30 percent from business. Today it buys close to 50 percent of its production "input" in the form of machinery, tractor fuel, commercial fertilizer, mixed feeds, building materials and so on.

Such purchases amount to $16 billion a year. Farmers combine them with land, management and labor to produce $30 billion worth of food and fiber. After business firms assemble, store, process and package these products their value to consumers is $75 billion. The total is 90 billions when you add synthetic fibers, imports and seafoods.

The Davis concept of agribusiness, we think, makes it easier to understand the importance of an event like the Farm Forum, which brings outstanding speakers from agriculture, business, labor and government to Minneapolis. It helps the city dweller to realize that, likely as not, he too is a member of the farm-business team. And it helps the farmer to realize that the city dweller is now doing some of the chores he used to do for himself.

As Davis said, the farmer of 100 years ago provided most of his own storage and production supplies, did some processing on the farm and often had to sell his products. These combined operations today represent 40 percent of the economy, whether measured in terms of employment or gross national product.

The figure suggests that farmers (or should we say agribusinessmen?) are far more important to national welfare than they appear when only their dwindling numbers are considered.

Departments of Labor, and Health, Education, and Welfare, and Related Agencies Appropriation Bill, 1957

SPEECH
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 9720) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1957, and for other purposes.

Mr. DONOHUE. Mr. Chairman, as I have said over the past several years when this annual appropriation bill for the Labor, and Health, Education, and Welfare Departments has come before us, there is perhaps, no measure upon which we act here that more vitally affects the lives of so many of our American citizens.

The appropriation we grant under this measure and the regulatory provisions governing the spending of the appropriation are designed to improve continuously the Christian, civilized working conditions of our people and to protect and advance the health of all our citizens, particularly children, women, and the aged. It is obvious, therefore, that this appropriations bill is of the greatest importance to the progress of our national welfare and that is why each of us has the highest obligation to devote the most conscientious attention to it.

The distinguished chairman of the subcommittee, my colleague from Rhode Island, is one of the foremost experts on this subject in the country, and I am certain he enjoys the fullest confidence of this body and appreciation for the superlative manner in which he has presented and explained it to us for the past 6 years.

I am in thorough agreement with the positive necessity for practicing wise economy in every Government expenditure and the most careful scrutiny to insure against the temptations of waste and extravagance. However, I also submit that it is very dangerous to try to measure the health and happiness of human beings by the mere material yardstick of cold currency. It would, indeed, be economic folly to take a chance on lowering our national standards of productive working conditions and health protection for the mere sake of bookkeeping figures. It is, therefore, with the utmost conscientious conviction I urge you to support the full appropriation figures unanimously recommended by the subcommittee and, indeed, under some items, I would be inclined to favor greater increases, for instance, in the appropriation of State grants for unemployment compensation, their employment services administration, and unemployment compensation for veterans.

In our consideration here, it might be well to emphasize the identification of some of the unit agencies affected by this appropriation bill and almost by their very names, which unfortunately are not as widely publicized for general appreciation as they should be, we realize their beneficial impact upon the country's welfare. First, let me mention just a few that come under the Department of Labor. There are the Bureau of Employees' Compensation, Bureau of Employment Security, Bureau of Labor Standards, Bureau of Veterans' Employment Rights, the Wage and Hour and Public Contracts Division, and the Women's Bureau. The value of these bureaus and their divisions to the country in maintaining and encouraging constant improvement in labor conditions and relations in the most productive country in the world is incalculable, both for domestic prosperity and tranquillity, as well as in providing adequate defense against any possible aggressor.

Some of the more vitally important units of the Department of Health, Education, and Welfare are, the Social Security Administration, the Food and Drug Administration, the United States Office of Education, the Office of Vocational Rehabilitation, the United States Public Health Service, the Bureau of Medical Services, and the National Institutes of Health. In their various functions these agencies regulate and inspect the distribution and sale of food and drug products to protect the American public from unscrupulous dealers; vocational rehabilitation, a national necessity, is promoted by the Office of Education; the Children's Bureau insures better child and maternal health examination. Under the Institutes of Health, we have the various research programs for continuing work toward the cures for such devastating diseases as heart, cancer, arthritis, rheumatism, as well as mental and dental. These research institutes have been doing and are doing most encouraging work in the fight against the ravages of these terrible afflictions causing, annually, tremendous losses in our economic productivity, not to mention the suffering and unhappiness they visit upon individual lives and families. Progressive discoveries have been made in these recent years prompting us to reasonably feel that a great part of this human misery and economic loss will continue to be greatly alleviated by the wise use of these appropriation funds for persevering research into the health problems of the Nation and that is the chief reason why I am solidly in favor of increasing these particular appropriations by as much, or even more than $10 million.

Last, but not least, I should like to mention the Hill-Burton hospital construction program and the importance of insuring that it is kept in full operation in accord with the original intent of the Congress when it first enacted this measure by unanimous bipartisan vote. The chairman assures us that the appropriations previously made, which as we know are to be available for a 2-year period, are sufficient and they would be unable to spend what they presently still have by the end of this fiscal year. This means that all of the $21 million we appropriated for 1956 will carry forth to 1957, and that should be enough to keep the program going until next year, including the additional four categories of nursing centers, diagnostic centers, hospitals for the chronically ill, and rehabilitation centers. Nevertheless, I exhort you to ever keep this most beneficial program in mind as it has more than proved its value in helping to provide the additional health and hospital facilities so urgently needed to adequately care for our people. I also want to commend the chairman for the increases he has recommended in the Bureau of Old-Age and Survivors Insurance as well as his advocation of continuing attention and constant planning to aid in the problems of our older people who find it so difficult, and too often impossible, to obtain any employment at all under our current industrial system and practices.

Mr. Chairman, I do not desire to intrude unnecessarily long upon the time and attention of this body. However, may I repeat that we are acting upon a piece of legislation of fundamental significance to the health and welfare of our country. In our consideration of adequate appropriation to carry out the full objectives of these two major governmental departments, let us not retreat from or abandon the civilized Christian progress we have steadily mantained since the Good Lord blessed us with an independent and bountiful existence.

At a time when we are generously granting billions of dollars to aid our foreign allies, let us not be neglectful of our own citizens. At a time when we are telling the world of our better way of life, as opposed to Communist barbarism, let us not dangerously reduce any of these public services whose contributions to national progress have been universally acknowledged. At a time when we are engaged in a life-and-death struggle with the curse of communism, let us take no unwise chances of disrupting the high morale of our own good people. In conscience, let us vote in support of the continuing and full functioning of these units and agencies whose services are, indeed, in the national interest and emphatically good for all Americans.

Problems of the Southern Farmer

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 8, 1956

Mr. SMITH of Mississippi. Mr. Speaker, I want to take this opportunity to express my appreciation of the very careful analysis of the problems of the southern farmer made by the gentleman

from Alabama [Mr. GRANT]. I am especially interested in the necessity for checking the drastic reductions in cotton acreage now in progress. If the Southeast has to accept another heavy reduction next year, many of our farmers must prepare to go out of business.

The gentleman from Alabama has been an outstanding leader in the fight to safeguard the interests of the southern cotton farmer. As a Representative of a major cotton producing area, I am deeply appreciative of the work that he has done for our cotton farmers.

National Commander Summarizes Reasons for American Legion Opposition to UNESCO

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 8, 1956

Mr. GROSS. Mr. Speaker, on March 7, 1956, the national commander of the American Legion, J. Addington Wagner, testified before a subcommittee—International Organizations and Movements—of the House Committee on Foreign Affairs.

In appearing before the subcommittee, Commander Wagner was carrying out the mandate of the October 1955 national convention of the Legion in regard to the United Nations Educational, Scientific, and Cultural Organization and the United States National Commission for UNESCO.

The American Legion has been widely criticized in certain newspapers and periodicals for its firm stand in opposition to UNESCO. In his statement to the subcommittee, Commander Wagner offers an excellent summary of the reasons for the Legion's condemnation of UNESCO, and I for one commend this great veterans' organization for its stand.

Mr. Wagner also effectively explodes the widely circulated myth that UNESCO was tried by the Legion in a star chamber proceeding, and that the Legion's stand did not reflect the judgment of a majority of Legionnaires.

Mr. Speaker, I commend to the attention of all Members the text of Commander Wagner's prepared statement, which follows:

Mr. Chairman and members of the subcommittee, my name is J. Addington Wagner. I am the national commander of the American Legion, and I appreciate, through my appearance here today, the opportunity to carry out the mandate of the October 1955 national convention of the American Legion relative to UNESCO.

The pertinent clauses of this resolution are as follows:

"*Resolved*, That the American Legion urges Congress to repeal the laws creating the United States National Commission for UNESCO and its Secretariat; and that Congress deliver mandates to all administrative departments of the United States Government to desist from further dissemination of UNESCO and United States National Commission for UNESCO materials, reports, and programs within the territorial jurisdiction of the United States.

"That Congress be urged to make a complete current investigation of the operations of UNESCO to determine whether or not that agency has complied and is complying with the terms and conditions of Resolution 215 of the House of Representatives and Resolution 122 of the United States Senate, 79th Congress; said resolutions being the basis of the United States participation in UNESCO; provided further, that investigation be especially made to ascertain explicitly whether there has been violation of the provision of the final portion; provided, however, 'that such agency shall not interfere with educational systems or programs within the several nations, or their administration.' And if, upon investigation, it be determined that UNESCO has violated any of the conditions as set forth in the resolutions, that Congress be urged to take appropriate action to enforce compliance therewith."

The American Legion's convention mandate on UNESCO climaxed the most extensive study, debate, and discussion ever given to any subject by Legionnaires.

Aside from the 2 days of discussion and debate given the subject by the members of the Joint Foreign Relations-Americanism Convention Committee and by witnesses who appeared before it, UNESCO was considered by delegates to many of our department conventions this past year. As a matter of fact, 10 department conventions adopted resolutions on the subject. All 10 supported existing American Legion policy in opposition to UNESCO.

This subject has also been thoroughly studied and discussed by the National Executive Committee of the American Legion.

The opposition of the American Legion starts with those who originated UNESCO. The official publication of the Department of State, entitled "Post War Foreign Policy Preparation, 1939–1945," on page 216 states that Alger Hiss was appointed special assistant to the Director of the Office of Special Affairs in April 1944.

Alger Hiss was later sentenced to prison for perjury in connection with his Communist Party affiliations. Subordinate to and reporting to the Office of Special Political Affairs was the Division of International Security and Organization. Employed in the Divison were: Mrs. Esther C. Brunauer, who was later suspended from her employment in the State Department as a security risk; and Dr. Quincy Wright, who has been identified by the Senate Internal Security Subcommittee as having "actively participated in the work of the American Institute of Pacific Relations." The Institute of Pacific Relations was identified by the Senate Internal Security Subcommittee in 1952 as an "instrument of Communist policy, propaganda, and military intelligence."

On March 25, 1944, it was announced that the United States Government would send a delegation to the Conference of Allied Ministers of Education in London. The American delegation included Archibald MacLeish, who was reported by the House Committee on Un-American Activities to have been affiliated with 10 organizations cited as subversive by the United States Attorney General or the House Committee on Un-American Activities.

The Conference of the Ministers of Education of the Allied Governments, meeting April 5–29, 1944, drew up a tentative draft agreement for a United Nations organization for educational and cultural reconstruction.

In the United States Department of State, through the collaborative efforts of the Division of Cultural Cooperation, the Division of International Organization Affairs, and the Office of Special Political Affairs, a new proposal was formulated which looked to the establishment of a permanent organization for educational and cultural cooperation—almost simultaneously with the general international organization—and shifted the emphasis from reconstruction to longer-range objectives.

This new proposal was approved in principle by the staff committees on February 2, 1945, at which time Alger Hiss was Acting Director of the Office of Special Political Affairs. On April 17, 1945, when the final draft of the proposal was made available by the State Department to the Conference of Allied Ministers in London, Alger Hiss was Director of the Office of Special Political Affairs.

In its January 3, 1955, report the Senate Internal Security Subcommittee concluded:

"1. Alger Hiss, Harry Dexter White, and their confederates in the Communist underground in Government, had power to exercise profound influence on American foreign policy and the policies of international organizations during World War II and the years immediately thereafter.

"2. They had power to exercise profound influence on the creation and operation of the United Nations and its specialized agencies.

"3. This power was not limited to their officially designated authority. It was inherent in their access to and influence over higher officials, and the opportunities they had to present or withhold information on which the policies of their superiors might be based.

"4. Hiss, White, and a considerable number of their colleagues who helped make American foreign policy and the policies of international organizations during crucial years, have been exposed as secret Communist agents."

In its second Report on Activities of United States Citizens Employed by the United Nations, the Senate Internal Security Subcommittee further concluded that:

"Harry Dexter White was the Treasury's representative at the United Nations San Francisco Conference, where he gave particular attention to the establishment of UNESCO."

The United States Department of State publication No. 2457, entitled "The Defense of Peace, Documents Relating to UNESCO," lists among the United States deleation to the Preparatory Educational, Scientific, and Cultural Commission in 1946 the following: Esther C. Brunauer, Archibald MacLeish, Alexander Meiklejohn, Harlow Shapley, and Mark Starr. In addition to the records of Esther C. Brunauer and Archibald MacLeish, which have been listed above, the records of the House Committee on Un-American Activities and the Special Committee to Investigate Tax-Exempt Foundations indicate that Alexander Meiklejohn has been affiliated with at least 4 organizations designated as Communist or subversive by the United States Attorney General or by the House Un-American Activities Commission; Shapley with 17; and Mark Starr with 4.

Subsequent to its formation, a number of United States delegates to the General Conference of UNESCO have been individuals possessing records of affiliation with subversive organizations. Among them were: Esther C. Brunauer, whom I have previously mentioned; Lawrence Duggan, who was identified by the Senate Internal Security Subcommittee in 1952 as one who collaborated with agents of the Soviet intelligence apparatus; Charles S. Johnson, whom the records of the House Committee on Un-American Activities and the California Un-American Activities Committee indicate had been affiliated with at least four organizations designated by the House Committee on Un-American Activities or the United States Attorney General as subversive; Archibald MacLeish, who has been previously mentioned; and Reinhold Niebuhr, whom the records of the House Committee on Un-Ameri-

can Activities indicate had been affiliated with 12 organizations cited by the House Committee on Un-American Activities or the United States Attorney General as subversive.

Certain individuals who, likewise, had records of affiliation with subversive groups have participated in various UNESCO activities. Lawrence Duggan, who was mentioned above, was listed as the United States representative to the Preparatory Conference of Representatives of Universities which was convened at Utrecht, August 2–13, 1948, by UNESCO in collaboration with the Netherlands Government.

Madam Myrdal was listed as Director of the Social Science Department of UNESCO. Concerning her, the Special Committee To Study Tax-Exempt Foundations reported in 1954 that "Madam Myrdal, wife of Gunnar Myrdal * * * is an extreme leftist who was at one time denied a visa by our State Department. That a person of Madame Myrdal's persuasion should be Director of the Social Science Department of UNESCO is rather forbidding."

John Grierson resigned as head of the National Film Board of Canada at the time of the Canadian atomic-spy revelations. Denied a visa to this country, he came in through UNESCO and thereafter headed the Film Section of that Organization.

Of the American employees of UNESCO both past and present, Mrs. Kathryn Bernstein, Peter Duberg, Ruth Froma, David Leff, Mrs. Kathryn Pankey, Helen Van Gelder, and Annette Wilcox have been separated because of loyalty investigations. Jerome Oberwager and Benjamin Wermiel were both fifth-amendment witnesses, while Frank Malina is identified as a Communist Party leader. Haakon M. Chevalier, Otto Klineberg, Gardner Murphy, and Quincy Wright all are reported in the finding of the House Committee on Un-American Activities as having had numerous affiliations with groups designated as subversive by the House Committee on Un-American Activities or the United States Attorney General.

The American Legion by convention resolution is unalterably opposed to the creation of any form of world government. UNESCO, in its own publications, appears to us to advocate world government.

The most clear-cut examples of this type of propaganda are to be found in the series of pamphlets entitled "Toward World Understanding." While attempts have been made to disclaim the responsibility of UNESCO in the publication and distribution of these pamphlets, nevertheless, they appear to have been published by UNESCO and are being sold and distributed through UNESCO outlets as of today. As a matter of fact, as late as November 1955, we find them advertised in the Report of the Fifth National Conference of the United States National Commission for UNESCO, page 6. Page 60 of volume 5 of this series states:

"Education for world-mindedness at present encounters obstacles outside the school. The principal one certainly is nationalism. If the feeling of belonging to the human community develops normally by an extension of the feeling of belonging to the national community, it cannot possibly develop from that caricature of patriotism which is extreme nationalism. If the integration of the child in the national group takes place in the atmosphere of pride and contempt characteristic of this attitude, the efforts of the teachers, no matter how judiciously concerted they may be, will in most cases remain barren. Education for world-mindedness is not a problem that the school can solve within its own walls or with its own means. It is a political problem even more than an educational one, and the present position of teachers does not, in general, permit them to intervene in the field of politics with the resquisite authority."

Volume IV of this series, entitled "The United Nations and World Citizenship," states on page 6:

"Worldwide organization for the conduct of human affairs is therefore essential. No teacher with a sense of realism and even an elementary knowledge of world affairs will ignore this basic need or be indifferent to its consequences for education. World machinery is required; and human beings with the right outlook are required to utilize it or to insist that it be utilized. The educator thus has a double task; to teach about the machinery of world cooperation and to foster the growth of the spirit that will make it function. Education has, in short, the urgent duty to develop informed and competent world citizens."

The UNESCO Report to the United Nations in 1952 stated on page 61 under the caption Education and Understanding: "In this field, UNESCO often reaching far beyond the boundaries of the school, is endeavoring to encourage the new attitude of mind which alone can foster the development of a sense of world citizenship."

UNESCO has published or assisted in publishing many books and pamphlets which have received wide distribution throughout the United States. Many of these books and publications are written by people with extensive records of leftwing affiliation.

Included in this group, by way of example, would be such books as: Are There Too Many People, coauthored by Madam Alva Myrdal, whose record has been previously mentioned; Human Rights—a symposium edited by UNESCO, which included the writings of Quincy Wright, whose record has also been previously mentioned; Contemporary Political Science, which lists among its contributors, Frederick L. Schuman, whom the House Committee on Un-American Activities reports to have been affiliated with 28 organizations designated as subversive by the House Committee on Un-American Activities or the United States Attorney General; Artist in Modern Society, which includes the writings of Marc Connelly, whom the House Committee on Un-American Activities reports to have been affiliated with 6 organizations designated as subversive by the House Committee on Un-American Activities or the United States Attorney General.

Also, Cultural Patterns and Technological Change, which includes the writtings of Otto Klineberg, whose record has been previously mentioned; Democracy in a World of Tension—a symposium prepared by UNESCO, included the contribution of Quincy Wright, whose record has been previously mentioned, and John Dewey, whose record as reported by the House Committee on Un-American Activities includes affiliation with 11 organizations designated as subversive by the House Committee on Un-American Activities or the United States Attorney General; Race and Biology, by L. C. Dunn, whose record as reported by the House Committee on Un-American Activities includes 9 affiliations with organizations designated as subversive by the House Committee on Un-American Activities or the United States Attorney General; Race and Psychology, by Otto Klineberg, whose record has been previously mentioned.

Also, the Race Concept, whose contributors included: L. C. Dunn, previously mentioned, and M. F. Ashley-Montagu, whose record as reported by the House Committee on Un-American Activities includes four affiliations with organizations designated as subversive by the House Committee on Un-American Activities or the United States Attorney General; the Technique of International Conferences, the list of consultants for which included: Gustavo Duran, who was identified in the State Department Loyalty Investigaiton of 1950 as a former lieutenant-colonel in the Communist International Brigade in Spain during the Spanish Civil War, together with Otto Klineberg and Gardner Murphy, whose records have been previously mentioned.

Also, The University Teaching of Political Science and The Teaching of the Social Sciences in the United States, both included contributions from Marshall E. Dimock, who has been reported by the House Committee on Un-American Activities to be associated with at least four organizations cited as subversive by the United States Attorney General or the House Committee on Un-American Activities; How To Print Posters, by Jerome Oberwager, who has been previously mentioned as a fifth-amendmnt witness and former employee of UNESCO.

UNESCO has also published a book, entitled "The Entertainment Film for Juvenile Audiences," by Henri Storck. Listed in this book are a considerable number of films produced by the Czechoslovak State Film Enterprise, and by the Soviet Union. Inasmuch as films produced in a Communist state have as their major mission, the diffusion of propaganda, the publication of this book would appear to be but an extension of Communist propaganda.

The American Legion is of the opinion that UNESCO, through the United States National Commission for UNESCO, is endeavoring to influence the educational system of the United States. We submit that this is in violation of the terms and conditions expressed in Resolution 215, House of Representatives, and Resolution 122, United States Senate, 79th Congress.

In November 1949, a pamphlet, entitled "UNESCO Today," was published as State Department publication No. 3694 for the United States National Commission for UNESCO, which reported that: "Largely as a result of Commission activities, at least a dozen universities and colleges now have UNESCO courses on international understanding. Scores of grade school teachers interested in the UNESCO movement have brought it to the attention of their classes; international themes have been stressed in pageants, plays, and music; and national scholastic newspapers and magazines, as well as those published by schools, have stressed UNESCO along with the U. N. and other specialized agencies."

In May 1950, a booklet entitled "The UNESCO Story," was published as State Department publication No. 3931. Page 26 of this booklet is entitled "UNESCO in the Schools." Activities which have been carried on in the schools of the United States in behalf of UNESCO are listed on approximately 50 pages of this publication.

In November 1951 a bulletin entitled "A Junior High School Looks at UNESCO" was published as State Department publication No. 4380 for the United States National Commission for UNESCO. This entire publication is devoted to showing how the UNESCO program was carried out in Alice Deal Junior High School in Washington, D. C.

In September 1952, a bulletin entitled "Teaching About the United Nations in the Schools and Colleges of the United States in 1950 and 1951" was printed as State Department publication No. 4649 for the United States National Commission for UNESCO. This publication indicates how students are being indoctrinated with the UNESCO concept of world citizenship from the kindergarten to the university and in adult life. As late as November 1955 the United States National Commission for UNESCO published a bulletin entitled "The Development of International Understanding Through Primary and Secondary Schools" which was distributed at the fifth national conference of the United States National Commission for UNESCO on November 3–5, 1955.

Examination of the foregoing publications, in our judgment, produces one inescapable

conclusion; that is, that UNESCO has, from its inception, and is continuing today, to interfere in all aspects of the American educational system.

Some measure of the impact of UNESCO on educational reconstruction is indicated in a statement that this intergovernmental organization whose total annual budget is no more than $8 million, was able to stimulate contributions from voluntary agencies in the United States, totaling over $200 million in 2 years. This statement was taken out of a publication entitled "Youth and UNESCO," which was written by Hall Lee Dean, Robert S. Smith and Donald F. Sullivan, the latter two who served as members of the United States National Commission for UNESCO from 1947 to 1949. These three individuals obtained material for this publication while on a trip to Europe in 1949, which was sponsored by the Carnegie Endowment for International Peace. At that time, Alger Hiss was the president of the Carnegie Endowment for International Peace.

The American Legion urges Congress to repeal the laws creating the United States National Commission for UNESCO and its Secretariat. While we recognize that many fine Americans have been and are members of the United States National Commission for UNESCO, we feel that this Commission has been influenced in the past by individuals with known records of Communist-front affiliation. Included in this latter category of influence are the following individuals:

Esther Caukin Brunauer, whose record has been previously mentioned; Mark Connelly, who was previously mentioned; J. Frank Dobie, who was reported by the House Committee on Un-American Activities to have been affiliated with four organizations cited as subversive by the United States Attorney General or the House Committee on Un-American Activities; B. W. Huebsch, who was reported by the House Committee on Un-American Activities to have been affiliated with nine organizations cited as subversive by the United States Attorney General or the House Committee on Un-American Activities; Archibald MacLeish and Reinhold Niebuhr, who have been previously mentioned; Harlow Shapley, whose record previously has been quoted; Harold C. Urey, who was reported by the House Committee on Un-American Activities to have been affiliated with at least 14 organizations designated as subversive by the United States Attorney General and the House Committee on Un-American Activities, and who has also served on the United States National Commission for UNESCO; and J. Robert Oppenheimer, who was denied security clearance and access to classified security information by the Atomic Energy Commission in June 1954. The United States Atomic Energy Commission's Special Personnel Security Board in denying Oppenheimer's security clearance reinstatement, stated that the following considerations were the controlling factors in leading to the security clearance denial:

1. We find that Dr. Oppenheimer's continuing conduct and associations have reflected a serious disregard for the requirements of the security system.

2. We have found a susceptibility to influence which could have serious implications for the security interests of the country.

3. We find his conduct in the hydrogen bomb program sufficiently disturbing as to raise a doubt as to whether his future participation, if characterized by the same attitudes in a Government program relating to the national defense, would be clearly consistent with the best interests of security.

4. We have regretfully concluded that Dr. Oppenheimer has been less than candid in several instances in his testimony before this board.

Congressman GEORGE A. DONDERO, of Michigan, was reported in the CONGRESSIONAL RECORD of March 17, 1952, page 2423, as follows:

"On March 25, 1949, I brought to the attention of the House, an organization called Artists Equity Association, in whose lists may be found practically all of the notorious Red artists in the country. I propose to show that the Artists Equity Association is the latest link in a chain of Red-instigated artists' organizations designed to control art and artists of this Republic.

"It is astounding to find that this left-wing artists' organization is ready to dominate the Visual Arts Panel of the United States National Committee of UNESCO with 6 of its 18 panel members, all connected with the above Artists Equity Association. They are: Hudson D. Walker, Director of AEA; Russell M. Cowles; Stanley Hayter; Abraham Rattner; William Zorach; and Theodore Brensen, the chairman of Artists Equity's Committee of International Cultural Relations.

"The United States is going to participate in the UNESCO International Conference in September of this year and the president of AEA, Henry Billings, radical leftwing artist, has been made a member of the UNESCO Advisory Committee.

"Is it not time that the State Department ceased in its attempts to promote communistic art that is distorted, perverted, and actually the sabotage weapon of international communism?"

The United States National Commission for UNESCO has published a list of recommended films which includes some which were either written or produced by individuals with records of Communist or Communist-front affiliations. Included in that category are:

Americans All, produced by Julian Bryan, who was reported by the House Committee on Un-American Activities to have been affiliated with at least four organizations which have been cited as subversive by the United States Attorney General; Brotherhood of Man, which is based on a script written by Ring Lardner, who has been identified before the House Committee on Un-American Activities as a member of the Communist Party; The Cummington Story, written by Waldo Salt, who was identified before the House Committee on Un-American Activities as a member of the Communist Party, was produced by Irving Lerner, who was reported by the House Committee on Un-American Activities to have been affiliated with six organizations cited as subversive by the House Committee on Un-American Activities or the California Committee on Un-American Activities, and music by Aaron Copland, who was reported by the House Committee on Un-American Activities to have had 21 affiliations with organizations cited as subversive by the United States Attorney General, the House Committee on Un-American Activities and the California Un-American Activities Committee; Picture in Your Mind, produced by Julian Bryan, whose record is quoted above; A Place To Live, written by Muriel Rukeyeser, who was reported by the House Committee on Un-American Activities to have been affiliated with 17 organizations cited as subversive by the United States Attorney General and the House Committee on Un-American Activities, was directed by Irving Lerner, whose record is quoted above.

The United States National Commission for UNESCO has advocated a series of 13 recorded radio programs dealing with the problems of human rights which were produced by the Institute for Democratic Education.

The 1948 report of the California Senate Committee on Un-American Activities stated with reference to the Institute for Democratic Education:

"The organization has been in existence for about 8 years. It is financed by private contributions from interested individuals and organizations.

"The leading figure in the institute is one Harold Franklin. In 1935, the Communist Party held a conference in Washington, D. C. The gathering was known as the National Emergency Conference Against the Government Wage Program. Harold Franklin was a member of the resolutions committee of this conference. All of the leaders of the conference were well-known Communist Party members. Today, Harold Franklin is program director of the Institute for Democratic Education.

"The director of the Institute is Howard M. LeSourd. LeSourd was a sponsor of the Communist-front organization known as the Joint Anti-Fascist Refugee Committee, whose leaders were recently convicted for contempt of Congress.

"Many of the members of the board of governors of the institute, as well as actors who have made the organization's transcriptions, have long records of affiliation with Communist fronts.

"So extensive are the Communist-front affiliations of the personnel of the Institute for Democratic Education, as evidenced by the documents in this dossier, there can be no doubt that this organization is one of the insidious ways in which the left wing has penetrated radio broadcasting.

"The radio transcriptions of the institute follow the line of the Communist Party with the strictest fidelity."

Maj. Gen. Milton G. Baker, former Chairman of the United States National Commission for UNESCO, stated at the fifth national conference of that group on November 3, 1955, that: "The legion condemned UNESCO without a hearing. UNESCO was not tried and found wanting by the legion convention. It was tried in a star chamber proceeding, so to speak, without a jury and, just as any such trial never represents the will of more thoughtful members of a community, I do not believe that this action reflected the judgment nor the will of all legionnaires."

Certainly Major General Baker was badly informed, or misinformed when he told the commission's recent fifth national conference that "the legion condemned UNESCO without a hearing."

Apparently General Baker made no effort to find out how the UNESCO resolution was actually handled. He could have learned the truth from any number of sources, including a representative of the UNESCO Relations Staff of the State Department. The Assistant Director of that State Department office participated in the meeting of the Convention Joint Committee considering the UNESCO resolution.

Anyone who chooses to misrepresent our actions is certainly free to do so. We resent it, but we cannot prevent it. The American Legion has never been a rubber stamp for any official or quasi-official agency of the Government. We will continue to be independent and to fight for the things we believe to be right.

Mr. Chairman, I have summarized in capsule form information relating to UNESCO operations in this country which is a matter of public record. On the basis of these facts, the American Legion submits that UNESCO has been a haven for many individuals whose loyalty to the United States is severely compromised, if not submerged, by a demonstrated sympathy for Communist objectives and the principles of one-world government. The activities of these people, as carried on through the instrumentality of the United States National Commission for UNESCO, have been subsidized by American taxpayers.

We object most vigorously to the continuance of an American-financed propaganda campaign which, in our belief, is contrary to the spirit and the laws of the United States of America. We believe that the in-

tended effect of such a campaign can only be the destruction of public appreciation of American values and confusion and division among our people.

We of the American Legion have the utmost respect for the judgment of the Congress in this as in all other matters. The issue is the security and strength of our entire Nation. There is great public concern about the problem; therefore, we earnestly ask that the Congress undertake a complete and thorough investigation of the activities of UNESCO and the United States National Commission for UNESCO. Such an investigation, we feel, would clearly and authoritatively show the need for repealing the law creating the United States National Commission for UNESCO, and the necessity for taking appropriate action to enforce compliance with resolution 215 and resolution 122, which authorized United States participation in UNESCO.

The Communists Are Placing New Emphasis Upon Propaganda and Economic Programs and the United States and the Free World Must Find a More Effective Way To Counter These Steps

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. HAYS of Arkansas. Mr. Speaker, it is obvious that the Soviets are using every device to gain trade and political advantages in certain parts of the world through a stepped-up economic program that makes use of deception coupled with a propaganda drive to extend Communist influence throughout the world. This Soviet activity was recognized by the United States delegation to the United Nations last year and the delegation unanimously adopted a statement urging that our own policies be reassessed in the light of this move. The statement was prepared by our delegation on December 9 and was sent to the Secretary of State for the information of officials here. On January 11, 1956, Mr. Dulles released this statement to the press, stating at that time that the President had seen the statement and concurred generally with the views which it expressed. While the statement has been widely circulated, I find that it has not been published in the RECORD, and since it is of great significance and relevant to discussions now taking place in the Congress, I include it in my remarks, as follows:

STATEMENT ON ECONOMIC FOREIGN POLICY BY THE UNITED STATES DELEGATION TO THE 10TH SESSION OF THE GENERAL ASSEMBLY OF THE UNITED NATIONS, TRANSMITTED BY HENRY CABOT LODGE, JR., CHAIRMAN OF THE UNITED STATES DELEGATION, TO THE SECRETARY OF STATE, DECEMBER 9, 1955

Impelled by a unanimous feeling that economic and social questions are assuming increasing importance on the international scene, the United States Delegation to the 10th General Assembly has joined in framing this statement.

The present period in history may one day be recognized as a major turning point in the struggle between communism and freedom. It appears to be clearly a shift in the cold war, in which economic and social problems have moved to the forefront.

Members of the United States Delegation during this General Assembly session have observed the effectiveness of Soviet tactics under these new conditions. This can be seen both in the way the Soviet bloc delegates work in various United Nations meetings, and also in the voting that occurs in many committees. As we observed maneuvers, we were conscious that the Soviet Union, elsewhere in the world, was using economic and social collaboration as a means for jumping military as well as political barriers. Examples of this can be found in India, Egypt, and Burma.

We believe that the United States must counter these Soviet efforts. We can succeed, not by outbidding communism in sheer amounts of economic aid, but by making newly independent and newly articulate peoples feel that they can best satisfy their wants by becoming and remaining part of the community of free nations.

We welcome more emphasis on economic and educational endeavors, for we have a proven experience in these fields.

We are in a contest in the field of economic development of underdeveloped countries which is bitterly competitive. Defeat in this contest could be as disastrous as defeat in an armaments race.

We could lose this economic contest unless the country as a whole wakes up to all its implications.

Henry Cabot Lodge, Jr., Brooks Hays, Chester E. Merrow, John O. Pastore, Colgate Whitehead Darden, Jr., Robert L. Brokenburr, Laird Bell, Jacob Blaustein, James J. Wadsworth, Mary P. Lord.

The United Nations Organization

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, March 8, 1956

Mr. JENNER. Mr. President, it is unfortunately only seldom that we have an opportunity to hear or read the truth about that great brainchild conceived of Alger Hiss, the United Nations Organization. When someone has the courage to tell the truth, he is quickly submerged by the mire of propaganda that has spewed forth from the U. N. propaganda machine since the day of its birth.

When someone does take courage, and brings the facts into public view, we all have a patriotic responsibility to see that they are as widely known as possible. The March 1956 issue of the American Mercury magazine carries a brilliant example of objective reporting on the U. N., written by a noted American journalist, Mr. Karl Hess.

Because the facts contained in this article have so vital a bearing on the work which we are doing in the Congress, I ask unanimous consent that it be printed in the Appendix of the RECORD.

I am informed by the Public Printer that the article is estimated to make 3 pages of the CONGRESSIONAL RECORD, at a cost of $240.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOUR CHECKLIST ON THE U. N.—THE TRUTH ABOUT THIS INTERNATIONAL ORGANIZATION

(By Karl Hess)

No product has even been sold to the American people in such a constant, dinning fashion as has that supreme product of the social-planners' imagination—the United Nations. Children are fed U. N. in their school diets, with some of them understanding the initials "U. N." before they understand the initials "U. S." The blue and white U. N. flag flies beside the red, white, and blue American flag at public gatherings. Radio and television networks happily hand over time to be used by U. N. propagandists. Opposition statements simply are ignored.

Danny Kaye grimaces from a thousand movie screens as he reports on the U. N. as a friend of children. Adults hire lecturers to tell them about the U. N. because the topic is fashionable. Forums spring up to discuss the U. N. but actually serve to promote it. And from all this activity evolves a social attitude that the U. N. is inherently right, that it possesses a natural virtue, shared by all and loved by all.

In all the ballyhoo and the intolerance of any dissension, one factor is strikingly absent: Truth. The U. N.'s propagandists do not deal in facts, they deal in emotions.

Americans who will snub their best friends, if the friends say a harsh word about the U. N., almost invariably are totally ignorant as to the actual nature and performances of the U. N. The schoolteacher who tells your child that the U. N. is a wonderful idea probably couldn't tell within a hundred how many pro-Communists, as opposed to believers in freedom, there are on the U. N., almost invariably are totally ignorant as to the actual nature and perform-probably doesn't have the foggiest notion that the U. N. has rejected God at its front door.

These peoples, and millions more, have swallowed the propaganda without ever having tasted the truth. In the hope that the truth may still seep out, here is a checklist of simple facts concerning the U. N. This is not a checklist of mere disagreements between points of view. It is a checklist of reality; of what actually has been and is going on inside the Manhattan house of glass, while millions of Americans stroll by, not bothering to look.

The checklist is in the form of alphabetically arranged entries for handy use when you are confronted by the various pitchmen and pitchwomen of the U. N. and their volunteer shills. The list may provide the basis for the reader's own additions and elaborations. And as the checklist grows, its additions, when appropriate, will be printed in this magazine.

AFGHANISTAN

Recently the loyalties of the Government of Afghanistan have shifted from the side of the West to the side of the Soviet Union, which has sent missions to the country and also loaned it substantial amounts of money. In 1950, the U. N. sent a technical assistance mission to Afghanistan. The man chosen to head the mission: Owen Lattimore.

ARMY FOR THE U. N.

The U. N. has made much of the fact that it is setting up an armed organization which will be used to fight aggression wherever it flames forth. Not a single nation has assigned or specifically promised armed units for this U. N. plan. Only one nation has even promised to shoulder arms if the U. N. does decide to fight an aggressor. That lone nation? The United States.

ASSOCIATION FOR THE U. N.

Leading the private, nongovernmental efforts to propagandize the U. N. in this country is the tax-exempt organization known as the American Association for the United Nations. In a pamphlet issued by this organization, a spokesman describes the ex-

tent of the organization at the time of America's ratification of the U. N. Presumably it is proportionately stronger today: "It has a hard core * * * of members of approximately 50,000, doing much of its work in cooperation with many organizations. * * *" The guiding spirit behind this organization has been Clark M. Eichelberger.

ASSOCIATION FOR THE U. N. AND RED CHINA

From a bulletin of the American Association for the United Nations: "We support the decision of our Government to negotiate with the government of Communist China as a matter of realistic political necessity."

ASSOCIATION FOR THE U. N. AND SECURITY

Regarding the brief attempts to stop the infiltration of American Communists into the U. N. the journal of the American Association for the United Nations, the Peoples Section Bulletin, comments that "the safety of the country can be more imperiled than assured if measures directed against an alleged conspiiracy take on the attributes of a police state. * * * We deplore these measures as we do the unwarranted fears which prompted them, and urge the amendment of the Internal Security Act and related provisions in law. * * *"

BERLIN BLOCKADE

When the Soviets tried to starve the free zone of Berlin, a U. N. Security Council move to end the blockade was vetoed by the Soviet Union. The blockade finally, of course, was broken by the United States airlift, without U. N. aid.

BIRTH CONTROL

The UNESCO publication, The Impact of Science on Society, says that "unless there is a world government which secures universal birth control, there must from time to time be great wars, in which the penalty of defeat is widespread death by starvation."

BOOKS

In contrast to the hundreds of books and pamphlets propagandizing the U. N. to the American people, only three works have appeared in the past year dealing with the facts of the U. N. and its performances, as compared to its promises. The books are: The United Nations: Planned Tyranny, by V. Orval Watts, published by Devin-Adair, New York; The U. N. Record, by Chesly Manly, published by Henry Regnery, Chicago; and Behind the U. N. Front, by Alice Widener, published by the Bookmailer, New York.

BRICKER AMENDMENT

"Americans who advocate making the United States a province in a supernational state are reactionaries in the true sense of the word. The world experienced many centuries of darkness and agony from the world government known as the Roman Empire. In any massive consolidation of governmental power, tyranny is the usual byproduct.* * * [The Bricker amendment] would protect the doctrine of inherent rights against erosion by treaties and other international agreements. The preservation of our inalienable rights would not depend merely on the beneficence of the President and the Senate. The American people would be the exclusive repository of their inherent rights, and even they would be incapable of surrendering their rights except by further amending the Constitution." (Senator JOHN W. BRICKER, the American Mercury, October 1953.)

BUSINESS

The U. N. hostility toward business, and particularly United States business, has never been deeply concealed. A prime example of that attitude was the report of the U. N. Economic Commission for Europe regarding oil. The report, which urged an emphatic blow to American oil production by a sort of international price-fixing arrangement, was handed out to interested U. N. units but in many instances was specifically and officially withheld from the American businessmen involved. Further, the report was prepared under the direction of a Swedish Socialist, Gunnar Myrdal.

Over the years, the U. N. has been pushing a study of American business. One action was the publication of a document entitled "Principal Developments in the Field of Restrictive Business Practices in the United States Since January 1, 1953." The report sets forth antitrust actions against American businesses. It presents, however, only the charges, without any mention at all of the defense arguments in any of the cases.

COMMUNISTS IN U. N.

In 1952, the publication United States News & World Report cited an "informed estimate" that as many as 50 percent of the 1,300 policy-level staff members of the U. N. were either Communists or willing to follow Communist directions.

COMMUNIST JOB QUOTAS

In filling the 1,300 policy-level jobs in the U. N. Secretariat, Soviet and satellite governments (Russia, Byelorussia, the Ukraine, Czechoslovakia and Poland) are entitled to up to 237 positions.

DISMISSAL DAMAGES

It has been claimed that the U. N. in dismissing certain persons from its staff, has answered United States objections to American Communists and Communist sympathizers serving in the U. N. (This country, of course, has no jurisdiction whatsoever over the Communists of other countries brought in to serve at the U. N.) It is true that persons have been dismissed from the U. N. at the instigation of the United States. But, in the cases of 25 persons dismissed because they refused to answer questions concerning communism, the U. N.'s then Secretary General Trygve Lie gave them every aid "in the transition period while seeking other employment" and also helped make it possible for the dismissed persons to receive damages for their dismissals of up to $40,000 per person. The tribunal that set the amounts had no Americans in its membership. Later, four women dismissed from UNESCO after refusing to attend a loyalty-board hearing were awarded $30,300 damages.

ESPIONAGE

Use of the U. N. as a cover for Soviet espionage operations has been spotlighted in United States congressional investigations. More than 40 American members of the U. N. Secretariat were dismissed because of possible connections with the Communist Party. Two hundred persons resigned without explanation during the investigations.

ESPIONAGE IN ECONOMIC AFFAIRS

In testimony before the Senate Internal Security Subcommittee, two American assistants to the Assistant U. N. Secretary General for Economic Affairs were asked if they were engaged in espionage or subversive activities against the United States. Both refused to answer on the grounds that to do so might incriminate them. They were Joel Gordon and Irving Kaplan. Three other aides in the economic affairs department, Sidney Glassman, Herbert Schimmel, and Marjorie Zap, refused to answer questions regarding Communist Party membership or activity.

ESPIONAGE SHIPMENTS

One U. N. privilege of immunity is that its officials do not have to have their baggage inspected when they enter or leave America. In 1951, the Senate Judiciary Committee heard testimony that, thanks to this immunity, a Czech U. N. official once left with 97 pieces of uninspected luggage containing equipment which was highly secret, literature and secret communications.

FIFTH COLUMN

"You Americans are a strange contradiction. You spend huge sums of money fighting the fifth column in your country but at the same time, down on the East Side of New York, and partly with money given by the Rockefellers, you have erected the biggest fifth-column headquarters in the world, the U. N. It is filled with men who wish to subvert the Government of the United States. Yet you pay out your good money (and Great Britain does, too) to bring these people into your midst. Why a great Nation like the United States bothers to belong to such a monstrous organization, why any great nation would care to join—is more than I can honestly comprehend." (Lord Beaverbrook as quoted in an interview by the New York Journal-American, December 3, 1955.)

FORD FOUNDATION

The U. N. Bulletin in 1954 carried this note: "A special program of training in tax legislation and administration for United Nations fellows and scholars was set up at Harvard University Law School. * * * The Harvard project is financed by a special grant from the Ford Foundation."

GOVERNMENT ADVISERS

A report describing the manner in which the U. N. sends personnel to administer technical-assistance programs sets a significant pattern for the future internationalizing of domestic governments: "A most important innovation * * * was the recommendation that high-level technical consultants from abroad be appointed to top advisory positions in the regular government service."

GOVERNMENT ADVISERS, SOCIALISTIC

One of the consultants to the U. N. Economic Commission for Latin America is Clarence Senior. He was, for several years, national secretary of the Socialist Party of the United States.

GREECE

The U. N. has been given credit for preserving the independence of Greece against attacks by insurgent Communists. Greece was saved, in point of strict fact, by direct United States aid to that beleaguered nation. General Van Fleet headed a memorable military mission to fight the Communists, and $2 billion of United States economic and other military aid was poured in to defeat the Reds.

HAMMARSKJOLD MISSION

The fact that the Secretary General of the U. N. should journey in person to Red China in order to add his personal word to the negotiations for the release of American prisoners illegally held there, was hailed by many as dramatic proof of the eyes-open activity of the U. N. Senator WILLIAM F. KNOWLAND saw it otherwise at the time. First, he pointed out that Dag Hammarskjold, in his mission to the Reds, hadn't had the time to visit the captive fliers, or even check the conditions of their captivity. He added: "The mission of Hammarskjold was not a success and, in my opinion, no service is done the American people or those in the free world by pretending that it was. Mr. Hammarskjold has returned without the release of the prisoners. * * * He personally favors the admission of Communist China into the United Nations."

HISS

"Who were the principal movers at San Francisco for this United Nations Charter? Who wrote the charter, and who had the most to do about shaping its provisions? The answer is that the Russian Communists and Alger Hiss, a representative of our State Department, were the prime movers and schemers in arranging its provisions. That is the same Alger Hiss who was convicted of perjury when he denied sending secret material to the Soviet Union representatives. Its very beginning gave this document a bad odor." (From a speech by Representative USHER BURDICK in the House of Representatives April 28, 1954.)

HOME LIFE

Interference in the home life of individual families is a stated U. N. purpose. In the UNESCO school program's statements of intent, there is the declaration that UNESCO will try to "correct many of the errors of home training * * * the narrow family spirit of the parents may, in fact, not only compromise indirectly, and in some degree, unconsciously, the eventual integration of the child in the human community, but it may also cultivate attitudes running directly counter to the development of international understanding."

HUMAN RIGHTS

According to Dr. Charles Malik of Lebanon, chairman of the U. N. Commission that drafted the organization's Covenant of Human Rights, "I think a study of our proceedings will reveal that the amendments we adopted . . . responded for the most part more to Soviet than to western promptings."

INDIVIDUAL INTERFERENCE

Dean Acheson, former Secretary of State, has made it clear that the scope of the U. N. is not limited to discussions of national and international matters at a governmental level. The U. N., he said, "amounts to an international legislative system," that is empowered to "deal with the individual and the rights of the individual" in any nation belonging to the U. N.

INDONESIA

Freedom for Indonesia sometimes is cited as a U. N. accomplishment. Actually it was more precisely an American accomplishment. The Dutch steadfastly rejected U. N. Security Council suggestions that Indonesia be given its independence. It was granted only after Merle Cochran, diplomatically representing the United States Government, persuaded the Dutch that their battle in Indonesia was a losing one.

INDUSTRY SEIZURE

Chief Justice Vinson and two other justices of the Supreme Court upheld President Truman's seizure of the steel industry by direct reference to the United Nations. They reasoned that inasmuch as the U. N. charter pledged this country to resist aggression and that in view of the fact that the steel industry was vital to defense (during the Korean War), this international fiat gave the President the right to seize and operate a privately owned American industry.

INTERNATIONAL SECURITY

The myth of the U. N.'s power to cure all ills was frankly faced by Sir Gladwyn Jebb, chief delegate from Britain to the U. N. He admitted candidly that such an organization "cannot provide for our security."

INVESTIGATIONS RESISTED

"The executive committee of the Federation of International Civil Servants Associations has recommended that no international civil servant should give information 'prejudicial to any international civil servant' to the police of any national government. This recommendation * * * is directed specifically to inquiries made by the United States Federal Bureau of Investigation among officials of the United Nations. Seven thousand to eight thousand employees of the United Nations and its agencies are members of the federation." (The New York Times, September 15, 1953.)

IRAN

The departure of Soviet troops from the oil-rich kingdom of Iran is often cited as a U. N. victory. In fact, the Red troops left only after Iran granted the Soviet special oil concessions that the Kremlin had demanded. The Red troops, therefore, did not meet any form of defeat. They won their point and then got out.

IRAN REFINERY DISPUTE

The U. N. Security Council failed to settle the crippling dispute between Great Britain and Iran over the gigantic Iranian oil refineries. The settlement of this issue finally was achieved by a United States mission headed by Herbert Hoover, Jr.

ISRAEL ARMISTICE

In the 5 years since it set terms of a peace settlement in the Israel-Arab war, the U. N. has ben unable to produce Israeli action on those terms—even thoug the Arab nations had long ago approved them.

ISRAEL FIGHTING

Just how ineffective the U. N. is when faced with even the opposition of a minor nation was shown during the resurgence of the fighting along the Israel border. Although cited a score of times for military acts against the Arab nations, which were not so cited, Israel easily and with absolute impunity rejected the U. N. citations.

ISRAEL PARTITION

Despite the U. N. Charter's promise of "equal rights and self-determination of peoples" the U. N.'s partition plan for the creation of Israel took an area owned 85 percent by Arabs and split it so that the Arab ownership was reduced to 40 percent. The pressures to which U. N. members were subjected in order to effect this partition was described, in the diary of the late Secretary of Defense James Forrestal, as having "bordered closely onto scandal."

ISRAEL REFUGEES

In 5 years, the U. N. has been unable to solve the tragic dilemma of 850,000 Palestinian Arabs who were displaced by Israel. The only U. N. solution so far has been virtually to beg alms with which to keep the refugees alive.

KASHMIR

In 1949, a year after Pakistan and India began fighting over the State of Kashmir which, like Pakistan, is predominantly Moslem, the U. N. arranged a cease-fire and said that the people of Kashmir should have the right of plebiscite to determine their future. In fact, however, the U. N. has stood by and permitted Nehru India to hold its own elections in the territory occupied by Indian troops.

KOREAN CASUALTIES

More than 90 percent of all casualties by the U. N. forces in Korea were sustained by American troops. Twenty-five thousand six hundred and four Americans died in the Korean "police action." More than 103,000 were wounded; over 7,000 were listed as missing.

KOREAN CIVIL ASSISTANCE COST

The State Department has reported that up until 1952, more than $385,300,000 was given to the U. N. Civil Assistance program in Korea. Of that amount $321,688,000 was contributed by the United States with only $17 million coming from all the other U. N. members.

KOREAN COST

More than 90 percent of the expenses of the "U. N. action" in Korea were paid by the United States taxpayer.

KOREAN STALL

It took the United Nation 10 weeks to get around to accusing the Communits regime in Peiping of aggression after Red Chinese troops intervened in Korea. It took 6 months for the U. N. to adopt a resolution calling for an embargo on war materials intended for Red China.

KOREAN GIVEAWAY

One of the many U. N. feelers to appease the Red Chinese after they intervened in the Korean war included a promise to turn Formosa over to the Reds, as well as granting them a seat in the U. N.

LAWS

In 1951, the California Court of Appeals ruled that the UN Charter "is paramount to exery law of every state in conflict with it." In 1952, in the Steel Seizure Case, Chief Justice Vinson of the United States Supreme Court held that President Truman's action was legal, not under the United States Constitution, but under the UN Charter. A ruling in which he was supported by two other Justices.

LIBYA

Designation of Libya as an independent nation is regarded as a conspicuous U. N. accomplishment. Actually, one U. N. official, Adrian Peit, of the Netherlands, U. N. commissioner for Libya, frankly admitted that the supposed national assembly of free Libya was so completely a puppet of a British-installed regime that it couldn't even draft a constitution for itself.

LOS ANGELES DECISION

UNESCO's declared designs to propagandize school systems was forthrightly rejected in one major American city. In 1952, the Board of Education of Los Angeles voted to ban any "official or unofficial UNESCO program in the Los Angeles city schools." It further ordered that "the UNESCO chairmanships and central advisory committee shall be abolished."

LOYALTY TO AMERICA

"This writer submitted to an eminent American attorney for analysis all the material (concerning the loyalty of U. N. employees). His legal opinion concerning the present situation regarding United States-United Nations personnel security relations today is: 'As the United Nations organization now interprets its charter and its rights, it is entitled to employ, for work within the city of New York and elsewhere, Americans who are disloyal to the United States or subversive in whatever degree, and to cloak such employees with whatever immunities are granted to United Nations employees." (Alice Widener, Behind the UN Front, published by the Bookmailer, New York.)

MILITARY STAFF COMMITTEE

The Soviet Union, as a permanent member of the Military Staff Committee of the UN, is entitled to the chairmanship of the body every fifth month. The function of this committee is to provide the direction of strategy for any armed force fighting on behalf of the U. N. The committee was, thus in technical strategic charge of the police action in Korea. To block that control, the United States and its supporters had to flatly and openly break the rules of the U. N.

MISCEGENATION

The U. N. has produced at least one official statement approving of intermarriage between races, whether or not there might be individual cultural objections. In the 1950 UNESCO statement on race, it is said that "no convincing evidence has been adduced that race mixture of itself produces biological bad effects. There is, therefore, no biological justification for prohibiting intermarriage between persons of different ethnic groups."

MONETARY FUND

The International Monetary Fund, a specialized agency of the U. N., controls assets of more than $7 billion. Its Secretary, until 1952, was Virginius Frank Coe. He was dismissed after refusing to tell a Senate committee whether he was or was not at that time a member of a Soviet espionage ring.

MURDER

In 1952 the free trade union committee of the AFL brought to the attention of the U. N. the appalling fact that Communists in occupied China had committed 14 million political murders. The U. N. would take no action.

NATIONALISM

Love of country is particularly and specifically discouraged in a UNESCO publication entitled "Principles of Social Reconstruction." It condemns "bigoted nationalism" in history books. A sequel to it regards any degree of nationalism as undesirable.

POWER POLITICS

Proof of the efficacy of old-fashioned power politics as opposed to U. N. ineffectualness came when the Soviet demanded bases on Turkish territory controlling the Bosporus and the Dardanelles. Turkey said it would fight rather than accede. America and Great Britain backed Turkey. The case never even reached the U. N. Russia backed down.

PREJUDICE

Under the Genocide Convention of the United Nations, a person who, according to the U. N., libels or injures the feelings of any member of a group may be charged with an attempt to exterminate that group and may be tried in a court of the U. N.'s designation—not necessarily a court in the defendant's own land.

PRESIDENTIAL AUTHORITY

In 1954, in the preamble to an Executive order, President Eisenhower openly acknowledged that he now considered the U. N. as much a source of his authority as the Constitution of the United States. He wrote: "Now, therefore, by virtue of the authority vested in me by the Constitution, statutes, and treaties of the States, including the Charter of the United Nations, and as President of the United States, it is hereby ordered as follows."

PRESS FREEDOM ABRIDGED

The United Nations specifically provides that freedom of expression may be curbed if even as ephemeral a thing as reputations are threatened. Any dictator thus is given the right to protect his repuation by shutting up and shutting off every vestige of free expression. The U. N. item that does this is in article 16, section 3, of the Covenant of Human Rights. Freedom of expression, it states, may "be subject to certain restrictions * * * as are provided by law and are necessary (1) for respect for the rights or reputations of others, (2) for the protection of national security or of public order, or of public health or morals."

PROPAGANDA IN SCHOOLS

An official statement of the Director General of the United Nations Educational Scientific and Cultural Organization asks that teaching in schools "should not be * * * limited merely to imparting information about the structure and activities of the organization, important though this information may be. Rather it should be seen as a form of education contributing to the development of world-minded citizens."

PUBLIC FUND POLICY

The U. N.'s own bulletin, in March 1954, set forth the organization's attitude toward the use of government (i. e., tax) money: "The government budget, traditionally used primarily as a means of control over the receipts and disbursements of public funds, becomes a major instrument of economic policy" thanks to the U. N.'s program of economic assistance.

RED CHINA'S SOVIET SUPPORT

The U. N. has never condemned the Soviet Union's support of Red China's war against U. N. forces.

RED CHINA TRADE

The United Nations never has asked that its member nations cease trading with Red China, despite the fact that Red China has been branded an aggressor and has waged active war on U. N. forces.

RELIGION

Rather than offend any of its members, such as the atheists of the Soviet Union, the U. N. omits God from its considerations. And when UNESCO put up a $600,000 fund to underwrite a new world history, it chose as editor Prof. Ralph Turner, of Yale, described in William F. Buckley's God and Man at Yale as "a dedicated iconoclast who has little mercy for God, or on those who believe in Him."

RELIGIOUS FREEDOM ABRIDGED

The U. N. specifically asserts that religious freedoms may be curbed by governments. Article 15 of the U. N. Covenant of Human Rights, section 3, says: "Freedom to manifest one's religion or beliefs may be subject only to such limitations as are prescribed by law."

SLAVE LABOR

In 1953 the United Nations Economic and Social Council was asked to discuss the use of slave labor in the Soviet Union. The council removed the item from its agenda. It would not discuss the matter.

The slavery, so far as the U. N. was concerned, could continue.

SOVEREIGNTY

Among American supporters of the U. N., there is no attempt to conceal the fact that the goal of that support is the end of the sovereign United States and the substitution instead, of a United States that would be merely a cog in a U. N.-run world. Clark M. Eichelberger, as executive director of the tax-exempt American Association for the United Nations, summed it up frankly in testimony before the Senate Subcommittee on Treaties:

"I do not retreat at all from the position that the United Nations without a change in charter can evolve by a voluntary pooling of sovereignty to such elements of world government as they need to save our lives. * * * I am not at all scared of the world sovereignty because whatever pooling of sovereignty we find necessary with other nations for the peace of the world through the U. N., I think the American people will accept."

SOVIET AGENTS

In testimony before a Senate committee, a witness from the FBI stated that "Representatives of the Soviet-bloc governments in the United Nations do not only operate as propaganda ministers in the United Nations, but also whenever possible carry on in this country to further the revolutionary aims of the Communist International by working in close proximity with members of the American Communist Party and alien Soviet agents, who number literally hundreds in the United States."

SOVIET EXPANSION

During the years of the existence of the United Nations, the Soviet Union has enslaved some 650 million additional persons, about a quarter of the human race.

When the U. N. began, the Soviet held 200 million persons in slavery. Now they hold 850 million.

SOVIET VOTES

While the United States enjoys only one vote in the U. N., the Soviet Union has been granted nine. Three are direct Soviet votes: the U. S. S. R. itself, the Ukraine (a part of the U. S. S. R.) and the Byelorussian "republic" (another part of the U. S. S. R.). Each of those is considered a separate state and member of the U. N. The six other Soviet votes are through its satellites which are members of the U. N.: Czechoslovakia, Poland, Rumania, Hungary, Albania, and Bulgaria.

SUBVERSION

"The subversion that Communists wish to accomplish in the U. N. is perhaps best described in a Communist pamphlet, The United Nations, issued in English by the People's Publishing House, Bombay, India, in September 1945. Acting as usual on the precept, 'Tell people the truth about what we're going to do—they won't believe it,' the Communists told about how and why the Soviet joined the U. N., and made the three main points: (1) 'Great power unanimity with the right to veto in the Security Council' was insisted on 'to prevent the Organization from being used against the Soviet,' for the Soviet would vote against such action automatically; (2) 'The international peace organization had to be the best possible organization through which * * * the peoples * * * particularly of Britain and the United States of America' could learn to fight capitalism and to checkmate their own foreign policy; (3) the Trusteeship Council should be used for liberation from British and American imperialism, and the underdeveloped areas of the world aided economically, socially, and culturally according to the policy of Josef Stalin. This policy—as students of communism know—called for 'a single world economic system which is so essential for the final triumph of socialism.'" (Alice Widener, U. N. Judgment Day, published by the American Coalition.)

TECHNICAL ASSISTANCE COST

Last year the U. N. Technical Assistance Program had a budget of $25 million. More than half, nearly $14 million, was contributed by the United States.

UNESCO

"UNESCO is the nearest thing to a managed world culture that has emerged in this confused postwar world. Its skillful admixture of acceptable and noncontroversial projects with its coercive programs has disarmed many of its natural critics. The fact that some sincere and deserving men and women have penetrated its staff does not explain away the fact that its high command, since the beginning, has been steered by grim-minded men who are out to submerge American nationalism under a superworld administration." (Harold Lord Varney, American Mercury, February, 1954.)

UNICEF COST

Americans have become familiar with the schoolchildren's collection of money for the U. N. International Children's Emergency Fund. They may not have become so familiar with the fact that of $130 million given to the fund up to 1952, $81 million came from America while not a penny has come, for instance, from the Soviet.

GEORGE WASHINGTON

In the 11th volume of a UNESCO series entitled "Toward World Understanding" there is a specified suggestion that schools cease emphasizing such hero types as George Washington. This volume of the UNESCO was authorized by Prof. J. A. Lauwerys, education professor at the University of London and author also of a foreword to an Anti-Defamation League pamphlet describing UNESCO's work. In Professor Lauwerys' own UNESCO volume, he speaks of discouraging "presentation to the young of hero types in whom the virtues are, so to speak, incarnated." America's first President is cited as one of these types. Lauwerys warns that if teachers continue to stress such persons, young people may be led to think of the hero type as more than "simply insignificant human beings."

Stand Up and Be Counted

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1956

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Nashville Banner under date of February 24, 1956. It follows:

STAND UP AND BE COUNTED

Now is the time, as has been suggested, for a complete congressional investigation of the National Association for the Advancement of Colored People.

It is time and it is the opportunity for Members of Congress—and others exercised either pro or con concerning that outfit—to stand up and be counted.

Serious implications reside in the statement by Representative E. C. GATHINGS, Democrat, of Arkansas, read into the CONGRESSIONAL RECORD, and the basis for his demand that authorities examine closely four chief points bearing on the NAACP and its operations: The amount of its financial collections, the source of those collections, the salaries of its officers, and the expenditures it plans to make in the several States.

With two other points, investigators certainly would be concerned as evidenced by Representative GATHINGS' remarks; namely, identification of its official rosters and its objectives.

The Banner believes the proposed investigation should be held; that it must be thorough, and that the time for it is now.

We say that in the interest of the public welfare, and of the law-abiding irrespective of race who are the innocent victims always of pressure movements on which reckless hands invariably fasten.

The Arkansas Congressman demanding this inquiry is not derogating all NAACP members. Unquestionably, there are in it many men and women of worthy intention and good will. There are those outside it—the preponderance of Negro citizens—who would bitterly resent tactics of smear and coercion; or tactics detrimental to the peace and order of America. They would resent particularly use of such an organization as a tool of subversive interests should it be established that such occurred or was contemplated.

We believe therefore that said members should be among the first seconding the call for a thorough investigation—either to vindicate the organization or verify the facts in the case if they are as has been charged.

The South target of NAACP pot-shotting, certainly deserves better than continued attack by an agency in the dark.

Congress in recent years has investigated many things—not one of its inquiries related more urgently to justice, peace, and order.

It has the opportunity now to proceed in a matter of vital importance to the present and future not only of the South but of the whole Nation.

The issue has been raised—clearly and squarely.

It is time for all to stand up and be counted.

The High Rate of Small-Business Failures

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, March 8, 1956

Mr. SPARKMAN. Mr. President, on yesterday I commented on my concern and the concern of the Senate Select Committee on Small Business over the present high rate of small-business failures. For the past 2 years, the rate of small-business bankruptcies has been higher than at any time since the end of World War II.

Today, I wish to bring to the attention of the Senate an article, appearing in the current issue of the magazine America, national Catholic weekly review, which reflects the attitude of a distinguished Catholic scholar toward the problems of small-business men, with the words:

It would be apposite, perhaps, to state here that this prospect is every whit as disturbing to Catholic social thinkers as it is to the Members of Congress. According to the mind of the church, the small-business man holds a position in society scarcely less important than the honored place traditionally accorded the family-size farmer.

Mr. President, not only does this penetrating article reflect the thinking of the associate editor of the leading Catholic publication on the important position small concerns occupy in the Nation's economy, but it is also a commentary on the sixth annual report of the Senate Select Committee on Small Business. For that reason, Mr. President, I ask unanimous consent to have this article, entitled "Little Business, What Now?" by Benjamin L. Masse, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LITTLE BUSINESS, WHAT NOW?
(By Benjamin L. Masse)

To the widely accepted belief that, except for farmers, 1955 was the most prosperous year ever, the Select Committee on Small Business of the United States Senate has entered a strong dissent.

Not that the committee denies that 1955 was for the most part a terrific year. It concedes that it was. It readily accepts the imposing evidence marshaled in the President's economic report to Congress that 1955 broke almost every record in sight. But, it says, the report was wrong in one important respect: the farmers were not the only ones who were short-changed. The little-business men were, too. And since, in the impressive words of the Senators, small-business men are the quintessential expression of our free-enterprise system," what happened to them in 1955 ought to lead to much shaking of heads, giving of pause, furrowing of brows and similar expresions of serious concern.

What did happen to small-business men? Quite simply, again in the colorful language of the Senators, not enough "of the bloom of 1955's industrial bonanza" rubbed off on small business. In too many cases, little-business men got only the crumbs that fell from groaning tables where the likes of General Motors, United States Steel, and Jersey Standard Oil dined on T-bone steaks and pie à la mode.

Such is the burden of the report which in January the Small Business Committee, under the chairmanship of Alabama's able JOHN SPARKMAN, submitted to the Senate. The report was unanimous.

SMALL-BUSINESS PICTURE

Since profits are the proof of the business pudding, the committee assembled some figures on 1955 earnings that cannot be easily shrugged off. In 1952, it points out, little business managed to stay right on the heels of big business. That year companies with assets under $250,000 earned, after taxes, a 10.6-percent return on stockholders' equity. The biggest corporations, those with assets over $100 million, did only a trifle better. They earned 11.2 percent.

Three years later, however, the relationship had notably worsened. During 1955, big-business earnings zomed to a 14.4-percent return on investment, whereas the profits of small business plummeted to a 4.4-percent return.

If another popular yardstick of profitability is used, namely, profits after taxes per dollar of sales, the committee says that the same deterioration in the relative position of small business is apparent. In 1952, the smaller companies earned 2.3 cents per dollar of sales; the largest companies, 5.7 cents. During the first half of 1955, the earnings of the little fellows dipped to 0.95 cent, while those of the giants vaulted to 7.2 cents.

CAUGHT IN THE MIDDLE

If such things happen in the green wood, the committee wonders, what will happen in the dry?

If small manufacturers are lagging so far behind the prosperity of an expanding market, what position will they find themselves in should there occur a marked contraction of economic activity in the future?

Bankruptcy figures, the committee intimates, suggest the worst. According to Dun & Bradstreet figures, the rate of business failures during 1954—42 per 10,000—was 63 percent higher than the average for the postwar years 1946–53. Reports for the first 7 months of 1955 indicate that the number of failures last year, despite all the prosperity, will not differ much from the 1954 total. The number for 7 months was 6.487. Since the average liability of these failures was $40,000, it's a safe conclusion that most of the bankruptcies were small businesses.

What caused this worsening in the position of small business?

The committee mentions the unintended but harsh impact on small firms of competitive struggles among the heavyweights. It suggests that appropriate Federal agencies make a continuing study of the auto industry "for an unclouded view of competition at work on a titanic scale. When General Motors, Ford, and Chrysler start a bare-knuckle fight for a bigger slice of the market, the smaller companies are bound to suffer black eyes and bloody noses. Sometimes they may even be knocked out. What chance have Studebaker-Packard, American Motors, and Kaiser-Willys to survive, the committee asks, when GM has corralled 51 percent of total auto sales, Ford 27 percent, and Chrysler 17 percent? Those were the actual percentages for the first 9 months of 1955.

Nor does a competitive struggle among giants adversely affect only their small-fry competitors. Sometimes it causes all sorts of anguish to their own dealers. A survey by the National Automobile Dealers Association showed that of the dealers reporting, 38 percent lost money during 1954—the third largest sales year in the auto industry. Though returns for the banner year of 1955 are not yet in, the Senate committee thinks that many dealers operated at a loss. For the first 9 months of the year, dealer operating profits were running at no more than 2.6 percent before taxes.

FEWER AND BIGGER

The trend in industry after industry, the committee report warns, is toward fewer and bigger companies. The head of Anheuser-Busch, the big St. Louis brewery, is quoted as saying that 1955 was the year when they were going "to separate the men from the boys in the brewing industry." Actually, that rugged process has been going on steadily in the brewing industry for the past 20 years. In 1934, there were 725 breweries. Thirteen years later the number had shrunk to 440. Last year only 254 companies were left to satisfy the Nation's thirst for malt beverages.

The committee mentions the home-laundry equipment and the shoe industries as other examples of growing concentration of production in fewer and larger firms.

In the retail field, the chain store is making life steadily more difficult for the small independent. In 1951, chains had 21.6 percent of total retail sales. During the first 9 months of 1955, they edged their percentage upward to 22.7 percent. Not the size of the increase

but the trend is what worries the small independents.

Nor is the chain the only large-scale competition the small independent retailer has to live with. In some fields he must try to meet the challenge of big manufacturers who are also big retailers—sometimes in competition with their own dealers. Last March the Justice Department accused the General Shoe Corp. of lessening competition and tending to create a monopoly in contravention of the Clayton Act. Starting in 1951, according to the Justice Department complaint, General Shoe acquired 18 different companies engaged in making or selling shoes. As a result, it now has 30 manufacturing plants and 500 retail outlets. For an independent dealer, those 500 retail shops are tough competition.

The committee notes, finally, that the persistence of the postwar merger movement continues to diminish the relative importance of small business in the American economy. Far from receding, the wave of mergers reached a kind of crest in 1955, with more mergers in mining and maufacturing than in any year since 1930. Banking mergers were also on the rise, jumping from 119 in 1952 to at least 240 last year. As the committee report says, from the viewpoint of the companies involved these mergers may all be justified, but their cumulative effect on the economy can only be deplored. Every merger "inevitably diminishes the ranks of individual enterprise." Unless checked, warn the Senators, this trend will sooner or later "alter the character of our national economy."

It could be that the committee report exaggerates the plight of small business today. As the Senators themselves conceded, the data for a comprehensive diagnosis of the health of small business are lacking. In reaching its conclusions, the committee had to rely on only a few yardsticks—mainly profit margins, bankruptcies and mergers. Other criteria might give a somewhat different picture. The committee seems persuaded, however, that additional data would not change its conviction about "the growing domination of the marketplace by large corporations."

It would be apposite, perhaps, to state here that this prospect is every whit as disturbing to Catholic social thinkers as it is to the Members of Congress. According to the mind of the church, the small businessman holds a position in society scarcely less important than the honored place traditionally accorded the family-size farmer. One the key role of small business in a truly human social order no one has insisted more often or more eloquently than the present Holy Father. Only last month, in an audience granted to representatives of 70,000 small Italian business firms, he again manifested his concern for the future of independent enterprise. He also seized the occasion to make an observation that seems just as pertinent to United States small businessmen as it was to his Italian auditors.

THE CHURCH'S STAND

Private economic enterprise, said the Pope, fully corresponds to the Church's doctrine about the role of the human person in society and his responsibility before God. But the Church does not commend every type of private business enterprise. Specifically, it condemns enterprisers who ignore the rights of others, especially the rights of their employees, and carry on their businesses as if they were free to serve only their personal interests. Private enterprise, he reminded his listeners, has duties as well as rights.

Our Federal and State authorities can do a great deal to help small business ride out the present storm blown up by technological advance and corporate concentration. They are doing a great deal now. But they cannot do everything. In the last analysis, small business will survive in our society only if it deserves to survive. It must be self-reliant. It must be as efficient as possible. Above all, it must honestly strive, in the Holy Father's words, to make its contribution to the national community.

When Is an Arab State a Soviet Satellite?

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 8, 1956

Mr. DAVIDSON. Mr. Speaker, the growing tensions in the Middle East have caused concern throughout the free world. Each of us, I am sure, has a desire to be informed to as great an extent as is possible about events in that critical area of the world and about the views which others have with respect to the situation there. As a result of my concern with the growing sense of crisis in the Middle East, and in an effort to place before you an excellent report on the threat of Communist infiltration in the Arab States, I have requested permission to extend my remarks in the RECORD and to include a statement prepared by the international affairs commission of the American Veterans Committee. This statement signals in clear terms the dangers that are inherent in the Communist effort to gain a foothold in the Middle East. It pinpoints the loss of American prestige in that area, and acts to sober any extravagant claims that Russia's policies have been a failure.

I commend this excellent and enlightening article to my colleagues:

WHEN IS AN ARAB STATE A SOVIET SATELLITE?

Over 6 months ago Egypt entered into an arms deal with Red Czechoslovakia. Friendly warnings from the United States and other western nations that Communist arms and trade might lead to Arab political dependence on the Reds, have been characterized by Egyptian spokesmen as meddling and interference. There is, nevertheless, growing evidence that Egypt has moved far down the road that leads to the status of a Soviet satellite. Egypt provides a case history of what can happen when a nation, for whatever motives, seeks Communist aid for the solution of its problems.

Evidence of Cairo's shift in the Kremlin's direction has appeared almost daily in reports published in the Government-controlled Egyptian press—most influential in the Arab world—and in radio broadcasts emanating from Cairo. If corroborating evidence is needed, it can be found in responsible American newspapers and magazines such as the New York Times, Time magazine, Newsweek, and U. S. News & World Report.

ANTIWESTERN PROPAGANDA

The 6 months since Nasser announced the Czech arms deal have witnessed a rising crescendo of antiwestern propaganda both in Cairo press and radio. In this campaign against the free world, the United States is target No. 1, closely followed by Britain and France, and daily the Arab masses are subjected to heavy doses of anti-free-world hatred. Conversely, nothing unfriendly is said about the Soviet European bloc and Red China, and the net effect has been to pave the way for deeper Communist ideological penetration. Here is the documented record:

"The United States suddenly is the butt of attacks more vitriolic than than at any other time in Egyptian-American relations. Russia, on the other hand, is receiving unprecedented bouquets. The Voice of the Arabs radio broadcasts originating in Cairo speaks of the Soviet Union as being sincere, honest, and impartial in its attitude during the present arms dispute. Some Arab leaders are drawing contrasts between what they term an understanding Russia and the imperialistic United States." (Cairo dispatch, United States News & World Report, October 14, 1955.)

"CAIRO, December 1.—The United States today is Egypt's official whipping boy. Every day the state-controlled press and radio are lashing out at Uncle Sam. An Egyptian propagandist told me frankly that the people are being conditioned to an anti-American feeling 'in case we decide to turn it on full force.' * * * We are accused to trying to destroy Arab unity, we are subtly ridiculed and our motives are suspect. In news stories and feature articles are planted the seeds of suspicion and hate." (Dispatch by staff writer William Longgood to New York World-Telegram & Sun, December 1, 1955.)

"CAIRO, January 14—A new voice is reaching out to the people of the Middle East and Africa with growing strength and influence. * * * The Voice of the Arabs is rapidly becoming the most influential propaganda medium in this vast area that has so lately sprung into the limelight as a new arena of the struggle between the great powers of the East and West. * * * Its news and political commentary never varies from the policies of the Government of Premier Gamal Abdel Nasser. * * * But the Voice's broadcasts have brought official protests to the Egyptian Government from the State Department in Washington, from the British and French Foreign Offices and more recently even from the Governments of the sister Arab States of Iraq and Jordan. The latest protest came from the newly named Jordanian Government of Premier Samir el-Rifai who complained * * * that the Voice of the Arabs had had a strong influence in stirring up the violent anti-West riots that ended only after a military state of emergency had been clamped on the entire country." (Osgood Caruthers, New York Times Cairo correspondent in the New York Times, January 15, 1956.)

CAIRO RADIO SPEAKS

"Justice and logic require that we now defend and not attack Rusisa, and that we now attack and not defend Britain and America, which have shown falsehood, deceit, fallacy and ill-will." (Al Akhbar, daily, quoted by Cairo Radio, October 14, 1955.)

"The United States, O Arabs, does not want to offer aid which is not backed by influence. She does not want to loan funds without interests in some form of colonization. * * * Russia, on her part, seizes the golden opportunity and begins to express support and get closer, and indeed to offer economic aid, financial or technical, without America's excessive demands. * * * Russia is fully ready to offer aid without desiring to buy consciences, freedoms, or even homelands. * * * Russia is courteous, helpful, and cooperative toward us, while * * * the United States shuns us, lets us down, and prevents aid from reaching us." (Cairo, Voice of the Arabs, October 11, 1955.)

[What is democracy?] "There is, for instance, the United States, the stronghold of democracy. It is the capitalists who rule the country while the masses are busy chasing dollars and watching baseball games. Everyone knows the Soviet Union is a democratic state and that its rulers come from the masses. They rule through the Communist Party." (Cairo Radio, October 11, 1955.)

PRO-SOVIET SLANT

"It was Khrushchev who announced that the Soviet Union sympathizes with the

Arabs. It was Bulganin who attacked the Baghdad Pact and all military alliances, describing them as imperialistic acts in new forms with only aggressive aims. It was the voices of the two leaders which together maintained that this persistent foolish policy of the West constitutes a breach of the Geneva spirit which gave rise to worldwide optimism. It is no wonder therefore that this dual voice finds an appreciative reaction in the hearts of the Arabs and is worthy of being greeted with thanks." (Cairo Radio, December 31, 1955.)

"Communist Chinese Premier Chou En-lai has received a mission of Egyptian newspapermen who are now visiting China. Chou En-lai told the Al Akhbar reporter that he hoped the next Afro-Asian conference would be held in Cairo. The Communist Chinese Premier said he would take that opportunity to visit Egypt. He went on to assure the Egyptian journalist that China supports the Arab States in their efforts to win their independence and integrity." (Cairo Radio, December 29, 1955.)

"The United States will continue to aid countries fighting Communist infiltration. It will also endeavor to find a solution to the tragic dispute between the Arab States and Israel, for it is anxious to retain the friendship of both parties—so said President Eisenhower in his state of the Union message. * * * Eisenhower's words sound so hollow now that the Soviet Union has embarked on its courageous peace campaign." (Lebanese newspaper Al Jaridah, quoted by Cairo Radio, January 8, 1956.)

"If Bulganin and Khrushchev were to plan from the Kremlin a policy they would like Britain and America to follow in order to arouse Arab public opinion against them, and make way for Russia alone to win the sympathies of the Arab States * * * could they find a better policy than the current one pursued by the London and Washington Governments? * * * Can the Arabs contemplate this attitude without growing indignant and shunning any scheme designed to humiliate and subject them to the dictates of wanton Zionism in America and Britain? And can the Arabs view with satisfaction, thankfulness, and appreciation the clear and strong declarations of Comrade Khrushchev? * * * Could any man with a particle of dignity or sense of fairness in Egypt and the Arab States as a whole, fail to welcome these statements and thank the person who made them? * * * O statesmen of the Western World, awake from your stupor: Know that we are neither your slaves nor anyone else's * * * and that we do not consent to kiss the hand which slaps us in the face, tramples our rights, and prescribes our blood for our enemies. We give praise to any Eastern or Western statesman who sides with our rights, and condemns aggression against us, whatever the regime and doctrines prevailing in his country may be."—(Col. Anwar al-Sadat, Egyption Minister of State in an editorial in Al Tahrir magazine, quoted by Cairo radio, January 3, 1956).

SOVIET ECONOMIC INROADS

While this antifree world, pro-Soviet propaganda barrage conditions the minds of the Arab world, Egypt and her Arab neighbors are being manipulated economically into the Communist bloc.

Between August 1955 and January 1956, hardly a day passed when Cairo radio or Damascus radio did not carry at least 1 report of trade negotiations between an Arab State and a member of the Soviet bloc.

The fruits of these almost constant discussions were summed up on December 6, 1955, when the New York Herald Tribune reported from Cairo:

"Egyptian trade agreements have been negotiated with all Iron Curtain countries except Bulgaria and Albania."

The pattern of increased Arab trade with the Communist states was clear as far back as October 1955. In its issue of October 14, 1955, U. S. News & World Report reported from Cairo:

"Egypt has been tying up with the Soviet economy at an increasing rate in recent months. Sales of Egyption cotton to the Soviet bloc have gone up fast, and cotton is just about Egypt's only export. During the last year the Soviet world bought more than twice as much cotton as ever before. Shipments have gone to Russia and Red China, as well as Czechoslovakia. Payment on the China deal was arranged in such a way that Egypt will have to buy products in other Communist countries in order to get full compensation. The same trend shows up in imports. Egypt now buys more than half her oil from Russia and Rumania. She used to get it all outside the Iron Curtain. The Egyptians are relying more and more on Eastern Europe for heavy manufactured goods and machine tools—such things as locomotives from Hungary and steel from Czechoslovakia. Even the wheat that has traditionally been imported from the United States and other Western countries is beginning to come from the Soviet bloc instead. As a result, Cairo is swarming with Communist trade delegations representing countries all the way from China to Poland. Their very presence has served to increase Communist prestige in Egypt over the last several months. The arms deal sent it higher than ever."

Details of successful Arab-Communist trade talks followed hard and fast. In its issue of November 28, 1955, Newsweek reported:

"Following the publicized announcement of Communist arms sales to Egypt (more than 200 MIG jet fighters, 150 heavy tanks, 6 submarines, and 500 artillery pieces), Egypt's Communications Minister Fathy Radwan and Gamala El Din Badewi, managing director of the Egyptian State Railways, returned from a visit to Prague with a Red bid to build a great new railroad network in Egypt. If approved, it would bring hundreds of Communist technicians into the area and make Egypt a communications gateway to Africa."

Cairo Radio reported on November 30, 1955, that the Egyptian Permanent Under Secretary for Finance and Economy conferred with a delegation on means to facilitate the importation of iron from Communist China. Two weeks later, on December 14, 1955, Cairo Radio reported:

"The agreement to import approximately 60,000 tons of iron from the Chinese Republic, which the Public Services Council had approved, has now been concluded and the iron actually shipped. It is now on its way to Egypt."

The East German Red regime was on the scene, too. On November 10, 1955, Cairo Radio reported a 3-year pact:

"Minister of Trade and Industry Dr. Muhammad Abu Nusayr held a press conference November 10 at which he spoke about the trade agreement concluded November 10 between the German Democratic Republic and Egypt. The short-term agreement, he said, was concluded on March 7, 1953. The latest negotiations have resulted in the amending of certain of its articles in Egypt's favor. It has also been decided to raise the credit limit of the Government of the German Democratic Republic from 500,000 to 700,000 pounds in order to enable it to increase its purchases from Egypt. The Minister then said that th long-term agreement stipulates that the German Democratic Republic pledges to purchase a minimum of 3 million pounds worth of Egyptian products with a possible increase to 6 million pounds. The East German Government has promised to do its utmost to achieve the maximum limit. Abu Nusayr added that Egypt is importing complete factories and shipyards from the German Democratic Republic. The Minister concluded by saying that the German Democratic Republic is expected to send some technical experts to offer all kinds of assistance and impart experience to public and private organizations with regard to Egypt's requirements for its industrial and productive projects."

Hungary, meanwhile, has joined with Czechoslovakia in building bridges to span the Nile. The Beirut radio, on October 10, 1955, reported:

"According to a report from Budapest, Hungarian plants are now constructing seven highway bridges for the Nile Delta in Egypt. Each bridge will be 200 meters long and 12 meters wide. The bridges will be delivered late in 1957."

The Hungarians had other things to sell Egypt as part of the overall Red plan for economic penetration of the Arab world. On January 4, 1956, in a survey of Egyptian trade agreements with the Soviet bloc, Correspondent Osgood Caruthers reported to the New York Times from Cairo:

"Hungary will send 93 diesel switch engines to Egypt in return for 2 million (Egyptian pounds) worth of cotton."

AN OVERALL SURVEY

The Caruthers survey also said this:

"The most important development in Egypt's economy in 1955 was the expansion of Egyptian trade commitments with the Soviet bloc.

"This expansion, accompanied by a marked increase in foreign Communist efforts to spread Soviet influence throughout the Middle East, caused deep concern among the western nations that were seeking to seal off the awakening and troubled Arab world from the menace of Red infiltration."

The free western nations had good cause for concern, too. As Issa Korachi reported to the New York Daily News from Egypt on November 1, 1955, Communist competition was pushing out western trade:

"France recently offered the lowest bid for a contract to provide Diesel hydraulic engines, but the sale went to Hungary. * * * An English company got beaten out of a big railway-freight-car contract when Poland offered to provide them for 27 percent less. * * * The Egyptian Health Ministry recently bought DDT from East Germany, as against an American bid."

A Christian Science Monitor correspondent in Cairo added a footnote to these developments in a dispatch published November 22, 1955:

"Early this year * * * the Government saw fit to end the austerity regime and lift travel and import restrictions. * * * A few weeks ago, however, importers from the Western countries were warned they could no longer have the foreign currency to buy from the West. If they wanted to do business abroad, they had to do it with Soviet and satellite countries. * * * One reason for this is Egypt's increasing difficulty in selling its cotton to western countries. Another reason is the huge amount of foreign currency being spent abroad, especially in Eastern European countries, for the purchase of heavy arms."

NASSER'S IDEA

Shortly after Premier Nasser announced the arms deal with Czechoslovakia, he granted an interview to Time magazine correspondent Keith Wheeler. "It was my own idea," he said of the arms deal. "I had hesitated for 2 months, but at last in June, I called for Solod (Soviet ambassador to Egypt, now Chief of Middle Eastern Affairs in the Soviet Foreign Ministry) and I said 'Sell us arms.' Really, I was surprised when he accepted."

When Time man Wheeler asked Nasser whether he wasn't opening the way to the Russians with his arms purchases, the Egyptian Premier replied: "There are not now any Russian or Czech technicians in Egypt." Technically, on this technical prob-

lem of technicians, Nasser may have been right at the time he spoke.

The Nasser interview with Time was published on November 14, 1955. He may have been tecnnically right about the technicians, but one high-ranking United States official didn't think so. Appearing on a television program, College Press Conference, ABC-TV, November 6, 1955, United States Assistant Secretary of State George V. Allen said: "There probably will be, and there probably are in Egypt right now, Soviet technicians, or at least, Communist technicians from Czechoslovakia."

RED TECHNICIANS

There was, of course, concrete evidence that some Red technicians were to be admitted to Egypt. In announcing the 3-year pact signed with East Germany November 10, the Egyptian Minister of Trade and Industry had said: "The German Democratic Government is expected to send some technical experts to offer all kinds of assistance and impart experience to public and private organizations."

And of course the Egyptian-Czech trade agreement concluded several months before the arms deal, carried with it a provision that "The Egyptian Government is ready to facilitate the work of the Czech technical staff in Egypt."

Evidence mounted as time went on, however, that a considerable number of Red bloc technicians were, in fact, on the scene in Egypt. On January 20, 1956, the Associated Press reported from Washington:

"Premier Nasser is said to have admitted into Egypt possibly 150 Soviet bloc technicians to help assemble arms from Czechoslovakia.

"Diplomatic sources who reported this today said the number is five times the 30 experts Nasser originally estimated would be necessary to help get into operating condition the guns, tanks, jet planes and other arms.

"The increase is a source of concern to United States officials anxious to hold the growth of Soviet influence in the Middle East to a minimum.

"Egypt made a deal with Red Czechoslovakia last fall for $80 million worth of military equipment, much of it now delivered."

Regardless of the number of Communist technicians actually in Egypt, it appeared quite early that other things were taking place that made the actual number of technicians on the scene relatively unimportant.

RED PROPAGANDA

The U. S. News & World Report dispatch from Cairo, published October 14, also covered those angles. It said:

"The Communist influence isn't noticeable only in trade. Diplomatic missions of Russia and the satellites have all been getting bigger and more active. The Russian Ambassador is in frequent conference with Egyptian leaders. Russia has been given permission to expand its propaganda activities and has just recently taken over a building in downtown Cairo where it displays books and photographs and holds showings of Russian movies."

U. S. News & World Report noted some other developments as well:

"Russia began putting out a daily propaganda bulletin last month. Communist countries have been splurging with elaborate displays and other promotion stunts. East Germany, for example, staged a big fair in Cairo last spring—and spent more on fireworks for the affair than the United States Information Agency spent throughout Egypt in all of last year."

Finally, there was this significant angle:

"There is an increased tendency in Egypt's newspapers to go along with the Soviet line on international policies. Sometimes the papers print propaganda releases from Communist embassies without changing a word. For example, not long ago a Cairo newspaper carried a story extolling Czechoslovakia's 'ever-increasing living standard' and the high quality of its goods. The article bore the headline 'Czechoslovakia Makes the Stuff That Dreams Are Made Of.' The whole thing came straight from a press release issued by the Czech Legation."

CONCLUSION

The disturbing evidence presented here clearly indicates that Egypt's kind of military and economic involvement with communism leads down the road to the fateful status of a Soviet satellite. Whatever Egypt's historic quarrel with Great Britain and the West, Egypt's freedom and destiny as well as the freedom and peace of the world can only suffer by cynical deals with Russia.

The United States as a partner in the free world alliance must make it clear to Egypt and the Middle East that we will respect and aid legitimate democratic aspiration of Egypt and the countries of the Middle East. We cannot, however, be blackmailed by dangerous games with Russia. We need to supply dynamic leadership which can help toward an equitable solution to the Israeli-Arab tensions.

The free world should offer positive and constructive action and should not under the guise of "realism" substitute debilitating appeasement.

Tomorrow Is the 9th of March

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 8, 1956

Mr. O'HARA of Illinois. Mr. Speaker, it is a wholesome practice in sentiment to give observance to anniversary occasions. It is this practice of remembering the recurring birth anniversaries of members of a family that contributes so much to the weaving of the enduring affections of the home. We observe the anniversaries of the births of the great men of our own Nation and of the great champions of the rights of mankind whose field of service has chanced to be in foreign lands. From all of these we derive inspiration and from such observances we are strengthened in spirit and in will the better to serve mankind in the generation of which we are a part.

Tomorrow is the 9th of March and that was the day 100 years ago that my father was born. He has been gone from the activities of this life more than three decades, but I have never ceased to feel his presence. It was he, joining his counsels with those of my mother, who planted so strongly within me the concept of equality among men, without any discrimination on the basis of circumstances over which they had no control, that it has remained the guiding influence of my life and will continue so until the end.

I have spoken many times on the floor of this House on other anniversary occasions, but yesterday on the occasion of the 106th anniversary of the birth of Thomas Masaryk, the first President of Czechoslovakia. I trust that my colleagues will not think it amiss of me today, or think this a trespass upon privilege for purpose of personal sentiment, to remember that tomorrow, the 9th of March, is the 100th birthday of Thomas O'Hara, my father.

He was born in Newburgh, N. Y., of parents who had come in their youth from Ireland in sailing vessels. He was the greatest man that I have ever known. As orator I think in his day he had no equal. It was he who taught me my love of words, that words are as flowers, and properly gathered and placed in sentences and in paragraphs can come closer to giving expression to the sentiments of the heart than in any other way humanly open to us. His was a brilliant career on the bench, in the practice of his profession of law, in his contribution to literature, in his service to his country in times of great international tensions under President Grover Cleveland, and in his service with understanding and heart to the causes of the lonely and the friendless and neglected. Always he combatted discrimination among Americans, or among the peoples of any land, based on station, color, religion or other circumstances not related to worth and character. He and my mother, whose 100th birth anniversary follows 2 weeks from tomorrow, gave me the rich heritage of a mind that has never felt the corroding poison of prejudice. They could have left me no richer heritage, none that could have purchased the contentment that has been mine throughout a life exceeding the Biblical three score and ten.

Mr. Speaker, I am happy to have had this opportunity of paying this tribute of affection and appreciation in the month of the 100th anniversaries of their birth to the memory of a father and a mother who gave me this priceless heritage.

Citizens Council No Place for Klan; Leaders Place Guard Against KKK

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks, I include the following article, written by Staff Writer Robert Webb, of the Jackson (Miss.) State Times, under date of March 4, 1956. It follows:

CITIZENS COUNCIL NO PLACE FOR KLAN; LEADERS PLACE GUARD AGAINST KKK

(By Robert Webb)

More and more of the national spotlight is focusing on the citizens councils.

With almost every news development on the segregation issue, the councils are mentioned.

All too frequently we hear charges of Ku Klux Klanism being hurled at the councils by northern liberals.

But, if the makeup of the Mississippi councils is any criterion, the organization is as far from the KKK doctrine as Washington is from Moscow.

The high-principled community leaders who founded the councils in Mississippi are among America's finest citizens. Few groups can boast the caliber of men the Mississippi councils have chosen to command their affairs.

Their integrity, and devotion to the principles of fairness and justice are unquestionable.

KEEP PUBLIC INFORMED

They have one purpose—to keep the public informed on developments in the South's fight to retain segregation.

In the Jackson Citizens Council, we have a perfect example of the general caliber of men who compose the organizations in 59 of the State's 82 counties.

At the top, as president, is Ellis W. Wright, Sr., funeral director and community servant of many years standing. The vice president, C. H. King, a past president of the Jackson Chamber of Commerce, is Head of the Mississippi Road Supply Co.

For its treasurer, the Jackson Council picked Marvin Collum, president of the Jackson-Hinds Bank and president of the chamber of commerce.

On through the board of directors the list of Jackson Council leaders provides an index to the community's top business and public-spirited citizens.

The board includes men like Julian P. Alexander, Jr., former Hinds County district attorney; Samuel M. Bailey, president of Jax-Stone Co.; George W. Godwin, recent king of the carnival ball and owner of an advertising agency; Dr. J. Harvey Johnston, surgeon; and Garner M. Lester, cotton broker.

STORY MUCH THE SAME

Over the State the story is pretty much the same. Bankers, lawyers, doctors, merchants, and brokers are being counted on by the estimated 80,000 councilors to direct them in the right and legal path of preserving southern traditions.

In Greenville, for example, the Citizens Council is headed by Conwell Sykes, president of the Commercial National Bank. Clarksdale's Council has as its president another banker, Eddie Peacock.

Fred Anderson, attorney and lumberman, is president of the Citizens Council at Gloster.

Principal safeguard against radicalism is the power of each local council's board of directors to dissolve its chapter if dangerous elements appear in the membership.

Men of high principle may take differing attitudes on public issues. But, North and South, these men will stick to the tenents that have won them the support of their neighbors in community affairs.

Back in August, 1954, the first Citizens Council was organized at Indianola under leadership of 14 prominent, community-spirited men.

The movement caught fire until today applications for memberships are being made by people across the Nation.

SIMMONS PRIME MOVER

A prime mover in the councils has been mustached, angular W. J. Simmons, a native Mississippian and alumnus of both Mississippi and Millsaps Colleges.

As secretary of the Jackson Council and State administrator of the councils, Simmons has figured as the principal spokesman for the organization.

Under his direction, the councils are coordinated into county, congressional district, and State organization.

The only other paid State official of the councils is R. B. Paterson, who maintains the State headquarters at Greenwood in steady communication with the Jackson office.

Patterson makes this observation on the councils' makeup:

"In Mississippi, prominent, level-headed, courageous leadershihp has been found in each instance, and the members that belong to our councils come from every walk of life.

"Every man who is a patriotic, law-abiding American who loves his State and Nation should be proud to take part in this movement."

With mail to the Jackson office alone ranging between 25 and 200 pieces daily, depending on news developments, the councils have become a main source of information on the segregation issue and States' rights.

AFFILIATED WITH FEDERATION

In this respect, many council leaders have affiliated with the Federation for Constitutional Government, a New Orleans headquartered organization that's reported spreading throughout the country.

Both the councils and the federation have fostered the doctrine of interposition which Mississippi and four other Southern States—South Carolina, Virginia, Georgia, and Alabama—have adopted as their principal firing piece against integration.

Simmons, stanch advocate of constitutional States' rights, remarked:

"We in the councils and the federation hope to make the doctrine of interposition applicable not only to the southern localities, but also to all areas of the country where the rights and privileges of the States are an issue."

By passing resolutions of interposition, State legislatures are asserting their disdain of the Supreme Court school-integration decision.

They are calling for a showdown, all within the legal framework of the Federal system, on whether the high tribunal has the right to dictate the conduct of public school affairs, a right historically reserved to the States.

Simmons said the daily mailbag is usually about "ninety-nine and forty-four one hundredths favorable to the councils."

If the federation move continues its gains, the soft-spoken council official predicted, the mail will be even more favorable.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

Social Security Amendments

EXTENSION OF REMARKS
OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, March 9, 1956

Mr. LEHMAN. Mr. President, last week the Commissioner of Public Welfare of New York State, Mr. Raymond W. Houston, testified before the Senate Finance Committee, which is holding hearings on social-security legislation. Mr. Houston testified on behalf of the Council of State Public Welfare Administrators, of which he is chairman.

Among other things, Mr. Houston testified in favor of disability insurance and, in my judgment, made an ironclad case for the inclusion of this type of insurance in the old-age and survivors' insurance program.

I hope Commissioner Houston's incisive and convincing testimony will be read by all the Members of the Senate in anticipation of the time when this legislation will come before the Senate for debate and a vote.

It goes without saying that I, personally, am strongly in favor of disability insurance, as I have been for many years. Indeed, I think I was one of the first to introduce a legislative proposal to this effect.

At this point I should like to pay tribute to the vigorous leadership which has been given to the Council of State Public Welfare Administrators by Mr. Houston. I ask unanimous consent that his testimony before the Finance Committee be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I am Raymond W. Houston, commissioner of the New York State Department of Social Welfare. I speak to you today in my capacity as chairman of the Council of State and Territorial Welfare Administrators of the American Public Welfare Association. First, let me say that our council has worked with the other committees and members of the American Public Welfare Association to develop the program of legislative objectives of the association. Our members, composed of the administrators of all the State and Territorial programs, strongly endorse and concur in the legislative objectives of our association, which have been presented to you by our president, Mr. John Tramburg. Our council members come from varying backgrounds and reflect the problems unique to the various sections of our great country. We all have vast responsibilities in the administration of the public assistance programs and in the use in large amounts of public funds for this purpose. Out of our combined experience we concur in the proposal contained in H. R. 7225 to make disability payments available to the disabled. All of us are carrying in our public assistance loads many who, we believe, should have long ere this become entitled to the provisions of insurance against the hazard of disability. In our view, disability as defined in H. R. 7225 is even more of a risk to an individual's economic security than old age. After all, aging is a common universal experience and one which can be looked forward to and planned for. Disability can strike suddenly and with finality eliminate an individual's hopes for his and his family's future insofar as his own efforts are concerned. Many aging persons are able to and in fact do continue to earn after the prescribed retirement age of 65. When permanent and total disability strikes, there simply remains no out as far as the individual stricken is concerned. Insurance against disability can contribute at least a feeling of some economic independence should such a hopeless condition arise.

In reading the newspaper accounts of some of the testimony given before your committee, I have noted the statement that disability insurance would beget malingering and that there would be difficulty in establishing medical disability. In our long experience as administrators we all agree that with few exceptions—and those are generally to be found among the emotionally disturbed or the mentally incapacitated—no one really wants to live on an assistance allowance of any kind. We were particularly impressed with this fact at the time when the depression era blended into the preparation for World War II era. We then saw people leaving the assistance rolls in droves—people even who up to that time we thought were permanently incapable of again accepting employment. But when the jobs become available, people responded and took them and were happy in their newfound economic independence. It is even more true that no one wishes to be established as a totally and permanently disabled person.

Most of the States already have a program of assistance to the permanently and totally disabled. With the cooperation of the applicants themselves and with the wisdom of the medical profession, we have been able to administer this program wisely and effectively. In some of the States, my own included, the welfare forces have been asked to make determinations for the disability freeze. Here again with the assistance of the medical profession and the splendid guidance of the Social Security Administration, we have been able to gather the evidence and make the decisions as to medical disability. I have no fear whatsoever of our continuing to be able, by the joint efforts of the Federal agency, the State and local welfare agencies, and with the cooperation of the medical profession, to administer a program of decision as to those who are eligible for disability insurance payments.

There has been some concern expressed to your committee with respect to the costs to the social-security system of such a program. I believe the people in this country would be happy to pay the slight additional cost involved to be insured against the hazard of permanent and total disability. A small example of willingness to contribute for insurance benefits occurred in my department fairly recently. The employees were polled as to their desires with respect to entering the social-security system. The question was as to whether the social-security program should be integrated and made a part of the State retirement system or whether it should be kept separate with the payroll taxes for the program being levied against the employees and the full benefits of both systems made available to the employees. Of 238 employees expressing their views, 221, or 93 percent, indicated their willingness to pay the additional taxes in order to gain the additional benefits of the social-security system.

There are those who say that we do not need a program of disability insurance payments in view of the fact that we already have a vocational rehabilitation service program. I have in my department the section of the vocational-rehabilitation program for New York State serving the blind, and I would say to you that the vocational-rehabilitation program is not the total answer to the needs of the disabled. The fact is that in many parts of our State and the country as a whole, there simply does not exist the medical knowledge and initiative to rehabilitate all the disabled. Even in the centers with the most highly skilled medical staffs who are in possession of the best knowledge we have at the present time, there are hopeless cases. This is not to say that as time goes on, more and more new knowledge will not come to us and enable us to do more in the way of rehabilitation for many now thought to be incapable of profiting by such a program. But in the meantime and until such time comes, until we know what to do about all of the disabled, we need to take care of their economic needs through the insurance program. I think we need to remind ourselves too that disabilities occur by reason of accidents of many sorts and that as our safety programs and accident prevention programs become more widespread and universally accepted, the need for disability insurance payments can be held in check.

Our State administrators of public assistance are perhaps more aware than any other group of our total program of economic assistance to people in need. They are aware of gaps in the insurances and of those in the assistance field. I would therefore like to comment on their behalf on a few particulars contained in S. 3139, public assistance amendments of 1956, introduced by Senator MARTIN.

MEDICAL CARE

It is not generally realized by the public how much the costs of medical care to relief recipients have risen and how large a percentage of the costs of public assistance goes for medical and hospital care. In most of the States the welfare departments are the agencies which take care of the medical and hospital needs of those in receipt of assistance and of the so-called medically indigent. We particularly applaud the provision in S. 3139 which would make Federal assistance over and above the regular formula, available for the medical needs of adults and children. To indicate to you that the proposal of Federal participation in $6 and $3 monthly maximums for adults and children respectively is not overly generous, I would point out that in New York State the average cost for medical care for adults on old-age assistance is $20 per month. Throughout the Nation there are many unmet needs in this field of medical care which can only be met by Federal participation in such programs of medical care for the indigent.

SELF-SUPPORT AND SELF-CARE

Until recently the public-welfare forces of our country have been occupied with the establishment of eligibility for and the

granting of assistance to those found eligible for it. Now we find that our rolls are composed of persons who are there mostly by reason of other causes than the economic. They are composed of the aging, of broken families and their children, of the disabled including the blind, and of children whose parents cannot take care of them. We believe the time has come when careful work with these people in helping to reestablish their broken homes and lives, in restoring them to participation in the economic and social stream of life, and in finding and preventing the causes of delinquency and dependency, is most important. Whatever we can do to strengthen family life and to see that children's needs are met at an early age and in their own homes will prevent eventual delinquency, mental illness, and dependency. Whatever we can do to find out the potentialities of the individuals, of children and adults as well, to retrain them for new ways of meeting their economic needs will pay off in the long run. We are therefore enthusiastic about the self-support and self-care provisions contained in S. 3139.

TRAINING OF PUBLIC WELFARE PERSONNEL

Most of us find with alarm that our key personnel was recruited during the years of the depression era and that we are having difficulty in interesting people in and in keeping them with our public welfare programs. We are now in the era of a limited supply of young people due to the curtailed birthrate of the depression days. In the welfare field we find, when we try to recruit from the persons who are minded to work wtih people, that we are in competition with the nursing profession and the teaching profession. We see that those who wish to become teachers can go to the teachers' colleges, with little or at least a nominal tuition payment. Those who wish to enter the nursing profession can go to nurses' training schools, again with no tuition requirement. here and there in the schools of social work, there is no way in which a young person desiring to educate himself to participate in our work can have the advantages of free tuition now available in these other professions of working with people. Section 705 of S. 3139 promises to give us the assistance we need in recruiting competent personnel, which in the end will pay off in improving our vital program of meeting the needs of the people whom we serve.

PUERTO RICO AND THE VIRGIN ISLANDS

I have, and some of the other Eastern States—later others will have—a particular interest in the provisions with respect to Puerto Rico and the Virgin Islands. New York City in particular has been a great recipient of newcomers from Puerto Rico. While there is no evidence that people come to New York to receive assistance, the fact is that some who come do eventually need assistance. It is therefore to our interest to see that an adequate program of assistance is maintained in Puerto Rico and the Virgin Islands. We have never understood why the Congress has put the limitations it has on Federal aid to these two Territories with respect to assistance programs. We would be greatly interested to have the Congress at this time provide that Federal aid for public assistance to Puerto Rico and the Virgin Islands should be on the same basis as for other jurisdictions.

CHILD WELFARE

Mr. Tramburg has commented fully and at length with respect to the child-welfare program. The State administrators would concur in his remarks. I would wish to point out particularly our interest in having the present provisions with respect to the allocation of child welfare services funds changed. As you know, these funds are presently restricted to rural areas and areas of special need. All of us are finding that the greatest problems in the child-welfare field are in our great cities. In our State I have no hesitancy in saying that the most grievous problems in connection with children are in New York City. There we find children needing foster homes for whom no homes can be found, children of minority groups who should be adopted for whom no adoptive homes can be found, babies needing loving and tender home care languishing in hospitals for lack of other places to place them, and too many older children finding their way to training schools for delinquents for lack of proper early protective and preventive services. It, therefore, seems urgent to us that the child welfare services funds once allocated to the State should be usable in whatever area of the State the combined judgment of the Children's Bureau and the State administration dictates without the artificial restrictions presently imposed by the Congress.

That I am here today representing the more than 50 State and Territorial administrators of public-welfare programs is evidence to you of our abiding interest in the social-security system of our country as the best way of meeting the needs of the many who are found by your committees to be insurable. It is also evidence that we have a continuing interest in the improvement of programs of assistance and service to those who for varied and diverse reasons are not eligible to be covered by our insurance program. We urge the favorable action of the Congress on these various proposals to improve our program of services to people at this session.

Postal Rates

EXTENSION OF REMARKS
OF
HON. W. KERR SCOTT
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, March 9, 1956

Mr. SCOTT. Mr. President, in the February 2, 1956, edition of the Pittsburgh Sun-Telegraph there appeared an editorial concerning postal rates that merits the attention of the American public.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POSTAL RATES

The disposition of the Congress, as interpreted by Chairman TOM MURRAY, of the Post Office Committee of the House of Representatives, is to reject a proposed increase in postal rates. The Sun-Telegraph thinks this would clearly and properly serve the public interest in the matter.

It is true that President Eisenhower drew his recent picture of a balanced Federal budget largely on the presumption that Congress would go along with his recommendation for higher postal rates.

It would appear now that the presumption was not soundly based, and the same thing goes in some degree for the recommendation.

The idea that the postal service must of necessity be rendered at a profit does not fit any part of the pattern of our national experience.

One of the reasons, and a very big one, that America has been progressive and prosperous to a degree without precedent in the history of the world is that the postal service draws the far corners of the country together swiftly, accurately and at small cost.

This has put life into the vast resources of the Nation for information and instruction.

It has put energy and sinew into business and industry.

It has quickened the whole pace of our national life.

If it is a subsidy, it has been in the good interests of all the people.

To make the postal service pay its own way out of its own revenues would probably contribute less than the President expects to a balanced budget, and in any event would be a dubious gain if it lowered the standards which have served the country so well.

Generous Action of Edwin Lutcher, a Wisconsin Boy

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, March 9, 1956

Mr. WILEY. Mr. President, I call to the attention of the Senate one of the most heartwarming stories I have heard in a long time.

Harvey Higley, of Marinette, Wis., Director of the Veterans' Administration, has forwarded to me his recent correspondence with 12-year-old Edwin Lutcher, of Lake Geneva, Wis.

In his own straightforward way, Edwin wrote on a sheet of paper torn from a notebook, offering to give the VA his pet German Shepherd, Smokie Boy, as a guide for some blind veteran.

It is a refreshing thing to find such genuine generosity among young people, and I am mighty proud of this lad, as was Mr. Higley. I am glad to acquaint the rest of the country with the kind of thoughtful lads we have in Wisconsin.

For this reason, and for its inspiring example, I ask unanimous consent that the full text of this correspondence be printed in the Appendix of the RECORD.

I congratulate young Edward, his mother, Celestine, and his dad, who himself is a patient in a veterans' hospital.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

FEBRUARY 14, 1956.

DEAR SIR: I am Edwin Lutcher, age 12, and I have a German shepherd dog about 6 months old, and I would like to give him to the blind soldiers as a guide for someone. The dog is a nice one; his name is Smokie Boy. Please come and get him. It would make my 2 sisters and 2 brothers and I very happy to know our dog can help someone. Thank you.

My address is:

EDWIN LUTCHER,
General, Delivery, Lake Geneva, Wis.

I live in Lake Ivanhoe, Wis., phone number is Chestnut 8-4045.

Please let me hear from you soon.

FEBRUARY 29, 1956.

Mr. EDWIN LUTCHER,
General Delivery,
Lake Geneva, Wis.

DEAR EDWIN: I think you are the most generous boy I've ever heard of. Very few grown folks would make an offer of their

dog so that a blinded soldier or veteran could train it to be their eyes.

For the more than 22 million veterans in this country of ours I want to thank you and your 2 sisters and brothers for the excellent suggestion that you would like to donate Smokie Boy.

I know he must be a fine dog to have such a wonderful master but, honestly, Edwin, I think you should keep Smokie Boy because every boy should own a dog.

You see, Edwin, we train blinded veterans to have "eyes" by teaching them to use what we call "the long cane." Once they get the knack of using the cane they don't have anything to worry about and, after all, a cane is so much easier replaced than a dog which must become old and die. When one gets attached to a dog he misses it so much after the dog dies, but with a cane, it's only a piece of wood.

However, Edwin, I think so much of your generous offer I'm going to ask Senator WILEY to insert your letter in the CONGRESSIONAL RECORD so that everyone in the United States will know what kind of boys we raise in Wisconsin. I'm from Wisconsin, too, you know—from Marinette, way up north of you.

Tell your sisters and brothers how proud we in the Veterans' Administration are of you.

Thank you very much and don't be surprised if some newspaper photographers come to Lake Geneva to take your picture and that of Smokie Boy. I'm sure all America will want to see the boy who wanted to give his dog as the eyes of a blinded veteran.

Most sincerely,

H. V. HIGLEY,
Administrator.

Nine Tools of Destruction

EXTENSION OF REMARKS
OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1956

Mr. DAVIS of Georgia. Mr. Speaker, on March 1, Mr. John U. Barr, chairman of the executive committee for the Federation for Constitutional Government, spoke to the Executives' Club of Louisiana in New Orleans at a luncheon meeting.

His speech dealt with efforts of the Supreme Court of the United States to usurp legislative functions, and he minced no words in pointing out what a terrible tragedy it will be if the Court is successful in these efforts.

The address is as follows:

NINE TOOLS OF DESTRUCTION

(By John U. Barr, chairman, Executive Committee, Federation for Constitutional Government Before Executives' Club of Louisiana, Inc., March 1, 1956, New Orleans, La.)

I sincerely thank you for inviting me to speak to you today. But what I have to say I sincerely believe, even though I do not possess the eloquent tongue of an orator, with which to say it.

We, who are in the autumn of life, already know by our experience that the economic and social mustard plasters and aspirins of the present decade are more dangerous and painful than the economic and social ills and sprains they were supposed to cure.

I love this land of ours—I wish that I could bequeath to my children and theirs, the freedoms that I have known. I keenly feel the shame that many men and women of my age must feel for failing to save them from the crushing debts and burdens of the regulated life they seem doomed to face.

With each passing day, our time grows shorter, while the injustices of Government by bureaucracy and social boon-doggling lengthen and multiply. It is, to me a terrible and terrifying thought to realize the price our heirs will have to pay for the stupid, the quack cures, we of this, and the immediate past generations, failed to prevent. This false and, certainly, temporary prosperity we and they think is ours and theirs.

Our Government no longer lives, or is housed solely in the District of Columbia. Much of it is concentrated in an area not over 5 miles in any direction from the hub on 42d Street, in New York City, where the headquarters of the United Nations is the center. From this area, come the social and statism philosophies which now govern most of the executive and judicial branches of our Federal, State, and city servants in Washington, and most of the Nation.

The voters of our land have lost much of their control over the executive and judicial branches of our Government. On the national scene, the two political parties now can rig their conventions to produce candidates who compete only to get the opportunity to get elected, by promises of the giveaway, perpetual bank nights, free everything and bingo social security, where you get a free card on your 63d birthday to hit bingo on your 65th, and then they charge the winnings to the yet unborn and the house cut to the younger taxpayers.

On the national level, the judicial is the creature of the executive, aided and abetted by a Senate clique which allows their thinking to be done for them by the political shysters and hucksters of the New York area. Knowledge of law, love of our institutions, reverence and respect for the Declaration of Independence and the Constitution no longer are the prime requirements for appointment to the Federal courts. The black robes of Federal justice are now worn by men who start their careers by falsely swearing to protect and defend the Constitution of the United States of America.

These judicial misfits, the products of more than 20 years of poorly concealed socialism, are the typical types envisioned by the founders of socialism, judges who, with Marx and Engels, believe that government of, for and by the people is a grave error. They shun, despise, and desecrate the words and acts of the founders of this great Nation, the immortal men and women who fashioned our form of government, our Bill of Rights. We must never forget that these founders actually lived their own lives under the tyranny and terror of an imposed slavery, confiscation, imprisonment, and even death at the hands of a government over which they had no control, and which, most often, spat upon the theory of consent of those governed. The founders wanted no part of an all powerful executive or judiciary.

It is a shame that the black robe of judicial dignity no longer is certain to enfold men of undivided devotion to the patriotism of Clay, Henry, Hale, Calhoun, and countless others who dedicated their lives, their fortunes and their sacred honor to win for us, and for all the world to copy, a form of government that, if left alone and undiluted, guarantees human dignity and equal opportunity for all who will seek it.

By this time, you have confirmed my declaration that I am no orator, that my educational background is not adequate to properly describe what, and who, now hide behind or underneath these black robes of this middle of the twentieth century. But, I hope you will now believe that I am sincere and that which I have to say, really does come from my heart and from hundreds of hours, thousands of hours of reading and study in this autumn of my life. If it is true that life begins at 40, it is then also true that my political curiosity began at about that time and increased with each passing year. That is my only excuse for taking these minutes from the hours of your busy lives, and for the few more minutes that I need to finish this account of my studies.

The greatest legal brain of the present crop of wearers of the shabby robes of our Supreme Court is that questionable American citizen called Felix Frankfurter. He, of all men, knew all of the terrible implications of the crime that he committed when he joined the other eight black-robed misfits, who participated in the Segregation case. Felix Frankfurter cannot plead the same stupid historic ignorance of Earl Warren—politician Warren knew what he was doing, but was most likely ignorant of the final and legal consequences of his act. But Frankfurter, Professor Frankfurter, doctor and master of law. Frankfurter—diabolically clever Frankfurter, who must have thought that, at long last, a method had been found of amending the Constitution of these United States without the consent of the governed, without the authority of the sovereign States, and without having to face the fierce determination of that brave little but stalwart minority of States' Righters in the Congress of our country. That Frankfurter was wrong, history will eventually record.

To really understand the remarkable cunning of the massive Frankfurter brain, you have but to trace the year of our big jump into the cesspool of socialism, and the men who took charge of these high sounding, but rotten departures from constitutional government—the men who attempted the beginning of the end of States' rights, that cornerstone of all of our rights and dignities reserved to the "consent of the governed."

The year was 1935, the master architect was Felix Frankfurter, and the illegal acts all in that year of the abrupt and unholy start of American governmental socialism were:

1. The wealth tax.
2. The Wagner Act.
3. The WPA.
4. The social-security law.
5. The REA.
6. The public utilities holding law.

All of them, without exception, came under the control of former friends and students of Felix Frankfurter, who openly and proudly called themselves "happy little hot dogs." Sure, they were happy to flaunt their power and the power of their tutor in our faces.

That was before DIES, MCCARTHY, JENNER, and EASTLAND, to name a few who had the courage to face the terrible revenge, the smears and the humiliation visited upon them by journalistic and political followers of that monumental, tragic, American national error, named Mr. Justice Felix Frankfurter.

Certainly, in any republic, it is right that ignorance is no excuse for law violation. It is assumed that any disregard of timeless patterns of conduct, or morality, or the commandments are errors basic to the conscience of all, but degenerates or absolute morons. I can, or could, understand the plea of ignorance of the Constitution or the Declaration of Independence by Mr. Chief Justice Earl Warren, if he ever has the courage to make that plea.

I can, or could, understand the further plea of Warren that he did not know the historical significance of the first American Constitutional Convention. At least he could plead that, in his ignorance, he did not have the intelligence to feel any libertarian or moral compulsion. His crime was not a violation of a moral law. He did not, perhaps, realize that by failing to keep faith with his oath and the spirit and letter of the Founding Fathers, he had automatically broken the commandment "Honor thy father and mother."

But all is different in the case of Felix Frankfurter. He is brilliant, he is fully grounded in every type of law. He, of all men, knew that he was participating in the first drastic, openly admitted, and brazenly documented departure of the Court from fixed constitutional limitation and all past precedent. The actual violence, by quoting socialist authorities in preference to established precedent, was a low, corrupt, and, in my mind, a treasonable act that will eventually smell a million times worse than the NRA—sick chicken—Schechter case. Of course, I refer to Frankfurter's late, unlamented NRA—his brain child, or should I say his sick chicken—run by his disciples in perfect harmony with his, Frankfurter's, and his sister's early lectures and writings before he besmirched the dignity, sanctity, and justice of our Supreme Court with his membership on its bench. Also, and likewise, his sister knew that she, like her brother, by her own lectures and writings before she took the oath of office to become his agent, his eyes and ears in these socialistic schemes and frauds on the unsuspecting governed and, at the financial expense of the governed, because she also latched on the bureaucratic payrolls of many of these "treasons of 1935." The antics of that pair are worth studying.

Time does not permit me to go into the case of the second best brain of the Supreme Court. But I dare not fail to pay a full measure of contemptuous tribute to another miscarriage of wisdom, by his appointment to our would-be, new, self-delegated masters, the Supreme Court. I refer to that other defrauder of the governed, by grave error now called Mr. Justice William O. Douglas, who is another brain, but, unlike Mr. Warren, who can always plead ignorance. But Douglas and his brain, after his participation in the legal fraud of the segregation case, is as ripe and ready for impeachment as is Frankfurter.

In fact, on that case Douglas is more ripe, for he once, long before the black-Monday deed, predicted its consequences, and I quote herewith what he feared about Supreme Court decision based on sociological theories, rather than constitutional law:

"The instability that is created when a judiciary with life tenure seeks to write its social and economic creed into the charter."

And, then he went on to appease his Communist-front pals, by adding, and I further quote:

"It must be remembered that the process of constitutional amendment is a long and slow one."

Could it be that Douglas and Frankfurter wanted to do a rush job for their associates in socialism?

You and I will never know, or at least I do not think we will—whether Frankfurter and Douglas conspired to bear-trap the seven other, mostly inexperienced "Black Robes" into the attempt to avoid the calm, sane, slow, but legal method of look before you leap, "constitutional amendment processes," which our early American statesmen devised to keep the Government the servant—not the master of the governed and to save our Nation the pitfalls and awful consequences of hasty or violent change of our legal rights and prerogatives.

If I only had the gift to open my fellow citizens' minds and hearts to the real truths in these terrible hours—if only I could get you fully acquained with the recorded historical facts, to the end that my clumsy and inadequate efforts would, at least, bear some fruit to hold us for the day of full harvest, brought about by wiser and more competent men than this humble citizen.

With all the faith of my Christian training, I further ask you to blend your nightly prayers with mine to the end that the will and justice of our Lord be done without violence, without strife, without hatred. That all of our fellow citizens can differentiate between moral contempt for these willful destructionists of our Republic, and the bestial hatred that often follows unrestrained contempt. Contempt with calm restrain is now a crying need in this land of ours.

I must admit that it takes a lot of restraint, when I hear these lazy people who say, "The Supreme Court has spoken, therefore, you and I must quietly obey." And lots of these people put a great deal of emphasis on "You must obey," they are the folk who would have tried the patience of Job.

However, now is the time when genuine patriots must acquire patience—now is the time when those of us who really care about the future of our children and our children's children, must take some of our time to make known, in clear and simple language, that the legal remedies are still available—that the voices of our Constitution and our Founding Fathers still have a calm and patriotic audience.

May I suggest to you that you acquaint yourselves fully with the thwarted audacities and checked previous attempts, by the earlier power-mad fools on the Supreme Court of yesteryears. There are many authorities and cases, among those the 1833 Virginia stand on interposition, which made the Supreme Court reverse itself.

An earlier masterpiece of calm patriotism was displayed by Georgia in the 1790's—when the legislature of that State caught the Supreme Court in an attempt to curb or violate the sovereignty of Georgia in a claim case. In that case, Georgia took the issue to its sister States and so successfully that the 11th amendment was passed, declaring Georgia right, and the Supreme Court wrong.

Let us never forget that our history and heritage of a union of sovereign States came into being by the careful planning of men who had suffered the evils of violence, bloodshed, and uncurbed power. Thus, after each earlier attempt by a power-hungry Supreme Court, our history records the words and deeds of people who found the torch of truth lit by our founders and who, by the peaceful and legal methods of our heritage—forced the Court into the light of public contempt, and then back into the boundaries of the rightful, but always limited power of the Supreme Court.

Our Supreme Court is the creation of the several States—a Court that has hurried to reverse itself many times in our early, and even late, history. Never for a moment forget that this Supreme Court operates and lives under a compact of the States, and forever remind all of those who would cloak the Court with sovereignty that the States have forever reserved to themselves and their reserved right to charge a violation of their contempt creating this Supreme Court.

I hope that, in the not too distant future, the Federation for Constitutional Government, which I have the honor to head, will have sufficient funds for a printing of a convenient handbook on these matters of curbing the power of bloated executive and judicial branches of the Government. The governed can still, if they have the will to, handle the legislative branch. Such determination, coupled with more careful candidate selectivity, could take care of local government. But the big problem of the enlightened governed is to not blindly fall into the boobytraps of bribery by taxation, to elect men who try to perpetuate themselves as our governors, who, with the use of our tax money, attempt to forever play Robin Hood, politicians who try to make it seem moral and right to rob the thrifty to support the indolent. This trend in our national life is another terrible evil that merits full discussion at another time.

In the interim, may I inform you there are many fine, truthful documents available at rather modest cost to keep you currently informed of each of the creeping evils of Socialist philosophy, and how to find the legal remedy to meet and defeat these evils. I hope that, within my remaining span, I can again have the pleasure of meeting with you to share your joy of complete victory of constitutional personal liberty and human dignity over those who would have us believe that it is for our best interest to surrender our liberties to an all-powerful central state.

A central state that will watch over us with paternal solicitude, if, and only if, we agree to work for the central state and give all the fruit of our labor to that state.

I fervently hope we can destroy that hoax and, then together, proudly relate to our children the knowledge that their parents were the workers who labored for that triumph of absolute justice.

For, as certain as I am that a divine power gave me the sunlight and the darkness, so certain am I that the Founding Fathers had divine guidance in their creation of our remarkable system of government. I am just so certain that this same divine power and guidance will again come to the aid of those of us who will work to help this divinity in its covenant to help those who help themselves in the search for truth, equal and rightful opportunity. In the Gospel of St. John, it is set forth that "those who believe in God, even if they should die, shall live again." That is why truth, even if it shall die, will live again. It always has. It always will.

A Magna Carta To Protect Private Investments

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, March 9, 1956

Mr. WILEY. Mr. President, down through the years one of the issues which I have always fought for on the international scene is the protection of American investments abroad from arbitrary treatment and, in particular, protection from confiscation.

We have noted that in instance after instance, one of the first typical actions of a demagogic leader or group is to bait foreign free enterprise, harass it, intimidate it, and ultimately try to confiscate it, without equitable compensation.

When I served as a member of the American delegation to the United Nations General Assembly, I fought for action to signify the determination of the free world to protect alien investment.

The underdeveloped countries can hardly expect to see expanded private investment unless they treat it fairly.

I was pleased, therefore, to note a recent communication to the American Society of International Law in connection with its international investment law conference recently held, from a distinguished German banker. He commented on this very subject, and urged a world Magna Carta, to protect the sanctity of private property.

It is appropriate that such an expression should come from West Germany, because rarely on the world scene have we seen so impressive and spectacular a comeback of private enterprise as in the Federal Republic of Germany. We have seen there how diligence, industry, sweat, and toil, the free labor of free men, and free entrepreneurs, can revitalize a nation, raise it from the ashes

of defeat and despair, to a proud position in the family of nations.

I send to the desk the text of the message which was forwarded by Mr. Hermann J. Abs, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the communication was ordered to be printed in the RECORD, as follows:

To the PRESIDENT OF THE AMERICAN SOCIETY OF INTERNATIONAL LAW,
Washington, D. C., U. S. A.:

The American Society of International Law is to be commended for its sponsorship of the forthcoming international investment law conference for the question of legal bars and incentives to foreign investment being considered is one of vital concern to the economic viability and political stability of the free world.

As one devoted to the fundamental principles of our free western society relative to individual freedom, private initiative, and the respect for the justly acquired property and other rights of the individual, may I respectfully invite your attention to the increasing jeopardy to these principles as a result of two World Wars and more particularly because of the expansion of Communist ideology, the Soviet sphere of influence and their most recent economic investment activities in the international field. Expropropriation and confiscation of foreign properties raise barriers to commercial intercourse among the free nations which weaken dangerously the common bonds of free-world unity. Therefore, as one similarly devoted to the principles of the sanctity of individual and property rights, I respectfully urge upon you the consideration of the formulation of a world Magna Carta, to serve as a standard and guide to the free world, embodying a firm declaration of principle on the sanctity of private property wherein that which belongs to the alien investor or owner is not subject to arbitrary confiscation or expropriation. Such a Magna Carta subscribed to by the nations of the world would serve to dispel the trepidation that has frequently deterred private international investment, especially in those areas where trade and investment is needed to strengthen freedom against Communist encroachment. I broach the idea to your organization as I firmly believe that in America, the leader of the free world, the impetus and leadership for such a movement should be founded. We look to you.

I look forward to receiving the report of your learned deliberations and will make them known to my colleagues in the banking fraternity here. With every good wish for success in your endeavors,

HERMANN J. ABS,
Suddeutsche Bank AG, Frankfurt-am-Main.

The Farm Problem

EXTENSION OF REMARKS
OF
HON. GORDON ALLOTT
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Friday, March 9, 1956

Mr. ALLOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the farm program, delivered by Robert Lucas, editor of the Denver Post, before the Colorado ASC conference of county committeemen and office managers, at Denver, Colo., on November 3, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS GIVEN BY ROBERT LUCAS, EDITOR THE EDITORIAL PAGE THE DENVER POST, BEFORE COLORADO ASC CONFERENCE OF COUNTY COMMITTEEMEN AND OFFICE MANAGERS, NOVEMBER 3, 1955, AT THE ALBANY HOTEL

The big issue in the 1956 Presidential campaign is going to be the status and the economic future of the American farmer. That has been understood by most observers for months. Mr. SAM RAYBURN, Democratic Speaker of the House of Representatives, sort of made it official with a statement in Oklahoma City on October 31. He said: "I think the Republicans have a lot to account for in 1956, and one of them is Ezra Taft Benson."

The Democrats are going to run against Mr. Benson who, oddly enough, is one of the few men the GOP does not seem to be running for President. Mr. Benson is going to be portrayed in several roles:

1. A pawn in the hands of Cadillac farmers, the tool of Allen Kline, and the moneyed aristocracy of American agriculture.

2. An instrumentality of New York bankers who want scarce money, high interest and not too much dough in the pockets of the United States farmer.

3. A secret weapon for corporation farmers who are determined to absorb the so-called family-size farm, convert independent farmers into tenants and sharecroppers, and collectivize agriculture in the hands of fewer men.

4. A ruthless, intransigent Utah Mormon who will bankrupt farmers before he will confess error, rectify mistakes, or get out of office.

To achieve success in this political blitzkrieg, Mr. Benson's enemies are reviving the tactics of Sockless Jerry Simpson, who advised the populists of the nineties to raise less corn and more hell. Already two participants in the last epidemic of agrarian discontent which swept the Middle West have started firing: Nels Kraschel, Democratic Governor of Iowa, 1937–39, and Dan Turner, Republican Governor of Iowa, 1931–33. Mr. Turner was the gentleman during the 1932 unpleasantness when a few farmers tried to strike, dumping milk along highways and trying to interfere with the marketing of farm products.

Nor is all the ned being raised by Democrats. The Gallup poll has shown the Midwest 3 to 1 against the administration's farm policies. Two months ago a revolt produced what is known as the National Farm Organization. This revolt is said to have spread into the often Republican States of Missouri, Nebraska, Minnesota, the Dakotas, and Illinois. Speakers demanded rigid price supports at 100 percent of parity to give the farmer his fair share of the Nation's prosperity.

In the face of declining hog prices, Gov. Leo A. Hoegh, of Iowa, asked seven Republican governors of as many Midwestern States to meet with him to "plan bold action now to save the farm." Gov. Joe Foss, of South Dakota, came out for parity at 90 to 100 percent. "Labor has a floor under wages," Governor Foss said. "Tariffs and fair trade acts serve as floors under business. The farmer would be the first to go along with the elimination of floors. But since everybody else has them, he wants them, too."

The political stakes in this conflict are great. There are 178 electoral votes in the 17 States of Colorado, Idaho, Iowa, Illinois, Indiana, Kansas, Minnesota, Missouri, Montana, Michigan, Nebraska, North Dakota, South Dakota, Ohio, Oklahoma, Wisconsin, and Wyoming. The total of 178 votes is two-thirds of the 266 necessary to elect a President. And few politicians have forgotten Harry S. Truman's performance in 1948 when he won 11 of the States in question, with 128 electoral votes. Mr. Dewey, who most people felt had the farm belt in the bag, carried six States for 54 votes in the very States which are normally Republican.

Now amid all the tumult and shouting, there are a few people—a few people—searching for constructive remedies, and not simply palliatives, poultices, or narcotics. We have two farm problems, in my opinion. The first involves the immediate necessity of relieving depressed commodity groups (and hogs are clearly in that category). The second is the construction of plans and programs that will serve the long-range interests of agriculture fairly, soundly, and within the framework of our economic system.

Nothing, it seems to me, will be gained by poorly drawn indictments of Mr. Benson. Nothing will be gained, nothing of lasting value, that is, by trying to convince the American farmer that he is the reincarnation of the forgotten man, 1956 style. Moreover, what little political poise we have left in this country will suffer further deterioration by reviving a form of class warfare, alining the rich against the poor, the big against the little, or the talkers against the doers.

I know that talking this way is sometimes like trying to sweep back the ocean tides and often comes to naught in a political year. But I think some things should be said, anyway. So here goes.

Is American agriculture in the grip of a deepening depression? Are farmers going on breadlines? What farmers are we talking about, anyway?

Are we talking about the 2 million farmers who are on units large enough to produce 88 percent of our farm products? Or are we talking about the 3½ million other farmers who produce only 12 percent of the food and fiber which goes to market? There are about 1.5 million farm operators at the lower end of the scale who have less than $1,000 per year of income. Those people are in trouble, real trouble. But can their problems be answered by high and rigid price supports or production payments? I agree with the Department of Agriculture, Mr. Benson's Department, when it says, "We have more of a social than an agricultural problem involved here. There is real need to help this group by encouraging new industries and new jobs in the areas where they are concentrated. They need credit to expand their operations and to buy the machinery which will permit them to make a better living. For many of these people, the solution to their problem does not lie in the land."

Mr. Paul DOUGLAS, the distinguished Senator from Illinois, admitted recently that while the price-support program does hold an umbrella over the small farmer, it chiefly benefits the larger farmers. He pointed out that a quarter of the farm-price-support benefits go to 2 percent of the farmers, or about 100,000 of the 5 million. Another quarter go to 9 percent of the farmers, or a total of about 450,000. The remaining 89 percent, or nearly 4½ million farmers, get the other half, or only what the upper one-ninth of the farmers receive.

But while admitting that division of supports—which admission affirms the vast range of farmers in this country—those most bitterly critical of Mr. Benson then insist on averaging in the part-time, residential, and other noncommercial farmers in proving that the American farmer is an abused man.

Now, it seems to me that any fair-minded observer, any sincere student of the farm problem, anyone who is looking for constructive solutions rather than miracles in solving this puzzle, must recognize certain truths and proceed from them rather than from loaded statistics and distorted definitions.

The first of these truths is this: Science and technology have combined to push ag-

ricultural problems far ahead of demand in this country. And markets for American farm products overseas are hamstrung by (a) American price, (b) the lack of foreign dollar holdings and (c) tariff obstacles both in this country and abroad. Those grim facts have produced surpluses in this country. Hence Mr. Benson's efforts to (1) quicken the program of surplus disposal and expansion of exports, (2) intenstify research to lower costs of production and to devise new uses for farm products, new crops, and an expansion of markets.

Mr. Benson's foes scoff at such objectives as too little, too late, and too Republican. The collectivists have never had faith in American enterprise, ingenuity, innovation, and know-how. They have no faith now as those peculiarly American characteristics apply to American agriculture. But they are wrong.

A second truth is the changing character of American farming. The Democratic National Committee ridicules a Benson subordinate's statement that "too many people are trying to stay in agriculture who would do better some place else. Farming takes capital and managerial capacity." But Mr. Butz spoke the truth. The American farmer and his children have as much resolution and determination as any breed in the land. But for 200 years the trend has been away from the land. The greatest exodus from the farms in that two century period took place during the 20 years of the New and Fair Deals. Why? Partly, I submit, because farming today demands different talents, different skills. Study the history of settlement periods on United States irrigation projects, some of which enjoy the highest per acre return in all agriculture. Then answer the question whether or not "farming takes capital and managerial capacity."

A third truth is that the influences of a free market are more dependable in adjusting agricultural output to price and demand than the devices and gimmicks of government. An example may be found in the case of the United States dairy industry. When Mr. Benson dropped support prices on milk and butterfat to 75 percent of parity, his action was met with a storm of derision and condemnation in certain quarters. But what has happened in the ensuing 16 months? Production of milk has leveled off after having increased for nearly 2 years. Month by month, from December 1954 through April 1955, milk production was at a lower rate than a year earlier. The American people began to use more dairy products. Consumption of milk products from commercial sources increased, reflecting larger consumer incomes and lower retail prices since April 1, 1954. And civilians began to consume more dairy products made available from Government stocks. Per capita consumption of butter rose 6 percent in 1954–55, reversing a long time trend the other way. Cheese consumption rose 10 percent. And by the end of the 1955–56 marketing year, prospects are for comparatively small holdings of butter and nonfat dry milk and moderate quantities of cheese. In short, the dairy industry is getting back on a sound basis because Mr. Benson had the courage to follow his convictions. And was thus advised and supported.

Finally, and to me most important, is the truth about the system under which we live. The farmer need not apologize for petitioning the Federal Government's assistance. But the question is how to provide that help within reasonable limits of our competitive economy and at bearable cost to the National Treasury.

Senator DOUGLAS has urged serious consideration of a program that would allow prices to fall, but which would pay the farmers the difference between (a) the market price they receive and (b) a given percentage (say 90 percent) of parity. "Such a method," he said, "would, of course, be a subsidy." "In principle, I do not like subsidies," he said. "But if they are to be paid, I believe it is better to pay them to the small and average farmer." If and when we embark upon such a plan, however nobly inspired, we shall have altered fundamentally and wrongfully the competitive free-enterprise system of this country.

Others would have us return to high and rigid subsidies, applied not alone to basic crops, but to an ever-widening area of agricultural commodities. It has never been explained to me how such a plan would help restore any balance at all to production and consumption of food and fiber in this Nation. Even on the valid assumption that some people would eat more, it is justified only as a means of warding off a farm depression; and its sponsors insist the danger warrants the price—but they don't know the price.

Then there is a program for governmental rental of land to bolster farm income. Because of the wide variety of land uses and the complicated formulas necessary to execute it, such a plan could cost the Government $1 billion a year. In Denver not long ago Mr. Benson made favorable mention of a program that would include incentive payments to farmers to divert croplands into grass, forage, and trees. Whether he was referring to payments for direct soil-conservation measures or combining such payments with the renting of land to shrink production was not clear. But it seems safe to say that such a plan—striking as it does primarily at the root of the problem—overproduction—is attracting the favorable interest of farmers more than any other.

Some form of assistance is necessary, of course. Business and industry use the tariff and the police powers of the Sherman-Clayton Act to protect themselves from ruinous foreign competition, or the engulfment by monopoly. Labor has organized, with the sanction and blessing of Uncle Sam, to bargain for wages. Some States recognize and enforce fair-trade laws which fix manufacturers' prices and forestall price-cutting competition. Almost all segments of society are better organized than the farmer to demand a fair price or to bargain for a flexible income to meet the exigencies of the changing times. Certainly there is no denying the existence of a cost-price squeeze. It is particularly severe in the 22 drought-ridden counties of Colorado and throughout many of the Plains States, where price and drought have combined to burden the best farmer severely.

The farmer, as essential as any and more essential than most entrepreneurs in filling the demands of the growing Nation, is asking nothing that is not his due. But he should not be beguiled into following false prophets and self-serving friends. He should not allow himself to become a dupe, a vehicle in the power-drive of ambitious politicians.

Mr. Benson, in my opinion, is not insensitive to the importance of prosperous farmers in a stable and prospering economy. But neither is he willing to substitute bread and circuses for tested economic and human principles in devising a farm program that will neither save the real farmer, nor serve the country.

That seems to me, a layman who never slopped a hog, milked a cow, drove a tractor or refinanced a farm mortgage, implicit in the Secretary's candor, his faith and his demonstrated conscience.

Too many men, farmers, and politicians alike, are being sucked into a political conspiracy solely for the purpose of pocketing those 17 farm-belt States. Those conspirators are not telling the whole farm story, using only enough of the figures to prove again that old axiom that while figures don't lie, liars do, at times figure. Some of them have dropped all pretense of seeking out solutions, and have set out to get theirs any way they can.

If they were interested in honestly educating the American voter on the complete story of agriculture and the farmer in America today, they would complete the report. They would admit also that the per capita income of farm people has been increasing for 20 years and gained slightly between 1953 and 1954 when the per capita income of nonfarmers was moving the other way.

Farm real-estate valuations increased by 2 percent from 1954 to 1955 and are just under the record high reached when the Korian war was at its peak in 1952.

Farm debts amount to only 11 percent of farm assets, as compared with 19 percent in 1940 and 21 percent in 1930. Does that indicate that farmers are quitting or heading for the hills?

The average equity of farm families—total assets minus debts—is estimated at $22,000. That is $5,000 higher than comparable figures for nonfarm families.

And what about the total income of farm families—income from both farm and nonfarm sources? The apostles of doom blithely ignore this fact: Income from off-farm employment, income from investments, and like sources now make up 30 percent of the total income received by farmers. As Don Paarlberg, Assistant to the Secretary of Agriculture, said in a much discussed Massachusetts speech: "Dollars thus received are just as useful in paying bills as dollars received from the sale of crops and livestock. If account is taken of the income that farm people receive from nonfarm sources, the per capita income of farm people from all sources actually increased 16 percent during the last 7 years."

Not every man who endorses cash payments under the Brannan plan, or high and rigid and universal supports, or a two-price system for wheat are conspirators, of course. They can make plausible arguments in behalf of their preference. And they are sincere in their beliefs. But they are, in my opinion, wrong because, first, they are trying to make basic and unworkable alterations in our economic system; second, they are only easing the present free farmer's pain without due attention to the origin of his economic illness, which could be fatal.

I give you this as my conclusion: The American farmer—the full-time, working, farm-for-a-living farmer, is fully capable of pulling his own oar in the economy of the United States. He needs and deserves help, and will in turn help himself, as, when, and if some bailing is necessary in rough weather. But he is not going to sneak an unfair share of the limited drinking water on the trip. And he is not going to be tricked into mutiny at the expense of others on the boat on the promise of some phony reward when he reaches land. That seems to me the American ideal. And the farmers of this country are American before they are anything else.

Youth Temperance Education Week in Oregon

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, March 9, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a proclamation by the late Gov. Paul L. Patterson, of Oregon, proclaiming Youth Temperance Education Week in the State of Oregon, April 22 to 28, inclusive, 1956.

Although many Members of the Senate realize that Governor Patterson trag-

ically passed away on January 31, this proclamation was issued by him on the 24th of January 1956, which was, of course, prior to his untimely death. Particularly because this youth temperance proclamation was one of the last acts which the distinguished Governor of my State undertook during his lifetime, I think the contents of his proclamation should be of special significance to the Members of the Senate and to other readers of the CONGRESSIONAL RECORD.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

STATE OF OREGON,
EXECUTIVE DEPARTMENT,
Salem.

PROCLAMATION—YOUTH TEMPERANCE EDUCATION WEEK

Whereas it is important that the youth of our Nation and State receive instruction on the problem of alcohol and other narcotics; and

Whereas the education of our youth regarding this problem is an endeavor demanding the support and cooperation of all good citizens;

Now therefore, I, Paul Patterson, Governor of Oregon, do hereby proclaim the week of April 22 to April 28, 1956, as Youth Temperance Education Week and urge all citizens to join in meetings, and other planned observances for youth temperance education during this designated week, and further urge all Oregonians to consider and continue said program as a year-round project.

In testimony whereof, I have hereunto subscribed my name and caused to be affixed the great seal of the State of Oregon. Done at Salem, the capital, this 24th day of January A. D. 1956.

PAUL PATTERSON,
Governor.

Attest:

EARL T. NEMBRY,
Secretary of State.

The Communist Conspiracy—Devious Methods of Undermining the American Way of Life

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, Judge Harold Medina, now a member of the United States circuit court of appeals in New York, reveals the daily harassments by the Communists and fellow travelers he had to endure while sitting as a judge in the trial of the 11 top Communist leaders in 1949.

Judge Medina told of his experiences before the Executives Club at the Hotel Sherman in Chicago last week.

The people of this great Nation who are real Americans deplore the existence of a Communist conspiracy within our borders. They salute Judge Medina and his kind for the courage exhibited at this trial, notwithstanding, the kind of tactics employed by the Communist hoodlums.

Congratulations, Judge Medina, for your outstanding courage and patriotism.

I am including at this point, Mr. Speaker, an article by Mr. H. A. Thompson, outstanding writer on the Chicago Tribune staff:

JUDGE SAYS REDS TRIED TO MAKE HIM KILL SELF

(By John H. Thompson)

An effort to compel him to commit suicide was one phase of the psychological warfare waged by Communists in an attempt to break up the trial of 11 top Communist leaders in 1949, Federal Judge Harold R. Medina asserted yesterday.

Medina, now a United States Circuit Court of Appeals judge in New York, told a luncheon of the Executives' Club in the Sherman Hotel of his ordeal during the 9 months' trial. He termed the recent surrender of two of the defendants, who had been fugitives, as part of a Communist propaganda scheme.

A month after Defense Secretary James Forrestal leaped to his death from a hospital window, Judge Medina said, the Reds learned that Medina was a victim of acrophobia, or fear of high places. Pickets outside the New York courtroom began carrying signs saying: "Medina will fall like Forrestal."

TELLS OF PHONE CALLS

"I would get telephone messages at night at home, saying, 'Jump,' or 'You've got to jump,'" said the jurist. "At night I would lie in bed with an awful feeling that I had to get up and run to the window."

Judge Medina said he defeated the strain of the trial, and its daily harassments, by adhering to a rigid daily schedule, by remaining calm during the Red-inspired hullabaloo, and learning the virtues of patience.

The defense lawyers, he asserted, had no intention of seeking an acquittal, or they would have followed recognized legal precepts. Instead, he said, it was their intention to disrupt the trial itself by "getting" the judge and by interfering with court procedure every day.

PARTY LINE CHANGES

The party line changed about every 6 weeks, Judge Medina said. It began with relays of delegations calling on him. Other phases of the psychological warfare included a campaign to accuse him of prejudice against Jews, Negroes, or the workers. He received 200 to 300 letters a day berating him.

Judge Medina said he came to feel as if the whole American people were against him until after the trial when a flood of nearly 60,000 letters poured in from every cross-section of the country, "the anonymous representatives of America."

"They sensed better than I the test that American justice had been through," said Judge Medina. "They told me, in effect, that they loved America just as I do. It was a welling up of love of America, of patriotism, and I happened to be the lucky man who got its impact."

Later Developments on the Natural Gas Bill

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, March 9, 1956

Mr. WILEY. Mr. President, as an opponent of the natural gas rate increase bill, and as one who welcomed with enthusiasm President Eisenhower's wise veto of it, I have been closely following subsequent developments on this issue.

I have in my hand the text of two interesting newspaper clippings on this subject.

The first is from the March 5 Washington Post; the second is from the March 8 New York Times.

I believe that those of us who fought to protect the rights of American consumers should continue to follow this issue very closely to make sure that the letter and spirit of our intentions are fulfilled.

I send to the desk the text of the two clippings, and ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the news clippings were ordered to be printed in the RECORD, as follows:

[From the Washington Post of March 5, 1956]

GAS-BILL BAN HIKES FPC WORKLOAD

(By Warren Unna)

There has been a noticeable lack of motion in Congress to override the President's February 17 veto of its Natural Gas Act amendment.

Since the House split by a narrow 209 to 203 in approving the measure last year, and the Senate vote was only a somewhat better 53-to-38 endorsement this year, the chances of coming up with the necessary two-thirds vote to override the veto are dubious. This is particularly true because the overriding must first occur in the House, where the bill originated.

This means the Federal Power Commission must now buckle down to regulating natural-gas producers who sell their product across State lines.

NEW JOB FOR FPC

The FPC always has had the job of regulating the relatively few interstate pipeline companies who transmit the gas to the utility-company distributors. But it was only after the Supreme Court's June 7, 1954, decision in the Phillips Petroleum Co. case that the FPC was faced with also regulating the producers.

During the Senate debate, those favoring the bill's passage declared the FPC had stood still since the Phillips' decision. They said the FPC was merely awaiting congressional action to counteract the Supreme Court and to get the Commission off the hook of having to regulate the producers. As evidence, the probill Senators cited the majority votes the Commission had taken in favor of Congress passing the bill and in favor of the President's signing it.

Now that the smoke has cleared, it appears that the FPC did not quite stand still, and some regulatory work has been under way these past 20 months.

REGULATION BEGUN

Declares FPC Chairman Jerome K. Kuykendall: "We were accused of freezing all the prices. It might have seemed like a freeze to them, but actually we issued regulations saying no producer could raise his prices without first going through our regulatory procedure."

In August 1954, 2 months after the Supreme Court decision, the FPC required producers to file applications for certificates of gas sales and also schedules of existing rates and rate changes.

To date, the FPC has disposed of 2,483 of the 6,557 interstate sales applications by issuing certificates of public convenience and necessity." The rest are pending.

The FPC has also permitted 2,960 of the 3,181 rate increase filings to go into effect by waving its power to suspend these increases over a 5-month investigatory period. These increases total $20.4 million annually.

Some 34 other rate increase applications, totaling $1.3 million annually, were at first

suspended and then permitted. Still pending before the FPC under suspension orders are 187 applications, which would boost the gas producers' income by approximately $17.4 million.

Only two of these cases have reached the point of an FPC examiner's recommendation—handed down only this month. In one of these the examiner recommended turning down an Oklahoma City gas producer's application for a $17,184 annual increase; in the other, the examiner recommended approval of an Omaha producer's application for a $43,800 annual rate increase.

RATE PROBE VOTED

A few weeks ago, the Commission voted 4 to 1 to investigate rates charged by 16 of the Nation's biggest natural-gas producers to the Tennessee Gas Transmission Co., a pipeline company which services among other utilities, the District's own Washington Gas Light Co. The FPC permitted them rate increases to go into effect late in 1954.

Senator PAUL H. DOUGLAS, Democrat, Illinois, who led the Senate fight against the gas bill, has gone on record favoring an 8½ percent investment return for the gas producers—2½ percent greater than the usual 6 percent permitted utilities. DOUGLAS feels the differential is allowable because of the greater risk producers face in prospecting for their gas.

The FPC also has some work cut out for it in regulating rates for gas which the pipeline companies both produce and sell to themselves for interstate transmission.

The Commission originally permitted one of these companies, Panhandle Eastern Pipeline, to charge itself on the basis of a weighted average field price of the gas it produced—a price considerably higher than the regular cost-plus-fixed-percent utility basis. The United States Court of Appeals found insufficient justification and now the Commission has to make another price decision.

REALIZES JOB

The FPC would be the last to underestimate the rate regulation work now before it. The problem is compounded by the fact that producers experience extremely uneven costs in prospecting for their gas. One may make a rich strike with the first drilling; another may have to sink 100 holes—each at considerable expense—before finding his gas.

Some Capitol Hill observers fear there may still be a death rattle left in the gas fight. Embittered gas-bill proponents may refuse to approve additional appropriations to enable FPC to hire the necessary staff to do the regulating.

The chaos resulting from that could prove pretty well limitless.

[From the New York Times of March 8, 1956]

GAS PRODUCERS SEE LOOPHOLES IN LAW

Producers of natural gas have found several loopholes in the Natural Gas Act of 1938 that they feel will permit them to avoid Federal Power Commission price controls at the wellhead.

Tom P. Walker, president of Transcontinental Gas Pipeline Corp., said at a meeting yesterday of the New York Society of Security Analysts that the "gas producing section of our industry was in a definite state of shock" over President Eisenhower's veto of the controversial Harris bill.

"Some of the companies, I think, may attempt to sell their gas to consumers, particularly in the petrochemical field, within their own States," Mr. Walker explained. He added that some producers were "talking about setting up their own petrochemical companies."

He indicated that producers were investigating a loophole that would permit them to sell their gas directly to a consumer for his own use. They then would contract with the pipelines for actual deliveries.

Transcontinental is the major supplier of natural gas to the New York-New Jersey area. Its operations are almost entirely in the gas transmission field. It sells gas at wholesale to utilities and municipalities from Alabama to New York City. Its chief sources of supply are in the Texas-Louisiana gas fields.

How Taxes Can Be Cut

EXTENSION OF REMARKS

OF

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1956

Mr. CRETELLA. Mr. Speaker, I include an excellent editorial from the March 4 New Haven (Conn.) Register which speaks in a forthright and positive manner on the subject of lightening the tremendous burden of tax now on the backs of the American people. Giving credit where it is due, it is by the present administration, under the inspiring leadership of President Eisenhower, that personal income taxes were cut for the first time in many, many years and it is expected this year we are to have a balanced budget, an almost unheard of event. I think every taxpaying citizen, regardless of his political inclinations, should laud the efforts of the Hoover Commission in its carefully studied proposals to lessen the staggering cost of Government, and I hope many of its recommendations will be adopted by Congress:

HOW TAXES CAN BE CUT

It is not absolutely necessary for Connecticut to be billed $1,226,500,000, or $540 each for every individual in the State, to support the Federal Government in the lavish style to which it is accustomed, between now and June 30, 1957.

Yet this will be our share of the taxload, the Connecticut Public Expenditure Council warns, unless the tax-slashing opportunities open to our lawmakers be seized.

A concerted public demand that tax-cutting possibilities be made reality could prod Congress, at long last, into actually doing something to lighten the people's taxload.

Here are the possibilities:

The proposed Federal budget for 1957 balances, with receipts estimated at $66,300,000,000 and with spending estimated at $65,900,000,000 plus $435 million for debt reduction.

This $435 million nibble at reduction of our astronomical national debt would be made possible by an anticipated surplus of income over outgo for the 1957 fiscal year. In addition, there is likelihood of a $230 million surplus, as of June 30 this year. Total: $665 million.

This is still but a drop in the bucket, whether for tax relief or for whittling at the national debt. But, as the expenditure council reminds us, other moneysaving opportunities, very substantial ones, are open to Congress. Those opportunities are the economies urged by the Hoover Commission. What about those?

Herbert Hoover has shown that savings of $5 billion are possible through adoption of all the expense-cutting recommendations the Commission has made.

If no more than $2 billion of those possible savings were effected, the expenditure council remarks, the surplus available for tax relief would total $2,665,000,000.

This would be $2 billion in Hoover Commission economies, plus the $230 million and $435 million surpluses anticipated in the 1956 and 1957 Federal budgets.

The American people need not resign themselves to staggering along forever under such tax burdens as they carry today.

The people themselves can do something about lightening the load.

The people can tell their servants in Congress—tell them early and often—that the extravagant spending habits of Government must stop, that economy must be practiced.

The Hoover Commission has shown the way toward a healthy beginning. Congress thus far has approached the Commission's recommendations with the reluctance of any habitual spendthrift urged to try living within his means.

One trouble is that many Congressmen have contracted a political disease. The victims of this disease have hallucinations. Their delusion is that the most votes go to those public servants responsible for spending the most money—for aid to the taxpayers in the form of school, highway, public works, price-support projects and assorted schemes of similar nature, funds for all of which must come, in the first place, out of the taxpayers' own pockets.

At $540 per head, for Connecticut, the bill presented to us by our Federal public servants for fiscal 1957 is indefensibly high.

Let's let our Congressmen hear from us, then. Let's assure them that popular voting support from now on will go not to the biggest spenders of our money, but to the expense-cutters who can give us real tax relief.

Visit by Protestant Churchmen to Russia

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, March 9, 1956

Mr. WILEY. Mr. President, today nine distinguished United Protestant leaders will leave New York for a 10-day visit to Russia.

I believe that it is appropriate, particularly in this pre-Easter season, that we explore every avenue that could conceivably lead to mutual understanding, and I am glad to know that this trip is being made.

As I have said on many occasions, however, I agree with the note of caution in the comment by Dr. Eugene Blake, president of the National Council of Churches, when he announced the trip:

While we cannot be sure that an agreement can or should be reached at many points, we do hope that under the guidance of Almighty God that exchange of visits will contribute toward a large measure of understanding and good will.

Despite Communist efforts to promote atheism, religion remains a powerful force in Russian life. But the Reds nevertheless invariably seek with cunning to try to misuse a good force for their own propaganda and other purposes.

Mr. President, I think that we should all be fully informed on this present trip. Therefore, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Toward Mu-

tual Understanding," which appears in the February 1956 issue of the National Council Outlook.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TOWARD MUTUAL UNDERSTANDING—THE NATIONAL COUNCIL OF CHURCHES ARRANGES A TWO-WAY VISIT OF AMERICAN AND RUSSIAN CHURCHMEN FOR 1956 TO EXCHANGE VIEWS RESPECTING LIFE AND WORK OF THE CHURCHES IN THE TWO COUNTRIES

A deputation of eight United States protestant leaders will make a 10-day visit to Russia in March, for conversations with Christian leaders in the Soviet Union.

The deputation was selected by the National Council of Churches and will travel to Russia under national council sponsorship.

It will be the first part of a two-way visit that will bring Russian churchmen to the United States next June to be guests of the National Council of Churches for a stay of about 10 days.

The two-way visit will afford an opportunity for extended conversations, the first ever undertaken by a broadly representative group of churchmen in this country with those in Russia. As churchmen, they will exchange views respecting the life and work of the churches in the two countries, including the efforts of the churches directed toward the achieving of a just and durable peace.

The public announcement that a two-way visit had been arranged in negotiations begun last June was made by Dr. Eugene Carson Blake, president of the national council, at the opening session of the 2-day quarterly meeting of the general board, February 1.

"Be assured," Dr. Blake told members of the general board, "that the delegates will represent vigorously our convictions on the moral issues underlying tensions prevailing in the world today."

The deputation announced by President Blake includes 6 clergymen and 2 laymen. The eight Protestants include members of the Baptist, Methodist, Presbyterian, Lutheran, Congregational, and Episcopal Churches.

The deputation comprises:

Rev. Dr. Eugene Carson Blake, president of the National Council of the Churches of Christ in the United States of America; stated clerk of the Presbyterian Church in the United States of America.

Rt. Rev. Henry Knox Sherrill, presiding bishop of the Protestant Episcopal Church and past president of the National Council of Churches.

Rev. Dr. Franklin Clark Fry, president of the United Lutheran Church in America; vice chairman and presiding officer of the policy and strategy committee of the national council.

Mr. Charles C. Parlin, Methodist lay member of the general board of the National Council of Churches.

Rev. Dr. Herbert Gezork, president of Andover Newton Theological School; member of the department of international affairs of the National Council of Churches.

Rev. Dr. Roswell P. Barnes, associate general secretary of the National Council of Churches.

Rev. Dr. Walter W. Van Kirk, executive director, department of international affairs of the National Council of Churches.

Dr. Paul B. Anderson, member of the national council's department of international affairs, secretary of the international committee of the national councils of the United States and Canada of the Young Men's Christian Association.

Dr. Anderson spent several years with the YMCA in Russia and is the only member of the deputation who speaks Russian. He and Dr. Van Kirk are the only members of the group who previously have been in Russia.

The deputation is scheduled to leave by commercial airline for Moscow on March 9 from New York, and to return to the United States on March 22. They will arrive in Moscow on March 10 and leave on March 20.

SUBJECTS FOR DISCUSSION

It is the hope of the deputation, expressed by Dr. Blake, that the conversations with the Russian church leaders may embrace many subjects of mutual interest. As conceived by the American churchmen, these would include: What the churches of the two countries have done and are doing to promote world peace; the freedom of the churches to fulfill their mission; the current trends in theological education; the Christian faith and other religions; Christian faith and modern science; Christian literature and the relations between the churches in the United States and the Soviet Union.

It is the expectation that the conversations begun in Moscow will be continued when the Russian church leaders come to the United States on or about June 1.

The original proposal was that American churchmen, as a manifestation of the spiritual fellowship binding all Christians, pay a goodwill visit to the Soviet Union.

The proposal was made by the national council's department of international affairs, chaired by Ernest O. Gross, former United States member of the General Assembly of the United Nations.

The general board of the national council at its quarterly meeting in New York last June approved the recommendation. It authorized the president, in consultation with the board's committee on policy and strategy, to take whatever steps were necessary to effectuate a visit to the Soviet Union.

President Blake, by cable and letter, made known the wishes of American churchmen to His Holiness Alexei, Patriarch of Moscow and All Russia. He assured the Patriarch that "the American churches are most eager to bring to fulfillment the peace hopes cherished by so many of the common people of the world."

The national council's president expressed the hope that the Patriarch would concur in the proposal for an early meeting in or near Moscow and the desire of the American group to meet also with leaders of other church bodies in Russia.

Two months later, a favorable reply was received from Metropolitan Nikolay on behalf of Patriarch Alexei. The reply said that "with brotherly love in Christ we are ready to meet your delegation" and proposed that plans be extended to assure a 2-way visit. The Russian church leader said, "We would like to visit you and get acquainted with the church life in America."

The proposal for a 2-way visit was approved by the general board at its meeting in Pittsburgh in Ocotober. The board requested the officers of the national council to inquire of the United States State Department concerning ways and means of carrying out this intention. This was done.

Subsequently, the arrangement of mutually satisfactory plans was worked out in correspondence between the Council's general secretary, Dr. Roy G. Ross, and Metropolitan Nikolay. It was agreed that a national council deputation of 8 persons should first visit Moscow, and that the Russians would proceed to the United States 3 months later.

Arrangements were completed in time to permit formal announcement to the general board at its first meeting of 1956.

TWO LAY DELEGATES

One of the deputation's two lay members, Paul B. Anderson, New York, (Congregational Christian), has been associate executive secretary of the international committee of the YMCA's since 1947. He has spent more than 20 years of his life-long career with the "Y" engaged in service to Russian refugees and prisioners of war in Germany and other European countries.

Dr. Anderson was assigned to the refugee service post in 1920, with headquarters in Paris. From 1938, until he resigned the position in 1941, he also carried responsibility for relationship between the international committee of the YMCA's in the United States and Canada and the YMCA movements in all parts of Europe.

He returned to the United States in 1941 for "Y" work, only to be reassigned to France 3 years later as deputy general secretary of the War Prisoners' Aid for Northwest Europe.

The other lay member, Charles C. Parlin (Methodist) a New York lawyer, in active both in the work of his own denomination and in the cooperative movement of the Protestant churches, in the United States and internationally.

Mr. Parlin is a representative of his denomination on both the general board of the National Council of Churches and the central committee of the world council. He is also a member of the executive committee of the World Methodist Council and has been elected delegate to five Methodist general conferences (1940, 1944, 1948, 1952, 1956).

Dr. Franklin Clark Fry, New Rochelle, N. Y., is president of the United Lutheran Church in America, the Nation's largest Lutheran body, with more than 2,220,000 members. He is a representative of his denomination to both the general assembly and the general board of the national council. Membership on various National Council of Churches committees includes the vice chairmanship of the general board's policy and strategy committee and chairmanship of the European program of the council's department of ecumenical relations. He presided at the opening session of the council's constituting convention, held in Cleveland, Ohio, in November 1950.

In his own denomination Dr. Fry is a former treasurer of the Luthern World Federation (1942–46) and is now its vice president and chairman of its commission on younger churches and orphaned missions.

Active also in church relief work overseas, Dr. Fry made a round-the-world flight in January 1951 for church world service, relief agency of the national council, to inspect conditions and the needs of displaced persons and war refugees. On his return he reported his findings personally to President Truman.

Dr. Herbert Gezork, since 1950 president of Andover Newton Theological Seminary, Newton Center, Mass., is a distinguished Baptist theologian. He is recognized for his leadership, both in his own denomination and in the cooperative movement of the churches.

He is the immediate past vice president of the 1,505,871-member American Baptist Convention and a former president of its foreign mission society.

He is also an active member of the department of international affairs of the National Council of Churches and served as a United States delegate to the faith and order conference convened by the World Council of Churches, in Lund, Sweden, in 1952, and to the second assembly of the world council, held in Evanston, Ill., in August 1954.

Dr. Gezork was born in Germany in 1900. He is a graduate of both the University of Berlin and the Baptist Divinity School, Hamburg. He received his Ph. D. in 1930 at a United States school—the Baptist Theological Seminary, Louisville, Ky.—where he studied under a student-exchange program. Returning to Germany in 1931, he was appointed general secretary of the German Baptist youth movement, a position he held until 1934, when the organization was dissolved under pressure by the Hitler government.

The other four members of the deputation have been mentioned frequently in the Outlook. They include the president and a former president of the National Council of Churches and also the council's associate general secretary and the executive director of its department of international affairs.

Rt. Rev. Henry Knox Sherrill, presiding bishop of the Protestant Episcopal Church, was the National Council of Churches' first president, and is now 1 of the 6 presidents of the World Council of Churches. He served overseas as a chaplain in the First World War and during World War II he was chairman of the General Commission on Army and Navy Chaplains, receiving a Medal of Merit from the President.

Dr. Eugene Carson Blake, the present president of the national council, is stated clerk of the general assembly of the Presbyterian church in the United States of America and a member of the central committee of the world council. He has spent the last two Christmases representing the protestant and orthodox churches on missions to our servicemen and women in Japan and Korea, and in Newfoundland, Labrador, and Greenland.

Dr. Roswell P. Barnes, also a Presbyterian, is associate general secretary of the National Council of Churches. For 10 years before the formation of the council, he served as associate general secretary of the Federal Council of Churches. During World War II he was a member of the Ecumenical Commission for Chaplaincy Service to Prisoners of War, and secretary of the Commission on Aliens and Prisoners of War.

Dr. Walter W. Van Kirk (Methodist), executive secretary of the department of international affairs of the national council, has spent the greater part of his ministerial career working for better international relations and lasting world peace. For 25 years before the national council was constituted, he served as executive secretary of the department of international justice and goodwill of the Federal council, in 1945 he was consultant to the United States delegation to the United Nations conference in San Francisco and has served as official U. N. observer for the national council since that time.

Over the years, individual churchmen have visited the Soviet Union and, more recently, delegations of Baptists and Quakers have gone to Moscow. Russian churchmen recently visited Canada. The national council deputation is the first one representative of most major Protestant denominations to plan such a visit.

Concluding his statement to the general board, Dr. Blake said:

"We cannot say what effect the establishment of closer relations between Christians of the two countries will have in improving relations between the United States and the Soviet Union. We believe that improved relations between nations require a frank and honest recognition of the differences that prevail between them. The general board should be assured that the deputation will represent vigorously our convictions on the moral issues underlying the tensions prevailing in the world today. While, therefore, we cannot be sure that agreement can or should be reached at many points, we do hope that under the guidance of Almighty God this exchange of visits will contribute toward a larger measure of understanding and good will."

Dean Clarence A. Manion

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, March 9, 1956

Mr. McCARTHY. Mr. President, the State of Indiana continues to pour great citizens into the bloodstream of our Country. One of the most distinguished of these is Dean Clarence E. Manion, of South Bend, former head of the Law School of Notre Dame University, who is a cochairman of For America, a patriotic nationwide organization committed to a course of political action. Dean Manion, as we all know, is one of the great constitutional lawyers of our beloved land. In addressing a gathering of 3,200 patriotic Americans in Carnegie Hall on Wednesday night, February 22, in an observance of the natal day of the Father of our Country, George Washington, Dean Manion suggested a course of political action to his fellow Americans that deserves our thoughtful consideration.

I ask unanimous consent that Dean Manion's remarks at Carnegie Hall be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY DEAN CLARENCE A. MANION, FORMER DEAN OF THE LAW SCHOOL AT NOTRE DAME UNIVERSITY, AT A PATRIOTIC RALLY HELD IN CARNEGIE HALL, NEW YORK CITY, ON THE NIGHT OF WEDNESDAY, FEBRUARY 22, 1956

Fellow Americans, 157 years ago George Washington addressed a memorable farewell to his countrymen. Now, on this anniversary of his birth, we are here to forestall an official surrender by the United States of the national independence and constitutional government which Washington fought so hard to procure for us. Our State Department refuses to deny a reported statement by one of our foreign Ambassadors that it is now our official policy to yield our national sovereign independence in order to save what it considers the free world. Authors of world government superstate proposals will now be running for Presidents of the United States, and seek the nomination of both political parties. The leadership of both parties is now working first to emasculate, and then to reject the Bricker amendment, precisely because a properly phrased Bricker amendment to the Constitution would save our national independence and protect the managing rights of the 48 States from the treasonable ravages of secret diplomacy.

Under these precarious circumstances let us thank God that we are still able to assemble here in the menacing shadow of the United Nations and address each other as "fellow Americans." Constitutional States rights constitute our best defense against communism. Exclusive, decent, local control of the police forces, property ownership, elections, and education is always and everywhere an impassable barrier to the worldwide Communist conspiracy for the complete centralization of godless power.

The Founding Fathers of America built this barrier into the Constitution and reinforced it with the unequivocal language of the 10th article of the Bill of Rights. Until recent times succeeding generations of Americans respected the wisdom of these constitutional barriers to despotism of any kind.

In this city in 1912 Woodrow Wilson paid his scholarly respects to these constitutional limitations on Government and to our institution of exclusive local government and States rights independent of central control. He cited history to show that human liberty depends upon the limitation of governmental power. He declared that "centralization of governmental power is what always precedes the death of human liberty."

Yet, in the last 20 years, the centripetal forces of despotism have pulled more and more power into Washington, D. C., until the independence of State and local government are all but politically destroyed.

The deposit of despotism in Washington increases by the minute. The President of the United States who, prior to his election cried out against the destructive centralization of power, now aids and abets this centralized force by all of his official actions, and by everyone of his recommendations to Congress. The President now holds in his hands more power over your life, property, and privacy, than is held by any other governmental official on earth outside of the Iron Curtain. Communism is centralized power and whatever adds to centralized power adds to the Communist conspiracy to destroy America. If the President does not understand this, then it is high time for the American people to tell him about it in one loud voice.

You have heard an excellent detailed diagnosis of our troubles at this great rally tonight. What can we do about them? Here is For America's recommendation for action: Leadership in both parties is hopelessly stacked against American patriotism. Bipartisan conspirators have already concluded arrangements to put international socialists on both party tickets in the next November election.

If the American voters are given no choice which does not involve the continuation of centralized socialism and the destruction of our national independence in an international super state then American liberty will be doomed before the dawn of another Washington's birthday.

To break this bipartisan stranglehold it is not necessary at this time to run anybody for President or to undertake the organization of another nationwide political party. Instead, For America proposes that patriots in the several States qualify slates of all-America presidential electors for the ballots in November.

Under the Constitution the President is elected by 531 presidential electors. The electors presented to you by both political parties next November will be prepledged stooges of international socialism.

Between now and then, let us see to it that all-American teams of independent electors will be on the ballots by determined, patriotic organizations in all States where international socialism controls both parties.

For America will help you to get that done.

This is your one chance to become American once more.

Appendix

Assistance to the Physically Handicapped

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Monday, March 12, 1956

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a statement I prepared pointing out a specific example of what can be done to assist the physically handicapped to become self-supporting members of the community.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

As a member of the Senate Small Business Committee, it is gratifying for me to be able to pay tribute to the sagacity, foresight, and humanitarianism of the Bendix Aviation Corp. assisting the physically handicapped. This company, within a relatively short period of time has awarded $1,350,000 of subcontract work to a small organization which possessed no prior manufacturing experience in any industrial sphere. As if this fact, in itself, were not sufficiently significant, the contracts awarded by the Bendix Corp. require the manufacture of exceedingly complex, synchronous motor components used in radar, aircraft instruments, and in other electronic circuitry where the most exacting control of elctrical impulse and power supply is required. Permit me to relate the highly unusual and most inspiring story of the manner in which a large corporation created a small electronics manufacturing plant within the organizational framework of a rehabilitation agency.

The Federation of the Handicapped at 211 West 14th Street, New York City, is a nonprofit social welfare organization created for the purpose of aiding and rehabilitating physically handicapped individuals. This organization contacted the Bendix Aviation Corp. to solicit subcontract work which would permit them to employ and train disabled people for job placement in regular industry. The Bendix Corp. was advised by the Federation that it could offer adequate manufacturing space, although this consisted solely of four walls and bare floor. It possessed a meager amount of working capital which could be utilized for a manufacturing project and it could provide a hitherto unused source of manpower composed of physically disabled individuals endowed with enthusiasm, tenacity of purpose, and the ability to work diligently, but who lacked the skills, knowledge, and judgment which can come only with experience.

Because the federation lacked equipment, experience, adequate working capital, and the essential engineering and manufacturing knowledge, the awarding of a subcontract by Bendix to this organization presented what seemed to be a group of insurmountable problems. Under ordinary circumstances the perplexity of such a situation would prompt any concern to withhold any offer of subcontract work. The Bendix Aviation Corp., however, expended considerable time and effort in order to devise a plan by means of which the Federation of the Handicapped could be provided with an opportunity to obtain the subcontractual business it was seeking. The Federation of the Handicapped was notified by Bendix that it would be provided with an opportunity to obtain subcontract work from Bendix—but, because of the complexity of the type of work to be subcontracted, it would be necessary for Bendix to provide engineering and manufacturing "know-how," and, on a loan basis, certain types of equipment, tooling, and all required raw materials. The federation gratefully accepted this most unusual opportunity and a team of Bendix personnel immediately undertook the task of providing all that was needed to create a small manufacturing unit capable of producing intricate, component parts under close competent supervision.

The skeleton plant in 60 days delivered the first shipment of finished parts to the Bendix Corp. Bendix purchased, on a subcontract basis, each of these components at a cost which was identical to Bendix' own cost of manufacture. This made it possible for the federation to establish the same job standards and rates of bonus compensation as those utilized by Bendix for its own employees.

Through the close cooperation and masterful guidance of Bendix personnel the federation workers as a group, were able to rapidly accelerate their production rate and were able as individuals to acquire new skills, financial independence, necessary experience, and considerable engineering and manufacturing comprehension. The quality and quantity of the work produced by the federation workers and their ability to meet delivery schedules induced Bendix to increase substantially the volume of subcontract work. This, in turn, permitted rapid expansion within the small electronics plant that Bendix created. The original barren room has become a two-story, manufacturing plant accommodating a maze of complicated electronic equipment, 80 percent of which is now owned by the federation itself. Thousands of component parts are currently being produced and shipped each week by a staff of 135 physically handicapped employees who have now become taxpayers—not tax consumers.

The contracts awarded by Bendix and the income realized from them has meant a great deal to the Federation in terms of helping the disabled to help themselves. A considerable number of physically handicapped individuals have received job training and job experience and have not only learned how to perform a skilled task under standard working conditions but have been able to obtain positions in regular industry. Hundreds of other physically handicapped men and women have received the benefits to be derived from medical treatment, psychological therapy and professional counseling.

It is a tribute to both the Bendix Aviation Corp. and the Federation electronics plant which it developed, that the latter is now capable of completely financing and managing its own operation and can successfully compete against other Bendix subcontractors for Bendix subcontract work. Outstanding among my experiences is this particular case history of what can be done to assist our physically handicapped to become self-supporting members of the community. I trust that many of us will follow this example thus making a great contribution to the welfare of our country.

Control Over CIA Not Impractical

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 8, 1956

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to recommend to the attention of the membership of this body an editorial which appeared in the Milwaukee Journal on March 6, 1956, entitled "Some Congressional Control Over CIA Is Not Impractical."

During the last 3 years, I have exerted repeated efforts on behalf of the proposal to establish a Joint Committee on Intelligence Matters. I have first outlined my proposal on this subject, in House Concurrent Resolution 169, 83d Congress and reintroduced it, in an amended version, in House Concurrent Resolution 28, 84th Congress, together with over a score of my distinguished colleagues.

It is my sincere hope that the House Rules Committee will report House Concurrent Resolution 28 in the near future.

SOME CONGRESSIONAL CONTROL OVER CIA IS NOT IMPRACTICAL

For several years there has been a rash of resolutions in Congress calling for an agency to watch over the Central Intelligence Agency, our top cloak and dagger corps.

The second Hoover Commission called for the same thing. It suggested that a small, permanent commission composed of a bipartisan representation from Congress and distinguished private citizens handle the job.

President Eisenhower has gone halfway. He recently named a civilian commission in the executive branch to serve as watchdog and report to him. But he has shied away from letting Congress in on the act. This hasn't stilled demands that Congress take a hand in watching an agency for which it appropriates money. Senator MANSFIELD, Democrat, Montana, has come up with a bill to create a joint committee of both Houses of Congress to work with the CIA. The Senate Rules Committee has agreed to congressional action on the bill and it has attracted a large measure of support.

The Hoover Commission pointed out that the CIA, because it needs a large degree of secrecy to operate, is exempted by law from rules that control other Government agencies. For instance, the General Services Administration, the Government's housekeeper, has no control over CIA at all. CIA is exempted "from compliance with any provision of law limiting transfers of appropriations; any requirements for publication or disclosure of the organization, functions, names, official titles, salaries, or numbers of personnel employed by the agency; and any regulations relating to the expenditure of Government funds."

Such exemptions are, by and large, proper. The Atomic Energy Commission has similar exemptions. But Congress does have to appropriate funds for the CIA. It created the

Agency and set its scope of activities. Surely someone in Congress should be given at least peek enough to make sure that CIA is operating efficiency and properly. This is particularly true because of criticisms—some from the Hoover Commission itself—of some shortcomings in CIA.

The AEC, which hoards secrets, too, has a Joint Congressional Committee which is given enough of a picture to judge whether the organization is handling Government funds properly. The Joint Committee has worked exceedingly well, and without weakening national security. The same sort of committee could do the same sort of job for CIA. It wouldn't have to be told everything—and shouldn't.

But Congress ought to be able to determine whether the dagger is being kept sharp and the cloak is kept cleaned and pressed and buttoned. It's basic that Congress, with control of the purse, must get enough information to make an informed judgment on how the purse is expended.

That's all MANSFIELD and others want—and it's little enough to ask.

American-Flag Airlines

EXTENSION OF REMARKS
OF
HON. DeWITT S. HYDE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, March 12, 1956

Mr. HYDE. Mr. Speaker, last week the Denver Chamber of Commerce was privileged to hear an address by a constituent, Willis Player, of Chevy Chase, vice president of Air Transport Association. I was privileged to receive a copy of Mr. Player's talk and after reading it I found myself immensely impressed with the logic which he so eloquently expressed.

Mr. Player is greatly concerned over the future of United States-flag international carriers who are faced with unbelievable odds in their competition with foreign airlines.

As you know, our foreign competitors are almost entirely owned by their governments. They are highly subsidized and pay salary scales one-third lower than our high rate of pay in the airline industry—from pilot captains right down to the apprentice mechanic. They find themselves in the remarkable position of receiving from our Government in compensatory mail pay more than our Government pays our own carriers for exactly the same service.

Mr. Speaker, under leave to extend my remarks, I present the attached excerpt from Willis Player's speech:

The second condition involves the country's important international air services, and the condition is this: The Federal Government should give American-flag airlines treatment at least equal to that accorded by our own Government to foreign-flag airlines.

No American-flag airline management that I know of thinks that foreign-flag airlines should not be welcomed to the United States. The foreign-flag airlines of the free world are important elements in freedom's total strength. But the conduct, if not the concept, of our international air policy seems, to many close observers, to verge on bankruptcy. It should be possible to reestablish a psychology in which we are as eager to ask for rights as to grant them.

Would it surprise you, by the way, to learn that our Government pays foreign-flag airlines at a higher rate than our own airlines for carrying the same mail over the same routes And then, would it surprise you to learn this: That because foreign governments pay our airlines the same mail rates they pay their own—rates internationally agreed to, by the United States among others, as equitable service rates—an important official of our Government took the position that foreign governments are subsidizing our airlines? That's a delightful bargaining position to contrive.

Address by Hon. John J. Sparkman, of Alabama, at Meeting of the Amen Corner

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, March 12, 1956

Mr. MARTIN of Pennsylvania. Mr. President, on March 3, 1956, in Pittsburgh, Pa., at a meeting of the Amen Corner, four Senators addressed that historical association, my colleague the senior Senator from Pennsylvania [Mr. DUFF], my colleague the Senator from California [Mr. KUCHEL], my colleague the Senator from Alabama [Mr. SPARKMAN], and myself.

The only 1 of the 4 who had prepared an address was the Senator from Alabama. Since he delivered a very interesting address on the present situation as it relates to Communist Russia, I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR JOHN SPARKMAN AT A MEETING OF THE AMEN CORNER, HOTEL WILLIAM PENN, PITTSBURGH, PA., MARCH 3, 1956

I am profoundly honored to have been invited to address this distinguished gathering of the membership of the Amen Corner.

It is my understanding that the stated purpose of this meeting is to enable "men of many minds, without regard to race, creed, politics, or previous condition, to gather nocturnally, quite haphazardly, at some place of convenient rendezvous, to discuss as the spirit moves them, any subject under the rising or the setting sun, and, without let or hindrance, apply to the arts forensic any system of logic or reason which, the individual in his sovereign right, might elect."

I assume that these prerogatives apply equally in the case of guest speakers. Accordingly, I shall speak tonight—since the spirit has moved me—on new problems which the American Nation faces in the present-day world. I shall endeavor to apply to this subject arts forensic and some semblance of logic or reason.

Our basic policy is to do what we can to keep peace in the world. As a corollary, our policy must be designed to prevent the Soviet Nation and its Communist satellites from attaining their aim of world domination by war or means other than war. And we must, in addition, strengthen the free nations of the world and expand our alliances and security arrangements with them so as to prevent their defeat from external aggression or from efforts of Communist forces inside their borders.

It has become apparent recently that the Soviet line is changing. The cold war is still on, but the emphasis has been altered. I hope that I am wrong when I say that I fear the present initiative in this redirection is with the Communists. I should like to be able to agree with Secretary Dulles that the Soviet shift indicates a failure of Stalinist-Leninist policy; that the Soviets have abandoned a program of intolerance and violence. My feeling—to paraphrase Homer—is: Beware the Soviets bearing gifts.

Tonight I propose to discuss new developments within the stated framework of our world aims—that is, preservation of peace, prevention of Soviet aggrandizement by war or means short of war, and strengthening of the free nations. I shall confine my remarks to four developments, and the problems which they create:

1. Redirection of our competition with the Soviets in the area of economic and scientific aid to underdeveloped countries;
2. Altered posture in the field of nuclear defense;
3. Similar changes in the field of guided missiles; and
4. Intensified need for more and better trained and educated personnel, particularly in the field of science.

Obviously, I have not attempted to cover all major facets of our foreign and military policies. I will not consider questions of military aid and defensive alliances. Their omission does not, however, imply that they are not vastly important. But we must realize that military alliances alone will not successfully counteract the new Soviet economic and political offensive which is in full swing in the Middle East and Asia.

I have chosen, instead, these topics because they involve areas of immense challenge in this mid-20th century. Moreover, these are the areas in which we are entering the most intense competition with the Soviets.

Communists are on the move throughout the underdeveloped countries of the world with aid, trade, arms, good will missions, technical missions, student exchanges, and neutrality propaganda.

The Communist economic offensive is underway in the underdeveloped countries of Asia, Africa, and South America. Moreover, offers of aid usually accompany trade proposals. These we know have been made to India, Burma, Indonesia, Iran, and Afghanistan.

In the Middle East, Russian trade overtures have been tendered to Egypt, Syria, Saudi Arabia, and in recent days, Lebanon. There, a team of Russian experts has arrived wtih offers to the Lebanese Government of assistance in the development of the country. The immediate Soviet offer is reported to concern highways and communications, but general cooperation in broad areas of technical and agricultural activities are thought to be involved also.

Closer to home, the Russians have made generous offers of trade and economic assistance to Latin America through the medium of a statement by Premier Buganin to the Latin American publication Vision.

Russia has sponsored a million-ton steel plant for India, and a $20-million road and development program in Africa. We know that the Russians offered to build the Aswan Dam project for Egypt.

The Soviets have extended offers of trade and economic assistance even to Liberia, Libya, and the Sudan.

These Russian overtures threaten our relationship with the nations of Asia and the Middle East. Specifically, this economic offensive may transform many of these nations from partisans on our side to neutrals. As Walter Lippmann stated recently, "This means the progressive dissolution of the ring of containing states, which was put together by Mr. Acheson and following him by Mr. Dulles, in the preceding phase of the cold war."

Mr. Dulles, in a recent appearance before the Senate Foregn Relations Committee expressed confidence that the leaders of these friendly states would not be wooed by Soviet blandishments. Moreover, he eschewed a United States policy of attempting to outbid, or outpromise, the Soviets in each country to which they offered aid and technical assistance.

But, surely, this redirection of Russian policy dictates imaginative countermeasures on our part. I do not propose tonight to debate the question of whether an expanded point 4 foreign-aid program to the underdeveloped nations is required. But, unquestionably, we must revitalize and extend economic and technical assistance projects; plans for the extension of capital to these areas; and programs designed to give technical, scientific, and medical assistance to the countries involved.

It is imperative that our Government swiftly chart an imaginative course of action to compete successfully in this new phase of the cold war. Unless we do this on a broad scale, long-range basis, we will, indeed, be forced either to out-promise the Soviets on a case-by-case basis or leave the economic and technical assistance field entirely to them.

We can no more afford to lose this phase of the cold war than the last.

Our position vis-a-vis Russia has changed in the area of nuclear weapons. Once we had a monopoly. Now we must assume that Russia has nuclear weapons at her command which can be directed to targets far beyond her borders.

We also find ourselves in active competition with the Soviets in the field of intercontinental ballistic missiles. These missiles are fired like artillery shells and have no guidance in flight. The goal is, of course, a missile which will cross oceans and cover long distances.

There has been much public debate recently about whether we are ahead of the Russians or behind them. Mr. Trevor Gardner, who recently resigned as Air Force Research Chief, maintains that the Soviets are already ahead of us in this field.[1] He thinks that original budgeting for research and development in the ballistic missile category was too low, and that budget cuts worsened the situation. He warned that this cut[2] "guarantees this Nation the second-best Air Force in the world."

General Twining, Air Force Chief of Staff, told a Senate committee that regardless of who was presently ahead, Soviet research efforts surpassed ours, and possibly could result[3] "in the Soviets obtaining better missiles sooner than we." General Twining also stated that Russia had thousands more planes than the United States, although their performance had not matched that of United States aircraft.

It was recently reported that the Russians have test fired long-range ballistic missiles hundreds of miles further than the United States has tested them.

Scientists have set the goal for ballistic missiles at a range of 5,000 miles. This goal is still unattained. Our present Redstone missile ranges 200 miles, though we hope to develop an intermediate-range ballistic missile which will travel 1,500 miles.

Dr. Walter R. Dornberger, former commanding general at the German rocket center and now a rocket expert for the United States,[4] recently predicted that certain defensive weapons could be developed which would neutralize the effect of these missiles. But both the missile and its deterrent would have a hydrogen-bomb warhead and the use of either would result in race suicide.

The foregoing facts are sobering in the extreme. We are obviously entering a vastly altered phase in our international struggle against world Communist aggression.

Clearly, bold new strategy is indicated in the competitive areas which I have outlined. The task is difficult and its magnitude requires intelligence and foresight on the part of our policymakers, and patience for those of us who have a proper role as critics of foreign policy.

It is not difficult to perceive an underlying need for an increasingly greater supply of well-educated scientific personnel. Scientists obviously must implement foreign aid and technical assistance programs, and the development of nuclear weapons and ballistic missiles. Accordingly, I propose to examine our position in this vital matter.

It is not encouraging to read reports from eminent persons such as Rear Adm. H. G. Rickover, the builder of the atomic submarine, the *Nautilus*, who stated:

"On the engineering side some experts believe the United States is not even graduating enough trained people to sustain, to fertilize, its present rate of technical expansion beyond the year 1970. To maintain present living standards in the face of rapid population growth, industry must produce 10 years from now 40 percent more than it does today.

"It is well known that the Soviet Union is going to pass the United States in scientific and engineering education unless something is done. The United States today has about 800,000 engineers; the U. S. S. R. has about 650,000. Between 1950 and 1960 the Soviet Union will have graduated 1,200,000 engineers and natural scientists; the United States 900,000 as presently programed. The Soviet engineers will be as expert in their fields as the Americans are. The Russians are educating as many women as men in the professions; far fewer American women enter the great professions.

"Perhaps the most insidious weakness a nation can have is the belief * * * that it can do everything better than other people. We are subjected to this kind of propaganda in various media, such as the slick advertisements in our magazines * * *.

"The United States is spending about 2½ percent of its national income on education. In contrast it spends more than 4 percent on recreation. In 1951 the amount spent for advertising was $199 for every family in the United States, but the amount spent for primary education was only $152 per household. The national outlay for educating citizens is substantially less than the outlay for educating customers.

"It is more important to have better teachers than better school buildings. The main, the fundamental problem is that teachers' salaries are desperately low—hence do not attract enough highly qualified men and women. It will profit us very little to spend millions of dollars on scholarships and then place the students under incompent teachers. Niggardly teaching salaries—to those upon whom we depend to transmit our culture and our civilization—commit a fraud upon our children."

Unquestionably, our ability to maintain superiority over the Soviet Union—and, therefore, our ability to maintain world peace and the integrity of the free nations of the world—depends in largest measure upon the ability and training of our manpower.

In fields which I have discussed this evening, our posture will depend upon the advance scientific training and general intellectual ability of those persons of superior mental caliber.

It was discouraging to read a recent report[5] from the conference of the American Association of School Administrators decrying the neglect of talented students and urging improved educational facilities for gifted children. This conference concluded that schools no longer attract superior persons as teachers. Most gifted young people enter other professions. This is so because salaries are better elsewhere, and the climate surrounding other professions more attractive.

On the other hand, at precisely the same moment, our newspapers reported that in the Soviet Union special programs and plans were underway designed to facilitate the education and training of superior young people and to make their lot more attractive and rewarding.

The Atomic Energy Commission has expressed concern of long standing[6] "with the shortage of engineers, particularly of nuclear engineers, and with the adverse effect the accumulated shortage will have on the development of large nuclear power industry in the United States."

A recent Washington Post-and Times Herald[7] survey observed that the Nation's scientists were seriously concerned over the failure of our educational system to provide enough scientists and engineers to man today's scientific and technical age.

The survey showed that less than half of the students of college caliber ever entered college, and that 60 percent of the best students in the country's high schools graduating classes do not go to college. Over half of the students who do go to college do not graduate, and for every high-school graduate who eventually earns a doctoral degree, 25 others with the intellectual ability to do so do not acquire degrees.

The observation of the Conference on Nationwide Problems of Science Teaching, held at Harvard University in 1953, is pertinent today.[8]

"The words 'atomic age' no longer belong to science fiction, nor are they merely a cliché; they describe a reality. In the scientific and technological culture of our present-day society, every citizen needs a realistic understanding and appreciation of the part that science, both physical and biological, plays in everyday life. Of comparable importance are also the development of understandings and skills which function in a wide variety of occupations, and the identification and encouragement of scientific abilities needed in engineering, research, teaching and other scientific professions.

"Among [our] children are the scientists of the future. Surveyors of the country's youth have found that the intellectual resources of the United States are not being exploited to anywhere near their full potential."

These conclusions are valid today. A recent survey of scientific personnel resources of the National Science Foundation observes:[9]

"It has become apparent that the scientific and technical personnel resources of certain countries are rapidly approaching ours in numbers, with the indication that we may be surpassed within the next few years. In our effort to maintain superiority we must give attention not only to the training of adequate numbers of scientists and engineers, but, of even greater importance, we must place heavy emphasis on quality."

What a tragic waste of manpower these studies reveal.

I am certain that we will bring to bear on these formidable problems which face us, the courage and resourcefulness which have always characterized our approach to natural and human obstacles. Indeed, these new frontiers are more formidable than any which our forebears assayed.

Our aim is constant—peace in the world; containment of Communist aggrandizement; and maintenance of the integrity of other free nations.

The Communist line has shifted. Danger is increased. Burdens are greater. But I

Footnotes at end of speech.

Footnotes at end of speech.

am confident that this Nation, as it has in the past, will rise to the occasion and do what must be done to achieve our just goals.

The American Indian

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, March 12, 1956

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from the good women of the First Christian Church in Houston, Tex. They are deeply disturbed over legislation affecting the American Indian. They requested that their remarks be inserted in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FEBRUARY 7, 1956.

DEAR SENATOR JOHNSON: The National Council of Churches, this past year, approved a study of the American Indians and their affairs. We, in our study in this church, were amazed to learn of the injustices our Government has committed and allowed to be committed. We, as a Christian group, are ashamed that we have not taken enough interest in this before; but as a result of our study, we feel compelled to write and urge you, as our Senator, to do your best to see that proper and just legislation be passed and that the unfair and unjust be amended.

As you know, Canada has lived up to the letter to every treaty they have made with the Indians. We, who are so proud of the United States, find that we have abused, broken, and ignored our treaty with the Indians time after time.

We, as a group, denounce bill No. H. R. 1063, now called Public Law No. 280, and demand that it be amended. We know President Eisenhower protested its unfairness when he signed the bill and we feel sure he will add his voice to ours.

We also urge you to vote against and to do all in your power to defeat Senate termination bills Nos. 2743 through 2750; S. 2866 and S. 2867; H. R. 7316 through H. R. 7622, and H. R. 7679 and H. R. 7680.

We join the Association of Indian Affairs in the belief that these rights are fundamental and inescapable:

1. Termination must not mean extinction; the right to survive as an organization, be it tribe, cooperative, corporation, or club must be preserved. Implied is the right to hold and operate tribal estate.

2. The Federal Government should not withdraw until it has formal assurance of State and local acceptance of responsibility. Whole surrender of Federal responsibility, as in Public Law No. 280, is unwise and unfair.

3. Federal assistance and protection should not be withdrawn unless the earning power, the resources, in general the economic status of the tribe, is sufficient for the Indians to be self-supporting so that they will not be a burden to the local community and the State. The Federal obligation to help the Indians to achieve this status must not be evaded. The Federal Government owes it to the people of the States, including the Indians themselves, to retain its responsibility until the Indians have achieved, as a minimum, the standard of living of their non-Indian neighbors.

We feel that the Indians should not be able to sell property for a period of 20 years, to prevent them from being cheated, as has been done in the past.

Very truly yours,
THE CHRISTIAN WOMEN'S FELLOWSHIP,
FIRST CHRISTIAN CHURCH
HOUSTON TEX.

Interest of Kentucky Youth in Government

EXTENSION OF REMARKS
OF
HON. EARLE C. CLEMENTS
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Monday, March 12, 1956

Mr. CLEMENTS. Mr. President, no better example of young citizenship at work can be illustrated than the recent visit by 86 Newport, Ky., Catholic High School students to the Newport and Campbell County offices to discover for themselves how the various governmental agencies operate.

I request unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the March 10 issue of the Kentucky Post commenting on the civic interest of young people in the operations of their government.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RESPONSIBLE YOUTH IN ACTION

Responsible youth, boys and girls with an active interest in the political and official affairs which surround them, were in the news in Kenton and Campbell Counties Friday.

In one instance, 86 Newport Catholic High School students, members of the senior civics class, visited city of Newport and Campbell County offices to discover for themselves how the various governmental agencies operate.

The Newport Catholic youngsters conducted a mock session of Newport's city commission meeting, with their own student officers in charge.

And all of the eligible group registered in the county clerk's office for the coming elections. Under new State law, boys and girls who will be 18 by November 6—next general election date—also are eligible to register now for votes in the approaching May 29 primary, the county clerks have noted.

At the same time as the youth visit and registration was underway in Newport, a group of 54 Erlanger Lloyd High School seniors appeared at the Kenton County clerk's office. They, too, registered to be eligible for their first votes under the new Kentucky law which lowered the age limit.

And students of Notre Dame Academy also have registered now for the votes to which they are entitled.

These civic acts are evidence of responsible youth, the opposite of the juvenile delinquents who all too often make the news.

Gloomy Parallel to Farm Ailment

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 12, 1956

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the Washington Post and Times Herald of March 11, 1956]

MATTER OF FACT

(By Joseph and Stewart Alsop)

GLOOMY PARALLEL TO FARM AILMENT

In the old American folk recitation, "The Senator from Arkansas," one of the climatic moments begins with indignant questions: "Mr. Speaker, sir, why did Rome fall? I'm askin' you, Mr. Speaker, why did the grand imperial city, a-settin' in her glory upon her seven hills, collapse into jes' ruin and teetotal deecay?"

The answer provided by the orator is both unprintable and incorrect. But the questions are not out of place at the moment, because a part of the real answer has a pretty direct bearing on the debate on the farm bill which dragged its weary way along in the Senate in recent days.

The decay of Rome quite certainly began when the hardy farm citizens whose valor had made Rome great ceased to be able to maintain themselves and their families by farming their small holdings. In hardly more than a generation, over great areas of Italy, the family sized farms were swept away. They made way for vast, consolidated, slave-operated, absentee-capitalist holdings which were the equivalent in those days of what we now call industrialized farms.

This same social change, whenever it has come over any great nation of the past, has invariably marked a beginning of an ending. All around might be the evidences of the most hectic prosperity, except on the little farms. But when the little farms went, it was as though the nation's healthy roots in native soil were stricken and withered; and in the end the nation was stricken, too.

The warnings of history need to be remembered, at the moment, for the rather simple reason that there would be no really grave American farm problem if it were not for the plight of the family sized farms. Not all the big farms are prosperous, of course. But almost all of them can take care of themselves, and a great many of them are still enormously prosperous, like the industrialized rice growers recently described in this space, or the rather numerous industrialized cotton growers who can profitably produce cotton at 8 to 9 cents a bale, but are now selling their cotton for 31 cents.

The people who are not prosperous are the folk on the family sized farms. They are so unprosperous, in fact, that this Nation is virtually beginning to be divided into two nations. A single statistic tells the story. Per capita farm income has now declined to the level of $860 a year, whereas the per capita income of Americans off the farm now stands at the level of $1,922. Farm folk are

much less than half as well off as other folk in America.

If this condition persists for very long, it can produce only one result. All the ambitious, able-bodied members of farm families will do what the Roman farmers did. They will give up the life they have been trained to. They will pull up stakes. They will seek better opportunities elsewhere.

There are plenty of signs already that just this is beginning to happen. More and more very large farms are appearing in every agricultural State of this country. The number of family-sized farms is everywhere declining, and in some States it is declining with alarming rapidity. The total number of farms in Iowa, for instance, is estimated to have dropped by more than 10 percent between 1950 and 1954.

In Iowa, moreover, they call their hogs "the mortgage-lifters." But with pork down from well over $20 a hundredweight, a current price of $11.50 a hundredweight, a farmer whose 100 finished hogs might have fetched $4,500 only a year or so ago will now get only $2,300. No wonder reports of an accelerated drift from the farms come from Iowa, as from most other farm States.

None of the farm doctors seem to be prescribing for the real disease. Secretary Benson is obviously right in arguing that high, rigid farm parities are the kind of cure which only makes the disease itself more dangerous in the end. He has been courageous in fighting this prescription, and the Democrats, who prescribed rigid parities, have not fought for them with real faith.

On the other hand, when Under Secretary of Agriculture True D. Morse says, as he has said, that small farms will have to go to the wall because large farms are more economically viable, he makes Secretary Benson's protestation of attachment to family-sized farms sound pretty hollow. This, clearly, is the basic thing that arouses the farmers against Benson.

In the end, no doubt, the real point will have to be recognized: That family-sized farms have a very great social value which makes a national investment to sustain independent farming a paying proposition for the long term. When that time comes, a distinction will somehow have to be made, between the big operators who have no claim to national support, and the family-sized farmers who still constitute this Nation's roots in the American soil, over-urbanized as we unfortunately are.

Radio Address by Hon. Alexander Wiley, of Wisconsin, Broadcast Over Wisconsin Radio Stations

---

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, March 12, 1956

Mr. WILEY. Mr. President, I send to the desk the text of a radio address which I have been pleased to deliver by transcription over many stations of my States, discussing the various important issues pending before the Congress.

I ask unanimous consent that the text of this address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR WILEY SUMMARIZES CURRENT STATUS OF MAJOR LEGISLATION AND ISSUES IN CONGRESS; URGES PROMPT ACTION ON SEAWAY, SOCIAL SECURITY, HEALTH, AND OTHER FORWARD-LOOKING BILLS

We are now about a third of the way through the 2d session of the 84th Congress.

As you know, a tremendous amount of news is occurring in Washington on the Senate and House floors, and in Senate and House committees. Legislation is being taken up which vitally affects you, the people of our State.

I am glad, then, to report to you on the matters affecting your welfare, your income, your homes, health, taxes, defense, transportation, costs of living, and many other subjects of deep interest to you.

We are going to run down a whole series of questions touching briefly on these various issues.

When you have heard our summary, I hope that you will drop a note to me in Washington with your reactions. Let me have any questions which you may have in mind on any of the topics discussed.

Later on in this broadcast, too, I will mention some free publications which you may be interested in writing in for.

CHANNEL BILL AND SEAWAY ROUTE

Announcer: Senator WILEY, first off, I think that we might discuss some of the matters affecting Wisconsin's economic future. What is the status of the very important Great Lakes channel bill, Senator WILEY?

Answer. We are expecting that the channel-deepening bill to improve the channels west of Lake Erie, and thus complete the 2,300-mile waterway, will soon be taken up favorably in the Senate.

Meanwhile, related big news is that the United States Maritime Commission has wisely taken action to designate the St. Lawrence route as an essential route to Europe.

That means fortunately that American flag shipping will be given necessary financial support, so that it can compete with foreign shipping.

In other words, while we welcome foreign shipping lines—Norwegian, German, and others along the seaway route—we are particularly anxious that American-owned shipping proceed through what is now known as Essential Route No. 32—the seaway route.

Question. Is there any other action to report on the lakes?

Answer. Very definitely. A number of us Senators are proposing that Congress help the Great Lakes shipbuilding industry to expand and modernize the present lake fleet which is now pretty old and obsolete.

Expanded shipping is of course vital to Wisconsin's economic future.

PASS ROAD BILL

Question. Now, Senator, turning to some of the major legislative issues, would you run down the list of just what the status is of the principal bills now pending before the Congress?

Answer. I am delighted. We have been discussing transportation, and that naturally brings up the question of roads. Very soon, the Senate and House will go into conference to figure out a final version of the multi-billion-dollar highway improvement bill.

Regrettable, this bill has been held up for more than a year because of the controversy as to how it is to be financed.

But so far as you and I and 55 million American motorists are concerned, the important thing is to get the modernized roads and get them fast.

Not only do we need an improved Federal-State highway system, but we need an improvement in urban, that is, in big city roads as well. (The latter program for city roads had unfortunately been dropped previously.) But everyone knows that in driving through our major cities, there are terrific traffic jams. This results not only in needless delays and high costs, but often severe accident rates as well.

LIBERALIZED PENSIONS NECESSARY

Question. Now, turning to another phase, what is the status of the social-security legislation?

Answer. It will be coming up in the Senate from the Finance Committee fairly soon.

Fortunately, it is certain that there are going to be liberalizing of the old-age pension laws. More hundreds of thousands of Americans are going to have the opportunity to be included at long last under the law. And there will be liberalized pension treatment for elderly women and for the permanently and totally disabled.

BETTER CREDIT FOR HOME REPAIRS

Question. That is certainly good news for old folks. Now, what is the outlook on United States housing?

Answer. The outlook is quite bright. There will be almost as many new American homes started this year, as in the peak past years.

And, too, it seems quite clear that there is going to be an increase in the Federal Housing Administration credit available for millions of Americans to repair and modernize their old homes. In other words, there will be better terms available through the FHA, if you want a loan, through your bank, to improve your present home.

VETERANS' LAW CHANGES

Question. For veterans and their wives who are listening in, Senator, what can you report by way of legislation affecting them?

Answer. The House Veterans Affairs' Committee has been taking up American Legion and Veterans of Foreign Wars proposals for a greatly liberalized pension program for veterans reaching the age of 65. This legislation naturally particularly affects our 4 million veterans of World War I. But, of course, over a period of time, it will affect our millions of younger ex-servicemen from the World War II and Korean conflicts. So, watch the House Veterans' Affairs Committee for important developments on that front.

VARIOUS ISSUES DISCUSSED THUS FAR

Question. Senator WILEY, thus far you have discussed such topics as Great Lakes shipping, road improvement, social-security changes, home repair, veterans' pensions, and related items. Earlier, you had mentioned that various congressional publications are available on request from your listeners. May we hear about them now?

THREE PUBLICATIONS AVAILABLE

Answer. Yes; here they are. If my listeners would like any of these items, just drop a note to me in Washington.

First, there is the latest yearly report of the House Un-American Activities Committee—another important document analyzing Communist infiltration into various segments of American life.

Second, on a different subject, there is the report of the Senate Agriculture Committee presenting its ideas on farm parity and the soil bank. If you would like to see an analysis of agricultural legislation affecting America's dairyland, just write for that committee report.

Third, there is a significant report from the Joint Committee on the Economic Report. It analyzes the health of our overall American economy—our price level, employment, income, production and other helpful statistics affecting all 165 million of us.

Those, then, are three important publications on communism, farming, and the United States economy.

If you would like any or all of these three reports, just drop a note to me in the Senate Office Building in Washington.

Question. I know that many of our listeners will indeed be writing to you for those reports, Senator, as they have, for other helpful publications.

Now, in the short time remaining to us, would you run down the status of some of the other miscellaneous issues before the Congress?

Answer. Glad to. Here they are: Let's start with these five—the diverse fields of health, milk, taxes, civil rights, and autos.

First, health. Congress will certainly give favorable attention to President Eisenhower's broad health program. That means expanded research into various diseases, improved insurance against the costs of illness, and it means more medical facilities for our people.

Second, school milk. Congress is giving the green light to this vital program. Already it is estimated that 16 million youngsters in school are consuming 3 billion pounds of milk every single year. That adds up to 2½ percent of our total milk production. This school milk program spells better health for the children, and it spells added economic health for the dairy industry.

Third, taxes. There should be and probably will be some tax revision this year. That means changes to iron out inequities in tax laws, end tax discrimination against small business and curb certain nuisance excise taxes.

Fourth, civil rights. The President is wisely proposing a national commission to explore the difficult matter of relations between races, particularly in the South. Such a commission could come up with constructive recommendations to help eliminate frictions and misunderstandings between Negro and White—over the segregation and related issues.

Fifth, the automobile industry. Two Senate committees have been studying the problems faced by automobile dealers in your town and throughout the land. This is part of a broader study of small business in relation to certain problems in the field of monopoly and antitrust laws. I think we will see improved relations between the auto companies and their franchised dealers. And we will see important changes in United States antitrust laws, designed to strengthen free competition. That is an indispensable part of a forward-looking national program.

Question. Those are five phases of Congress' study, Senator. Now, how about five more?

FIVE ADDITIONAL KEY FIELDS

Answer. Here they are: In the fields of defense, conservation, lobbies, labor, and atomic energy.

Defense: A Senate subcommittee is analyzing the very important guided missile program which is so vital to America's defense against possible Soviet long-range attack.

Next, conservation: You can expect continued exploration of the needs of our outdoor heritage—our national parks, our forests, our streams. Wisconsin conservationists are, of course, determined, as I am, that we preserve these outdoor resources for ourselves and the future generations. That means preserving them against the menaces of pollution, the menace of overgrazing of cattle, the menace of possibly unsound construction or leasing activities. Our national heritage belongs to all of us and not just a chosen few.

Next, lobbies: We are all hoping that our people will get the facts—the full facts—on precisely what the various powerful lobbies are doing in Washington, how they are trying to influence votes, what campaign contributions they are making, etc. In other words, let's throw the spotlight on lobbies and see what they are really up to. An investigation by an eight-man Senate committee is now underway on this front.

Fourth, labor: We are all hoping that before the end of this Congress, definite action will have been taken to protect the integrity of union welfare funds. All honest laboring men are especially anxious that the miserable handful of crooks and leeches who have been chiseling into labor's pension and health funds be cleaned out. Safeguard these funds for the workingman. End the scandal of these welfare funds.

Fifth, atomic energy: It is clear that we must step up peaceful application of atomic energy in the fields of industry, medicine and agriculture. Soviet Russia is working all-out in both military and civilian application of the atom, and we have no alternative but to do likewise. Time is precious. We need to bear down in our national scientific efforts, expand scientific personnel so as to speed progress.

SUMMARY

Question. Well, Senator, I know that our listeners have enjoyed this rapid rundown.

Looking back, you've touched on these important fields: Health, school milk, taxes, civil rights, and autos.

Then, you mentioned congressional consideration of defense, conservation, exposing lobbies, protecting welfare funds and speedier applying of the miracles of the atom.

Earlier in the program you pointed out that three publications, among many others, are available to your listeners, the House Un-American Activities Committee report on communism; the Senate Agriculture Committee's report of farm parity; and the latest study by the Joint Committee on the Economic Report.

To obtain these or any other items, all that your listeners need do is drop a note to Senator ALEXANDER WILEY, Senate Office Building, Washington, D. C.

Answer. It will be a pleasure to hear from you. And while you're writing, let me know what your thinking is on Congress' actions. Let me have your judgment on problems like business, farm, labor, defense, anti-communism or any other matter affecting our Nation.

Your views will be most welcome.

This is your senior Senator, ALEX WILEY, signing off from Washington.

Civil Rights and Civil Liberties

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 12, 1956

Mr. LEHMAN. Mr. President, on Friday, March 2, Gov. Adlai Stevenson, who is my announced choice for the Democratic nomination for the Presidency this year, and who is by any standard one of the most distinguished men we have had in public life in recent years, delivered a speech at the University of Minnesota. It was, in my judgment, a thoughtful and thought-provoking speech.

This speech dealt with the subject of civil rights and the subject of civil liberties, among others.

What Adlai Stevenson said on these two subjects, while it is by no means all that there is to be said, still needs to be said and needs to be considered. I commend the ideas and thoughts contained in his address to all the Members of the Congress and to all the American people. This is a speech of a man of intellect and understanding.

I ask unanimous consent that the remarks of Gov. Adlai Stevenson, as delivered on March 2 at the University of Minnesota, in Minneapolis, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH OF GOV. ADLAI E. STEVENSON AT THE UNIVERSITY OF MINNESOTA, FRIDAY, MARCH 2, 1956

One of my major rewards for political campaigning is that occasionally I can detour onto a college campus.

This takes me to a place where one encounters the young, the brave, and the beautiful—who provide both agitation and comfort for the aging. And the campus is also a place where one is likely to run head-on into an idea—and into a man who isn't ashamed of having one. Over a period of some years I have found this experience particularly exhilarating—because such men also invariably turn out to be Democrats.

It is natural that there should be a certain unrest among this distinguished breed. After all, we have been going through a season that hasn't been very fruitful for thinking men—or Democrats. And I would like to hold hope today that we may be coming to the end of the long dry spell. In spite of the deafening chorus from the Republican press and politicians, the Democrats, who have won just about every election since 1952, are, I think, on the way back to Washington, and when they get there an American citizen who has the habit of original thought will no longer be a displaced person.

It has been 3 years now since one of our political cartoonists had occasion to break out that standard caricature of the professor at large in the Nation's Caital. Only the indispensable scholars are still in Government harness—the impractical dreamers who turned out to be the only ones who could split an atom. And these are safely hidden behind a security wall where they can't upset the policymakers.

As a matter of fact, the way policy is being made these days I doubt that they could be heard from. It is, after all, pretty difficult to explain the economic implications of the 1956 budget on a single sheet of paper.

Now I suggest that the great exodus of thoughtful people from the seat of Government is more than a matter of sentimental concern to the American Association of University Professors. The consequence of their departure is becoming evident in small ways and large.

It shows up in the fatty content of state papers. It shows up in the advertising technique of explaining public policy by catch phrases like massive retaliation, more bang for a buck, everything is booming but the guns. Even political philosophy, if any, is condensed by the copywriters and auto salesmen into meaningless capsules for quick and painless consumption—like "dynamic conservatism," or was it "conservative dynamism"?

And, most importantly, it shows up in the alarming lack of bold and original thinking in Washington.

The administration's current program, we are told, represents the full flower of 3 years of study, of surveys, of soul-searching and brain-picking by commissions assembled under the banner of the great crusade. But, when we strip away the clichés and adjectives, we find only some warmed-over New-Deal proposals that have safely passed the litmus test of the public opinion polls—and have also been roundly denounced by Republican leaders for a generation.

But my purpose here today was not a political speech and a familiar recitation of Democratic virtues and Republican vices. And the fact is, of course, that I am very happy that the Republicans have borrowed Democratic programs, having none of their own. After all, imitation is the sincerest

form of flattery. Rather I have noted in a haphazard, desultory way, I fear, a few things that should, I think, command your interest and concern as educated thoughtful citizens on the eve of another national election.

With tensions mounting and our difficulties multiplying all over the world, and here at home, with racial tension mounting and economic difficulties emerging, and not only among the farmers, it is, I suggest, a most unfortunate time to conduct one of our quadrennial oratorical contests. It will, therefore, put even greater demands on the reason and responsibility of political utterance, and political utterers. If it is possible for one presidential contest to be a greater test of our national political maturity than another, it is certainly probable that we are in for a severe test. For this contest evidently must be fought in a world in which thermonuclear madness is still uncontrolled, and against a backdrop of the bold new Communist economic challenge for which we seem to be grossly unprepared, and the gathering shadows of social and economic discord at home. Moreover, in view of President Eisenhower's illness, to this campaign have been added new questions regarding the conduct of the Chief Executive's Office.

First, let me say just a word about the campaign and foreign affairs, because they are our most important affairs. The rapid disintegration of the free world position, and ours in particular, in the past few years has been much discussed of late. Mr. John Cowles of this city has just reported on the gravity of our situation in Asia. And someone illustrated the confusion and contradictions in our policy, or lack of it, by the incident the other day of the shipment of tanks for Arabia that was authorized by a Defense Department that didn't know what the State Department was doing; was halted by a President in Georgia who didn't know what either Department was up to; and was finally cleared by a State Department that couldn't get in touch with the Secretary of State.

But such mistakes are bound to happen I suppose. What isn't bound to happen, however, is the series of dangerous utterances that started before they were even elected when General Eisenhower and Mr. Dulles wooed the Polish vote by talking about rolling back communism and liberating the satellites.

And so it has been time and again ever since. In just the last few weeks, the Secretary of State has referred to Goa as a province of Portugal and angered India and all the excolonial areas.

Then he boasted about his brinksmanship, his talent for walking on the brink of atomic war, in a magazine article that shocked the whole free world.

Next he blandly assured the Senate that we really have the Russians on the run and that their new economic and political challenge, which is undermining our influence in Asia, is actually a symptom of Soviet failure and weakness. At that one everybody gasped, including even the Republican press.

But a few days later he reversed himself and said we needed more money and long-term commitments to meet the Soviet economic threat.

Now is there an explanation for such mistakes which can cause such mischief and deface the image of America? The explanation, in part at least, seems to be that they thing it proper to use foreign policy for domestic politics. And the Secretary of State, incredible as it may seem, has said as much.

Testifying before the Senate committee considering his confirmation back in 1953, Mr. Dulles was asked to explain the discrepancy between his previous statements in support of democratic foreign policy and the pronouncements of the 1952 Republican platform.

It was true, he said, that before 1952 he had given the Truman doctrine and the Marshall plan credit for containing Communist expansion, for bringing the Western Nations into an effective anti-Communist alliance, and for major victories in the cold war. But it was also true, he said, that he had helped draft a Republican platform that charged the Democrats with squandering the Nation's power and prestige, failing to halt Communist aggression, losing the peace and in reality having no foreign policy.

Asked which of these two contradictory positions he cared to repudiate, Mr. Dulles declined the opportunity and instead defended both with this explanation of his conduct during the campaign of 1952:

"One side presents his case and the other side presents the other case, as two lawyers do when they go into court. At that stage the two parties are not judges, and they are not judicial. In my opinion they should not be.

"As I say, they are like two lawyers who represent opposing people in court. My job as a lawyer is to present the case for my client. It is not my job to present your case, and it is not your job to present mine."

Aside from the moral judgment that Mr. Dulles' cynical view invites, it appears that he deems it both possible and proper to act as a lawyer for the Republican Party and Secretary of State for the United States at the same time.

And that is the point that I want to bring to your thoughtful attention. My view is that responsible public officials must always put the public interest first, and that there is no area in which partisan advantage should be more subordinated to national interest than in the conduct of our foreign relations. I hope and confidently believe that the Eisenhower administration will get more responsible treatment from the Democrats in 1956 than it gave in 1952. And I can at least hope that in these perilous times even Mr. Dulles' cynical attitude of politics first may moderate.

For after all it is the face America presents to the world that will influence so heavily the outcome of the struggle against the great new Communist imperialism to which we are now committed. We must hold out hope and inspiration to aliens in the first ferment of their new independence. And we can do so only by demonstrating that this Republic, now entering the middle-age of its democracy, is still concerned with steadily broadening freedom for all its own people.

Much has been done to insure the rights of every individual, but much remains to be done. And this brings me to thhe second matter that I thought to mention to you today. I think we can take great pride in the gains of our minority groups over the past 2 or 3 decades—a period which has seen a greater advance on a broader front than ever before in history. We can take pride, too, that these gains have been made without the sacrifice of order, that they have been made possible in large part by judicial interpretation of that remarkable charter of government, the American Constitution.

Yet this very progress now poses a new threat to the constitutional process—and one the world watches with closer attention. And this we must never forget—that we don't live alone any longer; that what we say and do to one another here at home is audible and visible—and fascinating—to the entire world.

In several States we are now attempting to secure the declared rights of a Negro minority in the face of the adverse reaction of controlling local minorities. We see again the ugly face of race prejudice; we hear again threats of violence and organized resistance.

And it is, clearly a matter of grave national concern when a girl in Alabama is denied her constitutional rights by mob violence or by subterfuge, or when murder goes unpunished in Mississippi, or when American citizens are denied peaceful occupancy of their homes in my own State of Illinois, or when citizens are denied, whether by physical or economic coercion, their right—and duty—to vote.

But against the failures there is evidence that the process we have undertaken is certain to prevail—that we are managing to change the hearts and minds of men as well as the laws under which they have long lived. And I hope the world will not this too, for this is the genius of our system, the means by which we see to it that social gains endure and enlarge.

In the last few days we have read these wise and compassionate words in a court order in which a Federal judge enjoined the city of New Orleans to end segregation in its public schools.

The problem of changing a people's morals, particularly those with an emotional overlay is not to be taken lightly. It is a problem which will require the utmost patience, understanding, generosity and forebearance, and from all of us, of whatever race. But the magnitude of the problem may not nullify the principle. And that principle is that we are, all of use, freeborn Americans, with a right to make our way unfettered by sanctions imposed by man because of the work of God.

Here is a heartening moral signpost for the future—and I do not mean the distant future. And it occurs to me the forebearance of which the judge speaks has a special meaning for those who live in sections where we have not been subject to the special traditions and the special problems of the Southern region. Before we cast a stone at Alabama, it might be well for those of us who live in some of the great Northern cities to ask ourselves, in candor, how the Negro minority is faring in our own communities. Is he free to live where he pleases, for example? And in what conditions of health education and economic opportunity does he live?

We long ago granted Negros the essential legal guaranties just now becoming available to them in the South—the right to vote, to free access to public facilities, to attend the public school of his choice. But racial discrimination in some degree is still a fact of life for the great majority of our Negro citizens who live outside the South. It consigns them to segregated neighborhoods, it denies them full employment opportunity—and it often confronts them with the naked face of prejudice they knew in the region from which they recently migrated.

Here, too, I suggest, we need a change in the minds and hearts of men—and a recognition that the full accommodation of our Negro citizens in this society of ours is in truth an American dilemma, which demands the best that is in us.

And I suggest, too, that our sense of outrage at the dramatic denial of the rights of some of our citizens must not blind us to the more subtle, but no less dangerous erosion of the liberties of all Americans which has characterized this period.

We are, as I have said, making steady progress toward reduction of the simple race prejudice which is at the root of the denial of the rights of our minority citizens.

But I am afraid we have made less progress in reducing the unreasoning fear which has stampeded so many Americans into demanding the denial of the essential liberties of many of our fellow citizens as a necessary safeguard against subversion.

For the first time in America we have seen the faceless informer draped in the mantle of our Federal Government. It has become commonplace for American citizens to be certified as disloyal without opportunity to face their accusers, or even to know the

source and the nature of the charges against them. We have reached a point where the commission, or even the honorable discharge of a serviceman, may be held up because he loved his mother or spoke to his sister.

There are those who say this climate, too, is improving—that McCARTHY has now been relegated to page 10 of the newspapers. But the political party which barely 2 years ago sent him through this country to lecture on "20 years of treason" under the Democrats has not yet disavowed its campaign tactics of 1952 and 1954.

We hear it argued, in high places and by those who should know better, that the assumption of innocence in the absence of proof of guilt is a luxury—and one we cannot afford now that we are at grips with a relentless world conspiracy.

Here I say is the great and dangerous fallacy. For the truth is that the Nation can never be secure until the liberties of every individual are secure.

Certainly there are those who seek to steal our secrets and poison our policies. But we give our enemies too much credit when we assume that we can protect ourselves against their subversion only by building barricades made of the broken cornerstones of free institutions.

We can and we must mount an adequate guard against subversion—but it will be of no avail if in the process we destroy the very thing we seek to protect. Freedom is not only a physical condition, but a state of mind, and it cannot survive in an atmosphere of suspicion.

The fear which has caused us to push Government loyalty and security programs beyond the bounds of reason, and of true effectiveness, has spread its poison into many areas of private life.

This has been called the age of conformity, and it has become the mark of respectability to shout down the dissenter. I recall a wry cartoon of a few years ago which depicted a job applicant standing meekly before the desk of a stern personnel manager. "Yes," he was saying, "It is true that I was fired from the State Department—but it was only for incompetence."

It is not, I fear, too great an exaggeration. We are told that when the recruiting agents of business come to the campus these days they seek not the bold and the original minds, but safe men and women. The student who thinks too much, the man with the lean and hungry look, is told to press his pants and sign no petitions and carry no flaming torches if he wants to succeed.

We have even developed a new device for denying speakers a public platform. It is no longer necessary to certify a man as treasonable or even subversive. It is enough to say, within the prudent limits of the libel laws, that he is "controversial."

We have seen this carried to its ultimate absurdity on the campus of one of our public institutions of learning, where no platform is available to an active politician—not even a Republican. I almost referred to this institution as a great university—but it seems to me it lost its greatness on the day its official discovered this safe way out.

When intellectuals cry out against these outrages they are dismissed as neurotic. Yet the neurosis, I fear, is the Nation's—and if it is allowed to run its course it could result in a fatal loss of the national nerve.

We cannot, it seems to me, debate intellectual freedom in terms of the political left or right. Liberty is neither conservative nor liberal—not here in America. The free-enterprise system is the sum total of our civil rights. At its base is the concept of the individual—the right of each man to be judged on his own merits and to advance to the limit of his natural endowment, and so is democratic capitalism also the sum total of our civil liberties, for it can never endure unless men are free to think and to dream, and yes, to revolt against the conventions of their time. Conventional men, I suggest, could never have exploded gasoline to drive a piston, or split the angry atom, or ushered us into this astounding electronic age. And the lonely man wrestling with an abstraction is also essential to America—he is, indeed, our final reliance in the years ahead when we will face the Communist theorists in a contest for the minds of men.

We are committed now to a war of ideas—and the victory will be the handiwork of bold and original thinkers pressing always against the frontiers of the mind.

We may thank God that our enemies in important respects are disarmed by their own dogma. By fitting their means to their prescribed ends they may win important battles, but they must, I believe, lose the war.

But we must not disarm ourselves here at home. To survive our society must be flexible: it must accommodate the new as it cherishes the best of the old.

Freedom is our heritage. Security is our goal. The argument that the two are somehow inimical is the fatal delusion of our age, the delusion of the disciples of Karl Marx at one end of the political spectrum, and of the thin-lipped men of the right at the other.

We are called upon to pursue security in the far places of the world, proceeding from a posture of military strength to enlist under the banner of freedom the uncommitted peoples who live now in the center ring of the ideological target.

We must pursue security here at home, seeking always to broaden the base of rights, immunities, and privileges guaranteed by law to every American, and I suggest that this great task is never-ending. In our own generation, for example, we have seen government assume responsibilities in the area beyond the guarantee of the right of each citizen to stand free, speak out, and participate in the political process. We have now undertaken to guarantee, by our common effort, the economic well-being of the orphaned, the widowed, the handicapped, and the aged.

Many of us still look upon these great social programs as charity, but I suggest they too have become rights, essential rights, that must be broadened and perfected.

Is this, as frightened men charge, the path to the welfare state? I don't know. As a matter of fact, I don't even know what they mean when they mutter darkly of statism and the like. What I do know is that America is and must be concerned always with the dignity of man, and that we will turn down the road that leads to history's scrapheap if ever we fail to use our total resources for the common good.

It is not enough to be against communism. We've got to be for America, and we've got to understand what we are for. It is not our prosperity or our armed might, that has won us our place in the world. It is our devotion to a body of ideas, a concept of truth and decency, and of dedication to the rights of man, that has made us unique among nations.

The Cut-Rate Bricker Amendment

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the Foreign Affairs Committee recently heard the testimony of our colleague from Arizona, Mr. UDALL, in opposition to the Bow resolution. This resolution would direct the President to denounce or revise the agreements whereby our country has regulated the question of jurisdiction over our servicemen abroad who are accused of breaking local laws during off-duty time. An editorial in the Washington Post and Times Herald on March 5 quite effectively quoted Representative UDALL's strong criticism of the Bow resolution in announcing its own reasons for opposing the measure. I present herewith the editorial, which reflects clear thinking on this tricky issue:

MR. BOW'S CURVED BALL

A dangerous move to undermine the North Atlantic Alliance is under way in the House of Representatives. Under the pretense of protecting the rights of American armed personnel abroad, Representative Bow and a number of his colleagues are pushing a resolution that would direct the President to denounce or revise the Status of Forces Treaty. Success for this venture would leave NATO in a condition of uncertainty that it might not be able to survive.

Representative UDALL has properly characterized the Bow resolution as "an attempt to bully President Eisenhower." Its passage would put the House in the position of attempting to tell the President how to conduct the country's foreign relations—a function which the Constitution assigns to the President, with the advice and consent of the Senate. It is well to remember that the Senate approved the Status of Forces Treaty in 1953 by a vote of 72 to 12. An attempt by the House to upset it would be, as Mr. UDALL has noted, "nothing less than a crude legislative encroachment wholly unwarranted by the Constitution."

Complaints that the treaty has resulted in a "sellout of American rights" simply cannot be sustained. Investigations have shown that more than 70 percent of the 6,000 GI's arrested for offenses committed while off duty in other countries in the last 2 years have been turned over to American military authorities. Most of the others have been released or lightly punished, jail sentences being imposed in only about 90 cases. Some officials have been concerned because many of the sentences meted out by the courts of our allies have been lighter than they would have been in American courts. All the evidences indicates that our allies have exercised their rights under the treaty with great restraint.

Some legislators have deluded themselves into believing, however, that, in the absence of a treaty, international law would give the United States exclusive control over offenses committed by its military personnel stationed abroad. It is true that a famous opinion by Chief Justice Marshall and several later Supreme Court opinions contain language lending support to that view. But Marshall was thinking of troops merely passing through a friendly country. He did not address himself to a situation comparable to that now prevailing among the NATO powers. What he did say most emphatically, moreover, is that "The jurisdiction of the Nation within its own territory is necessarily exclusive and absolute. It is susceptible of no limitation not imposed by itself."

The important fact is that our allies do not recognize the Marshall opinion or the international law which sponsors of the Bow resolution think Marshall proclaimed. It became necessary to the success of NATO, therefore, to provide by treaty for the handling of offenses by soldiers of one country stationed in another. The existing treaty does not discriminate against GI's. French or British troops in this country are similarly amenable to American courts for offenses com-

mitted while off duty. The relinquishment of jurisdiction in such cases ought to be encouraged, and this newspaper believes the Government has an obligation to provide adequate counsel for every GI tried in a foreign court. But this scheme to upset the treaty ought to be resisted as an assault upon one of the essentials of our national defense.

Revised Oil and Gas Leasing Regulation for the National Wildlife Refuges

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 12, 1956

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the RECORD, I include a letter from Mr. Charles L. Horn, chairman, Minnesota Emergency Conservation Committee, Minneapolis, Minn., to Assistant Secretary of the Interior Wesley A. D'Ewart regarding the revised oil and gas leasthe regulation for the national wildlife refuges.

Mr. Horn's letter follows:

MINNESOTA EMERGENCY
CONSERVATION COMMITTEE,
Minneapolis, Minn., March 5, 1956.

Hon. WESLEY A. D'EWART,
Assistant Secretary of the Interior,
Washington, D. C.

DEAR MR. D'EWART: We write to acknowledge receipt of your letter of February 29, in which you discuss the revised oil and gas leasing regulation for the national wildlife refuges as ordered by the Secretary of the Interior without benefit of congressional action to support such regulation.

You state that the revised regulation has the full endorsement and support of the career specialists of the Fish and Wildlife Service. This statement is more or less meaningless, it being a fact that most of the top career men in the Service have left the Service during the past 3 years.

You also state that leasing is prohibited on a number of national wildlife refuges determined to be indispensable for the preservation of rare or endangered species, * * * and you sum up all of this in your third paragraph with the statement: "In no case can there be oil drilling or development work without prior approval of the Fish and Wildlife Service."

From the argument you advance, it would seem that we must be made to recognize that all refuges are not important as preserves for wildlife, only those that the Service insists should be held inviolate for the reason that they are the habitat for endangered species. This is a new departure and one that we refuse to swallow. The truth is that all species are dwindling in population, furthermore every species has altogether too little habitat. We do not need fewer inviolate areas for wildlife, we need more refuges.

In view of the many personnel changes in the Service during the past 3 years, we question whether or not the decision of approval should be left entirely to Service personnel.

Most of these refuges have been established only after due deliberation on the part of Congress, the Interior Department, the Department of Agriculture, landowners and sportsmen, at public hearings, if you please. The revised regulation is but an edict of the Secretary of the Interior without prior knowledge of both Congress and citizens generally.

In the last paragraph of the first page of your letter you endeavor to set up some argument for mining leases by stating that many of the refuge lands are cropped to supply supplemental waterfowl food, also, that timber is harvested on some of the lands. It occurs to us that these practices come in the category of good refuge land management, the removal of mature trees offering assistance to healthy timber growth, deterring insect and disease orgies. In fact it is accepted as good forest practice. As for cropping waterfowl food, certainly there can be no argument about the sense of such practice.

But, tell us please, just what does oil drilling do toward enhancing and increasing the habitat for wildlife on refuges?

The revised regulation is but another foul example of government by decree. Offering regulations that will improve these refuges is one thing, but insisting on dictatorial regulations that do not add to the worth and importance of these areas as wildlife habitat, such as oil leasing, is a horse of another color.

The Department of the Interior does not have a leg to stand on to support this type dictation.

You insist that the Advisory Committee appointed by the Secretary discussed and approved the revised regulation. This, sir, is no valid argument for the decree. If this committee had approved the suggestion and it had been offered for acceptance by Congress, then, and only then, would it have had proper significance. It would, of course, be most difficult for us to imagine a committee, chosen by the Secretary, disapproving any regulation that might be advanced by him.

We do not agree with you that Mr. Hudoba's article in the February issue of Sports Afield in inaccurate and misleading. After all, what he did say was that our refuges are being overrun with oil drillers, and that such action is prompted by a revised regulation ordered solely by the Secretary of the Interior, which permits such encroachment.

Perhaps you do not approve of his reference to your appointment as Deputy Secretary, which we understand still awaits Senate approval. This phase of the article will not be discussed by us as it is not directly related to the regulation under discussion.

Lest you assume that our attitude is predicated on the score of partisanship, may we ask that you refrain from making any such assumption. We believe in our republican form of government. We are very much opposed to government by edict.

Very truly yours,
MINNESOTA EMERGENCY
CONSERVATION COMMITTEE,
CHARLES L. HORN, *Chairman.*

Eisenhower's Strange Magic

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 12, 1956

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Thomas L. Stokes in the Washington Evening Star of March 10, 1956, which reads as follows:

EISENHOWER'S STRANGE MAGIC—DEMOCRATS GAINING HEALTHY RESPECT FOR PRESIDENT'S POLITICAL SKILLS

(By Thomas L. Stokes)

Democrats are coming to have a healthy respect for President Eisenhower as a skillful and effective politician.

Well they might—for the party's Senate leadership is smarting under two rebuffs in a row administered by the President, one after the other, and involving the only two major issues that Democratic leaders thus far have brought before this session.

The victory for the administration on flexible price supports in the farm bill, a personal triumph for the President, followed his unexpected but very dramatic veto of the natural gas bill which the Senate end of the Texas Democratic leadership of Congress—Senater Leader LYNDON JOHNSON—chose to make the first goal in this preelection session.

This graphic demonstration of the President's practical political talents, about which Democrats hitherto had not unduly concerned themselves, brought them up short. It served to complicate further their 1956 problem when added to another asset of which Democrats have been constantly conscious.

This is the President's amazing personal popularity which in its extreme manifestations becomes a sort of idolatry, beyond hero worship, that Democrats find themselves unable to explain in any precise fashion. It was exemplified, in one of those little episodes that light up human psychology, by the literally ecstatic reaction among a large gathering of Republican women when he appeared before them briefly a few days ago.

Franklin D. Roosevelt had almost idolatrous devotion from a great segment of our people, enough to give him four big election triumphs; but he was also bitterly hated and excoriated by a lesser segment of our people. Our present President provokes nothing of that kind. Nobody seems to dislike him or, to put it the other way, virtually everybody seems to like him. He inspires an affection which he, himself, nurtures by constantly stressing that his role is as President of all the people. That has created for him the character of apostle of good will and tolerance. That, in itself, bespeaks a highly developed political instinct.

The end result is to set him above the confusion of political conflict, above his party, above partisanship.

The political effect of this aloofness is what plagues Democrats as they try to figure ways to reach him as a target. For he never seems to be blamed for acts of his administration, or even policies of his administration. Just now, for example, it is Secretary of Agriculture Ezra Taft Benson who is taking the heat as chief scapegoat. It is against him that discontented farmers spill their ire. It is his name that they repeat bitterly—not "Ike."

Similarly, the President's popularity is at an even higher level in the South, according to polls, than in 1952 when he got a tremendous vote there and carried 4 Southern States. He seems to get no reflected blame in the public school integration turmoil, even though well before the Supreme Court decision his administration had espoused a broad policy against segregation which it had implemented in numerous areas, including the military services and the Government here and the city of Washington. Southern anger strikes directly at the Supreme Court, not at him, according to southern Members of Congress.

He appears, in short, to possess a peculiar magic.

This aids him in his strictly political operations and maneuvers. He cashed in on the good will toward him and added to it by

seizing on the "arrogant" lobby behind the natural gas bill to veto that measure which so many consumers had come to fear. He still insisted he was for the principle of the measure and thus held out hope to its sponsors and supporters for its revival at some future date.

Practical politicians recognized at once the political technique in his handling of the Vice President Nixon affair. The upshot of what he said at two successive news conferences was to leave open the question of whether the Vice President should be renominated, but with nobody really knowing the eventual answer. The mystery he produced started a public debate out of which might come a consensus that would seal the Vice President's future status one way or the other without the necessity of the President showing his hand. Beyond that, the uncertainty will keep the Democrats off balance, for they will not know whether the Vice President is to be their campaign target or not.

All of which indicates that Democrats must reckon with an adept politician as well as an individual who can keep himself above politics.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. LOVRE. Mr. Speaker, Federal aid to education provokes considerable discussion whenever the subject is mentioned, and with this year's various proposals there has been considerable comment in South Dakota. In reference to this topic, I wish to place in the RECORD an editorial recently appearing in the Clark (S. Dak.) Courier, written by Bert Moritz, editor and manager of this weekly newspaper. The editorial follows:

FEDERAL AID TO SCHOOLS

A recent poll in the State of Minnesota shows that 78 percent of the residents polled in that State, favor Federal aid to education for the purpose of building schools. Going even further, a total of 61 percent favor receiving Federal aid for the payment of teachers' salaries.

Certainly the wish of the people should be the rule, but in this case isn't it possible that people answering the poll gave little thought to the outcome? Proposals such as Federal aid to education and socialized medicine come from both the Democratic and Republican Parties and both could have serious consequences.

In the matter of education, for example, do people actually want Government aid? True, there are many districts that could use additional money for financing their schools. Many not only need funds for building, but also for the payment of teachers and general expenses. However, do they want what goes with that Federal aid?

Today, parents of a community still have control, to some extent at least, of what is being taught their youngsters. The school board is made up of people like themselves, and who are interested in a good, wholesome education. Should we be receiving Federal aid, how easy it would be to change all of this. A President or Congress, with leanings other than democratic, would have open sailing to rush through their propaganda. A few changes here and there in the textbooks would be a start. It would be no trick to announce what books would be used and what would be tossed out.

Countries where dictators have gone into action have been quick to use this means to educate the future generation into their way of thinking. It's the easiest way possible for the Communists to promote their thinking in a country.

Possibly we are safe from communism or some form of government other than a democracy. Still you cannot help but wonder when you hear favorable talk from both parties for Federal aid to education and socialized medicine. Times are changing and they have been for years, but not to a point where we are ready to lose some of our most important privileges.

Let's keep our schools absoltuely free from outside interference, and still have a word in who will be our teachers and what books and subjects will be taught. A school district might appreciate a windfall from the Government, but they ought to consider, too, what the consequences might be.

In Order To Meet Communism's Stepped-Up Emphasis on Propaganda and Economic Programs, the United States and the Free World Must Reassess National Programs and Utilize Facilities of the United Nations' Technical Assistance Services

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. HAYS of Arkansas. Mr. Speaker, under leave to extend my remarks, I include the following excerpt from the remarks I made at a meeting of the Association for the United Nations on February 26, 1956:

I am convinced that the United States must find an effective way to help meet the aspirations of the less developed countries for economic development. We are now engaged in a fierce competition with the Soviet Union and we should welcome the emphasis which the Communists seem to be placing upon economic and educational phases of the world struggle since we have a proven superiority in these fields. Without abandoning the bilateral programs for economic aid and technical assistance by which we contributed much to raising living standards of other nations we should channel an increased percentage of our aid through the United Nations. We can avoid some of the misunderstandings and misinterpretations by taking this course, and will be more effective in working toward economic goals that are essential to world stability. It is obvious that whether the underdeveloped countries are right about it or not they would prefer in most instances to be helped through the United Nations and we must take this attitude into account.

I am not prepared to say that there should be any increase in the amounts being expended in economic aid, but I am convinced that we can relate our economic programs more effectively to our foreign policy objectives by taking a greater interest in the multilateral assistance programs which are working so well with their modest budgets. I am particularly anxious for us to present an alternative to the proposals for an international fund for economic development (SUNFED), and I fear that unless we can produce a better plan than is currently being considered by the member nations we would be virtually forced by world opinion to join an organization which does not conform to our standards or allow the hopes of millions of poor peoples to be frustrated.

The Soviet Union has put on a smiling mask of assumed generosity. I believe that many of the countries to which their blandishments are directed are aware that danger lurks in these overtures, but in the absence of help from us some might turn to the Soviets, deluding themselves with the thought that they can accept Soviet aid while resisting Soviet penetration. The best way to meet this threat is to move as Americans are capable of moving—with boldness and imagination into the new arena.

Death of Richard Miles McCool

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Monday, March 12, 1956

Mr. KERR. Mr. President, a little while ago a fine man who spent many of his productive years in Oklahoma passed away. I refer to Richard Miles McCool. A mutual friend has addressed to me a communication in which he pays tribute to Professor McCool. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WATKINS GLEN, N. Y., *March 8, 1956.*

Hon. ROBERT S. KERR,
United States Senator for Oklahoma,
Senate Office Building,
Washington, D. C.

MY DEAR SENATOR: In the recent passing of Prof. Richard Miles McCool we both lost a priceless friend, Oklahoma lost a useful and distinguished citizen, New York lost a beloved adopted son, and the world lost a great Christian devoutly dedicated to the service of humanity; a true servant of mankind whose only fault—if he had one—was that in doing so much for others, he did too little for himself. Born in Mississippi, he gave to Oklahoma many years of great and useful public service—as chairman of the State Democrat Party in the historic years of 1931 to 1934, as city manager of Norman, as president of the Murray State School of Agriculture helping to shape careers for many young folks, and various other important civic services.

His love for mankind took him far from Oklahoma to another continent, to help the struggling people of Ethiopia by serving as agricultural adivsor to their Government. Finishing his work there with the warm thanks of the Emperor, he came to Watkins Glen in the beautiful lake country of central New York, seeking a few years of well-earned rest and peace. There we took him to our hearts as a dear friend and good neighbor—enjoying immensely his endearing qualities of fine character, decency, friendliness, and the entrancing speeches that came from the amazing depths of his human experience and world knowledge. But a restful sunset of life was not to be for Professor McCool. Again he answered the call of suffering humanity, and went to far-off India as an agriculture and education expert for the International Coopcration Administration. He

went not only to serve needy humans, but also because he so loved America and wanted so much to help the people of Asia know our country better and more fully understand how we are trying to help others throughout the world. His warm humanity, kindly patience, and deep understanding quickly won for Professor McCool the respect, trust, and friendship of all the people of India with whom he came in contact. When he realized his health was failing he still carried on to the last limit of his endurance because he so unselfishly loved his work—the feeling of public usefulness it gave him to be striving to help others less fortunate, and to bring a better understanding between the people of Asia and our Nation.

The 70-year lifespan of Richard Miles McCool was a living sermon of "Love Thy Neighbor as Thyself" and of unselfishness in action. He lived, worked, and prayed for others—for his country, for his church, for his friends and neighbors, for his family. A banker might say that he left no estate—that he died a poor man. But in the eternal record, which holds that the only true wealth is the good we do in this world, it must be entered that he died a very rich man. To the world he does leave a legacy indeed important—a brave and wonderful widow, three fine daughters, a splendid son who won the Congressional Medal of Honor, and the inspiring everlastingly shining memory of a good man who unselfishly asked of life only the humble privilege of doing for others; who felt that his best and highest mission in life was to try each day, hard and faithfully, to follow in the footsteps of the Saviour. In our last tribute to this blessed soul, this great and good American whom thousands knew as simply Dick McCool, we can well say "there walked a real man—always with his face toward God."

In saying farewell to this departed friend I know that you join with me, Senator, in earnest thankfulness that a kind Providence sees fit to lighten the burdens of our own journey through this vale of tears with the living blessing of such precious friendsihps.

Sincerely yours,

CHARLES KRESS.

Petition in Opposition to Wesley A. D'Ewart's Confirmation as Assistant Secretary of the Interior

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1956

Mr. METCALF. Mr. Speaker, I have the following petition, signed by 48 residents and sportsmen of Park County, Mont., home county of the Honorable Wesley A. D'Ewart, in opposition to Mr. D'Ewart's confirmation as Assistant Secretary of the Interior:

LIVINGSTON, MONT.

We, the undersigned are residents and sportsmen of Park County, Mont., and do hereby express opposition to the confirmation of Wesley A. D'Ewart as Assistant Secretary of the Interior.

Thomas C. Bradley, Paul D. Kent, J. W. Ebert, H. H. Johnson, Jack W. Ward, Frank P. Armentaro, Walter Anderson, W. A. Hampson, M. R. Ramm, R. E. Nelson, Joseph Mathes, E. C. Norman, A. J. Ball, M. W. Enger, Peter B. Nichelson, Laurence Mittelstedter, Clarence Cutler, E. M. Barry, J. W. Nehan, R. G. Bauner, C. P. Commings, M. E. Williams, Carl F. Nichelson, H. L. Hageman, C. L. Ballard, C. L. Terpening, Kenneth Fox, Mike Indendi, John Duffey, N. J. Amon, William D. Ball, N. C. McCann, W. A. Andersen, H. J. White, H. E. Smith, J. W. Adams, R. R. Counts, Charles Gregory, Ray S. Alt, J. G. Hendricks, Jr., Don Chapman, N. E. Weber, P. A. Mikelson, E. L. Harper, F. J. Ross, J. R. Baucher, V. C. Reynolds, G. E. Coole.

A Political Ranger—Douglas McKay

EXTENSION OF REMARKS

OF

HON. FRANK A. BARRETT

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Monday, March 12, 1956

Mr. BARRETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Political Ranger—Douglas McKay," published in the New York Times of March 10, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A POLITICAL RANGER—DOUGLAS MCKAY

SALEM, OREG., March 9.—It is sometimes said in Oregon that if you aspire to public office and have the automobile dealers on your side you have an election in the bag.

Douglas McKay, who sold Chevrolets and Cadillacs here for 28 years before he turned over his business last year to his son-in-law, experimented with this saying 6 times. He did all right. Twice he ran successfully for Governor. Before that he was elected four times to the State senate. A rival Ford dealer, William Phillips, of Salem, managed his two campaigns for Governor. His first election was to fill an unexpired part of the term of Gov. Earl Snell, a Ford dealer of Arlington, Oreg., who was killed in 1948 in a plane crash.

Now President Eisenhower's Secretary of the Interior is setting out to test the political strength of the auto dealers once more.

Neither he nor "Grandma," his public name for Mrs. McKay, the champion angelfood cakebaker among Cabinet wives, likes the assignment. But the 62-year-old head of the Interior Department takes on the job of defeating Senator WAYNE MORSE, Democrat, as one of duty. He thinks the people of Oregon ought to be represented "by Republicans, not Socialists and leftwingers."

A REAL WESTERNER

"Doug" McKay is more of a westerner than millions of other western residents. His parents were born in Oregon. His grandparents on both sides came to Oregon in their early years. He himself peddled papers and sold candy in Portland theaters to help support his mother and sister.

Many years later he was introduced at a political meeting by a woman friend from Corvallis. She said she had known him many years.

"Sure, she does," the candidate told the crowd. "I used to collect laundry at her house while I was working my way through Oregon State College."

This Oregonian has taken as much punishment from Democrats in the last 3 years as any other Cabinet member—more than most of the others.

He has been accused of despoiling the public domain with a give-away program of natural resources. He has borne the brunt of the attack against the Eisenhower power partnership program, designed to put the responsibility for the power supplies upon non-Federal interests. In this plan, the Government steps in as a partner only when the project is to big for others to handle.

Mr. McKay is probably less disturbed by all the shooting than most politicians would be.

"I make a decision and go home and go to sleep," he told a friend. "I don't take my office problems home. If I did I'd go nuts."

LIVES TO TELL STORIES

Nevertheless, he sometimes wonders aloud, with a grin, why Mrs. McKay let him run for mayor of Salem a quarter of a century ago. That victory whetted his appetite for public service. He proved adept at politics.

Actually, he would rather be riding his horse as marshal of Portland's Rose Festival parade or telling one of his great fund of stories to a group of friends or to a lodge or service club gathering.

When he was running for Governor the first time a critic declared that "McKay belongs to every organization except the Knights of Columbus and the B'nai B'rith and he can't get in those because he's a Protestant." He has been a member of the First Presbyterian Church of Salem for many years.

Mr. McKay is a frustrated golfer. He has not been able to play much because of wounds received in World War I, when, as a platoon commander, he led his outfit against the Germans in the Argonne forest. Despite the wounds, he was able to get into World War II and work himself up to major, assigned to training troops in this country.

In his long service in the Oregon Senate and later as Governor, Mr. McKay won recognition as the father of the Willamette Valley basin development program of flood control and power development.

The Farm Problem

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1956

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Robert W. Lucas, editor, editorial page, the Denver Post, Denver, Colo.:

THE FARM PROBLEM

(Address by Robert W. Lucas, editor, editorial page, the Denver Post, Denver, Colo.)

My mission here today is to talk about the kinship between farm any city, farmer and urbanite. My theme, "No Country Cousins—No City Slickers," means simply that we're all one people, and we had better not forget it. Why? Because we face, together, a future of opulent opportunities if we behave like men—or slow economic strangulation if we act like monkeys.

For 200 years more and more people have been moving from farms to cities. During much of the time, I guess it could be said that succeeding generations have found city living more attractive. Remember the old song: "How Ya Goin' t' Keep 'em Down on the Farm?" Every city becomes a "Paree" in the vaulting ambitions of millions of young people.

Well, about the time the kilowatt, inside plumbing, the milking machine, and the internal combustion engine arrived to relieve the drudgery, austerity, and stringencies of the farm—from the kitchen to the barn, from the privy to the pasture, the American farmer was again caught up in tides of war,

in scientific discovery and in tidal social movements over which he had little direct control.

You know better than I know what happened to the farmer, skewered as he was and is on that three-pronged dilemma:

1. The labor-management relations act had stimulated the buying power of people who were buying what the farmer produced. At the same time, and at an ascending rate for 20 years, it has increased the prices of things the farmer wants or must buy. On balance, however, I believe you will agree that the phenomenal rise of consumer purchasing power has been a blessing to all of us—even though that blessing has, at times, been a not unmixed one.

2. Recent wars, and certainly World War II, pumped up an artificial domestic and world-wide demand for everything the farmer could breed, raise, and grow. Government provided inducements which, coupled with abnormal demand, stimulated agriculture into fantastic production.

3. Coincident with this development came automation in many forms: farm machinery, hormones, insecticides, fertilizers, improved seed and breed. The same talents and skills that wrought the bomb are revolutionizing the farm.

In other words, all hell broke loose within 15 years, virtually a millisecond on the clock of time. And today the American farmer and his city brethren, mutually interdependent, with the same hopes, and the same fears—treasuring the same political principles, dreaming the same dreams for their children—are trying together to untangle one of the classic economic snafus of American progress—the American farm problem.

You and I know that we must approach the diagnosis and treatment of this king-size headache with something more than narcotics or Dr. Glenn Frank's "pink pills for pale agriculture." If the debate degenerates into a struggle of brute political strength, farm against city, someone is going to get hurt. And by someone, I mean all of us.

You have here today eminent authorities representing many sides of the farm problem and the proposed answers thereto. It would ill-become me, a newspaperman, to try and hit the kind of pitching you're getting and will get from such major leaguers as Ezra Taft Benson, Representative HAROLD D. COOLEY, Dr. Roland P. Renne of Montana State College, and Dr. P. H. Stephens of the Farm Credit Administration. I can hit pretty well as an asphalt farm expert. But not when these men are in town and on the mound.

I want to tell you, however, why I believe this farm issue is fissionable and, therefore, one to be handled with care, whether you live on a farm or in a city.

First, it should be obvious that a nation such as ours must preserve and promote its agriculture. Let me cite you, in one shell-burst sentence, all we need to know to sustain or restore our respect for the American farmer: "The total population of the United States, now at 162 million, can be expected to top 190 million by 1965, and 220 million by 1975." That's not an ouji-board forecast. That's the result of a baby nose count, related to the present rate of children per family, and deaths per thousand. Peter F. Drucker, in a fascinating study of American population, made this categorical statement: "The major events that determine the future have already happened, irrevocably."

No one I know is so blind as to suggest that we can fill the bellies of 60 million more people in the United States within the next 2 decades without conserving our soil, bringing in new land and preserving the integrity, the opportunity, and the living standards of the American farmer. Moreover, why look ahead only 20 years? Those of us who shall have returned to merciful dust shall have left our progeny, to what? Who's to say the family of tomorrow won't want, and need, and be able to pay for more and better food? Finally, you answer for yourselves the importance of food and fiber on an island of freedom in a sea of revolution, totalitarianism, and hostility.

What are the factors which are raising barriers to comprehension of this problem between farm and city segments of population within our own country?

Americans today buy food with the same detachment as to its origin, as they buy buttons. And why not? It comes boned, trimmed, wrapped, packaged, processed, and, in general, dolled up like nylon stockings or an electric shaver. No one objects to that. It's an inevitable consequence of competition. And it moves more food, even though it may send many a farmer to the hard-cider jug muttering over his share of the consumer dollar. But the city man and woman, the consumer, must be reminded that human hands, human muscle, and human sweat have shaped that pretty thing he lifts out of a supermarket showcase.

Second, it should be obvious that the farmer and his family who, in 1940, composed 23 percent of the population and today numbers only 13 percent, will not be content with second class citizenship on the economic scale. Even after discounting some of the phony figures, grabbed by quack politicians who would have us believe that Government policy is the sole villian of that trend, we must recognize that many good farmers are in trouble. And if their trouble is not as bad as some would have us believe, it is bad enough to make them resentful of cavalier criticisms from the ignorant, the indifferent or the dishonest.

In other words, the acknowledged farm cost-price squeeze, the excesses of production over demand, the high and climbing capital requirements of modern farming, the new demand for brains in equal part with brawn and the inevitable spread in price between the raw farm product and the processed, retail package, are not and must not be considered frivolous or imagined difficulties arising from the complaints of "spoiled" farmers who want their cake and would eat it, too. That is not true of agriculture as a whole, and woe be to those who misread the signs. Those who, representing wholly urban or industrialized constituencies, embrace such monstrous nonsense are unwittingly collectivizing American agriculture, just as surely as agriculture was collectivized by planned famine and the firing squad in Russia and Red China. They are tearing down production patterns and threatening the food supply of a rapidly expanding national population.

In other words, the preservation and promotion of sound, and diversified, flexible and prosperous farming is critical to the nonfarming consumers of this country—not only for the benefit of farmers but for the benefit of the millions who are massing in the great cities. The urbanites cannot have it their own way, if it is to be the way of the transgressor on the legitimate aspirations of rural America. For, if the city people, in unthinking misuse of their new political advantage, by-pass agriculture in spreading the good things of life, they will pay for that error as the hungry people of foreign lands are paying—in agonies of want amid the suffocation of human liberty.

What is the farmer's responsibility? He is walking on eggs, his own eggs, if you please, in the matter of devising Government farm policy. Before he brandishes his vote as a weapon to force indefensible Government preference that, as one wise old rancher said, "goes against the grain of reason," let him consider the consequences of political buccaneering. Two-thirds of the American people today live and work in 168 areas described by the United States Bureau of the Census as "metropolitan." California, but a few years ago sixth in the population roll-call of the States, and the home of vast farming, is today second in numbers of people. At the same time it has become one of the most highly urbanized States in the Union.

Fifteen years ago only 1 out of every 4 people employed in States comprising the Southern Confederacy held nonfarm jobs. Today half—50 percent—of the southern population earn its livelihood away from the farm.

Right here in our own empire, considering the States of Utah, Colorado, and Arizona, more people live in metropolitan areas than outside of them.

It was not so many years ago that Henry Wallace said at Des Moines, "My greatest fear is that the farmers themselves may destroy the farm legislative machinery by asking it to do work for which it was never designed." And he said, too, that with good weather and no war, a 90 percent corn loan "will soon build up utterly fantastic supplies and endanger the whole system of commodity loans and the ever-normal granary."

Just over 2 years ago, Secretary Benson warned that "the resentment of 140 million nonfarm consumers is mounting against the expensive, wasteful, and ineffective program of rigid price supports. "And," he said, "the surest way for any group in this country to commit suicide is to forget the ultimate consumer."

I will leave it to others on this program to persuade or dissuade you as to the validity of the wartime and hangover system of price supports that are at issue today. (I use the term "hangover" advisedly.) But I should advise you that no minority bloc—whether it be farmers, veterans, or labor unions—can long succeed in prosecuting that which a majority of the people concludes to be wrongfully self-serving and in conflict with the general welfare. The panoply of history is littered with the wreckage of movements—political or economic—the sponsors of which persisted in "going against the grain of reason."

You know and I know that representative government such as ours, in a complex society such as ours, is a coalition of minorities into majorities that are ever changing. More and more ours is becoming a system of wheels within wheels: Business and industry use the weapons of tariff to preserve their markets and to protect their profits from the infiltration of cheaper competition. That privilege entails a responsibility. And when it appears that American protectionism threatens to drive out foreign trade to the point of breeding depressions abroad, something must be done about it. Men and women won the right to organize for self-improvement and protection. But that right carried with it a responsibility not to bludgeon and coerce freemen in the reckless or lawless use of force, boycott or other conspiracies designed to rule or ruin recalcitrant employers. Abuse of that responsibility brought the Taft-Hartley act. And public reaction against racketeering, Communist infiltration and other evils, is slowly encouraging greater maturity in the American labor movement. Public opinion, when informed and aroused, is the great equalizer in this republic.

In other words, when people embark on what the public comes to believe is economic or political piracy; when people set aside the one fundamental truth of the interdependence of all society, they have and always will suffer the backlash of public opinion—just so long as we have free speech, and free inquiry, and free elections.

Of course the farm problem is fissionable. It lends itself to the thundering declamations of demagogs—both from the farm and from the city. It lends itself to amusing and titillating comments—but which comments contribute nothing to enlightenment or solutions. I can recall one such quote

that I thought was catchy, but fearfully misleading. Disputing the wisdom of sliding or flexible supports, one of our wittier public figures said, "Instead of eliminating surpluses, as advertised, they are eliminating farmers, not as advertised." One might counter that by saying that high and rigid supports, "instead of producing abundantly for the profit of the farmer and the benefit of the consumer, as advertised, produced abundantly for storage in warhouses and caves, not as advertised." And, one might add, at double expense to the producing farmer, in depressed prices and inflated taxes. Neither of the foregoing propositions is wholly true or wholly false. But both illustrate the glandular aspects of political freebooting that stimulates the flow of American bile while paralyzing the function of the American mind.

It is folly, doubled and redoubled, to talk about "taking the farm problem out of partisan politics." It is an issue, to be thrashed out in the exhausting hubbub of the upcoming campaign. And we would have it no other way. But we in the city and you on the farm must remember this: The farm problem is in two parts—economic and political. Politically, the critics of distressing declines in net farm income, and the shifting trends in farm populations, are on the attack. Perhaps they should be. Theirs is an enormous advantage. Because we are not accustomed, in this country, to balkanized prosperity—to accepting material progress by 85 percent of the people, while even 15 percent lag behind. All the people—and I mean all the people—want to do something about it.

But it is the obligation of thoughtful people to recognize and isolate the purely political dissents from the more sober and more cerebral economic solutions, if any. And that obligation is shared by all of us—not the country cousins and not the city slickers. For this is a national problem, to be answered by all the people as one nation, and not to be contracted out as the personal vehicle of mountebanks who approach great problems of our times more with an open mouth than with an open mind. Farmers are neighbors, customers, and kinfolk of the 140 million men and women and children of urbanized America. And the urbanite, who is not without economic problems of his own, is and should be the farmer's best friend.

They must not be split away from each other by ambitious politicians who, without other visible means of support, would parlay discontent and resentment, human bitterness and economic dislocation into a coveted seat at the public trough. Nor must one segment of society be penalized at the expense of the other because this fantastically difficult puzzle lends itself so well to the specialists in double-think and double-talk; that unwelcome, human contribution to automation—the liar who figures the figures that lie.

The historian, Allan Nevins said recently, "The farm problem offers great temptation for a display of opportunism, and a wide scope of statesmanlike exploration." "Both in Congress and among the presidential aspirants," he said, "the entire subject needs exploration before next November, not for vote catching but for the national good."

Referring back to my own foregoing remarks, perhaps I have been guilty of unkind and emotional references to those whom I believe to be wrong. It is odd, indeed, how quickly one's opponent becomes a quack, or an ambitious politician, or a "demagogue." So if you will pardon my few lapes into lusty if not illuminating language, may I draw humbly from a paragraph by Mr. Adlai Stevenson, whose identity is probably not unfamiliar to you.

Referring to the great farm debate, he said: "Each of these problems breaks down into the reflection of the life and times of human beings—of wheat farmers in Minnesota, and factory workers in New Jersey, and fishermen in Maine, and orange pickers in California, and cotton choppers in Georgia. Here is our eternal concern as Democrats" (and I am sure he would share that eternal concern with a Republican here and there)—our eternal concern, he said, is "with the way men live, and the way men dream, and with the opportunity each must have to take his rightful place in the long march of history."

No country cousins, no city slickers? I should say not. This is a Nation of Americans, to be kept that way—by a fast infield, the brotherhood of man and the grace of God.

Nineteen Hundred and Fifty-six Will Be a Banner Year for College Graduates

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 12, 1956

Mr. SPRINGER. Mr. Speaker, spring is almost here. Each year every Member who has a university in his district is concerned as to what the employment situation will be for college graduates..

I have four universities and colleges in the 22d District of Illinois. The University of Illinois conducts a continual search for ways in which to fit its graduates into our social and economic system. It has been one of the most successful in the United States in this endeavor.

It appears from the attached article in U. S. News & World Report that this year will be a banner one for graduates in the employment field. In many fields there are not enough graduates to fill the jobs. This year will be no exception.

The salaries for graduates are rising. The search for engineers continues to be a pressing one, with a range of starting salaries between $347 and $525 per month, depending on the abilities and the scholastic record of the graduate.

At the Unievrsity of Illinois there will be more than 20,000 interviews conducted with approximately 20 to 30 employers each day on the University of Illinois campus to talk with graduates between now and graduating time.

This all speaks well for the healthy state of our economy. It is a hopeful sign for those getting ready to enter higher education to know that their prospects in the years ahead are good. The spcial report, in full, is herewith attached from the issue of March 9, 1956, of the U. S. News & World Report:

JOBS FOR GRADUATES PLENTIFUL, PAY RISING

(Job openings for college graduates this year, it turns out, are continuing good. Demand is high, starting pay is higher than ever.

(Here is a closeup of just what is being offered to seniors at one big midwestern college, as spring recruiting starts.)

URBANA, ILL.—A manhunt for talented youths is taking place right now at American colleges. Thousands of companies are conducting a spring drive to hire college graduates of all kinds.

In some career fields, a student who wished to consider all offers could talk with more than 100 prospective employers, without leaving the campus. Offers of up to $7,000 a year, as starting pay, are dangled before the eyes of the brightest graduates in certain fields.

Many people have wondered how long the boom for college graduates could continue. Would 1956 bring a decline in demand, lower salaries for beginners? As far as early signs are concerned, the answer is "No." Jobs seem to be plentiful and salaries are still headed up.

A preview of the job outlook for the 1956 crop of graduates is given in job-placement reports of a typical large midwestern university, the University of Illinois.

This university is located near the geographical center of the United States. It gets demands for graduates from all quarters of the American economy.

Already on the university's campus are the first arrivals among representatives of more than 1,000 companies that have won permission to interview students on the university grounds.

In addition, hundreds of other companies have applications on file for the names of youths who might be interested in working for them when they complete their college courses.

NO "POUNDING OF SIDEWALKS"

It's a situation that seems strange to the graduates of United States colleges in the 1930's, who often "pounded the pavements" for weeks or months after graduation day, looking for jobs of any description.

Overall, starting salaries offered here are up approximately $25 a month from last year. In the case of liberal-arts majors, with no specialized training for industry, opportunities are plentiful at a pay range usually of $4,000 to $5,000 a year.

The keenest competition this year, at Illinois as elsewhere, still is for engineering graduates. More than 500 firms, seeking engineers, will interview on this campus during the year. In the peak interviewing season, through March, 12 companies per day will be permitted to visit the campus to recruit engineeers.

Without the limit on this type of recruiting, nearly twice that number of firms would be interviewing engineers each day at this one college.

Greatest shortages in this field appear to be for ceramic and metallurgical engineers. Salary offers here often exceed $5,000 a year.

The average salaries offered for engineers in the February graduating class at Illinois were these: civil engineering, $4,860; electrical engineering, $5,232; general engineering, $4,680; mechanical engineering, $5,028; and aeronautical engineering, $5,400.

WANTED: MANY CHEMISTS

In heavy demand, too, are chemistry graduates. One university placement officer reports that "the number of positions available for chemists and chemical engineers has never been greater than it is today." The reason, he states, is a large increase in employment by companies which have long utilized chemists, plus a flood of new positions being created by firms which formerly employed few chemists, if any. More money than ever before, this man explains, is being spent for research and development work on established products and on potential new products. This requires a record number of new chemists.

Students with business specialties are being sought by interviewers as well. Because of the competition for commerce graduates, most major employers are now visiting the campus in the autumn as well as in the spring. As a result, 80 percent of the 138 students graduating in the February class of the university's college of commerce had their career plans set before

they left the campus. Competition for accountants is especially keen. Salaries offered range from $3,900 to $5,100 here.

Job offers in agriculture, also, are more numerous than for the last several years. Interviewers from about 25 companies visited this campus last year to talk with interested agriculture students, and from 400 to 450 openings were listed by mail.

Most seniors in this field, placement officers report, can expect at least 2 or 3 job offers. The majority of openings are for salesmen in such fields as fertilizers, feeds, chemicals, farm machinery, meats and seeds. More agriculture graduates also are being sought for general business training, by corporations which deal with farmers. Only in the area of farm management is the supply likely to exceed the demand for graduates this year.

CALL OF GOVERNMENT

Government jobs are being actively offered as well, and seem to be attracting considerable interest at Illinois. More than 100 students here talked with a representative of the United States State Department, who visited the campus last October to explain the program for foreign-service officers. Arrangements have been worked out for several hundred students to take new examinations on the campus this spring for Federal service.

For the student graduating with a B. A. degree, the starting salary for most Federal jobs turns out to be $3,670 a year—with, in some fields, good prospects for a raise to $4,525 in a few years. Local governments, however, are offering specialists as much as $4,791 a year to start.

A SEARCH FOR TEACHERS

Teaching jobs, meanwhile, are abundant. "Each year the shortage of teachers is becoming more critical," the teacher-placement officer here reports. "Several years ago, the shortage was most pronounced at the elementary level. Now a shortage exists in all high-school teaching fields except physical education for men, and even there most candidates for positions are able to find them."

This university's office of teacher placement listed 10,000 positions as available last year. They included jobs in all 48 States, the District of Columbia and many foreign countries. The demand this year is reported to be even greater. Representatives from cities as far away as California and Oregon are coming to interview prospective teaching candidates on the Illinois campus.

There seems to be a growing shortage of teachers at the college level as well. Last year, 2,164 college-teaching positions were reported—a jump of 43 percent over the previous year.

Average salaries for beginners range from a low of $3,425 for elementary schoolteachers to $4,287 for vocational-agricultural instructors. These are for a 9-month school year. The highest salaries being offered in the field are for city-school superintendents, graduated with higher degrees, who can expect an average of $7,440 a year to start.

LAWYER RECRUITING: SELECTIVE

The demands for law graduates, too, has been increasing steadily since 1951. Last year in this field, 161 vacanices were listed and there were only 17 graduates and 15 alumni registered for placement assistance.

Despite the strong demand here, placement officials report, the employment of law graduates remains highly selective, on a professional-association basis. Most law firms and law graduates think in terms of an eventual partnership. For this reason, the employer tries to make a careful study of the young lawyer and his family, to determine how well he will work out with the firm.

Large eastern law firms, insurance companies, and banks, however, are beginning to use campus interviews for their initial contact with young lawyers. There is a strong demand, too, for lawyers to work as insurance adjusters. Men with some technical background are needed in the field of patent law. Trust departments of banks also have numerous openings this year for law graduates. The majority of Illinois law graduates, however, seem to prefer general practice or corporate legal work, and look for employment in that area.

A placement official in the law field says: "Occasionally, I have received requests from highly successful lawyers specifying that the graduate they want must be in the top 5 or 10 percent of the class. I used to assume that these were men who, from personal experience, realize that high grades in school are indicative of assured success in practice. Several times, however, I have checked the scholastic records of one of these successful attorneys and found that he graduated near the bottom of his class and must have spent a goodly portion of his time, while in school, in the dean's office trying to get off probation or remain in school."

Generally, it turns out, the large law firms and corporate legal departments emphasize high grades and experience on the college-law publication, while the smaller firms and legal departments tend to be more interested in the man and his personal attributes.

Other, smaller fields are opening up for the college graduate. As one example, more and more calls are being received for alumni with some experience to fill positions in personnel management and labor relations.

Salaries in this sector are increasing with the demand. Government agencies, which have been hiring very few graduates in this field during the last few years, are reported to be actively seeking people with training in the labor area. An increasing number of corporations are establishing programs for industrial-relations trainees. Pay is almost always over $400 a month, with an occasional offer of $450 and higher.

OUTLOOK FOR WOMEN

For women students, requests for home economists in all areas—business, teaching, extension, and research—greatly outnumber the available candidates this spring. Last year, nearly 500 positions requiring a home-economics background were listed with this university. To fill those jobs, there were 77 seniors interested in employment, plus a few alumnae registrants.

The greatest demand in the home-economics field appears to be in food positions. These involve jobs in business with food companies, public utilities and retail stores, and dietetics positions in hospitals, restaurants, and school-lunch programs. Positions in teaching and research at colleges and univerties account for about a quarter of all listed vacancies. These require a master's or doctor's degree, are primarily of interest to alumnae.

Women graduates are in demand as librarians, too. Each student graduated from this university's library school last year had, as an average, 12 jobs from which to choose. Job requests are running 40 percent higher this year than last. Major libraries from all over the country send representatives to the campus for interviews, and many libraries arrange to give their examinations locally.

The greatest demands, in this field, are in the technical areas and in work with children and young people, placement officials say.

TWENTY THOUSAND INTERVIEWS

In all, 20 to 30 employers are arriving every day on this one university campus to talk with students soon to graduate. The number of interviews conducted on the campus will total more than 20,000 for this school year. That is in addition to a placement list, with hundreds of vacancies on file.

With this year's strong demand for college students, salary rates are still rising in most fields. Companies, in many cases, are having a difficult time keeping the salaries for men hired in past years higher than the salaries of new employees. One man hired by a major company 3 years ago, for example, discovered that he is making the same salary as that being offered his brother, who is graduating from this college in 1956.

DEMAND: HOW STEADY?

The foregoing is a report on the job outlook, as of now, for the college class of 1956. A business slump could bring a quick change in this outlook on campuses across the Nation. But even with a mild slump, the chances appear good for a bright young man or young woman to make an excellent business connection before leaving college.

The reason is that college graduates are in short supply at this time. Automation is raising the demand for technicians. The economy has grown, to care for a huge and growing population. The draft continues to operate, forcing companies to have replacements ready, or in training, for many of their younger key men in management or technical fields.

At the same time, the annual "crop" of college graduates remains low, with only a slight increase above that of recent years. It will be the mid-1960's before the big post-war population will reach the college level.

Prospects for the American college graduates of 1956, as a result, are almost unbelievably good, with job offers at high pay available now for nearly everyone who wants to get started on his career.

PAY OUTLOOK FOR CLASS OF 1956

Here's what one big college—the University of Illinois—is finding, as spring recruiting of graduates begins:

Range of starting salaries (per month)

Engineers	$347–$525
Business specialist	325– 425
Lawyers	325– 500
Agriculture technicians	300– 500
Teachers	285– 357
Government trainees	306– 399
Librarians	300– 500
Liberal-arts majors	333– 416

"Tech" Famine Weakens Our B-47 Atomic Thrust

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 12, 1956

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the Washington Post and Times Herald of March 11, 1956]

"TECH" FAMINE WEAKENS OUR B-47 ATOMIC THRUST

(First of a series on SAC's Achilles Heel)

(By John G. Norris)

There is an ominous weakness in the Strategic Air Command today. Already it has seriously lowered the combat readiness of the Air Force's long-range nuclear striking arm.

As Russia's own strategic bombing capacity increases by leaps and bounds, SAC leaders view the situation with the greatest concern. The lives of millions of Americans and even the existence of the Nation itself may depend on SAC's ability to do its job.

"The situation is critical and is our chief worry today," says Gen. Curtis E. LeMay, SAC commander in chief. "We still can carry out our mission, but at a high cost in efficiency and effort."

Briefly, the problem is that SAC is fighting a losing battle trying to keep its bombers flying. A grave shortage of skilled mechanics, coupled with an unbelievable high turnover in newly trained technicians, is responsible.

Too many B–47's are temporarily out of operation each day because of mechanical difficulties. Too many training missions cannot be completed because something goes wrong in the air. Some call this condition, "SAC's Achilles Heel."

Here is an actual example:

ORLANDO, FLA.—The 6-engine jet B–47 takes off just after dawn from the 2-mile-long runway at Pinecastle Air Force Base here on a simulated nuclear bombing mission.

As the 600-mile-an-hour bomber levels off upstairs, you get out of your parachute harness, hook on an oxygen bottle, and crawl through the belly to the bombardier-navigator's post in the nose.

First Lt. Glenn F. Morgan, Jr., of Washington, D. C., gestures at the radar scope. The instrument is the main element of the airplane's "K-system"—the "magic black box" which makes it possible to bomb individual buildings in a city accurately from above 40,000 feet through darkness or clouds.

Morgan, a 32-year-old Bethesda High School and George Washington University Law School graduate, shouts something indistinguishable. Both of you fasten your oxygen masks, dangling from heavy crash helmets, so that you can talk on the intercom.

THE SAME LETHAL STEPS

Morgan explains that the B–47 is turning to start its visual bombing run. From the preflight briefings, you know that this realistic training mission will go through virtually every step that would be performed if this were an actual nuclear attack on an enemy target thousands of miles across the world.

That includes flying a precision point-to-point course back and forth over the Southeastern States, navigating by the stars; a rendevous with a tanker plane for in-flight refueling; visual bomb drops of 500-pound conventional bombs on the range at Avon Park, Fla., just to make sure the release mechanism works, and—the climax—the radar bomb run on the main target.

At lunch the day before, Col. Mike McCoy, of Pomona, Calif., commander of the 321st Medium Bomb Wing, had introduced you to the bomber crew. It was a "lead crew"—a highly trained outfit which had been through countless Air Force schools and special courses to fit the men for their job. With the thoroughness that SAC does things, the three-man combat unit had a precise target in Eurasia which it would attack if the whistle blew.

What was it McCoy had said? It cost the Government $616,000 to qualify one B–47 pilot. You can believe it, considering what they have to know.

Capt. Edward J. Albers, 34, of Centralia, Wash., the copilot, had seen extensive World War II service, like Morgan. Both had been recalled when the Korean war broke out, Albers just short of his college degree and Morgan ready to enter law practice with his father in Washington.

The aircraft commander, Capt. John W. Rosenbalm, 27, of Kansas City, had served in the Air Force continuously since becoming an air cadet after the war. A typical B–47 crew, you were told, each married and with a child, average age just over 30.

You wonder what keeps the three top-flight men—still reservists without assurance of an Air Force career—on the job at captain's pay. Then you recall what General LeMay had said about so many of his people being "dedicated."

HOLDS THE ROAD

Rosenbalm asks if you'd like to fly the airplane, and gingerly you take Albers' seat. He takes it off automatic pilot, and it handles like your Buick. But you know how much skill is required to put this airplane through all its paces.

Then comes the approach to the target. Instead of Moscow, it is Charlotte, N. C., where there is a radar bomb-scoring squadron, able to tell just where the B–47's load would land.

Morgan starts his bomb run from the IP (initial point), eyes glued to the radar scope. Countless hours of study of aerial photographs, he hopes, will enable him to pick out the obscure target through the clouds.

Morgan's major problem is target identification. If his target is unidentifiable on the scope, he aims for some oil tanks a known distance away which give a recognizable blip. He sets the "magic black box" for such "offet" bombing and makes adjustments for wind, speed, altitude, etc. The electronic brain should do the rest.

This is the payoff, the end product of all those billions invested in SAC planes, bases and men. If SAC can do its job—get through and hit the target with devastating results—then it should never be necessary to use it. The deterrent threat should keep the peace.

Just then the "black box" fails. Only one of the many instruments goes out—the true speed indicator—but it is enough. On orders from Rosenbalm, Morgan squeezes past you and checks the bank of electronic tubes and other mystifying equipment. Finally he fixes it.

But it is too late. The simulated bombing mission is an "abort."

Some green airman mechanic had not adjusted a setscrew properly and an overworked sergeant-supervisor had failed to check it. So the black box failed and the combined skills and efforts of the men who built the plane and base, planned the mission, readied the plane for flight, and then flew it well, all came to naught.

As you head for home, you recall the old jingle about the loss of a horseshoe, the horse, the rider, the battle, and the kingdom itself, all for want of a nail. Is the country in danger for lack of SAC blacksmiths?

The above account of a regularly scheduled B–47 training mission, on which this reported happened to go, points up SAC's biggest problem today. It causes more headaches within SAC, in fact, than the certain knowledge that the United States is falling behind Russia in production of B–52-type bombers and in the development of strategic ballistic missiles. For the technician problem is immediate and gives no promise of getting better. The full consequences of bomber and missile lags lie in the future.

SAC represents a tremendous investment—$8 billion worth of planes, bases, and other property. It costs $1 billion a year to operate the arm plus several additional billions for new planes and bases.

But the money aspect is relatively unimportant. The sole reason for maintaining such costly might is that the Nation's only potential enemy is putting even greater effort into building a strategic bombing force capable of destroying the United States. If one small but vital element of SAC's vast, complex fighting machine breaks down, the end result could be catastrophic.

Studies have been made of what might be expected from a massive nuclear attack against the United States. At present, the United States can count on no more than 2 hours' warning from its mid-continent radar net and much less if an end run is made from the sea. The Arctic DEW line will not be ready for another couple of years.

Currently, the offense has a considerable edge over air defense weapons. Fighter-interceptors and missiles could not stop a mass attack. Some bombers would get through. With nuclear bombs now measured in millions of tons of TNT—capable of leveling whole cities and scattering radioactive fall-out over surrounding States—tremendous destruction would be certain.

Russia's newly developed atomic capability has led to a little-known change in SAC's primary task. Formerly SAC's main mission was to lay waste an enemy's war industries—to destroy his ability and will to resist.

Today, SAC's major role in all-out war would be destruction of the enemy's strategic air force. At the same time, it would make strikes in key areas to help block advances of enemy land forces, and then, if necessary, it would take on its classic role of hitting key enemy centers.

The new concept is that whichever side wins the opening air battle will win the upper hand and probably the war.

At the moment, SAC is ahead of SUSAC (Soviet Union Strategic Air Force) in aircraft. B–47's—the backbone of SAC—are greatly superior to TU–4's, a B–29-type bomber which has been the major Russian strategic bomber.

This is a big and cheering edge at the moment. But the Soviet Union is speeding production of the "Bison," roughly equal to our B–52; the "Badger," comparable to the B–47, and the "Bear," a turboprop (jet turbine driving a propeller) bomber of which we have none.

All three Russian bombers are probably in operational units in limited numbers and General LeMay says the Bear—though not as good as the Bison and Badger—"is good enough to make damaging attacks on this country."

Men, however, are still more important than machines, and the question arises as to the relative efficiency of the American and Soviet organizations. SAC commanders have a definite superiority in combat know-how. They have had war experience and the Reds started only 10 years ago.

But SUSAC has a stability of force that SAC chiefs envy. No one leaves voluntarily, and few want to. Soviet combat pilots and technicians live better than almost anyone else in Russia.

Contrast this with the situation in SAC. Less than 5 years ago, LeMay had a team largely composed of war-tested "pros." Since then his command has greatly expanded and its airplanes and their equipment have become tremendously more complex.

For the most part, SAC combat crews today are experienced and fully qualified to do their job. The turnover problem, for the moment, is not serious.

But the experience and skill level among SAC maintenance crews is low. Ninety-one percent of all SAC enlisted airmen have been in the command less than 4 years. In the more critical skills needed to maintain SAC planes, it takes 2 to 2½ years to train a recruit to the point where he is of much use. And at the end of their initial 4-year enlistment, 4 out of 5 such men decline to reenlist.

What has caused this critical situation, in the face of congressional action boosting military pay and reenlistment bonuses, will be discussed in succeeding stories along with some proposed remedies.

The Bright Side of Life

EXTENSION OF REMARKS

OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1956

Mr. LOVRE. Mr. Speaker, I wish to place in the RECORD an item from the column written by Mrs. K. E. Sheimo, which is carried in the Lake Preston

(S. Dak.) Times, published by Mr. Sheimo. Too often, in our deliberations, we become so concerned with issues that we can see only the dark side of life, and it is with the thought of noting the good things also in life that I insert the item which follows:

How many times as I look out at the setting sun, or up at the star-filled sky, or into the eyes of my loved ones I feel a pang of sympathy for those whose eyes can never see these lovely sights.

Yet there are many people in this world who have the gift of sight yet never lift their eyes to see the skies ablaze with light. Their eyes are blind to beauty and to the wonders of the world around them.

They plod along in mental darkness seeing only the humdrum, the obvious, the commonplace. They never pause to look at the beautiful flowers, the trees and the birds, the green grass and the blue skies.

The world is full of beauty, but how much of it we miss. We're all a little blind, I'm sure.

Archbishop Beran, of Prague: Roman Catholic Primate of Czechoslovakia

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 12, 1956

Mr. McCORMACK. Mr. Speaker, many are the heinous and dastardly deeds of Communist wherever they are in power. No matter how carefully and cleverly they try to conceal their nefarious activities, certain facts betraying their methods and machinations against humanity seep through the tightest curtains drawn between the lands of the workers' paradise and the free world. The few stray facts that do come through are repelling and revolting to the free minds of the West. Everywhere in the Communist world the people are not only regimented, but they are held under constant surveillance, being constantly spied upon by the secret security police. No one is free in any sense of the word. There is no freedom of movement, no freedom of assembly, no freedom of speech, no freedom of the press, nor freedom of conscience.

In recent times, freedom of conscience has taken an additional significance. All religious institutions, Christian churches in particular, have championed freedom of conscience, and especially in central and eastern Europ,e the Roman Catholic Church. Nowhere else in recent years has the struggle for freedom of conscience, freedom for one's soul, been more intense and bitter than in those parts of Europe where Communists hold the upper hand.

In Czechoslovakia, the home of Comenius and Masaryk, the struggle has been particularly bitter. There the Communists have nationalized all schools, have expropriated all church property, and have tried to silence and subdue all church leaders. In this task, they found in the leadership of the Roman Catholic Church their strongest opposition for right and justice. For several years the Communists tried to silence and suppress these leaders who were deprived of the means whereby their views were publicized. They were warned against the danger of harboring independent views. At the same time, they were also under constant threat of intimidation and even under threat of physical torture. But neither by bullying nor by blandishment could the Communists sway or silence the most outspoken critic of the Communist regime in Czechoslovakia, Archbishop Josef Beran, the Archbishop of Prague and the Roman Catholic primate of Czechoslovakia. On March 10, 1951, his enemies pounced upon him without warning. He was placed under arrest by the secret police; then he was fined by the authorities and banished from Prague to a place still unknown to us in the free world.

In recalling that sad day, March 10, the fifth anniversary of the imprisonment, we can only hope and pray that this devoted servant and leader of his people, this prince of peace, is still alive. We hope that the heroic manner in which he has endured the suffering which has been so unjustly inflicted upon him will serve to inspire free men everywhere to resist tyranny and devote themselves as resolutely and as unselfishly as he has done to the defense of the cause of freedom.

Lodi Wine

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 12, 1956

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks, I include the following story of an outstanding product in the 11th Congressional District of California:

Lodi, in the heart of California's fabulous central valley, for years has been known as the home of the glamorous Flame Tokay grape and as the scene of the national wine show. Immediately surrounding it are 40 thousand acres of vineyards producing the finest table and wine grapes available anywhere in the world.

Also in this area are 17 wineries transforming the fruit of these vineyards into fine wines. These wines already are popular throughout the markets of our country.

Today Lodi has a new reason for honorable mention. As a result of action by the Alcohol and Tobacco Tax Division of the Internal Revenue Service it is now officially recognized by this Government as a natural winegrowing area.

As a result vintners whose products conform to requirements of the United States Internal Revenue Service announcement now may label their bottles "Lodi wine."

And as a further result, products of the newly designated district henceforth will be recognizable throughout the wine markets of the Nation and the world by the appellation or origin "Lodi" on their labels.

For generations natural characteristics of soil and climate especially adaptable to the growing of wine grapes have lead to the steady growth of the Lodi district in viticultural industry importance.

More recently winemakers, taking advantage of the special qualities of the lush Palominos, Tokays and other grape varieties grown within a few miles of Lodi, have developed Lodi Sherry and Port wines to the point where they rival in color, quality and flavor anything produced in Spain or anywhere else in the world. I quote from a statement from John Hoggatt, manager of the Lodi District Chamber of Commerce:

"In fact connoisseurs of wine throughout the Nation now admit that some of our wineries in the Lodi district are producing Sherry that surpasses anything brought forth from any other traditional wine center of the world.

"I am enthusiastic over the far-reaching effects that the new Government recognition will have on the progress of this San Joaquin County community and on the welfare of the many hundreds of wine grape growers in this soil-rich area.

"The name Lodi now will appear in stores throughout the Nation. It will become identified with fine wines. It will be recognized in wine shows and exhibitions.

"Gradually, the name 'Lodi' will be looked for by those seeking to buy the finest in sherry and port wines. It will be a name of distinction recommended by store clerks, maitre d'hotel and food editors throughout the country.

"Because of importance of Lodi's quality sherries, I am sure that as the result of the new designation, this area soon will be known throughout the world as 'America's sherry land'."

Already a group of wine growers (400 in number) known as the Wine Growers Guild, have sent the first shipments of their newly labeled wine Lodi Cream Sherry into some of our eastern markets. I am sure that you will enjoy the opportunity, those of you who partake of wine, in sampling this new achievement of the agricultural production of the San Joaquin Valley in California.

So that there may be no doubt as to what comprises the Lodi wine district as recognized by the Internal Revenue Bureau, the people of Lodi have taken steps to build a fence around this natural vineyard by obtaining from State, county, and local officials and from historical records of wine growers in the area the geographical boundaries which generally will enclose all of that portion of San Joaquin County, Calif., whose products will be entitled to the new Lodi label. F. Gordon Mitchell, farm adviser of the University of California agricultural extension service, delineates the district thusly:

A line starting at Thornton Road and proceeding east along Eight Mile Road to Tully Road, then north on Tully Road to Harney Lane, then east on Harney Lane to the section line between sections 13 and 14, T. 3 N., R. 8 E., then proceeding along this line to Acampo Road, then east on Acampo Road and its extension to the Calaveras County line, then north along the county line to the extension of Liberty Road, then due east along Liberty Road and its extension to the Lower Sacramento Road, then north along Lower Sacramento Road to the Sacramento County line, then west along the county line to Galt Road, then south on Galt Road to Thornton Road, then southerly on Thornton Road to the Eight Mile Road.

Mr. Austin E. Mahoney, agricultural commissioner for San Joaquin County, has submitted similar boundaries and a description of the district submitted by chairman of the San Joaquin County Board of Supervisors, Clifford B. Bull, is in similar agreement. According to requirements of the Alcohol and Tobacco Tax Division, "A wine shall be entitled to an appellation of origin: (1) At least 75 percent of its volume is derived from fruit or other agricultural products, both grown and fermented, in the place or region indicated by such appellation, (2) it has

been fully manufactured and finished within such place or region, and (3) it conforms to the requirements of the laws and regulations of such region governing the consumption, method of manufacture, and designation of wines for home consumption."

Soil maps show this area to be covered with a thick layer of Hanford loam ideally suited to the production of wine grapes. It is this soil, plus other factors of climate and geography, which has helped build the traditional fame of Lodi as a wine center.

History of the Lodi district as a wine area reaches almost back as far as that of San Joaquin County. Unofficially it is known that wine grapes have been grown in this area for nearly a hundred years, although the first wine vintage was reported approximately 75 years ago.

Today with approximately 40,000 acres in the district devoted to the production of grades the annual crush is over 150,000 tons producing more than 14 million gallons of fine wines and brandy.

Because the Lodi wine district lies in the 11th Congressional District of California, which I represent, I am proud and happy to be among the first to designate this area, an area located in the heart of the richest agricultural land in our country, as America's sherry land.

Thomas Jefferson

EXTENSION OF REMARKS
OF
HON. WILLIAM E. McVEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 12, 1956

Mr. McVEY. Mr. Speaker, much enthusiasm has been shown at Jefferson Day banquets which are usually held at about this time each year. Always, when I read of the publicity attending one of these functions, I cannot help but reflect upon how far his followers have strayed from the principles for which he so strongly stood.

Jefferson was a great American. He is given much of the credit for writing the Declaration of Independence and was responsible for our Bill of Rights. He did much to fashion our American system. Both parties in the Congress would do well to heed the admonitions which he gave to the country.

The Fact Finder magazine, edited by Harry T. Everingham, in one of its editions has compiled a record of many of the important admonitions of Thomas Jefferson. The Fact Finder lists the following pronouncements:

I place economy among the first and most important virtues, and public debt as the greatest of dangers to be feared. To preserve our independence, we must not let our leaders load us with perpetual debt. We must take our choice between economy and liberty, or profusion and servitude.

If we run into such debts, we must be taxed in our meat and drink, in our necessities and in our comforts, in our labor and in our amusements. If we can prevent the Government from wasting the labors of the people under the pretense of caring for them, they will be happy.

The same prudence which in private life would forbid our paying our money for unexplained projects, forbids it in the disposition of public funds. We are endeavoring to reduce the Government to the practice of rigid economy, to avoid burdening the people and arming the magistrate with a patronage of money which might be used to corrupt the principles of our Government.

About national debt, he said:

I am for a government rigorously frugal and simple, applying all the possible savings of the public revenue to the discharge of the national debt; and not for a multiplication of officers and salaries merely to make partisans, and for increasing, by every device, the public debt, on the principle of its being a public blessing (1799).

We consider ourselves unauthorized to saddle posterity with our debts (1813).

Of foreign affairs, Jefferson said:

Let our affairs be disentangled from those of all other nations, except as to commerce, which the merchants will manage the better the more they are left free to manage for themselves (1800).

I have ever deemed it fundamental for the United States never to take active part in the quarrels of Europe. Their political interests are entirely distinct from ours. * * * They are nations of eternal war (1823).

Our first and fundamental maxim should be, never to entangle ourselves in the broils of Europe (1823).

The Government planners of today would not be very popular with Thomas Jefferson. About this matter he said:

I think we have more machinery of government than is necessary, too many parasites living on the labor of the industries (1824).

The freedom and happiness of man * * * are the sole objects of all legitimate government (1810).

Thomas Jefferson lived in a different age. Not all that he stood for would be appropriate today. But this question we should ponder over. Have we not strayed to far from the preachings of this great American?

An Editor's Thoughts in a Campaign Year

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. LOVRE. Mr. Speaker, as this is a presidential election year, I think the following editorial is worthy of consideration. The editorial is written by Mr. Aubrey Sherwood, editor and publisher of the De Smet (S. Dak.) News. Mr. Sherwood has been a publisher for many years and his thoughts and opinions are highly respected throughout our State. The editorial follows:

The press, a great service in information for the public, in the mistakes it makes often gives misinformation, at times does an individual or a group an injustice or at least embarrasses some. There have been instances of late: A poorly chosen heading in Life magazine overdramatized what Secretary of States Dulles had written about brinks of war to which efforts at world peace had brought our Nation; failure to use a comma where in delivery of a speech a pause had served a purpose brought charges that Vice President NIXON was terming Justice Warren "a Republican supreme court justice" when in fact he had said "a Republican, supreme court justice." Closer home, and more humorous than serious, the Argus-Leader had a heading "Hurley Dopes to Win" when the copy read "doped," a typographical error.

All of which reminds the editor of advice he heard given years ago by the late Charles W. Pugsley, then president of State college. Addressed to a group of high school journalists, it was worthy of the attention of every editor. "When the paper is out," he said, "sit down and read it carefully. You will find errors—in reporting and typographical. Some of them you can correct in a later issue, but you should recognize that the correction itself is a monument to the error." It might be added that it is general newspaper policy not to correct mistakes when this will serve no good purpose—thus avoiding too many "monuments."

Without question many of the mistakes made in reporting, in newspapers and magazines, come from over-doing either the effort to make a good "story" or the dressing given it. Publications are not different from other institutions in a weakness for self-promotion in the guise of public service. It takes mature years, at times, to appreciate the merit of the old phrase "who best can serve."

It is no defense of mistakes in print, of course, but for the public at large—editors and reporters included—there are the much more frequent mistakes of verbal report and comment. These too, though apology may be given, stand as monuments to the indiscretion—the thoughtlessness, the maliciousness.

With a political campaign under way it might be added here that there are those who are taking advantage of it to advance individual or group causes in the name of political claims and charges. They too are doing the public a great disservice, and erecting monuments to themselves and the groups for which they are spokesmen. The defense might be made "that is politics' but there is no more excuse for this in politics than in anything else—in fact it may be said there is less excuse when the Government of our Nation is at stake.

Joe Martin: 31 Years

SPEECH
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. SIMPSON of Pennsylvania. Mr. Speaker, the Honorable JOSEPH W. MARTIN, Jr., of Massachusetts, is celebrating the completion of 31 consecutive years in the House of Representatives. There is no need to recount here his outstanding record of accomplishment over the years.

All of us—his colleagues—are familiar with the distinguished service he has rendered to the people of his district and to the Nation. The voters of the 14th Massachusetts Congressional District certainly recognize that they have an outstanding man as their Representative in Washington. Not many of us stay in the good graces of our home folks for as long as JOE has.

The American people regard JOE MARTIN as one of their most illustrious statesmen. He has devoted most of his adult life to the work of this House, and has been instrumental in enabling us to discharge our responsibilities as Members with the maximum of efficiency. It is well known that our President, Dwight

D. Eisenhower, considers JOE MARTIN to be one of the most able and astute men with whom he has come in contact in the field of public affairs. All of us will echo that sentiment.

No higher tribute can we pay to a man than that he contributes mightily to the betterment of his country, and at the same time maintains the esteem in which he is held by his colleagues, and many friends and acquaintances. May JOE MARTIN continue to be with us for many years to come.

The Sound of Freedom

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 12, 1956

Mr. JOHNSON of California. Mr. Speaker, in mid-February 1956 there was held at the Pentagon a conference of the mayors of the 350 leading cities of the United States. Naturally, one of the themes stressed during this conference was the relationship that must exist between personnel on Armed Forces bases and the citizens of adjacent communities. Too often civilian communities lack complete understanding of the problems facing the services and misunderstanding can lessen the effectiveness of the way in which the armed services carry out their mission.

One of the best of the addresses made before this conference of mayors was made by Gen. Nathan F. Twining, Chief of Staff, United States Air Force. In direct but courteous fashion, General Twining explained to the mayors that operations on Air Force bases which may cause discomfort and annoyance to the communities are essential to the defense of America.

When jet fighters and jet bombers operate overhead—

He said—

it is not the Air Force that is doing this—it is the Nation.

The Air Force is making every reasonable effort to control the noise made by jet aircraft to meet the problem of base operations close to growing communities and in other ways to control the inconveniences that building military defense creates. Surely, after General Twining's presentation of the problems and the solutions being worked out, the mayors will be in a better position to explain to the citizens of their communities the necessity of what is being done. As General Twining said:

Noise is just something we are going to have to live with. The American people will eventually understand this. We must do all we can to speed this understanding.

The noise of jet operations is, indeed, something we are going to have to live with and we can learn to live with it as we have learned to live with steam engines, automobiles, radio and television. We live with these things gratefully because they contribute to our comfort. We will live with the sound of jet engines because the sound of jets is the sound of freedom. To quote General Twining again:

The echoes of Communist H-bomb tests obliterate the noise that comes from our building a defense against them.

The sound of our jets is a sweeter sound than the echo that necessitates the building of a strong all-jet Air Force and the development of ballistic missiles.

We know now that the Soviets not only have a strong Air Force, including bombers, that may be able to reach our cities. They are building missiles that will certainly be able to reach our cities and that will make our defense problem even greater than it is today, great though it is now.

Because of this, air defense is one of the Air Force's primary missions. Air defense includes the radar installations to detect the approach of hostile bombers. It includes the all-weather interceptors of the Air Defense Command which would take off to engage them. But air defense would be worthless without men and bases, and this is where civic leaders can be of positive help in improving the security of our country. By helping to further public understanding of airpower and the job it must do, civic leaders can make the job of furnishing protection to their communities much easier for all concerned and specifically for the Air Force.

Mr. Speaker, I would like to make a contribution to this most important job by inserting General Twining's address to the mayors in the Appendix of the CONGRESSIONAL RECORD. Community support has a definitely beneficial influence on the way our airmen do their jobs. National support means even more to them. Anything that contributes to community support and national understanding of airpower and our Air Force is a contribution to our national defense. General Twining's address to the mayors is as follows:

ADDRESS BY GEN. NATHAN F. TWINING, CHIEF OF STAFF, UNITED STATES AIR FORCE, BEFORE THE WASHINGTON CONFERENCE OF MAYORS, WASHINGTON, D. C., FEBRUARY 16, 1956

In the military services, we consider it our duty to keep community leaders informed on the state of our defenses. I am especially happy to have the opportunity to talk to this gathering of mayors.

In these days of no war, but no certain peace, the whole Nation carries a great burden. Helping to bear this burden is a responsibility of every citizen of the United States, but it rests on the Nation.

When the draft requires a part of the lifetime of our men, it is not the Army that is doing this—it is the Nation.

When jet fighters and jet bombers operate over your head, it is not the Air Force that is doing this—it is the Nation.

All these are actions vital to the Nation's needs.

There must be a close and workable relationship between the Air Force communities and the civilian communities you administer. It is, therefore, our mutual responsibility to tackle problems that tend to loosen these mutual ties.

In recent months one of the most troublesome problems for us both has been aircraft noise. In order that we can both seek ways to diminish this problem, I want to give you some facts about noise, explain what we are doing about it. I want also to discuss the limitations to a complete solution.

All of the concern about aircraft noise has generated from a relatively small number of complaints. Do you realize that of 6,000 airports in the United States, only about 250, or about 4 percent, are Air Force bases? If we add the airfields of the other services, we can say that 5 percent or 6 percent of all our airfields are military bases. Many of these bases do not have jet operations, and only a handful support supersonic operation.

Aircraft engines continue to become more powerful, and therefore louder. Long ago we foresaw this problem. We initiated noise studies, and noise-abatement programs.

Theoretically, we could move Air Force bases away from cities. Actually, we are trying to do this, but it will never be a complete remedy. We cannot even get enough base money to properly prepare existing bases to accommodate our modern, high-performance aircraft. You can imagine how much it would cost to build all new bases away from population centers.

In many cases, this would do very little good. Wherever we plunk down a multimillion dollar air base with a several million dollar payroll, local construction and service contracts, and local civilian employment, we are soon surrounded by a rapidly growing community. An air base is a big business. It makes the nearby cities bigger and it automatically generates communities where none existed before.

Even if it were possible to build isolated bases and keep them isolated there would have to be two big exceptions.

Part of our air defense is necessarily based to protect centers of industry and population. To provide maximum range, 360-degree protection to such an area, the interceptors must be based close by. Any other policy would be like putting the city fire department out in the country.

The second exception is our Reserve and National Guard bases.

We could not expect effective Reserve participation if our reservists had to use most of their limited time going to and from their bases. The major proportion of our reservists and Air National Guardsmen live in or near populous areas and in an emergency they must get on the job immediately.

I might add that we are giving these Reserve components first-line equipment. We want them to have first-line equipment, because they would be of little use if they did not have it. But as we give these units first-line equipment, the noise of their operation gets louder.

Nevertheless, let me assure you that insofar as it is financially possible and tactically sound, we will continue to try to get our bases away from population centers.

There are other measures we can and are taking which offer better immediate and local help. Here are some of them.

Certain technical developments are now underway. For ground runups there have been developed a whole gamut of devices to reduce the sound of engines running on the ground.

Our Research and Development Command and our aircraft industries are spending lots of time and money to develop silencers or mufflers for jet engines. Unfortunately, many of the gadget developed so far, degrade performance. These are unacceptable since our margin of security depends on ever-increasing performance of combat aircraft.

In flight, we have adopted time-consuming, fuel-wasting, and tactically inefficient traffic patterns both for takeoffs and landings.

We think it is our duty to explain the reason for noise and to keep the people informed of what we are doing about it.

Our commanders, for instance, have a program that we call preconditioning communities. Before a combat wing moves into a new area, we explain to the local people what

to expect and why our air operations are necessary.

The way these communities have reacted and accepted the minor inconveniences of better defense is a tribute to the understanding of the American people.

Aircraft noise is becoming widespread. Military and civil aviation will work together to do everything possible consistent with security and progress.

The big job is to get our Nation to recognize this as a largely unavoidable consequence of progress. Every technological advance has had undesirable side effects—and opponents of those side effects always try to stop our progress. Their efforts to halt progress always succeed in slowing it down, but they have never succeeded in stopping progress.

Noise is just something we are going to have to live with. The American people will eventually understand this. We must do all we can to speed this understanding.

I just wish our jet noise were our only problem. To me the echoes of Communist H-bomb tests obliterate the noise that comes from our building a defense against them.

This does more than anything else to put our noise problem into proper perspective. Even if progress in our modes of travel were not inevitable, the noise irritation of jet engines is a minor price to pay for security.

There is still in the world a potential enemy who resents the freedom in which we live. The Communists are still unwavering in their quest for world domination. The strength of the United States stands in their way. American airpower has served to discourage Communist aggression.

To achieve their ambitions, the Soviets are building a powerful war machine—the largest in the world. Even more important than size is the fact that the Soviets are equipping this force with modern, high quality weapons.

We are concerned primarily with the Soviet Air Force because that is the only direct threat to our people, our churches, our schools, and our cities.

The Reds now have the means to hit these targets. For example, they are now building a long-range jet bomber. It compares with the best we have in the United States.

That bomber cannot reach all our cities because it does not have the ability to fly far enough. However, the Soviets are now building a turboprop bomber that can fly a long way. It is called the Bear—a very apt name, I think.

For several years the Reds have had smaller bombers that could easily reach targets in Europe, Africa, or Asia. Obviously they built these new and bigger bombers for only one reason—to be able to hit us here on this continent.

While they have been building these big bombers, they have also been building up their stockpile of nuclear weapons. Recently as you have read, they exploded a thermonuclear bomb with the power of millions of tons of TNT. It is inconceivable to most of us even to imagine a million pounds of explosive, to say nothing of 1 million tons.

A third area of Soviet effort to build up striking power has been in the field of missiles. We know they are working hard on these, and when they get them perfected our defensive problem will become much greater.

Our defense problem is great enough now. We know from our own experience that a determined bomber attack has never been completely stopped, and you can be certain that if the Soviets ever decide to gamble everything on an attack, it will be a determined effort.

Air defense is then, logically enough, one of the Air Force's primary missions.

To detect the approach of hostile bombers, we will have several lines of radar stretched across the possible approach routes. If an attacking force were detected at the northern radar line, at the top of Canada, we would have only 5 to 7 hours warning. If he slipped through to the warning line at the northern border of the United States, our warning time could be 3½ hours or much less.

This does not give us much time to act.

If this warning were ever received two things would happen. First, the interceptors of the Air Defense Command would be directed to take off to engage the enemy bombers.

We now have interceptors that can perform this mission during any conditions of weather or darkness.

I think you would be interested in seeing our best interceptors.

The fastest one we now have in service is the F–86D. It is an all-weather version of the famous destroyer of Communist Migs. Coming into our air defense is a new interceptor, the F–102. This is a supersonic, hard-hitting interceptor and it will add much to our defenses.

At the same time our interceptors are out to stop the enemy attack, our bombers will be on their way. They will be hitting enemy airbases and concentrations of airplanes. This would really be our best defense because it would prevent him from launching new attacks at us.

Here are the principal United States Air Force airplanes that would be involved in this counterattack.

There is the B–47. It is our medium jet bomber. It does not fly as far as the heavy jet bomber. However, by using our bases overseas, or by using aerial refueling, this bomber can strike anywhere.

Our largest bomber is the B–36. It was our first intercontinental bomber and it is still a good one. The B–36 may go down in history as an outstanding example of a powerful weapon that did its job without ever fighting. I believe that more than any other one factor, the B–36 has kept our potential enemies from attacking us. We are all grateful for the part this airplane has had in guarding the peace.

To replace the B–36, we are now getting the B–52. This is the first intercontinental jet bomber, and it is proving to be a fine airplane. We all hope that it will continue to keep aggressors at a respectful distance.

I have shown you a few pictures of the airplanes now in your United States Air Force. These are the weapons that allow us to perform the Air Force mission. They are the latest products of the finest technology in America.

Fine as this equipment is, it all would be worthless without the other two components of airpower—men and bases.

Here is where you civic leaders can be of positive help in improving the security of our country. By helping to further public understanding of airpower and the job it must do, you can make your job of furnishing protection to your communities much easier. By accepting your local base as part of your community, you can help give our men a feeling that they belong to your community. As you know, many of our officers and airmen become dissatisfied with a career of military service.

The inability to retain our trained, experienced people could cut deeply into our effectiveness. I am convinced that one reason for this dissatisfaction is that often our men feel as if they are outsiders in their community, and that the job they are doing is unappreciated.

Too often, community reaction to our air operations is not gratitude for the protection we provide, but visible annoyance over real or imagined irritations and hazards.

Fortunately, you men and others in your position already realize these things. Throughout the land, our community relations are improving at most bases. In some communities, the relationship is unbelievably good. You will be interested to know that the bases which are best accepted and supported by the local civilians are generally those bases best performing their missions. To me this means that community support has a definitely beneficial influence on the way our airmen do their jobs. Thus anything you can do to increase community support of any military base will be a valuable contribution to our national defense.

Again, let me tell you how much I have enjoyed this chance to get together with you.

Labor, AFL-CIO, Boosting Education by Scholarships Again

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present a letter received by me as one of the Representatives in Congress from my native State of California from the California State Federation of Labor, AFL–CIO, concerning their scholarship award program.

It should be noted that this is the sixth annual scholarship award program, and I know you will join with me in commending this group of American citizens for continuing to carry forward this program designed to assist students in obtaining their higher education.

CALIFORNIA STATE FEDERATION
OF LABOR, AFL,
San Francisco, March 6, 1956.

To California Senators and Congressmen.

DEAR SIR: Enclosed find folder announcing the California State Federation of Labor's sixth annual scholarship program. As you will note, the Federation is offering three $500 scholarships to senior high school students in California and Hawaii.

This contest is a permanent part of the State federation's educational program. Further, the contest is indicative of the historic interest shown by the American Federation of Labor in advancing the cause of education in this Nation.

Here in California we have long fought for the building of an ever greater school system and for proper recognition of the talents and services of the teaching personnel.

Sincerely yours,

C. J. HAGGERTY,
Secretary-Treasurer.

SIXTH ANNUAL CALIFORNIA STATE FEDERATION OF LABOR, AFL–CIO SCHOLARSHIP AWARD

THREE $500 SCHOLARSHIPS

Three college-scholarship awards of $500 each are being offered to senior high-school students in California and Hawaii who will be attending college or university during the coming academic year. The awards are being made available by the California State Federation of Labor in an effort to assist outstanding students in obtaining a higher education and to promote a better understanding of the American labor movement.

BASIS OF THE AWARD

1. Senior high-school students from public, private, or parochial schools who are

planning to attend a college or university anywhere in the United States or Hawaii are eligible to compete in the examination. No distinctions will be made as to sex, color, or creed. The award may be used to assist the student in any field of knowledge, and is not limited to those interested in labor alone.

2. An award will be made to each of three candidates on the basis of the candidate's score in the special examination and his 4-year high-school academic record. A check for $500 will be deposited in the student's name at the college he has chosen.

3. A 2-hour examination will be held on Friday, May 18, 1956, in each high school where applicants have filed. The federation must receive from the principal of the high school, not later than April 14, 1956, the applications of students who will be participating. The federation will then mail out the specified number of examination questions. Following the examination, the papers will be returned to the federation office for grading by competent personnel selected by the committee of judges.

The school records and examination papers of the 50 highest students will be examined personally by the committee of judges which will make the final selection.

4. The aim of the examination is to evaluate the student's knowledge and understanding of labor and industrial problems and his ability to present his information. The student should show his factual knowledge and comprehension of past and present social and economic conditions affecting labor and management.

TEST TOPICS AND SAMPLE STUDY QUESTIONS

I. Why labor is important to everyone

1. Why will unions and union-management relations be important to you no matter what walks of life you enter?

2. How many wage earners are there in this country? About how many of them are in unions? Which are the major industries of our economy? In how many of these industries are most of the wage earners members of unions?

II. The beginnings of unionism: 1800–1886

1. In the early 1800's, what changes in the methods of doing business led workingmen to act together for the purpose of attaining higher wages and shorter hours?

2. How was unionism affected by the industrial revolution that took place in the United States from about 1860 to 1900?

III. Unions take root, gain acceptance, and federate: 1886–1932

1. In what significant way did the structure of the American Federation of Labor differ from the large national labor organization that preceded it?

2. In what industries and occupations were unions important during this period?

IV. The labor movement becomes a major national force: 1932–1955

1. What principal causes were responsible for the unprecedented growth of unions in this period? In what industries did much of this growth occur?

2. In general, what was the impact of World War II on American unions?

V. Unions: How they are organized and how they operate

1. In general, how do unions govern themselves, how do they make decisions, how are they financed, and what are their internal activities?

2. What are the principal differences which distinguish the craft type of unions from the industrial type of unions? Are all AFL unions of the craft type?

VI. Scope of collective bargaining

1. What are some of the subject matters of collective bargaining besides wages and hours? Why are such issues as medical care, pensions, guaranteed employment, etc., becoming more and more important in collective bargaining?

2. Explain how many of the issues of collective bargaining are affected by Government action and therefore necessitate political activity on the part of labor.

VII. Labor and political action

1. What has been the historical position of the American Federation of Labor regarding the formation of a labor party?

2. How does the present American Federation of Labor attitude toward political action compare with the position of Samuel Gompers on the subject?

VIII. What workers want through unions and collective bargaining: Protective rules and good employment conditions

1. Explain why it can be said that many union agreement provisions are designed to give workers job security. What kind of threats to their security do workers face in industry today?

2. Why is the grievance procedure in a plant important both to the union and to the worker? Is it important to the employer also?

IX. Unions and Government

1. Which Government agencies have as their functions the handling of matters of public policy involving industrial relations? What are these functions and how are they important to unions? To employers? To unorganized employees?

2. Over the last 50 years has Government become less and less, or more and more involved in union management relations? Why? Name and identify at least four Federal laws which demonstrate this trend.

Eisenhower Policy Threatens To Tragically Cripple the Offensive and Deterrent Power of the Strategic Air Command

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1956

Mr. PRICE. Mr. Speaker, the CONGRESSIONAL RECORD for Thursday, March 8, carries an impressive analysis by Joseph and Stewart Alsop of testimony given by Air Force Secretary Donald Quarles and Air Force Chief of Staff General Nathan Twining before executive sessions of both congressional Armed Services Committees In that analysis of information officially given, the Alsops emphasized that our current output of B–52 bombers is only four per month in contrast with the Soviet output of the comparable Bison bomber which is almost certainly three times as large. Secretary Quarles and General Twining admitted that we would not reach our planned peak output of 17 B–52's per month for at least another year and a half. The Soviets, however, are working toward a peak output of 25 Bisons per month and will reach their high peak considerably sooner than we shall reach our much lower peak.

Since the B–52 bomber is the long-range bomber on which our Air Force as presently constituted depends, replacing the B–36 of the postwar era as the B–36 had replaced the B–29 superfortress of World War II, this slowed down production of B–52's is a cause for real alarm. It is hard to comprehend that Secretary Quarles could be honestly satisfied with the situation and yet satisfaction was the impression he created in his testimony. One cannot help feeling that General Twining was more honest when he qualified his approval of the proposed fiscal year 1957 budget by saying that we still retain greater air-atomic power than the Soviet Union "as of now."

In the New York Herald Tribune of Friday, March 9, the Alsop brothers pursue their analysis of the proposed fiscal year 1957 budget with special attention to the B–52 problem. They point out that Gen. Curtis LeMay, the brilliant commander of our Strategic Air Command, is outspokenly dissatisfied with the situation; and LeMay, who has commanded the Strategic Air Command from its inception and has accordingly been responsible for immediate retaliation in the event of aggression, is a man with firsthand knowledge of the problem whose opinion deserves the most profound respect. He is, in a sense, an outstanding "survival-firster"—to use the Alsops' phrase—rather than a "balance-the-budget-firster."

As of now most of General LeMay's striking force is composed of B–47's which are hopelessly dependent on overseas bases. Politically, those bases are becoming less and less reliable because of the general weakening of the Western Alliance. Strategically those bases are

becoming more and more vulnerable because of the Russian development of new ballistic missiles capable of obliterating those bases.

As overseas bases lose their importance, the striking power of the B–47 groups is proportionately reduced. If we do not have the striking power which B–52 groups could give us at a time when the overseas bases are permanently lost to us, the offensive and deterrent power of the Strategic Air Command will be tragically crippled. By that time, as the Alsops say, "The Soviets will have a large, wholly contained force of long-range jet bombers with no crippling dependencies of any kind and plenty of power to destroy this country."

General LeMay wants to replace his medium range B–47's with long-range B–52's in order to maintain the Stratgic Air Command's striking power during the present interim period before the intercontinental ballistic missile will again change the balance of power. Again to quote the Alsops:

In these circumstances the sublime satisfaction of Secretary Quarles (with the existing B–52 program) is a trifle hard to comprehend.

Mr. Speaker, with the consent of my colleagues, I shall insert the following column by Joseph and Stewart Alsop in the CONGRESSIONAL RECORD:

MATTER OF FACT

(By Joseph and Stewart Alsop)

THE B-52 PROBLEM

Both the magnitude and the urgency of the American defense problem are pretty well summed up in what may be called the B–52 problem, which is due to cause widespread and embittered public debate in the months immediately ahead.

Secretary of the Air Force Donald Quarles has now told both the Senate and House Armed Services Committees that he is perfectly satisfied with the existing B–52 program. This means that Secretary Quarles is satisfied with a current monthly output of only four of these long-range jet bombers which have become the essential instruments of strategic airpower, although the Soviet output of their comparable Bison bombers is already three times higher than American B–52 output.

One man who is conspicuously dissatisfied, however, is the brilliant commander of the United States Strategic Air Command, Gen. Curtis LeMay. It must have taken some courage for General LeMay to tackle the B–52 problem again this year. In 1952 he was tentatively slated to become Chief of Air Staff. He was actually brought into the Pentagon on a sort of trial basis. But his insistent demand for an expanded B–52 program got him into a hot row with the then Secretaries of Defense and the Air Force, Robert A. Lovett and Thomas Finletter. So LeMay missed the top job in 1952, and was returned to SAC command.

Yet courage is one quality that General LeMay has never lacked. In the budget-making period this year, he rather stormily demanded an emergency effort to step up B–52 output to the level of 40 to 50 planes a month, and to raise the production goal far enough to provide SAC with no less than 1,900 B–52's.

LeMay was turned down flat by the balance-the-budget-firsters. But at present the Air Staff is all but unanimous that he ought not to have been turned down. And the wise and moderate chairman of the Senate Armed Services Committee, RICHARD RUSSELL, of Georgia, is now demanding an increase of $1.5 billion in this year's Air Force appropriations, mainly to provide LeMay with more B–52's.

The B–52 program LeMay wants will cost a pretty penny.

The bill for each of these great planes is $8 million; and the kind of increase in B–52 strength that LeMay wants would require tremendous concurrent increases in SAC's tanker fleet and airbase system on this continent. But if you are a survival-firster instead of a balance-the-budget-firster, General LeMay's arguments appear to be absolutely unanswerable.

In brief, LeMay's Strategic Air Command now comprises 11 truly long-range groups, whose obsolete B–36's are now being very gradually replaced with B–52's, plus 28 medium-range groups equipped with B–47's. Numerically, the present ratio is 330 intercontinental bombers to 1,420 medium-range bombers, for there are more planes in the B–47 groups than in the long-range groups.

The B–47 groups are planned to operate from this hemisphere. All are to participate in the first strike, and General LeMay insists that SAC cannot do its assigned job with a total striking power of less than 1,850 bombers.

But most of General LeMay's force, being medium range, is hopelessly dependent on the overseas bases. Loss of those bases would cut his B–47 striking power almost exactly as much as the destruction of four-fifths of his B–47's on the ground before the war even started. Without the overseas bases, therefore, SAC could not possibly do its assigned job. General LeMay might wound, but he could not kill the enemy.

This dependence of SAC on overseas bases is now being rendered acutely perilous in two different ways. Politically the bases are becoming less and less reliable, because of the general weakening of the Western Alliance. Strategically, the bases are becoming more and more vulnerable. The prime purposes of the Soviets' new ballistic missile of 1,500 miles range are to intimidate the American allies who control LeMay's overseas bases; or if need be, to destroy those bases in one vast, widespread, simultaneous missile strike.

In 2 years' time or a little more, therefore, these already doubtful foreign bases, on which SAC is so dependent, will quite certainly become utterly undependable. At that time, General LeMay's power to kill may be lost any morning. He may be left any morning, with only enough power to wound. By that time the Soviets will also have a large, wholly self-contained force of long-range jet bombers, with no crippling dependencies of any kind, and plenty of power to destroy this country.

What lies ahead, in sum, is a preiod when General LeMay can only be sure of wounding the enemy, while his Soviet opposite number can be sure of destroying the United States. General LeMay wants to replace his medium-range B–47's with long-range B–52's in order to maintain his power to kill during this interim period before the intercontinental ballistic missile will again change the power balance. In these circumstances the sublime satisfaction of Secretary Quarles is a trifle hard to comprehend.

Adequate Highways for Everyone

EXTENSION OF REMARKS

OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1956

Mr. LOVRE. Mr. Speaker, I wish to place in the RECORD an editorial appearing in a recent issue of the Wilmot (S. Dak.) Enterprise, weekly newspaper edited and published by J. V. Brenner. The editoriral concerns highway legislation which is of concern at the present time. The editorial follows:

THE GREATEST NEED

This session of Congress will pass highway legislation that will set the course of America's development for the next 100 years. It may demphasize the rural areas in favor of the big metropolitan centers. It may doom more thousands of us to die on outmoded country roads.

And yet, all the clamor seems to be for superhighways to connect our big cities.

Unless a fair proportion of the funds for roads goes into improving our existing highways—the farm-to-market, town-to-city, home-to-work roads—they will become more and more inadequate. These roads we depend on so much—roads that were built before 1955, when few cars even ventured onto them at night—are in use by everyone—52 weeks of the year, not just occasionally—night as well as day. It will cost comparatively little to modernize them. For example, adequate signing—reflectrized signs for 24-hour visibility—will make existing roads safer at a fraction of the cost of highway construction. Widening a network of roads and bridges, and improving existing roads at other dangerous points, costs much less than construction of a mile or two of superhighway. Yet, by doing these things, we can save the most lives and meet the greatest needs.

Unless we give equal priority to these existing roads—before spending billions for the super roads between the big cities—the countryside will lose the future.

Congressmen from nonmetropolitan areas must be sure the existing roads get their share of the new highway funds.

The Cargo Preference Act

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, March 12, 1956

Mr. BUTLER. Mr. President, the current debate on the farm bill, and specifically with regard to the attempted repeal of the 50–50 provisions relating to the merchant marine, has evoked comment in the press throughout the Nation. A particularly convincing statement has appeared in the columns of the Cotton Trade Journal, of Memphis, and I ask unanimous consent that it be reprinted in the Appendix of the RECORD.

There being no objection, the news article was ordered to be printed in the RECORD, as follows:

[From the Cotton Trade Journal of February 24, 1956]

THE CARGO PREFERENCE ACT

We had hoped that the Butler-Tollefson Cargo Preference Act would not be seriously challenged as long as the United States owns huge supplies of surplus agricultural commodities it is disposing of abroad at terms more favorable to the foreign purchaser or beneficitry than are available to the American consumer.

We are disappointed to find that the Senate Agriculture Committee between the first and final committee prints of the omnibus farm bill, slipped in a provision that such commodities may be shipped without complying with the Cargo Preference Act, which

requires that at least 50 percent of the shipments be made in American vessels, if available.

The compelling reason for adoption of this legislation in 1954 is just as compelling today: The fact that the American merchant marine is an indispensable factor of this country's security and welfare, in times of peace as in war. All other countries recognize this fundamental fact, and honor it in practice—which, incidentally, gave rise to the necessity for the 50–50 legislation. It was because many other countries receiving American aid and surplus commodity cargoes specified that shipment be in vessels flying their own flags that our merchant marine was forced to turn to Congress for relief.

That relief must not be taken away.

Chief supporters of the move to void the Cargo Preference Act are the State Department, which always turns a supersensitive ear to the interests of other countries; and the Department of Agriculture and the Farm Bureau Federation, which have the mistaken idea that a considerably greater volume of surplus commodities would be shipped if only foreign vessels were used.

Price is the factor, and the only telling factor, in the purchase of our surplus commodities. Naturally, foreign purchasers would prefer to have their own shipping used—some even to the extent of adopting legislation discriminating against shipping flying other flags—but if purchase terms, mainly price, are attractive, the commodities will move.

Last year there was an attempt to kill the Cargo Preference Act. At that time American ship interests were assured that no action would be taken unless hearings are held. The Senate Agriculture Committee acted without scheduling any hearings on this issue.

The Senate Agriculture Committee also ignored the House Merchant Marine Committee, which is holding hearings and conducting a comprehensive study of this matter now.

Two years ago, shortly after the passing of the Cargo Preference Act, foreign shipping circles attacked it as inimical to the liberalization of international trade. We disagree. Is it maintaining liberalized trade to perpetuate a situation in which less than one-third of American exports and imports was carried in American-flag vessels? That was the picture when the act was adopted.

As a matter of fact, as far back as March 1934, Congress adopted a resolution directing that in any action by a Government agency to foster the exportation of agricultural or other products, provision should be made for their shipment exclusively in United States vessels, if available.

The Cargo Preference Act was therefore in the nature of a concession, not a restriction.

Let's hope the provision nullifying the Cargo Preference Act is knocked out of the omnibus farm bill on the Senate floor. The American cotton industry, like any other branch of the American economy, needs a strong American merchant marine. More—the American people need one.

Bill of Rights Day

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. ANFUSO. Mr. Speaker, on June 30, 1955, I introduced a joint resolution to establish December 15 of each year as Bill of Rights Day, since ratification of that historic document took place on December 15, 1791. This year we shall celebrate the 165th anniversary of this historic event.

The resolution—House Joint Resolution 367—has been referred to the Judiciary Committee, but thus far no action has been taken. I trust the committee will take the necessary action so that the Nation can celebrate the event beginning with this year. The resolution authorizes the President to issue a proclamation each year setting aside December 15 as an occasion for public celebration, urging the display of the American flag on all public buildings, and inviting the American people to observe the day with appropriate ceremonies.

The idea was first suggested to me by Mr. Vincent Rossini, a New York newspaperman, who founded the American Bill of Rights Day Association on December 15, 1941. The association is still very active and Mr. Rossini is its director. In a pamphlet published by the association, the origin of the idea is traced as follows:

It was at the NUIA convention, on September 24, 1938, when there was offered an honor scroll to Gov. HERBERT H. LEHMAN, that Mr. V. Rossini, inspired by Mr. LEHMAN'S speech, spoke on the Bill of Rights, and informed the audience of his sponsorship for a national holiday to be called Bill of Rights Day.

In fact, the NUIA, a well-known organization, dedicated and pledged to the perpetuation of the American principles, on December 14, 1940, passed a resolution—which was introduced at the 1939 annual convention, with Lieutenant Governor Poletti as presiding officer—to promote a movement to have the 15th day of December each year declared a national legal holiday, to be known as Bill of Rights Day.

The American Bill of Rights Day Association adopted a fundamental resolution in 1941 calling on Congress and the legislatures of the 48 States to pass a law declaring December 15 as Bill of Rights Day.

The signers of the above resolution were: Gov. Charles Poletti, Judge Matthew J. Diserio, Judge Anthony J. Di Giovanni, Ada Bess, Rosina Martella, Hon. Victor L. Anfuso, Ada Kellogg Krammer, Albert Clausi, Hon. Nicholas Rossi, John Martignetti, Nicola Perillli, Saverio Monachino, Lillian Mulé, Michael Farinola, Antonio Squillante, Mamie Casablanca, Vincent Rossini, Joseph Susca, Arturo Egitto, and Mildred D. Wilcox.

One December 15, 1941, the first observance of the Bill of Rights Day was held at the Memorial Hall of the YWCA, in Brooklyn under the auspices of the NUIA. Principal speakers were: Hon. Matthew J. Diserio, judge advocate of the American Legion, New York County, and deputy commissioner of the city department of sanitation; Mr. Vincent Rossini, founder of the Bill of Rights Day. Presiding officer was Mrs. Henry F. Kramer, chairman committee of management International Institute of YWCA, assisted by the officers of the Sgt. James Bealin Post of King's County, American Legion.

Part-Time President

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 12, 1956

Mrs. ST. GEORGE. Mr. Speaker, as one who has been definitely critical of the rather one-sided bias of the Washington press as expressed in their daily editorial columns, I was delighted to read the following objective, temperate and intelligent editorial in Saturday's Evening Star. This article discusses a situation that has been demagoged to death, and brings it into focus—a necessary job, excellently handled.

PART-TIME PRESIDENT

There has been a nearly unanimous approval of President Eisenhower's candor in discussing his health in relation to his availability for a second term in the White House. And it was neither unexpected nor improper that this matter of health of a presidential candidate should become a major consideration in the political campaign that already is under way. There will, very likely, be exaggerated statements made on both sides of the debate. But, assuming Mr. Eisenhower's renomination, it will be the American people who will sift the truth from the exaggerations and exercise their judgment accordingly.

Senator SPARKMAN of Alabama chosen to make the formal Democratic response to Mr. Eisenhower's announcement of availability, has said that "the people are to decide the most unusual question which has ever been put to a democracy." Mr. SPARKMAN is correct in a sense. For the most unusual circumstances about this question is that the people are indeed being given the facts on which to make their decision. There have been other Presidents—candidates for reelection—whose health proved tragically unable to stand up under the demands of further tenure of office. But if this was known to, or even suspected by, the candidates at the time, or their closest advisers, it was not made known to the American people.

The Democratic attack upon Mr. Eisenhower, on the health issue, has been summed up in the charge that he is proposing to become "a part-time President." Actually, Mr. Eisenhower is not proposing to become a part-time President. He has been given a clean bill of health by a distinguished array of doctors—who have based their conclusion on personal attention to his case. And he has said, in reemphasizing previous remarks, that "unless I felt absolutely up to the performance of the duties of the President, I would no longer be there in the job or I wouldn't be available." Mr. Eisenhower is not proposing to leave behind him in the White House the great responsibilities of the Presidency while he is in Gettysburg, in Georgia, or on the golf course. He knows that cannot be done. It is unlikely he would try to do it if he could.

What Mr. Eisenhower is proposing to do is to relieve the Presidency itself of some of the burdensome routine of what is perhaps the hardest job in the world. It will be good, not only for him but for other Presidents, if he succeeds in this objective. The effort to delegate some of the Presidential routine did not begin with Mr. Eisenhower's heart attack, or even with his term in office. It was not so long ago that President Franklin Roosevelt created a corps of administrative assistants with a passion for anonymity. And from that time, the Executive Office of the President has grown to be

one of the larger agencies of the Government. But neither Mr. Eisenhower nor his predecessors have proposed reducing the policy and command responsibilities. Nor has it been proved that he needs to, even if it could be done.

Constructive Criticism Can Be Helpful on Foreign Policy—Reckless and Captious Criticism Will Do Us Untold Harm

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 12, 1956

Mr. SPRINGER. Mr. Speaker, attached herewith is an editorial pointing out the necessity of unity on foreign policy. It is so well written and the case is presented in such a way I felt sure the entire membership of the House would like to have this editorial for reading purposes. Mr. Lawrence believes, as do many of us, that there is room for criticism in foreign policy provided that it is constructive. It is the recklessness with which some Members of both bodies have approached this question during the last few weeks that has brought out many editorials throughout the country similar to the one below. I believe all of us can tell the narrow difference which is so important and bridges the gap between constructive criticism and petty haggling which does so much harm among our own allies.

Any presidential election year is a difficult one for us in world affairs. I trust we can have a campaign where issues are argued fairly on foreign policy, but not won at the expense of our unity which is so important in carrying out foreign policy.

Mr. Speaker, the editorial is herewith attached in full from the issue of U. S. News & World Report, March 9, 1956:

NOW FOR UNITY

(By David Lawrence)

The time to close ranks is at hand.

The world has been assured that President Eisenhower will continue to exercise the leadership which the free nations of the world have entrusted to him.

America's internal politics, therefore, must not be allowed to retard the forward march of freedom.

There should be in our Congress a willingness to put aside partisanship in the national interest. The Democratic Party promised the American people in the 1954 congressional campaign that it would give the administration wholehearted support in foreign policy. Unhappily, the captious criticism and the reckless, irresponsible speeches in the Senate in the last few days have brought dismay. They have stirred up in the minds of the Soviets the feeling that our councils are divided and that our purposes can be thwarted in this, an election year.

The Secretary of State delivered on Sunday, February 26, a well-reasoned address. It was carefully prepared many days before his testimony to the Senate Foreign Relations Committee. It was a comprehensive statement of our policy as a whole, but the politically minded centered their fire on the extemporaneous answers given on February 24 to partisan questioning at the hearing of the Senate committee.

Surely there are great questions on domestic affairs to be debated between the parties that will afford an opportunity to get votes without sabotaging America's world policies and striking down the prestige of the head of the Department of State. For he has just started on a tour, scheduled some time ago, on which he will visit 10 Asian countries. It is important to achieve a better understanding with the peoples of Asia.

The Senators should have offered their good wishes to the Secretary of State and given a demonstration of unity, so as to enable him to leave with the knowledge that behind him in this country leaders of both parties are united for America. This would have impressed the Asian leaders. In effect, they now are being told by press dispatches that Mr. Dulles may not have the confidence of his own Legislature. Asians and Europeans think in terms of a parliamentary body and not of our Congress as a coordinate branch. When a foreign spokesman does not appear to have the support of his legislature, his words fall on deaf ears.

The weakness of democracies is their tendency to let partisan politics override considerations of unity.

What difference does it make whether the Secretary speculates rightly or wrongly before a Senate committee as to the psychological motivations behind the change in Soviet tactics from violence to economic competition? What he says has to be weighed in the light of how the Soviets themselves maneuver from day to day in the "cold war." A public hearing is hardly the place to divulge all the background of delicate matters of state.

Some of the Democratic Senators nevertheless keep on demanding that they be given "all the facts." Wasn't it only a year or so ago that we heard so much talk about a certain United States Senator who was alleged to be "encroaching on the executive branch"? Why do the Democrats in the Senate feel that they must formulate foreign policy or be given in public hearings every detail of our strategy in the "cold war"?

The most vital fact to bear in mind is that American policy is vigilant and that, no matter what the Soviets are planning, the United States and its allies are on the alert to meet whatever challenges may come.

There is allied unity today, even though differences do exist among our friends. These differences, however, are not exploited—they are submerged.

President Eisenhower at the helm will steer the Ship of State safely away from the shoals of war, if it can be done at all. His energies have been and will be concentrated on maintaining peace.

The American people are behind him. The Secretary of State speaks for the President, and the words of Mr. Dulles should be respected as such abroad.

The average American is not a partisan. He wants his Government to succeed in world affairs.

If the politicians only would realize it, their chances for individual reelection, regardless of party, are improved when they are nonpartisan on foreign policies.

For nonpartisanship means fairness, decent criticism, constructive advice, and an abandonment of the sniping which was so palpable last week in the proceedings of Congress.

Peace in an atomic age is hard enough to preserve without being confronted by misguided attempts to weaken the moral strength of one's own Government. For the voice of the spokesman of the United States throughout the world must be the voice not of a political party, but the voice of an unpartisan people.

It's a time to close ranks—to unite for America.

Johnson City (Tenn.) Press-Chronicle Editor Wins Award for Editorial

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 12, 1956

Mr. REECE of Tennessee. Mr. Speaker, Mr. George W. Kelly, editor of the Johnson City Press-Chronicle, was significantly honored when he was awarded the George Washington honor medal by Freedom Foundation at Valley Forge. This editorial honor came to Mr. Kelly as a result of his editorial, "Be Thankful That There Are So Many Things To Be Thankful For" which was published in the Thanksgiving Day editions of the paper. The object of the foundation's annual awards is to honor citizens and organizations for their outstanding efforts to improve public understanding and appreciation of basic rights and freedoms inherent in the American way of life through things they write, do, or say. The editorial by Mr. Kelly met these requirements in an outstanding way but it also emphasizes the basic motives that influence and guide people. I feel that this editorial deserves wide distribution and I am placing it in the RECORD so that it may be available to people over the United States. Dr. Kenneth D. Wells, president of the Freedom Foundation, announced the award at its seventh annual awards program on George Washington's birthday at Valley Forge.

PRESS-CHRONICLE EDITOR WINS AWARD FOR EDITORIAL

George W. Kelly, editor of the Press-Chronicle, has been chosen to receive the coveted George Washington honor medal awarded by Freedom Foundation at Valley Forge for his editorial on Thanksgiving.

The editorial, "Be Thankful That There Are So Many Things To Be Thankful For," was published on the editorial page of last Thanksgiving Day editions.

An honor medal award was also voted for Range 4-H Club at Wataug community "for its program of extensive cooperation with community projects, particularly community fair and Christmas toy programs."

Patton-Crosswhite Post and Auxiliary, 6975, Veterans of Foreign Wars, was given a second place honor "for the 1955 edition of its service program supporting almost every worthy phase of community activities with emphasis on youth development."

The editorial honor and others in the foundation's seventh annual awards program were announced at special George Washington Birthday ceremonies at the foundation's Valley Forge headquarters by Dr. Kenneth D. Wells, president.

OBJECTS OF AWARDS

The object of the foundation's annual awards is to honor citizens and organizations, regardless of race, creed, or economic status, for their outstanding efforts to improve public understanding and appreciation of basic constitutional rights and freedoms inherent in the American way of life through the things they write, do, or say.

Members of the 1955 awards jury residing in Tennessee were Hamilton S. Burnett, Knoxville, associate justice, Tennessee Supreme Court, and Alfred English, Shelbyville, past national commander, Disabled American Veterans. They were members of a distin-

guished jury, composed of Supreme Court justices, heads of national patriotic service and veterans' organizations. President Dwight D. Eisenhower is honorary chairman, and Herbert Hoover, former president, is honorary president.

THE EDITORIAL

The Press-Chronicle editorial:

"We Americans are thankful for many things.

"For one thing, we are thankful we are Americans.

"Not that we consider ourselves better than other people.

"No, not that.

"We must never become puffed up in our own conceit.

"But it is indisputable that, next to being a child of God, being an American is the greatest experience and privilege on earth.

"Millions of starving, struggling souls of other lands look to us yearningly from afar, firmly convinced in their hearts they are seeing the portals of the Promised Land.

"America has the most of nearly everything that counts in this life.

"Materially we have an abundance.

"Philosophically, our creed of 'life, liberty and the pursuit of happiness' inoculates us invincibly against tyranny.

"Scientifically, we have developed more know-how than any other people.

"And spiritually, despite evidences of gross paganism, we are probably closer to God than any other people in the world."

DEVELOPMENT

"Truly we are great. Our light shines for the whole universe. We stand as an example of the highest development of human dignity.

"But with greatness comes responsibility, awesome responsibility.

"The God who gave us so much expects us to share His gifts.

"He expects us to hasten His Kingdom here on earth.

"If we fail, then we shall be cast into outer darkness, there to languish with others in the misty, musty pages of history who had the chance but were not equal to it.

"Back in the beginnings of this country, the settlers brought in the harvest. Then they gave thanks. That's the origin of our present Thanksgiving.

"As we see it, America will remain great so long as she keeps the spirit of Thanksgiving.

"She will be great so long as she remains humble.

"She will remain great so long as she recognizes the supremacy of God."

DANGER IN POWER

"The danger to America is that, in her greatness, she will begin to think she is self-sufficient. When that time comes, when America worships her material wonders instead of God, then America will go as others gave gone.

"Oh, the miracles of the drawing board and the laboratory, and the marvels of the assembly line. Truly they have sent our economy spiraling to the tops of the mountains. We are reaching new Everests by the month, sometimes by the day and even the hour.

"What other nation on earth approaches our gross national product. Who can match our creative genius—in peace or in war?

"We ask these questions, and there is no reply.

"Let us be careful lest we worship stockpiles, or bank accounts or smoke stacks, or stocks and bonds—worship them as those of old worshipped their idols."

GOLDEN CALVES

"With God, these things are a part of man's well being. Without God, they are golden calves.

"It is Thanksgiving. If we are dizzy from looking at golden calves, let us get a grip on ourselves.

"God still rules. He can destroy our golden calves with a lift of His finger.

"Let us, therefore, bow down before Him. Let us give thanks for all that He has given us. And let us ask forgiveness for all our stupid and foolish pride."

Independence for the Handicapped Through Employment

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I would like to include an excellent essay entitled "Independence for the Handicapped Through Employment." It was written by Mr. W. Robert Shade, of Laureldale, Pa., a senior at Muhlenberg Township High School and was awarded first prize in the Berks County essay contest sponsored by the Committee for Employment of the Handicapped. First prize in the poster contest was won by Miss Sandra Lee Blome, a Reading High School senior. Mr. Shade's essay is as follows:

INDEPENDENCE FOR THE HANDICAPPED THROUGH EMPLOYMENT

Joe Pitrowski had come through 2 years of perilous combat in the Italian campaign of World War II unscathed. In February of 1953 he was working in a factory on a trailer with a beam lift, when suddenly a steel beam fell on his back. His spine was broken. Doctors said he could not live—but Joe had a will to live. He did survive, but was a paraplegic—a hopeless cripple. Was Joe to live on Government compensation for the rest of his life? Sure, he would have security—and a loving wife and a comfortable home. But he would be lacking a most important factor—work. He was doomed to live a long life as a human vegetable.

Luckily for Joe, however, his doctor knew of a place that might employ him. Today he is leading a happy, useful life as a supervisor in a precision-parts plant. Many disabled people are not so fortunate as Joe, however. Every day, every hour—normal, sound individuals are deprived of some faculty by accident or disease. Others are born physically deficient. The handicapped may be anything from blindness to paralysis.

The body of a handicapped person might be perfectly healthy—that is, what's left of it—but his mental outlook deteriorates with the passing of each idle moment. Let us realize that man was born to work; this is his right. Work is not only a means of making a living, but it is living. There exists in the souls of men an incessant urge to be busy, not just in order to eat, but to do something constructive and useful. Everyone has a need to be useful. There is nothing more demoralizing than the life of ease, the guaranteed existence. If a man cannot pursue useful objectives, his thoughts turn inward—he begins to pity himself, and his personality and logic become horribly warped. Death itself is ofttimes better than this utter monotony.

In this age of progress, medical technology has advanced rapidly. Miracles are performed as far as curing diseases and mending mangled bodies is concerned. But the mind is forgotten. The philosophy today is to keep a patient alive at all costs, and to repair his physical being as far as possible. But we are content to patch up human beings as if they were inanimate rag dolls and then confine them in a pasture for the rest of their days.

This confinement is not only psychologically erroneous but also financially unsound. Each year the Federal Government spends $400 million supporting the disabled and their dependents. Our welfare agencies are overburdened. The handicapped have latent abilities which must be put to use by spending money on rehabilitation and job placement instead of relief. Every penny earned by a self-sustaining handicapped worker is two pennies saved in welfare expenditures.

When a disabled person is hired, both employer and employee benefit. The employee has a job and the employer has gained a most reliable and assiduous worker. The results prove that the handicapped make better workers than normal unimpaired persons. This is explained by the fact that they appreciate their job opportunity, and thus are more conscientious than the average. Numerous surveys have shown that the handicapped have better attendance records, have fewer accidents, use less sick leave, and produce more than normal workers.

These facts have been demonstrated by several large nationally known corporations. There is even one small factory in Long Island that employs only the handicapped. This is Abilities, Inc., a plant which does subcontracting work for larger firms. These disabled workers turn out intricate devices of all sorts for Remington Rand, Sperry Gyroscope, Ford Instrument Co., and several aircraft manufacturers. Abilities, Inc., was the dream of Henry Viscardi, Jr., who was born with rudimentary legs. Viscardi wanted to show the world that the handicapped make excellent workers. He has succeeded in both this aim and also financially. About 170 employees, having all kinds of disabilities, earned $50,000 profit the first year. Ninety-six percent of these people had never held jobs before.

But these few are only a small portion of America's handicapped. Employers hold the key to freedom for some estimated two million handicapped. Too many employers have thrown away their key by use of short-sighted hiring policies. They ignore the fact that "handicapped" does not mean "incapacitated." Workers today must meet top-notch physical standards in order to be considered for a job. There is no reason why a deaf man cannot be employed in a boiler room or a blind man as a piano tuner. Indeed, in these cases, the "handicap" proves to be an asset. It is absolutely illogical to use the "able-bodied" screen for all jobs.

When interviewing a job applicant, the employer must not say to himself, "What's wrong with this fellow?", but rather take a more positive attitude—"What can this person do well?". The best way to hire a man is to evaluate his abilities—not his disabilities. Instead of a medical examination give the candidate an aptitude test. There are many tests, charts, and other plans for evaluating a man's skill available for job placement.

We like to think of America as a land of equality of opportunity and antidiscrimination. It is surely a land of plenty—if one is injured or congenitally malformed he is dutifully sustained by the State. But the handicapped do not want the staleness of this guaranteed existence. They must have an opportunity to take their places as useful, productive citizens in our economic scheme. No amount of pity nor monetary grants can compensate for this blessing. We may be our brother's keeper, but we do not have to keep our brother in a cage to provide him with food and shelter.

Address by Dr. Ira N. Gabrielson

EXTENSION OF REMARKS
OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1956

Mr. METCALF. Mr. Speaker, one of the Nation's leading conservationists is Dr. Ira N. Gabrielson, president of the Wildlife Management Institute, former director of the United States Fish and Wildlife Service and of its predecessor, the United States Biological Survey.

On March 5, Dr. Gabrielson set out to bring the conservation record up to date in an address opening the North American Wildlife Conference. In part, his speech dealt with the Department of the Interior.

Since it was delivered, the Secretary of the Interior has announced his decision to run for the Senate. So the people of Oregon are going to be called upon to pass on his stewardship.

I am sure conservationists everywhere will be interested in Dr. Gabrielson's objective analysis of some of the recent activities in the Department of the Interior under Secretary McKay. Dr. Gabrielson's address follows:

FORMAL OPENING 21ST NORTH AMERICAN WILDLIFE CONFERENCE

(By Ira N. Gabrielson, president, Wildlife Management Institute, New Orleans, March 5, 1956)

Today, the 21st North American Wildlife Conference opens, and I deem it a privilege to be here again to participate in the affairs of the conference to the greatest extent possible. For the benefit of those who are here for the first time, it seems advisable to point out briefly the character of this meeting. While the Wildlife Management Institute works out the details, this is a North American wildlife conference. The general session programs are developed by a committee representing many conservation organizations, both official and private, and the technical sessions are planed by a committee from the Wildlife Society. This is, therefore, truly an international conference.

It is participated in by officials, by representatives of conservation organizations, and by individuals. Because of the mixed character of this conference and because of the many new things which come up in these meetings, it has long been customary that no resolutions will be passed and no motions will be entertained. All chairman of the sessions have been instructed to entertain no motions and to accept no resolutions, and we hope that you will bear this in mind during the next 3 days. Resolutions and recommendations on the topics discussed at this meeting are properly the prerogatives of the participating conservation organizations.

We invite everyone to participate in the discussions of the papers, both in the general and technical sessions. We also invite you to make the most of the opportunity to meet with others who are engaged in similar activity from other parts of the Nation. In the opinion of many, these small meetings between men working on similar problems are the most productive events of this conference, and we hope that you will take full advantage of all of these opportunities.

A list of the related meetings and the places at which they are meeting are found in your conference program.

Two years ago, when we met in Chicago, I discussed briefly national conservation affairs in opening that conference. Last year, meeting in a friendly but foreign land at Montreal, it did not seem fitting to discuss our national, public problems. Today, I feel quite free to do so. I do not propose to repeat the things that were said in Chicago but to limit my comments to major events that have transpired since that meeting.

A number of good things have happened which made many hope that the administration was becoming increasingly conservation-conscious. Just about the time we were convinced, our hopes were dashed by another move which was definitely not good conservation and not good management of the public conservation estate. First, let me review the plus side of the ledger. I will not attempt to go into detail since most of you are already informed of many events, but for the sake of the record some of the most important ones should be mentioned.

Perhaps the most important single forward conservation step since the Chicago meeting was the revision of the old 1872 mining laws. After long years of effort and agitation, the mining interests, the United States Forest Service, agencies of the Department of the Interior concerned with mining, and conservation groups worked out a draft of a bill which while not an answer to all prevalent abuses of the mining laws would, in the opinion of well-informed people, correct a large portion of the worst abuses. This bill, which was enacted, is a long step forward. It was passed because it received vigorous administration support, the support of most of the mining industry, and the conservation organizations.

The second important law was the passage during the first session of the present Congress of a bill authorizing the distribution of the $13,500,000 surplus Pittman-Robertson funds to the States over a 5-year period. The first 20 percent of the total is included in this year's bill as passed by the House.

A third important legislative matter was the inclusion by Congress in both the amendments to the Atomic Energy Act and the Mineral Leasing Act of wording protecting the national parks and monuments and wildlife refuges from prospecting or exploration for fissionable material except in cases of extreme national emergency. Many people thought this also included protection from mineral leasing of any kind, but a Solicitor's opinion has nullified this thinking so far as the Department of the Interior is concerned.

Another important event has been the Interior Department's vigorous resistance to the repeated attempts of the armed services to take over part or all of the various wildlife refuges for their exclusive use. The resistance of the Department to the attempted invasion of the Wichita National Wildlife Refuge by the Army has been the most publicized, but the Department has resisted other efforts to invade the refuge system as well as a number of efforts to invade the national parks with commercial developments. They deserve the highest commendation for this vigorous attitude. The Army is continuing its efforts to secure the Wichita land, and if they succeed, it will be only because the administration has overruled Secretary McKay in his efforts to defend this refuge.

Another item which deserves commendation is the program as outlined by "Mission 66." While no one has had a chance to see the detailed proposed development in the individual parks, and while there undoubtedly will be objections to some items in proposed developments, the general statement of principles and objectives in "Mission 66" meets with the approval of most of the conservation groups. The Congress has included a considerably greater sum of money than has normally been available for this work to start "Mission 66" in the year beginning July 1. This appropriation included in the bill was passed by the House.

The Secretary of Agriculture has earned commendation from conservationists for two decisions which in many ways were crucial ones. One, the appeal of the Stearns Mining Co., asking to conduct strip mining operations on land they sold to the Federal Government many years ago and which is now a part of the Cumberland National Forest. The introduction of strip mining would unquestionably have not only destroyed a fine new growth of timber but would have caused serious erosion. The Forest Service turned this one down, and the Secretary upheld their decision.

He did likewise in an appeal by the Van Cleve interests to make a land exchange that would give them complete control of access to a vast area of national forest lands, one which already had highly developed recreational use by the general public. These two decisions were very much in the public interest and were widely applauded by conservation groups.

Conservationists have had two victories this past year that are worth special mention. In New York State private-interest groups were able to have a bill passed 2 years in succession by the legislature to allow the building of a dam, to be known as Panther Mountain Dam. In the State-owned forest preserve. The issue then went to the people in a referendum to amend the State constitution which protects the forest preserve. In order to prohibit the building of a dam a no vote was required. Despite the fact that in 10 referendums every amendment had been approved, the people of New York State flatly rejected this amendment. The vote against the dam was 1,622,000 to 613,000.

The second issue was on a national scope and is one with which most of you are familiar. After a 4-year battle, the upper Colorado River storage project went to the floor of the house with Echo Park Dam deleted and provisos inserted protecting Rainbow Bridge National Monument and reaffirming the National Parks Act, by stating "that it is the intention of Congress that no dam or reservoir constructed under the authorization of this act shall be within any national park or monument."

These and other items have at times given the conservation-minded public hope that the administration was becoming conservation minded. On the other side of the picture, however, we have to record several very depressing actions or series of actions.

First, the Department of the Interior has gone steadily ahead in the process of changing the Fish and Wildlife Service from a scientific career service into a political agency. There are now four schedule C (political appointments) to the top echelon in the Fish and Wildlife Service, and the morale in the organization continues to be low.

It is obvious in the years that I have watched not only this service but others that the same individual serving in a career status is a better public servant than he would be if he were subject to the vagaries of political fortunes. Renewable natural resources, such as forests, wildlife, soils, and waters, cannot be properly managed from partisan or political points of view. They should be managed from a long-time program basis, and I want to reiterate that the actions of the Department of the Interior in destroying the nonpolitical status of the Fish and Wildlife Service and making it as political as all the worst State conservation departments is a long step backward. Conservation organizations and individuals have worked for years to get the State conservation groups out of the situation in which they were completely dominated by personal or partisan politics; now, we find our national organization which has

been entirely free of such activities stepping toward the bottom of the ladder.

The other most serious setback was the action of the Interior Department in inviting oil and gas leases upon all but a very limited number of national wildlife refuges. While under the law, the Secretary always has had discretion to make such leases, it is a matter of record that few were ever issued except under extraordinary circumstances. Some were issued in the early days by the old Land Office without the knowledge of the Biological Survey. During the years that I served as Chief of the Biological Survey and Director of the Fish and Wildlife Service, I cannot recall that any leases were issued on wildlife refuges, although we had many applications and much political pressure to do so. No Secretary under whom I served yielded to that pressure.

Now the situation is reversed and bids are invited. During the time that Secretary McKay's famous "stop order" was in effect from August 1953 to December 1955, several hundred leases were issued, while only 11 were issued from 1920 to August 31, 1953. It appears that many of these were issued without the knowledge of the Secretary, and the evidence given before the House Merchant Marine and Fisheries Committee in recent hearings indicates that many of them were issued without the knowledge of the Fish and Wildlife Service.

Many of these wildlife refuges were purchased with sportsmen's duck-stamp money and others with special funds appropriated by Congress. There are less than 10 million acres of these lands in the continental United States, less than one-half of 1 percent of the total land area, and yet our millionaire and billionaire oilmen are in such danger of becoming poverty-stricken that this tiny fraction of the total land area of the United States must be made their happy hunting ground at the expense of the wildlife for which the land was dedicated.

It is not possible to explore for oil or gas, or to develop oil or gas fields, without doing damage to wildlife and wildlife habitat. According to the Interior Department's own records of the abundance of oil and gas in this country, and in view of the fact that producing wells in many States are on a limited production schedule in order to prevent breaking the market, it seems ridiculous to believe that there was any necessity or any need for opening these refuges to oil or gas exploration at this time.

This policy and the large number of oil and gas leases that have been issued are another long backward step in wildlife conservation. The wholesale violation of the Secretary's famous stop order makes one skeptical as to how much attention will be given to the present regulations which do give the Fish and Wildlife Service some voice in the supervision of leases. They have nothing to say about issuing them. One thing is certain. The present regulations make it possible for the Department to issue the leases and then expect the career employees in the Fish and Wildlife Service to find ways to minimize the damage to wildlife values and to justify the leases. This has already happened at the House and Senate hearings on wildlife refuge bills. The policymakers have been remarkably inconspicuous at these hearings, while career employees have been put forward to try to justify a policy of subordinating wildlife to oil and gas interests on wildlife lands. It has hardly been an inspiring example of leadership.

The emasculation of the Soil Conservation Service is another backward move which is mentioned here again because the obvious slow start in the small watersheds program is at least partly due to the lack of technical help in this field. The Small Watersheds Act was widely hailed as good legislation, and once it gets under way, it should prove helpful in developing sound land and water management programs. It has been criticized in some areas as involving too much engineering, particularly land drainage, instead of land management.

Legislatively, this is an important year. There are a number of important bills before Congress, among which is the need for renewing the Federal Pollution Control Act, which expires on June 30. A rather weak bill has passed the Senate, and following recent hearings in the House, Congressman BLATNIK has introduced a much stronger bill, H. R. 9540, which deserves widespread support.

Senator HUMPHREY, Congressman METCALF, and Congressman REUSS have introduced bills making it necessary for Congress to give approval before any wildlife refuge is abandoned or transferred. During the hearings on this bill before the House Merchant Marine and Fisheries Committee, Congressman BONNER, chairman of the committee, proposed an amendment to prohibit gas and oil leasing on these refuges, giving them the same protection from such leasing as they now have from the use of prospecting or mining for fissionable materials. Hearings are in progress on this bill, as this is written, and most of the conservation organizations are supporting the bill and the proposed amendment.

The Senate Agricultural Committee has reported out an agricutlural bill containing in the soil-land bank many provisions that should be of interest to all persons interested in wildlife and forestry. If the bill passes, these sections may well represent one of the greatest advances that has been made in many years. They have, however, been tied to a rigid price support scheme which is objectionable to some of the farm groups and also to the administration. Just what the outcome of this will be is not known, but conservation groups generally are supporting the soil-bank provisions as presented in the Senate bill.

There is in preparation a new bill of interest to many conservation groups. It is one creating a national wildnerness preservation system, leaving the administration of wilderness areas as defined in the bill in the hands of the agencies now administering the land. It proposes also to establish a commission to present factual information regarding wilderness areas, to establish procedures for maintaining their wilderness character, and for preventing their invasion without the consent of Congress once the wilderness status has been established and approved. This bill may well represent a tremendous advance forward both for those who are interested in wilderness recreation and for those who are interested in wilderness wildlife and its values.

This has been a somewhat longer introductory talk than is usualy made, but I felt that it was time to bring the record up to date.

This conference is your conference. We hope that you will get enough out of it to justify your time and expense. Have a good time and enjoy this unique and beautiful city of New Orleans while you are here, but also take back to your homes something of conservation value. The 21st North American Wildlife Conference is now open.

Problems Surrounding Airports at Detroit, Mich.

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, March 12, 1956

Mr. BEALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared with reference to the problems surrounding Detroit's airports.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BEALL

An article which inadvertently had a double timeliness appeared in the March 5 issue of Aviation Week. The story dealt with problems surrounding Detroit's airports, and included a reference to Representative GEORGE MEADER'S request that a congressional investigation be made of the Federal airport aid program.

At issue in the Detroit case is a proposal the major airlines shift their operations from the Willow Run Airport to the Detroit-Wayne Major Airport.

To equip Wayne Major for the additional traffic would cost $30 million, which would give the airlines a facility about 15 minutes closer to the city they serve. But the airlines are opposed to the plan. Their reason, according to Aviation Week, is as follows, and I quote from the article:

"The airlines argue that a saving of 10 to 15 minutes in travel time to the airport doesn't justify the expenditure of $30 million."

It is easy to see why Representative MEADER wants to look into the scheme and see why public funds are being asked for a plan which is so obviously uneconomical.

It is even easier to imagine how certain Members of this Congress will react to any proposals that more than $50 million be spent in the Washington-Baltimore area for the same purpose—to save an insignificant quarter of an hour of ground travel time.

I am speaking, of course, of the persistent attempts to promote construction of a new airport at Burke, Va. The only so-called advantage of such an installation as compared with the utilization of Friendship International Airport to serve the Capital area would be the saving of a small amount of ground travel time.

If the proposed spending of $30 million for such an irresponsible scheme in Detroit has prompted calls for a congressional investigation, think what the reaction should be to a far more needless expenditure of $50 million right in Congress' backyard.

I said at the beginning of these remarks that the article Aviation Week had a double timeliness. You can surely see that it does. Not only does it show the folly of the Detroit scheme, which is being opposed by the airlines themselves, but it also provides a lesson on how to deal with any proposition that Burke be built up while a modern airport is ready and willing to handle flights in the same region and that is exactly what Friendship is prepared to do.

Code of Ethics of American Society of Newspaper Editors

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 12, 1956

Mr. HÉBERT. Mr. Speaker, George W. Healy, Jr., the able editor of the New Orleans Times-Picayune and a director of the American Society of Newspaper Editors, recently gave a most interesting paper before the Caribbean Press Seminar in the International House in

New Orleans. Many South American newspapermen were in attendance.

I found the paper so interesting and informative that I would like to share it with you.

Here it is:

Gentlemen of the Americas, Mr. Nutter has suggested that all of you, particularly those of you who have come from the South, may be interested in the activities and background of an organization of which I happen to have the honor of being an officer and director—the American Society of Newspaper Editors.

Central and South America, I believe, have no society of organization which is parallel to this society. As a matter of fact, until 35 years ago, North America had no newspaper editors' society.

The ASNE, as we call it, today is a robust, active organization of approximately 400 members—representing daily newspapers throughout the United States. It has grown to this status after a modest start, for when the ASNE was organized only a score of editors—representing the larger newspapers of the Nation—were on hand.

The purposes and ideals of our society are expressed in its Code of Ethics, generally called the Canons of Journalism in the United States.

This code asserts:

"CODE OF ETHICS OR CANONS OF JOURNALISM—THE AMERICAN SOCIETY OF NEWSPAPER EDITORS

"The primary function of newspapers is to communicate to the human race what its members do, feel and think. Journalism, therefore, demands of its practitioners the widest range of intelligence, or knowledge, and of experience, as well as natural and trained powers of observation and reasoning. To its opportunities as a chronicle are indissolubly linked its obligations as teacher and interpreter.

"To the end of finding some means of codifying sound practice and just aspirations of American journalism, these canons are set forth:

"I. Responsibility

"The right of a newspaper to attract and hold readers is restricted by nothing but considerations of public welfare. The use a newspaper makes of the share of public attention it gains serves to determine its sense of responsibility, which it shares with every member of its staff. A journalist who uses his power for any selfish or otherwise unworthy purpose is faithless to a high trust.

"II. Freedom of the press

"Freedom of the press is to be guarded as a vital right of mankind. It is the unquestionable right to discuss whatever is not explicitly forbidden by law, including the wisdom of any restrictive statute.

"III. Independence

"Freedom from all obligations except that of fidelity to the public interest is vital.

"1. Promotion of any private interest contrary to the general welfare, for whatever reason, is not compatible with honest journalism. So-called news communications from private sources should not be published without public notice of their source or else substantiation of their claims to value as news, both in form and substance.

"2. Partisanship, in editorial comment which knowingly departs from the truth, does violence to the best spirit of American journalism; in the news columns it is subversive of a fundamental principle of the profession.

"IV. Sincerity, truthfulness, accuracy

"Good faith with the reader is the foundation of all journalism worthy of the name.

"1. By every consideration of good faith a newspaper is constrained to be truthful. It is not to be excused for lack of thoroughness or accuracy within its control, or failure to obtain command of these essential qualities.

"2. Headlines should be fully warranted by the contents of the articles which they surmount.

"V. Impartiality

"Sound practice makes clear distinction between news reports and expressions of opinion. News reports should be free from opinion or bias of any kind.

"1. This rule does not apply to so-called special articles unmistakably devoted to advocacy or characterized by a signature authorizing the writer's own conclusions and interpretation.

"VI. Fair play

"A newspaper should not public unofficial charges affecting reputation or moral character without opportunity given to the accused to be heard; right practice demands the giving of such opportunity in all cases of serious accusation outside judicial proceedings.

"1. A newspaper should not invade private rights or feeling without sure warrant of public right as distinguished from public curiosity.

"2. It is the privilege, as it is the duty, of a newspaper to make prompt and complete correction of its own serious mistakes of fact or opinion, whatever their origin.

"Decency

"A newspaper cannot escape conviction of insincerity if while professing high moral purpose it supplies incentives to base conduct, such as are to be found in details of crime and vice, publication of which is not demonstrable for the general good. Lacking authority to enforce its canons the journalism here presented can but express the hope that deliberate pandering to vicious instincts will encounter effective public disapproval or yield to the influence of a preponderant professional condemnation."

The code of ethics which I have read to you has a prominent place in the annual publication of our society, Problems of Journalism, which actually is the report of what transpires at our annual meetings.

These meetings generally are held in Washington, where members of the society have an opportunity to hear from the President of the United States and to question members of the cabinet, the Congress and other officials.

In addition to the annual book—a copy of which I hold in my hand—our society prints a monthly bulletin in which various issues and problems facing editors are discussed.

Annual meetings of the society are open. They are covered by the press and are attended by some interested persons who do not happen to be members of the society.

The 1955 meeting was opened with what we North Americans would call a free-hitting discussion. Robert M. Hutchins, former president of the University of Chicago, who now is president of the Fund for the Republic, opened the discussion.

Twenty-five years ago Mr. Hutchins, or Dr. Hutchins, made his first appearance before our society—and my appraisal of what he said would be that it was far from complimentary. Later he participated in the preparation of a published criticism of United States newspapers—a so-called study of freedom of the press as he saw it.

Dr. Hutchins at the 1955 meeting expressed his opinions about newspapers and about newspaper editors, and conflicting opinions were expressed by J. Montgomery Curtis, of the American Press Institute of Columbia University, Editor Jonathan Daniels of the Raleigh News and Observer and Editor Frank Eyerly, of the Des Moines Register and Tribune.

I thought it odd later that Dr. Hutchins, who had deplored one-sided reporting, sent copies of his speech—at the expense of the Fund for the Republic—to a great many persons whom he thought might reprint it or at least read it. However, when I offered to provide the Fund for the Republic a transcript of the replies by the other three gentlemen who spoke on the panel with Dr. Hutchins, the chief assistant to Dr. Hutchins declined my offer.

Now, apparently Dr. Hutchins and I have different notions as to the meaning of one-sided. He believes in circulating his speech but not in circulating the replies to that speech.

This, of course, is of no importance, and I mention it only as a means of trying to acquaint you with the type of programs which the American Society of Newspaper Editors presents for its members.

In addition to Dr. Hutchins, speakers at the 1955 meeting included former governor, Harold E. Stassen, special assistant to the President on disarmament problems, and Senator WALTER F. GEORGE, of Georgia.

There were many discussions of newspaper problems at the meeting. Four outstanding correspondents told of the changing pattern of reporting in Washington. Prominent lawyers and editors discussed coverage of judicial proceedings; prominent Members of Congress and editors discussed coverage of legislative proceedings; and three prominent officials discussed coverage of military affairs.

The activities at the 3-day annual meeting are just part of the society's work.

Throughout the year its committees function in various fields of interest to editors.

One of the most important committees of the society is that devoted to freedom of information.

Objective of this committee, and its only objective, is to assist newspapers in obtaining access to all the news of governmental agencies to which editors feel that the American public is entitled. This includes all news concerning the conduct of our public business.

The committee proceeds on the thesis that every arbitrary government in the recent history of the world has professed its belief in the release of information that served the constructive purposes of that government—and that citizens of a free government are capable of judging for themselves whether the information which they are entitled to obtain from the officers who are their public servants is or is not constructive.

J. Russell Wiggins, the present chairman of the committee on freedom of information, included a paragraph in his April report to the society which I consider worth repeating:

"Geheimrat Opel, of the Opel Works, came to me to complain of the great number of confidential, strictly confidential and secret reports and news services emanating from different Reich offices and organizations. That has gradually become a cancerous growth. I am going to put an end to this nonsense and will repleace this superproduction of confidential reports by one single news service to be issued by the ministry itself. In excited and strained times the hunger for news must somehow be satisfied. If that isn't done, conditions such as these here referred to arise which can be remedied only by great effort."

The person quoted by Mr. Wiggins was the notorious Dr. Goebbels, Hitler's minister of propaganda.

Having been on both sides of the table—briefly in the Government and for more than 30 years in newspaper work—I recognize the inclination on the part of Government officials and employees to disclose only such information as will reflect favorably on them.

Protecting the general public from the damage which can be done by the furtherance of such inclination is the conscientious newspaperman, who believes that his reader is entitled to all information about his

Government which does not jeopardize the security of his country. The conscientious newspaperman seeks to publish information which is favorable and unfavorable. He should not publish only the good and omit the bad.

Many individual newspapermen have achieved noteworthy success in exposing conditions which public opinion sought to keep hidden. I am sure that there will be many more such exposes. They are all to the good, and the American Society of Newspaper Editors would be the last organization in the Nation to discount their value.

Still, ASNE feels that there is frequently need for concerted, rather than individual action. That is where the freedom of information committee goes into action. When individual reporters are faced with a blank wall, the committee may call on a Cabinet officer, acquaint with him the situation and obtain orders which will make openings in the wall for all newspapermen.

Having described to you, briefly, what our organization stands for, I shall be happy to try to answer any questions which you would like to put to me.

I would like also to welcome you to New Orleans and to say that if any of you care to visit the Times Picayune-New Orleans States building, just 3 blocks from International House, we will be most happy to receive you.

Thanks for your attention.

Results of 1956 Questionnaire Poll, 42d District of New York

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1956

Mr. PILLION. Mr. Speaker, in the early part of February, I mailed 105,000 questionnaires, one to each household in the 42d Congressional District of New York.

The questionnaire was accompanied by a nonpartisan, pro-and-con summary of the facts and issues involved. The background memorandum and questionnaire were confined to the following five pending legislative proposals: Niagara power development, the 1957 budget and taxes, the highway program, Federal aid for school construction, and the farm issue.

The purpose of the survey was twofold:

First, to give the public a concise summary of the facts involved in these issues and to stimulate public interest toward solving them.

Second, to determine in broad terms the attitudes of the people in this congressional district and establish a mutual appreciation of the problems as they are, in essence, presented to Members of Congress.

Three thousand seven hundred and eighty-two questionnaires have been returned to this date. In addition to the questionnaires, we have received hundreds of worthwhile comments and suggestions. The returned questionnaires and letters indicate a sincere good will and desire to participate in solving this Nation's problems.

I invite the attention of the distinguished Members of both Houses of this Congress to the results of this poll. The tabulated results are:

NIAGARA POWER PROJECT

1. In this apparent impasse, which course would you prefer for the development of the Niagara Power?

(Please indicate order of preference by figure, 1, 2, 3, etc.)	*Only first preference tabulated*
(*a*) Development by the investment owned group of 5 utilities (private enterprise)	2,081
(*b*) Development by the New York State Power Authority (public power)	314
(*c*) Development by the U. S. Government	218
(*d*) Immediate construction by the U. S. Army engineers and subsequent transfer to the New York State Power Authority or to the private utilities upon final choice by the U. S. Congress	281
(*e*) Submission to the people of the State of New York in an advisory referendum as to their views between public and private development	305

THE 1957 BUDGET, NATIONAL DEBT, TAXES

1. Here are some of the larger expense items of the budget. Which would you reduce?

Fiscal 1956 (billions)	*Proposed 1957 (billions)*	*Expense item*				
19.1	19.9	Defense Department, pay and maintenance	Yes	806	No	2,232
10.5	11.7	Aircraft, ships, guided missiles, weapons, and ammunition	Yes	348	No	2,676
3.0	3.3	Atomic energy, research and development	Yes	243	No	2,774
2.5	3.0	Foreign military aid	Yes	2,251	No	965
5.1	5.1	Gross farm support programs, net cost is $2.1 for 1956 and $1.6 for 1957	Yes	1,887	No	1,213
1.9	1.9	Foreign economic aid	Yes	2,239	No	986
4.8	4.9	Veterans' service and benefits	Yes	1,274	No	1,791
1.6	1.7	General government, executive, legislative, judicial	Yes	1,858	No	1,210
6.2	6.3	Commerce and housing	Yes	1,917	No	1,089
6.8	7.0	Interest on debt	(Unchangeable)			

2. If next June, there appears a surplus sufficient to balance the budget, payoff from ½ to 1 billion dollars on the debt and leave enough to pay for the tax cut, which type of tax cut would you prefer?

(*a*) No tax cut. Apply surplus to reduce national debt and improve United States credit for future contingencies	Yes	1,760	No	1,031
(*b*) Corporate tax rate 52 percent to drop to 47 percent (about $1.7 billion)	Yes	424	No	1,913
(*c*) Wartime excise taxes on liquors, cigarettes, gasoline (about $1 billion)	Yes	636	No	1,739
(*d*) A flat 5 to 8 percent reduction in income tax rates (cost $1.5 to $2.5 billion)	Yes	1,104	No	1,418
(*e*) An increase of $100 in personal exemptions (cost $2.5 billion)	Yes	1,796	No	835

HIGHWAY CONSTRUCTION PROGRAM

1. After balancing the benefits against the costs, do you favor any type of Federal interstate highway bill which allows New York State 659 miles out of 40,000 (1.6 percent), bearing in mind that New York State has 10 percent of the population and pays 14 percent of all Federal taxes?	Yes	1,135	No	1,981
2. On the basis of financing the cost by an increase in Federal taxes by 1 cent a gallon on gas or 2 cents for diesel fuel or by some other combination of automotive taxes, do you favor a $1 billion to $2 billion annual Federal interstate highway aid program?	Yes	1,740	No	1,346
3. If, in your opinion, a Federal interstate highway program is needed, do you favor a program of:				
(*a*) about $1 billion a year for 5 years	Yes	1,354	No	699
(*b*) about $2 billion a year for 10 years	Yes	1,209	No	742
4. Which ratio of Federal interstate highway aid to States do you favor (the present law is 60–Federal and 40–State)?				
(*a*) 60 Federal–40 State	Yes	2,253	No	310
(*b*) 75 Federal–25 State	Yes	603	No	773
(*c*) 90 Federal–10 State	Yes	261	No	878
5. Do you favor financing the interstate system by tolls, wherever practicable, with the United States underwriting the deficit?	Yes	1,931	No	1,189
6. Assuming that a delay of 1 to 3 years may result, would you favor a restudy of the interstate highway system for the purpose of giving top priority to about 20,000 miles which have prime national, defense, and economic interest?	Yes	2,251	No	869

FEDERAL AID FOR SCHOOL CONSTRUCTION

1. Do you favor Federal aid for school construction as provided for in either the Smith or Kelley bills? If "Yes," then please state how you would prefer to pay the costs?				
(*a*) Are you in favor of extending Federal aid to States for school construction as provided in either the Smith or Kelley bills?	Yes	1,756	No	1,415
(*b*) Should the costs be paid out of the general Federal taxes and thus postpone and reduce the amount of a possible tax cut?	Yes	1,496	No	1,101
(*c*) Should the costs be paid by either increasing Federal taxes or by continuing Federal spending in excess of revenues?	Yes	386	No	1,570
2. Which plan would you prefer?				
(*a*) Smith bill costing $1.25 billion over 5 years?	Yes	1,198	No	1,002
(*b*) Kelley bill costing $1.6 billion over 4 years?	Yes	791	No	1,126
3. Are you in favor of the Powell amendment to bar Federal aid for construction in school districts which do not conform to nonsegregation?	Yes	1,419	No	1,592

THE FARM ISSUE

1. In general, after balancing the benefits against the costs, do you approve the soil bank program?	Yes	1,997	No	980
2. Do you approve the present flexible 75 to 90 percent parity price program over the proposed 90 percent parity price?	Yes	2,084	No	743
3. Do you favor no agricultural program and thus allow farm prices to seek their own market level?	Yes	1,692	No	1,402

Long Beach, Home of the DC–8

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1956

Mr. HOSMER. Mr. Speaker, the Long Beach plant of the Douglas Aircraft Co. will soon turn its production lines to the manufacture of the fabulous new DC–8 jet airliner. Since the editorial below was written, additional orders have been received by the Douglas Co. for the new aircraft.

It is with justifiable pride that I call attention of my colleagues to the manufacture of this newest jet age miracle in the congressional district which I have the honor to represent.

The Long Beach Press-Telegram re-

cently on its editorial pages took note of "Long Beach, home of the DC–8," as follows:

LET'S TELL OF OUR ROLE IN THE JET AGE

Having put itself in the vanguard of the commercial jet age, Long Beach should now lay plans to develop the marvelous opportunity of identifying itself with the plane that will lead the field.

That plane is the DC–8 airliner. It will be produced here in Long Beach at the Douglas Aircraft plant.

After a long contest in commercial aviation circles to see which company would be the first to get contracts for commercial jets, Douglas came out on top. It not only obtained the first contracts, but also has far out sold competitors.

Douglas now has 106 orders for the new plane, a stratoliner with first class cabins, space for 122 passengers (there's a tourist cabin model that will carry 144 passengers), and a cruising speed of 550 miles per hour.

These planes have been sold to 10 different airlines, both domestic and foreign, and will vastly increase the convenience of air travel and shrink traveling times throughout the world.

By late 1958 the Douglas Co. will have DC–8's in the air, and deliveries to the customers will begin, it is estimated, in the summer of 1959.

So Long Beach has sufficient time in which to plan and launch a campaign to make the DC–8 jetliner and Long Beach synonymous in the minds of outsiders.

We have been trying to think of a slogan which would capsulize the idea we have in mind. Perhaps our readers can help produce a suitable one.

We have been strongly inclined toward the phrase "Long Beach, Home of the DC–8." It doesn't seem to us that such a slogan would be stretching the point, even though the Douglas operation in Santa Monica will contribute significantly to the manufacture of the plane. But perhaps another slogan, just as good, can be coined which will not arouse civic or professional ire elsewhere.

The Santa Monica branch is responsible for a great deal of the tooling and for the engineering on the new plane.

The Long Beach plant will take the assembly parts, however, put the plane together and produce the final article. Here's where it will come into existence and take to the skies.

This picture should suggest something clever and effective to the minds of some of our civic-minded folk who want to see this community get the recognition which it deserves as it steps in to lead the country in production of these revolutionary airliners.

How about "Birthplace of the DC–8"? What's your suggestion?

Flint (Mich.) Journal Supports Higher Postal Rates

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1956

Mr. CEDERBERG. Mr. Speaker, the editor of the Flint (Mich.) Daily Journal appropriately points out in an editorial in his March 4 issue that postage we pay for carrying our mail is not a tax but payment for a service. He also expresses the belief that the public is willing to pay a modest postal rate increase as a means of partially correcting a deficit situation.

Since the editorial is pertinent to legislation soon to come before us I submit the editorial for consideration of my colleagues.

It follows:

HIGHER POSTAL RATES NEEDED

The Post Office Department, under Flint's Arthur E. Summerfield, is trying to get out of the red ink—and having difficulty getting its program approved so it can accomplish its objective.

Elsewhere in the Journal today is a presentation of postal deficit experience in past years and an outline of the program by which Mr. Summerfield hopes to accomplish a reduction in the deficit along with more efficient postal service. Whether the program is put into effect depends on Congress.

That's where Mr. Summerfield and the Eisenhower administration are fighting an uphill battle, with not too much hope for success. Previous attempts have been made to end the postal deficit by raising rates, but Congress has refused.

Let's look at the picture:

The Post Office Department's deficit for the fiscal year 1952 was an astronomical $727 million. Changes instituted by Mr. Summerfield after he became Postmaster General January 20, 1953, reduced that deficit to $362,700,000 in the 1955 fiscal year. Postal salary increases and other benefits of $178 million voted by Congress recently will hike the deficit in this fiscal year to $440 million.

The deficit averaged $33 million annually from 1900 through 1940. From that period until 1946 there was a slight surplus because of wartime conditions. Since 1946 the deficit has averaged $460 million yearly.

What caused that tremendous increase? The answer, in simplest terms, is growing mail volume and rising costs. Clerical and carrier pay, fees to rail and air shippers, costs of postal trucks and other expenses have gone up 107 percent since 1932. In contrast, first class letter rates are the same—3 cents—as they were in 1932. Rates on second-class mail are only 3 percent above 1932, third class only 38 percent higher. In-county rates are the same as in 1885. Pound rates for advertising mail are below 1932 levels. The volume of mail handled has jumped to 56 billion pieces yearly.

Small wonder the Post Office Department deficit grows.

In the last 10 years, costs of our postal service have exceeded revenue by almost $5 billion. Another $440 million will be added this fiscal year. That accumulated deficit would build a lot of schools or hospitals, buy a lot of bread for the needy, provide quite a few weapons for our national defense.

If the problem is one of simple balancing of expenditures and revenues, why isn't something done about it? The answer is Congress. The politicians on Capitol Hill insist Americans won't stand for higher postal rates.

With that conclusion we disagree. We believe Congressmen, in placing the emphasis on the increase to the individual of 1 cent to mail a letter, have erected a strawman. We believe their opposition to bringing postal rates in step with reality stems from heavy postal users in business and organizations that have been accepting a tax-financed subsidy made possible by low postal rates.

All of us object to avoidably increased taxes. But payment for postal service is not a tax. It is a charge for a service rendered. Those who use the service should pay the bill.

The car wash offers an example. Years ago we had a car washed for 50 or 75 cents. Now we pay $1.75. We may dislike that added levy, but we know the washer's wage is higher and we expect to pay more for the service.

Why should the service of delivering a letter be any different? It's a different United States economy than it was in 1932. We should not expect to pay the same price to mail a letter as we did in that year. It's estimated a 4-cent letter would mean 12 cents more a month to the average family.

As for the big users of postal service, mailing is a cost of operation. Business expects to be paid a reasonable amount for services it renders or merchandise it sells. It should pay a fair price for postal service and most businesses are willing.

We don't believe Americans favor piling deficit on deficit in the postal service. We don't believe they want unnecessary interest charges adding to their or their children's burdens 10, 50, 100 years from now. We don't believe they favor mail subsidies to certain users.

It is our belief the public is willing to pay modest postal rate increases as a means of partially correcting a deficit situation. Congress should knock down its strawman and adopt rates which would put the Post Office in a sound financial position. In the end, the cost will be less.

President's Decision Was Good News to the American People

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1956

Mr. SCUDDER. Mr. Speaker, under leave to extend my remarks, I desire to include an editorial from the Santa Rosa (Calif.) Press-Democrat of March 1, 1956 entitled "President's Decision Is Best News of Year."

This editorial is a timely expression of public reaction to the decision by President Eisenhower to make himself available for a second term. I can add very little to its sentiment, other than agreeing that the President's decision was indeed good news to the American people.

The leadership that President Eisenhower has given, not only to our country but to the world, is significant in these trying times. He is the greatest symbol for peace in the world today, and has gained a degree of respect enjoyed by few other American Presidents.

His announcement to become a candidate for reelection so that he might carry on the program of peace and prosperity for which he has been striving, will give to the American people the opportunity to endorse his positive record of accomplishment.

The editorial follows:

PRESIDENT'S DECISION IS BEST NEWS OF YEAR

Decision of President Eisenhower to run for reelection is the best news thus far in 1956. The best news of the entire year, of course, will be his reelection by all the people.

There is no such thing as an indispensable man, as the President has repeatedly pointed out.

But there is such a thing as the best man for any job, and for the Presidency of the

United States that man is Dwight D. Eisenhower.

From the short-range economic viewpoint—which is far from being the most important factor—the people of the United States have never enjoyed better times. There are more people working, for more money, than ever before. Even more important, they are getting more real wages because the upward spirals of taxes and living costs have been stopped while earnings have gone forward.

There are a number of things vastly more important than the short-range economic picture, outstanding as it is. They are more important because they affect the kind of nation our children will live in, as well as the kind of nation we are living in today.

A few years back when "tax, spend, and reelect" was our Federal philosophy, the ruling politicians had a cynical saying: "You don't shoot Santa Claus."

Mr. Eisenhower abolished that philosophy. His administration abruptly halted the constantly increasing debt that was being built up as a heritage of national insolvency for our children. A return to a balanced budget is in sight and Federal taxes are coming down slightly.

Another thing abolished was the dangerous theory, put into practice, that the executive department of Government was the ruling department, with the Congress obligated to give rubber-stamp approval. Mr. Eisenhower's administration returned to, and has adhered to, the concept on which this Nation was founded and became great. That is the concept of the independence of the judiciary, the executive, and the legislative branches of Government.

For 20 years prior to Mr. Eisenhower's election, there had been a growing trend toward big Government. The number of bureaucrats constantly increased. The regulations they imposed on the people grew constantly more numerous. We seemed to be drifting constantly farther from the American historic philosophy that the least Government is the best Government. We seemed to be more and more accepting the European concept that the State was more powerful and more important than the people.

Mr. Eisenhower's administration abruptly changed this trend. Americans once again are coming to rely upon themselves, not upon Government handouts and regulations.

These things, we think, are far more important than the fact that times have never been better.

Combined with good times, they make Mr. Eisenhower's decision good news indeed.

A Compton High School Junior Writes Winning Essays on Democracy and Bill of Rights

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. DOYLE. Mr. Speaker, in the great 23d District, Los Angeles County, Calif., I have been pleased to actively support every program in the district whereby there was emphasis placed upon the writing of essays and compositions by students in schools, and also in support of every program which emphasized participation in discussion and speaking on school platforms or other public forum by students of the great 23d on the subject of the Bill of Rights or related subjects.

And now, I am pleased to be able to present for your attention and that of all of my distinguished colleagues in this great legislative body, two winning essays by Mr. Bob Jacobs, a junior in the Compton High School of the great 23d District who has the worthy ambition to attend the Naval Academy at Annapolis upon his forthcoming graduation from high school.

His essay, I Speak for Democracy, was one of the winners in the chamber of commerce essay contest on this subject. And his essay, The Significance of the Bill of Rights Today, won for him the prize of a $100 United States Government bond.

The text of each is herewith submitted. In this connection I am sure you and all my other colleagues will join me in complimenting this ambitious, forthright young American citizen, Mr. Bob Jacobs, of Compton High School, Compton, Calif.:

I SPEAK FOR DEMOCRACY

(By Bob Jacobs)

The old man rested his back against a stately oak tree and bade the gamboling youngster to take a seat at his side. A cool breeze stirred the blades of grass in the acres around them, into a green, glossy sea, and the snow-capped mountains in the distance gave a peaceful awe to the scene.

The old man spoke, "You know, Bobby, we're mighty lucky to be sittin' here now." The boy looked quizzically at him. "Yep," the old man continued, "a whole lot of good men have given their happiness and even their lives to let us sit out here and talk. Men like Patrick Henry, Nathan Hale, George Washington, Honest Abe Lincoln, Teddy Roosevelt, Douglas MacArthur, Franklin Roosevelt, Ike Eisenhower, yes, and a lot more men like Joe Doaks who fought and died and were never heard of. We are mighty lucky to be here."

Yes, old man, you are lucky. Over 175 years ago, a group of fearless men declared these United States to be free and independent under God and since then thousands of young and old men alike have given their lives in her defense. What have these men died for? They have died for the song of liberty; the song that fills the heavens above us each day; the song of a hundred and sixty million people living together. All you have to do is listen and you, too, can hear it. You hear it when the presses of the daily paper rumble into action printing the views of many men without fear of reprisal. It's in the hum of the airliners' engines as they carry passengers from sea to sea freely and undisturbed. It's in the butcher's throaty voice as he says, "Frankly, Mr. Brown, I don't like that new tax bill the President passed. It really hurts us small-business men and I'm writing to my Congressman about it." The song of liberty is there in his voice because he can speak his mind without fear for his life.

In most of the countries of the world today, the flame of liberty is dying out, but in America's democracy it spirals to new heights and consumes the propaganda of those who would extinguish it. Like a flame, though, it could be quenched; but with the help from God, a fighting will, and eternal vigilance, the sands of time will only serve to burnish, beautify, and uphold the precious flame of democracy.

THE SIGNIFICANCE OF THE BILL OF RIGHTS TODAY

(By Robert M. Jacobs)

In our troubled times what single document could be as important as our Bill of Rights? Ten simple inalienable rights granted to us by our Constitution, without which our entire democracy would most assuredly collapse as did the ancient and once glorious empire of Rome.

In our age of atomic weapons and artillery far beyond the wildest, most immaginable dreams of our forebearers who construed this Bill of Rights so many years ago, let us stop and recall the conditions under which this noble document was composed.

Here were 13 young, struggling Colonies, offspring of Great Britain, fighting for their very existence in a new, dark, foreboding land. Over their heads constantly hung the iron fist of tyranny and oppression from their homeland. Finally, driven to their wits' end by the power-mad Parliament of England, the newborn nation in an attempt to throw off the yoke of slavery, formed a convention of representatives from each Colony in the new land and adopted this Bill of Rights and Constitution to guide them in their time and to be used by their posterity.

Is this not also true today? There is an unstable element at work in our country gnawing at the very foundations of our freedom. We must not lose hold of these basic principles of our freedom or our entire free way of life will come crashing down about us.

We must do everything in our humble power to prevent this disastrous theory from becoming a true life fact. We cannot afford to lose hold of these rights for they, with the help of God, are our only perceptible way of maintaining our standard of living.

This aged document "of the people, by the people, and for the people," is our life and our liberty.

May we keep these, our sacred rights, forever.

Needs of Ranchers and Farmers

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 12, 1956

Mr. WICKERSHAM. Mr. Speaker, I desire to read the testimony of a real Oklahoma rancher who knows the needs of ranchers and farmers.

Members of the House Agriculture Committee:

I am Harold Davis, of Roff and Roosevelt, Okla., president of the Pontotoc County Farm Bureau, and vice president of the Pontotoc County Soil Conservation District. I am grateful for the opportunity to appear before this committee to discuss with you the proposed soil-bank bill and, more specifically, S. 3183. I am sure that you gentlemen are aware of the fact that legislation of this nature is long past due. Due to the economic status of American agriculture, the current parity ratio of all agricultural products is approximately 80 percent parity, which is below the parity ratio of the depression years of the 1930's.

We, in our section, are concerned that apparently some agricultural commodities will not benefit comparable with others. The increase in support prices to the basic commodities is taken care of, the supports on cottonseed and soybeans, and also the support on dairy products is increased.

In the declaration of policy under section 202 of Senate bill 3183, "Congress hereby finds that the production of excessive supplies of agricultural commodities depresses the prices of income of farm families * * * it is in the interest of the general welfare

that the soil and water resources of the Nation be not wasted and depleted in the production of such burdensome surpluses * * *. It is hereby declared to be the policy of the Congress and the purposes of this act to protect and increase farm income."

I have here the January 15, 1956, parity report of the USDA, and I would like to call to your attention the parity relationship of beef calves which is 75 percent, beef cattle, 66 percent, lambs, 73 percent, sheep, 59 percent, which constitutes the primary income from our section, this is a simple average, 67.5 percent, compared to all other simple averages of 75.2 percent. And as aforementioned, the purpose of this act is to protect and increase farm income. We feel that the objectives outlined in the bill are good but we do feel that one of the most important segments of agriculture, the livestock industry, has been left out and we would like to recommend that grassland or grazing land be included in the soil-bank proposals. A 3 to 5 percent reduction of land now utilized for grazing purposes would probably be ample.

We have seen consistent increases in cattle numbers in the United States for the past several years, even though we have had over a large area of the United States a severe drought for the past 3 years. Which indicates that we have materially increased the carrying capacity of pastures in a large part of the United States which have in only recent years become engaged in livestock production.

Under the current bill which provides for the retirement of cultivated cropland for 3 years to grass and trees I would like to call to your attention the fact that it takes approximately 3 years to place cultivated cropland into an ideal pasture. Thus we need to be disturbed about the fact that within 3 years we could have an additional 25 million acres of improved grazing land which probably would carry an additional six to seven million head of cattle.

Certainly this legislation is a challenge to all of us to build a program whereby agriculture and livestock industries can learn to live with their know-how without being penalized for a job well done, and that is, producing all of the food and fibre that 166 million Americans are able to consume and to fill all the markets we have available abroad.

There are economists that make statements that the increase in population in the United States will soon take care of the entire production of agricultural commodities. But if the future can be judged by the past, it will be long after any of us in this room will have passed on because our technological advances in all fields of agriculture is going up at the rate of about 2 percent per year and the increased population of about 1½ percent. So the only conclusion that we may arrive at is that our total production ability is going up about one-half of 1 percent faster than the population increases.

I am sure most of you gentlemen were either here or in public life during World War II and recall the slogan, "Food will win the war and write the peace," and perhaps it did its part. I think every red-blooded American is grateful for the magnificent job the American farmer did when called upon. However, currently we have a budget of some $45 billion for defense which none of us question the need of. However, the companion enterprise—food and fiber—which was so vital during the war and which is still vital in the event of another conflict—God forbid. We are debating whether or not $1 billion is excessive.

If we should become engaged in another conflict, about the only thing we have in reserve is bread and butter, and I am sure all of us here and throughout the Nation would like to have some red meat to go with it. We all recall the meat stamps which were necessary during the war, and they were entirely necessary, but if we can, during peacetime, build our meat factories by having our ranges ready to produce to maximum to where it will be ready to utilize in any emergency, we might not have to resort to rationing.

We feel like the soil-bank plan is definitely a step in the right direction to place agriculture in a favorable economic position with other segments of industry. It is a plan whereby, if properly executed, will permit agriculture and livestock producers to remain reasonably profitable during peacetime periods, which has not happened in recent years. But we do feel that the soil bank as finally passed should include all agricultural enterprises. And for that reason I am here to testify to this committee that we feel definitely grassland and grazing land should be included comparable to other segments of agriculture.

We further feel that there should be no limit placed on the amount of acreage that an individual may place in the soil bank voluntarily and be compensated for as outlined in the bill. We feel that this will permit the smaller units and younger operators who may have substantial payments to make on their land and equipment, to continue to operate to capacity, and probably would not choose to participate in the soil bank.

From the early months of high prices in 1951 to the summer and fall of 1953—in a few instances to November 1954—cattle prices declined 40 percent to 69 percent. Greater price declines have occurred for the lower grades. Prices for canner and cutter slaughter cows dropped from $21.55 in April 1951 to less than $7 by November 1954—a 69-percent decline. On the other hand, choice slaughter steer prices fell from $36 in April 1951 to $21 in June 1953—a 42-percent drop. Since 1953 we are aware that there has been some slight recovery, but the fall of 1955, and up to now of this year, we have probably seen the greatest break in fat beef cattle in history. The Chicago market down approximately $11 per hundred from a year ago on choice heavy steers, and Oklahoma City from $5 to $8 per hundred lower. Gentlemen, unless we can be successful in developing a program which will prevent in a measure at least this price decline and get prices comparable with other economic groups there will be a substantial number of ranchers forced out of livestock production.

One statement that I saw recently that is disturbing is that Federal land-bank loans in 1955 were 59 percent greater than 1954 in volume, and 21 percent in number, which clearly indicates that farmers and ranchers are having to go further into debt in order to have operating capital. This is something all of us must be concerned about not only from a farmers and ranchers standpoint, but know that all of the depressions in the past were lead by a depressed agriculture.

Gentlemen, I am grateful for the opportunity to appear here before this committee and all that we are asking is that the livestock industry be placed on a par with other agricultural commodities, and that agriculture as a whole be placed on par with industry.

Amendment to section 207 (a): Add in line 10 after word "farm", "ranch or permanent pasture." In line 11, strike the last two lines beginning with word "crops" and insert "agriculture commodities."

Amended paragraph reads: "(1) To establish and maintain for the contract period protective vegetative cover (including but not limited to grass and trees), water-storage facilities, or other soil, water, wildlife, or forest conserving used on a specifically designated acreage of land on the farm, ranch, or permanent pasture regularly used in the production of agriculture commodities."

Inglorious Insurance Company Failures

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Monday, March 12, 1956

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most interesting article on the subject of the regulation of insurance by the States. The article was written by Mr. Roger Kenney, insurance editor of the United States Investor, and was published in that journal in its issue of January 14, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEE HERE, COMMISSIONERS, HOW ABOUT THESE INGLORIOUS INSURANCE COMPANY FAILURES

"If your memory is good, you'll recall that when the famous SEUA decision was handed down by the United States Supreme Court in June 1944, the great worry and sweat of both the State regulatory authorities and a goodly part of the insurance fraternity centered around the future of State regulation. Indeed, so keen was the feeling on the subject that the National Association of Insurance Commissioners—then in session at the Edgewater Beach Hotel in Chicago—sent out wires to the leaders of the industry requesting that they come posthaste to the convention for the purpose of devising a strategy to save regulation for the States. All with the result that there descended upon that memorable convention one of the most outstanding groups of executives we have ever seen at an insurance commissioners' gathering.

"True, this group didn't do so well in developing a strategy—what with an abortive attempt having been made almost immediately to exclude the industry permanently from the workings of the Federal antitrust laws through action of Congress. And it was only after Congress let it be known that it was in no mood for making exceptions to the antitrust laws that Public Law 15 was passed on March 9, 1945—which, in essence, gave State regulation a new lease of life—so long as the States duly 'regulate' the insurance business.

"That's where State regulaton stands today. It exists only by the sufferance of Congress—and each succeeding Congress. And this, mind you, on the theory that insurance is such a highly personal business that the regulation thereof should be kept close to the people. Or to put it another way, the insurance business is of such a nature that its regulation must be adapted to local conditons and situations—with the human factor always playing an important role.

"TEXAS FAILURES POINT UP A QUESTION

"So far, so good. But in view of recent events—particularly in the State of Texas, where insurance failures have been occurring all too rapidly for comfort and where reports are current that more and bigger failures are yet to come—we wonder whether all this talk we heard 10 years ago about the advantages of 'states' rights' in the regulation of insurance hasn't proved to be mere eyewash—that is, whether, in the last analysis, the great advantage which the industry enjoys in playing one State insurance department against another—haven't been offset by the Insurance Departments themselves in the emphasis which they have come

to place on joint action with other States on many insurance regulatory problems.

"To come right down on the button, whereas Congress generously stripped itself (temporarily, at least) of the power of regulation accruing to it under the SEUA decision—largely on the theory that there is a local aspect to the insurance business which is better regulated at the State level—the States, through ambitious regulatory authorities, seem to have forgotten all this in the importance they attach to decisions made at the zone level. And by 'zone level,' we, of course, have reference to the 6 zones into which the country was divided some 20 or so years ago in order to bring about more comity in regulation among the States.

"There is no need of mincing words. Either State regulation is competent and sufficient, of it is not. Which means that the moment a State regulatory authority steps beyond his geographic boundaries and insists upon participation in the examination of a company domiciled in another State (and operating in his own), he thereupon tacitly admits that the regulation of the home State is not—in his eyes—all it should be. And Congress has a perfect right to assume therefrom that if the States have little or no confidence in one another, then indeed has the time come for the Federal Government to step in and lay down a national pattern of regulation."

Do the above words have a familiar ring to you? If they don't, they should. For, they were published in these columns on August 7, 1954, under the title "State Regulation of Insurance Outgrowing Its Breeches"—being in the nature of a follow-up to an article published 2 weeks prior entitled "Texas Insurance Failures Cast Dark Shadows Over State Regulation" and treating largely of the failure of the General American Casualty Co. of San Antonio.

Since those articles appeared in these columns, a great reform program was undertaken by the State of Texas—the 1955 Legislature passing 23 new insurance laws providing, among other things, for substantially increased financial requirements in the case of newly organized companies; a limitation on the kind of securities in which the capital and minimum surplus of a company may be invested; stricter regulation of the sale of insurance securities which had previously been exempt from the Securities Act; the granting of power to the Texas Board of Insurance Commissioners to inquire into the fitness and reputation of the officers of each company applying for a license; and last, but not least, more rigid examination rules and standards. Under the latter law, it is set forth that examinations shall be the responsibility of the entire board as distinguished from that of the chairman of the board, and that in the case of newly organized companies, there shall be mandatory examinations at intervals of 6 months for new companies during the first 3 years, annual examination thereafter for a period of 3 more years, and eraminations every 2 years after the sixth year. Also interesting is the fact that the legislature greatly increased the appropriation for all three branches of the insurance department—with the result that money is now available to employ a sufficient number of qualified examiners.

OUR PREDICTION FILLED

On paper, you must admit that this reform program sounds very impressive—one which bears every evidence of being wellnigh foolproof when it comes to preventing a repetition of that rash of insurance failures which broke out in the State in 1954. But alas, it still holds true that no law, however well drawn, is any better than the administration thereof. And that has been driven home to people all over the country in the past few weeks by the fulfillment of our prediction of a year and a half ago that more and bigger failures are yet to come in Texas.

THAT UNITED STATES TRUST AND GUARANTY FAILURE

First and foremost is the startling news that the assets of the United States Trust & Guaranty Co., of Waco, a combination banking and insurance company, had been impounded, and all the company's insurance policies canceled, under an order issued on December 22 by District Judge Charles O. Betts, of Austin, who took occasion to describe the situation as "the most amazing and fraudulent operation it has ever been my misfortune to look at or hear about."

It is estimated that about 128,000 investors and policyholders—mostly in the lower-income group—are affected by these proceedings, with a possible loss totaling about $5 million. Which led Garland F. Smith, chairman of the Texas Insurance Commission to remark: "I don't know any bankruptcy in the history of Texas that will affect more people. It's hard to sleep, thinking about these people who lost their money."

In this connection, it is interesting to note that Drew Pearson, the news columnist and radio broadcaster, is prominently mentioned in this case, Chairman Smith making the charge that Mr. Pearson is "responsible to a great extent." It seems that the United States Trust acted as a sponsor for a Pearson television program in which the latter adopted the slogan, "You can put your trust in the United States Trust." Mr. Pearson's rejoinder to Mr. Smith's charge has been to place the responsibility squarely on the shoulders of the Texas Insurance Commission which he describes as woefully inadequate, to put it mildly.

Affiliated with the United States Trust are the United States Life and the Southern Hospital and Medical Service which are being scrutinized at this writing, although no charges of insolvency have been made. It is also interesting to note that the United States Trust failure has ramifications across States lines into Arkansas where it loaned $500,000 to three people in Little Rock to set up a company known as the Arkansas Fire & Marine Insurance Co.

OUR WARNING OF SEPTEMBER 1954

How or why the United States Trust & Guaranty escaped the attention of the Texas Insurance Commission—particularly under the reform program which provides it with so much power—we do not know. But to us, sitting 2,000 miles away from the scene, there have been aspects of this operation which began to arouse our curiosity sometime ago. As a matter of fact, it was on September 25, 1954, that we took occasion in our Insurance Inquiry Section to warn an inquiring subscriber who asked our opinion of this company in this fashion: "We think that you have a perfect right to ask the management what hope there is for a turnabout in the underwriting and investment account. For our own part, we do not like to see so large a fraction of the assets resting upon real estate. We suggest that you make inquiry about the liquidity of the mortgage item on the asset side of the statement."

EXAMINERS SUSPENDED

As if all this was not enough to place the great State of Texas in the limelight once again for loose supervisory practices, still another situation came to light within the last 2 weeks which can hardly be regarded as auguring well for the future of State regulation in this country. On December 31, four examiners of the Texas Insurance Commission were suspended "without pay or duty," this step being the aftermath of a damage suit for $6,640,000 entered the previous day by the receiver of the bankrupt General American Casualty of San Antonio in behalf of creditors. Among other things, the suit charges that the examiners knew that the General American was insolvent in 1952. It was also charged that the four examiners received gifts from the General American. The examiners named in the suit are Chief Examiner Larry W. Blanchard; Robert Butler, assistant chief examiner; William J. Noad and Lee J. Pfefferkorn. In addition, the suit names C. B. Erwin, president of the General American Casualty, and 44 other officers, directors or other persons associated with the firm, and 11 surety companies and banking concerns.

THOSE ALABAMA AND SOUTH DAKOTA FAILURES

To further plague stanch supporters of State regulation of insurance, failures in the States of Alabama and South Dakota have also figured in the national news of late. From Alabama came the report a week ago that Superintendent of Insurance Leslie L. Gwaltney, Jr., had filed a petition in the court at Montgomery for the receivership of the Royal American Insurance Co., of Huntsville, which had been closely associated, through reinsurance and investment operations, with the Inland Empire Insurance Co., of Boise, Idaho; the Trans-Pacific Insurance Co., of Phoenix, Ariz.; the Central Standard Insurance Co., of Sioux Falls, S. Dak.; and the William Penn Fire Insurance Co., of Pennsylvania—companies with which the names of Stewart B. Hopps and Lowell M. Birrell have been mentioned.

From South Dakota came the report that on December 22, 1955, Commissioner George Burt had been appointed receiver for the Central Standard, so as the record now stands, all but the William Penn Fire in the above group are in receivership. And the latter company is apparently not entirely divorced from the troubles which have beset Central Standard—reports having it that it acquired control of Central Standard just prior to the receivership. Also interesting is the fact that the William Penn Fire had been named as a defendant, along with the United Dye & Chemical Corp., and the newly elected officers of the Central Standard, in a civil suit brought by minority stockholders who have made some rather startling charges regarding withdrawal of funds from the assets.

WHAT IS GOING ON IN STATE REGULATORY CIRCLES?

With such a sad array of events confronting the insurance commissioners of this country, what we had to say on August 7, 1954, about the shortcomings of State regulation now apply double. For, with this new outcropping of insurance failures affecting policyholders in perhaps as many as 25 or 30 States, it is almost a certainty that a demand by policyholders will be made that Congress conduct an investigation as to just what is going on in State regulatory circles to permit such a sad mess to come about—especially in view of the fact that Public Law 15 was passed largely on the plea from the insurance fraternity that it was necessary to keep insurance regulation close to the people and thus adaptable to local conditions. Indeed, the wonder of it all is that some such investigation has not already been embarked upon—what with the Idaho Insurance Commissioner having found it advisable (because of the far-flung interstate ramifications) to resort to the Federal courts in the receivership proceedings of the Inland Empire. And what is more of a wonder is that with all these charges having been made about unlawful and fraudulent application and withdrawal of assets, the Justice Department hasn't decided to ascertain whether there is any substance to these charges. The same can be said of the SEC.—what with the United Dye & Chemical Corp, and the Swan Finch Oil Co. (both listed securities) figuring so prominently in the question as to just who owns the Inland Empire. It has

seemed to us that if any injustice is being done to parties at interest in these charges which have been flying thick and fast, an investigation by Congress and other governmental agencies would at least clear the atmosphere and incidentally place State regulation of the insurance business in a better light than it is today. If the charges are warranted, then that of course is something else again. But anyway, they should be investigated.

THE LOWEST MARK IN STATE REGULATION

All this aside, the fact is that State regulation has now fallen to the lowest mark since the passage of Public Law 15—and a great many years before. And if Congress should undertake an investigation, it would find that one of the principal reasons lies in the fact that instead of being concerned with the local nature of insurance regulatory problems, many insurance commissioners have become nomads of the busybody type—so involved in the affairs of the National Association of Insurance Commissioners (a voluntary association whose very existence stands as testimony to the interstate character of the insurance business) that at times they must have difficulty remembering they are paid officials of the home State—paid primarily to see that the interests of the policyholders in their respective States are constantly and effectively protected.

As a byproduct of this situation, the system of zone examinations has become a medium of paying off political debts for the various commissioners who vie with one another for the privilege of being represented on such examinations. The net result is that an undue financial burden is placed upon the companies directly, and the policyholders indirectly—what with outside States often being represented by pseudo accountants with more political than business background, and the examinations thus being prolonged beyond any reasonable limits. The situation could hardly be otherwise with these examiners being paid $25 to $35 a day plus expenses—which incidentally have been so large at times as to lead company officials to wonder whether they include a special charge for the eating of the meals.

THE SAME OLD STORY

It's the same old story so clearly told many years ago by that great iconoclast among insurance commissioners, Edgar B. Sims, former auditor and insurance commissioner of the State of West Virginia. In a letter dated June 9, 1939, to the late Frank Julian, then president of the National Association of Insurance Commissioners, he wrote in part:

"My first speech will be the politician's speech. Most of us hold our jobs as a result of an election by the suffrage of the people or by appointment by the governor, who is elected by the people. Now it follows that we need friends and hosts of friends back in the precincts at home. There are hundreds of men in every State who want jobs—good, fat, juicy jobs, $25 to $35 a day and their keep—and if we can get these jobs for them, of course, they will 'render unto Ceasar the things that are Ceasar's.' And we, as politicians cannot be hurt by sending a whole flock of them.

"I know the hue and cry goes up that the companies provide for this examination and that its cost comes off the policyholders. That is true, in a sense. But with many, many companies the time will have to come when the examination expense will not come out of the surplus of the company but out of the insurance reserve, and I am sure that every insurance commissioner knows of companies that are along the ragged edges."

POINTS UP WEAKNESSES OF NAIC

The long and short of it is that while zone examinations were originally predicated upon the theory that each State where a company operates should have a turn in examining such companies, no effective machinery has yet been devised to bring order out of the chaos which comes from regarding zone examinations as a happy hunting ground for political appointees. And you can see why when you stop to consider that the National Association of Insurance Commissioners is a purely voluntary organization having no binding legal authority over any State insurance department—and with each out-of-State examiner being responsible directly only to his own commissioner.

These shortcomings of the NAIC were never so clearly pointed up as in the past few months when the examination committee of that organization started out to make simultaneous convention examinations of the Inland Empire Insurance Co. and its various affiliated organizations. Things went comparatively well until they struck Alabama where the Royal American Insurance Co. is domiciled. And there the committee was told in no uncertain language by the same Leslie Gwaltney (superintendent of insurance) who has now petitioned the company into receivership that "the Royal American will be examined by the Alabama insurance department if and when I see fit to call it, which examination will not be a convention examination, and this examination will be effected by me at the time I so desire to examine this company."

Superintendent Gwaltney's letter of refusal (published in full in our issue of January 7) is all that is necessary to prove to Congress that the NAIC is aping Federal regulation without having the necessary central authority to enforce its edicts. And right there you have the secret of all this bickering among commissioners, all this jockeying for preeminent position in the national limelight which the NAIC affords, all this harassing and badgering of insurance company managements for reasons that are not always quite clear, and all this neglect of primary duties on the home front for which the individual commissioners were duly appointed or elected.

A BREEDING GROUND FOR INGLORIOUS FAILURES

Add these factors together, and you find that they constitute a perfect breeding ground for just such inglorious failures among insurance companies as have darkened the State regulatory picture in recent months. It's the all too familiar story of the fellow who was so concerned about the weeds in his neighbor's lawn that he neglected entirely the bumper crop at his own front door.

ROGER KENNEY.

The Outstanding Newspaper Column of the Year

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1956

Mr. DAVIS of Georgia. Mr. Speaker, on January 7, a column written by Joseph H. Baird, of Decatur, Ga., was selected by the editors of Dixie Business magazine as the outstanding column of the year in 1955. An appropriate award was made to Mr. Baird in recognition of this selection.

This selection is of especial interest to me, inasmuch as I am personally acquainted with Mr. Baird and read the article in question which prompted the award. It was contained in the December 15, 1955, issue of the De Kalb New Era, an excellent newspaper which I have had the pleasure of reading each week for more than 30 years.

Mr. Baird is a keen student of government and economics. His writings are provocative and always worthy of serious thought and study.

The editorial in question merits the attention of all thoughtful people who are concerned with this important business of government, and I take pleasure in inserting it herewith:

THE PASSING SCENE

(By Joseph H. Baird)

There is a serious glut in the used-car market, caused by the tremendous pressure the big automobile manufacturers have put on retail dealers to move new cars by taking in old ones for more than their real market values.

So why should not the Federal Government move in, buy up all the surplus used cars, and distribute them to school children to use in going to and from school?

This ridiculous suggestion is made—with tongue in cheek—by Thurman Sensing, executive vice president of the Southern States Industrial Council in Nashville, Tenn. His proposal—a reductio ad absurdum—is no more preposterous than some of the other things Washington is doing to the dismay of economists and the despair of the long-suffering, middle-income taxpayer.

Mr. Sensing, in a recent press release, mentions the fact that the Government recently stepped in and bought up $85 million worth of pork because the price had dropped, and will feed it to children through the Federally-subsidized school lunch program.

And then he adds:

"This business of Government price supports is a vicious circle. The Government begs and borrows money from all the people to buy from part of the people stuff it does not need, at prices higher than anyone else will pay.

"It does this so that these particular people may operate at a profit and continue to produce more goods that the Government does not need but feels forced to continue to buy at prices higher than anyone else will pay. It shows what happens when the Government starts meddling with the law of supply and demand."

To all of which this writer responds with a fervent "Amen."

Virtually every economic group in America today—except one—enjoys some kind of Federal subsidy that is paid for by the rest of us.

The big manufacturer is subsidized by a high tariff. The farmer, dairyman, and stockman is subsidized by an inane policy under which the Government buys their products for more than market value and so, as Mr. Sensing points out, encourages them to continue overproduction. The airlines are subsidized. The steamship and barge lines are subsidized. Many individuals are subsidized through pensions and other Federal grants. More than 10 million persons are on the Government payroll.

As I said, there is one unsubsidized class. That is the small- and middle-income worker and business and professional man, who leaves an increasing part of his weekly paycheck or professional fee with the Federal or State tax collector to provide this cascade of public money into the pockets of others.

Somewhere this insanity must end. But where?

Big business says to start back on the road to normality by cutting farm subsidies. The farmer advises Washington to start by reducing the tariff and other types of subsidy to business. Various forms of transportation publish public-interest advertisements com-

plaining of Government favors to the others, but always forget to mention their own.

And the poor, bedeviled Congressman, pushed this way and that by economic pressure lobbies in Washington, risks political oblivion if he offends any of them.

Meanwhile, we continue down the road to economic lunacy.

And now the teachers join in the popular sport of raiding the treasury.

This writer has always been a strong supporter of better schools. He agrees with the late H. G. Wells that "history is a race between education and disaster." The one part of his tax that he pays willingly, even gladly, is that which helps support the schools.

But he firmly believes that the White House Conference on Education made a serious and regrettable mistake when it entered a plea for more Federal aid for schools.

Education is the only sizable segment of American life that is not already under some form of Federal control. It is the only field in which some semblance of States rights is left to us. So far Americans have insisted, wisely, I believe, that schools should remain under local, or, at most, State control.

I am aware of the so-called safeguards which the teachers promise to erect to prevent Washington from dictating educational policy. But I am old enough and cynical enough to know that in the last analysis the man who pays the bills has the final say.

Federal control of education is the quickest and easiest route to a dictatorship in this Nation. Not today, perhaps. But there is always a tomorrow.

Resolution of the Department of New Jersey, Veterans of Foreign Wars, To Eliminate Inequities Suffered in the Past by Dependents of Coast Guard Personnel

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. SIEMINSKI. Mr. Speaker, for the interest of the membership, I am enclosing a letter just received from S. Rea Fetzer, chairman, legislative committee, Department of New Jersey, Veterans of Foreign Wars, that points up the difficulty the dependents of Coast Guard personnel labor under. They need our help:

DEPARTMENT OF NEW JERSEY,
VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Trenton, January 17, 1954.

RESOLUTION

"Whereas the personnel of the United States Coast Guard are now inequitably treated insofar as medical care is concerned due to the placement of the United States Coast Guard under the Treasury Department, leaves the personnel under a medical system and with rights different from the other members of the Armed Services; and

"Whereas the provisions of the bill formerly known as H. R. 2756 of the 83d Congress, 1st session, hereinafter fully stated makes adequate provision for the United States Coast Guard personnel; and

"Whereas legislative action is contemplated by means of an omnibus bill to cover all branches of the armed services as recommended by the Moulton Commission: Now, therefore, be it

"*Resolved*, That the following be adopted:

"1. The Congress of the United States be requested to adopt the following: That, when the Coast Guard is operating in the Treasury Department, dependents of military personnel of the Coast Guard shall be eligible, subject to the same conditions and limitations as apply to dependents of military personnel of the Navy, for hospitalization and medical, surgical, and dental care in hospitals and dispensaries operated by the Armed Forces at places outside the continental United States and at other places where hospitals operated pursuant to the act of July 1, 1944 (60 Stat. 421; 42 U. S. C., ch. 6A), are not available.

"2. That action of the Congress be taken either through separate legislation, or through the omnibus bill hereinbefore described.

"3. That copies of this resolution be forwarded to all of the individual State departments of the Veterans of Foreign Wars of the United States, and to the national headquarters of the Veterans of Foreign Wars of the United States for their consideration, action, and approval."

The above-cited resolution was adopted by the Department of New Jersey, Veterans of Foreign Wars of the United States, in regular meeting assembled of its council of administration held on this 17th day of January 1954, in the War Memorial Building, Trenton, N. J., and it is further requested that all separate divisions of the Veterans of Foreign Wars of the United States take action by adoption of this resolution and forwarding a copy of the same to their individual Federal legislators for their action on this important legislation.

ALEXANDER J. GOW,
Commander, Department of New Jersey, VFW of the United States.

Attest:

BENJAMIN P. THOMAS,
Adjutant, Department of New Jersey, VFW of the United States.

Michigan Editor Asks "Postal Rate Hike or Big Deficit?"

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 12, 1956

Mr. CEDERBERG. Mr. Speaker, more and more newspaper editors are coming to the realization that our Post Office Department has not kept pace with progress generally and that rates for carrying the mail are lagging far behind.

One of our fine Michigan newspapers, the Flint Journal, published in the hometown of Postmaster General Arthur E. Summerfield, has gone into our postal problem quite thoroughly and on March 4 carried an illuminating article on postal rates and postal progress.

That article follows:

POSTAL RATE HIKE OR BIG DEFICIT?—NEED FOR IMPROVEMENTS CITED BY SUMMERFIELD—CONGRESS HOLDS KEY TO PROBLEM OF MAKING DEPARTMENT PAY OWN WAY

A Flint man is working his hardest to do what's been done only 13 times in the last 100 years. He's trying to put the Nation's biggest public business into the black.

Arthur E. Summerfield, who went from the automobile retail business in Flint to become Postmaster General in President Eisenhower's Cabinet, slashed the Post Office Department's annual deficit of $727 million in 1952 to $362,700,000 in 1955.

Remarkable as that feat may be, Summerfield sees it as a job only partially done.

He's set for his aim the improvement of service, modernizing of facilities, keeping pace with the Nation's growth—and eventually making the Post Office pay its own way.

You can go just so far in cutting expenditures. When you can't cut more without cutting into the service itself and a deficit still persists, you have to seek new funds if you want to balance the budget.

That is the position the Post Office Department is in now, Summerfield says. If black ink instead of red ink is to flow in Post Office pens some day, it will be a decision out of the Department's control and one for Congress and the people to make.

FOUR HUNDRED SIX MILLION FIVE HUNDRED THOUSAND DOLLAR INCREASE ASKED

The administration has asked Congress for postal hikes that would bring in an estimated $406,500,000 annually. Of this:

Two hundred and ninety-five milion dollars would result from increasing 3-cent letter mail to 4 cents.

Sixteen million dollars would come from increasing 6-cent airmail to 7 cents.

Seventeen million dollars would come from two 15-percent annual increases in publishers' pound rates and minor adjustments.

Seventy-seven milion dollars would come from a 29-percent increase in rates for advertising matter and other third-class mail.

One million five hundred thousand dollars would come from miscellaneous sources.

The simple alternatives are these:

1. Continue the present methods of financing, lumping the Department's annual debt with that of the Federal Government.

2. Raise postal rates, with users of the mail bearing the major cost of making ends meet.

More than $400 million is a lot of money. But the Post Office has a lot of customers—there's scarcely an American family who is not served by it. Since three-fourths of first-class mail is business mail, the rate increase for ordinary letters would directly cost the average family about 12 cents a month.

HIGHER RATES WOULD CUT DOWN DEFICITS

The higher rates requested would not bring the Post Office a profit, or even get it fully out of debt each year. But they would:

1. Slice a major chunk off the annual deficit, including budget compensation for employee pay increases and fringe benefits recently voted by Congress.

2. Permit badly needed construction and modernization of buildings.

3. Buy new equipment to improve service, increase efficiency and further reduce costs.

In 1955, the Post Office Department moved 8½ percent more mail and at comparatively less money than it did in 1953. This was achieved on the heels of these accomplishments under Summerfield.

Seventy changes in procedures to speed up the mail.

Streamlining of bookkeeping and money handling. When Summerfield took over January 2, 1953, he found the Department had no certified public accountant and the latest financial information was 18 months old.

Elimination of unnecessary service units. About 3,000 small post offices were closed, at a saving of more than $4 million, and with patrons generally getting better service through rural delivery.

Practical training programs. Ten courses of instruction—ranging from bundle tying to executive management—were instituted.

Establishment of cost control over the 85,000 motor vehicles the Department uses. A fleet of 4 basic standard production-line trucks is being developed to take the place of 7 types of special built, often handmade vehicles formerly bought.

Decentralization. Formerly, 40,000 postmasters reported to Washington on even trivial matters. Now, 15 regions and 91 districts have been set up, with home-rule operation.

Lease-purchase of new buildings. Facilities are bought out of rent.

Review of transportation policies. Schedules were revised, more highway vehicles employed, and unused space on scheduled airliners put to use for hauling mail.

A safety program. Vehicle accidents were reduced from 13 to 8 per 100,000 miles.

First nationwide effort to recruit desirable new career employees.

Airline subsidy and franked and penalty mail costs switched to other departments.

Research and practical experiments, among them are motorized conveyances for city carriers, an automatic letter-facing machine for sorting, self-service equipment for post office lobbies, and mechanical parcel-post sorting.

The searching eye of the business regime that Summerfield took with him to Washington even focused on the lowly post office pen. The ink splatterers were replaced by ballpoints. And, to typify the Department's New Look, the mailboxes are being painted red, white, and blue.

COSTS UP, BUT RATES UNCHANGED

Despite improvements, the Post Office Department still has a built-in deficit.

Before World War II, the average annual deficit was $33 million. Since the war, it has skyrocketed to an average $460 million every year.

These figures may explain much of that flood of red ink:

Since 1932, the pay of clerks has gone up 103 percent; that of city carriers, 106 percent, and that of rural carriers, 118 percent.

Railroad costs have risen 90 percent since 1932. Truck costs are up 206 percent.

And in that same period, the cost of mailing an ordinary letter has remained the same. Third-class mailing rates went up 38 percent and those for second-class rose 3 percent. Actually, some rates for mail delivered in the same county as it originates are the same as they were in 1885. Some advertising pound rates are below the 1932 level. Some services within the county are performed free of charge.

Since 1945, Congress has enacted employee benefits totaling $1,290 million. In the same period, rate increases have amounted to $286,300,000.

Annual fiscal year deficits since 1952 have been: 1952, $727 million; 1953, $663 million; 1954, $399 million; 1955, $363 million; 1956, $440 million, and 1957 (estimated) $470 million. The last three deficits include cost of recent pay increases and employee benefits granted by Congress, including almost $200 million estimated for next year.

"It is hard for most of us to realize what so large a sum of money really means," Summerfield wrote recently to President Eisenhower. "The fact is, we are losing $1,000 a minute." Every hour our taxpayers have to put up another $60,000."

FIVE-YEAR PLAN FOR NEW FACILITIES

The Postmaster General looks to more efficient buildings, labor-saving devices and improved working conditions to handle the mail better, faster and at lower cost.

A 5-year plan, made possible through rate increases, would spend:

Twenty-three million dollars a year for leasing or lease-purchasing of 3,500 new buildings put up with $230 million of private capital.

Two hundred and twenty-five million dollars for new lighting, painting, air conditioning and long-deferred maintenance of federally-owned postal buildings.

Two hundred million dollars for rehabilitation and modernization of about 60 percent of the space in federally owned postal buildings.

One hundred and twenty-five million dollars for modern time-saving and man-saving mechanical equipment.

The 5-year plan would cost $133 million a year.

Through its post offices, the Government has its most intimate and frequent contact with the public. Yet, many post offices were built more than 50 years ago and are badly run down, outgrown and outmoded.

In Denver, for example, sorting at the Union Terminal is done on the sidewalk daily—rain or shine. In many more places, mail is handled on outside platforms or in alleys. Even when postal employees work in the shelter of buildings, thousands work under conditions that would not be tolerated in private industry—inadequate space, poor ventilation and obsolete lighting.

A start has been made, but only a start, in use of conveyor systems instead of old-fashioned hand trucks, fork-lift trucks to replace back-breaking human lifting, even adjustable stools for mail sorters instead of the old rigid rest-bars. Morale and health affect a worker's efficiency, hence bear greatly on the Department's performance.

IMPROVEMENTS AWAIT DEFICIT REDUCTION

According to the President's convictions as referred to in a report by Summerfield to the President, the Post Office Department's plans for improvement of its physical plant must not precede a major reduction in the annual deficit.

Mr. Eisenhower recently said at a press conference, "Self-respect demands a raise in postal rates."

However, the recommendation for postal rate increases has met stiff opposition in Congress. The administration last year asked in vain for rate hikes similar to those it is asking now. Some took exception to Summerfield's claims of deficit reduction, saying items transferred to other Government agencies should have been figured in on the debit side for fair comparison. Now and then, opposition is voiced by one group or another to a certain phase of the post office reorganization.

Added to this, of course, is a natural political hesitancy to raise taxes—including the stamp for sending a letter—especially in an election year.

Some maintain it is the politicians, not the people, who are opposed to a rate increase.

The Post Office Department employs 500,000 persons and its financial transactions exceed $20 billion a year.

ANNUAL INTEREST IS $100 MILLION

In his letter to the President, the Postmaster General said:

"In the last 5 years the costs of the Post Office Department exceeded its revenues by almost $5 billion. Ignoring the huge interest payments on this sum, that $5 billion would have paid for 5,000 new $1 million schools; and yet, instead of new schools, we have chosen to bequeath to our children these postal charges—plus more than $100 million a year today in interest."

Basically, he says, the failure to operate on a more nearly break-even basis is due to postage rates being essentially the same today as they were in 1932, but with the cost of nearly everything the department buys or uses having more than doubled.

"If these rate increases are granted, we can complete the job the Post Office Department set out to accomplish nearly 3 years ago—provide better service, lower costs, reduce the postal deficit."

Presumably much of the $400 million a year asked in postal-rate increases will have to be spent anyway and will become a deficit item if the increases are not granted. Presumably, also, the Federal debt has no chance of being paid off for at least 100 years. Such an overall debt well might be some $40 billion bigger or smaller by that time—depending on the financing policy under which the Post Office Department is to operate.

Congress holds the key.

H. R. 9166

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1956

Mr. PELLY. Mr. Speaker, regarding H. R. 9166 which comes up tomorrow under suspension of the rules, it is pretty obvious that corporations think a protest at its righ rate of taxation would be a waste of breath. At least, no representative of big or little business came around to my office, or have written me letters, suggesting opposition to another extension of this special levy.

Under the emotional appeal of our defense needs, it may be considered bad taste to mention that taxes take more from the American people than their food costs them. I am going to vote for H. R. 9166 because I believe lower taxes might well mean more inflation—and that would be a return to the false prosperity of a few years ago. But I want it in the record that the tax rates are too high, and to repeat the warning of old: "The power to tax is the power to destroy."

Let us recall here and now that taxes on corporations actually are paid by the people. Were it not for this present tax on corporations, prices could be lowered to the people, more money could be paid to employees to buy more consumer goods. Thus, we could raise our living standards and also increase prosperity for all. Lower taxes on corporations, provided Government spending was within its income, would help labor and wage earners far more than the corporations themselves, for all taxes are channeled to consumers and wage earners.

I would like to see the Government's power to tax limited except for war emergencies.

It is not popular, maybe, to stress reducing corporation taxes but labor has a stake in this because what Government takes in taxes no collective bargaining contract can obtain for the workers.

I submit, Mr. Speaker, that an excessive rate of taxation of corporation profits is the cause of capital investing in nonemployment expanding and noncreative enterprises. Wealth needs incentive to expand and make more jobs. I shall vote for this measure because overspending by the Federal Government during previous administrations caused the buying power of the workers pay check to be cut in half. Government revenue must equal Government expenditures. We must balance the budget.

But looking to the future, let us not penalize profit incentive by confiscatory taxation. Samuel Gompers said the sin against the workingman was lack of profits. I say if anyone is going to syphon off corporation profits, let it be the consumer through lower prices and the workingman through the higher purchasing power of his wages.

The National Gallery, a World Art Center With 24 Million Visitors in 15 Years

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 12, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the National Gallery of Art will celebrate its 15th birthday this week, a birthday made resplendent by an exhibition of potential and outright gifts acquired by Samuel H. Kress, Rush H. Kress, and the Samuel H. Kress Foundation. In 1936, Andrew W. Mellon wrote to President Franklin D. Roosevelt offering his collection and a great building to house it to the Nation. Mr. Mellon never lived to see the gallery completed. He died in August 1937, just 3 months after construction of the gallery began.

Under David E. Findley, its Director from the very beginning, the National Gallery has grown from a half-empty museum to a world-renowned gallery whose exhibit rooms are filled with the works of the greatest masters of the Western World. The National Gallery in 15 short years has become one of the greatest cultural monuments in the entire world.

The National Gallery of Art has fulfilled the hope of its founder, as expressed by his son, Paul Mellon, at its dedication that—

> It would become not a static but a living institution, growing in usefulness and importance to artists, scholars and the general public.

Two dissimilar men, Franklin Delano Roosevelt, "the most intelligent President about art since Jefferson," and Andrew W. Mellon, have, through this gallery, made enduring contributions to the artistic life of our country. While Mellon's original contribution was large it will be equaled and surpassed before long by the equally impressive contribution by the Congress of more than $1 million a year to the gallery's maintenance. So, while the gallery is an enduring monument to Andrew W. Mellon, it is an equally enduring monument to a great Nation struggling for cultural maturity.

I would like to be able to say today that the Federal Government was proudly spending, at the very least, an amount equal to what it appropriates to maintain this single building for the purchase of the creative works of our own authors, composers, playwrights, painters, sculptors, and one day we surely will.

The Federal Government has assisted other countries since the end of World War II to restore their cultural monuments, build new art centers and opera houses, and support flourishing cultural programs for the benefit of their own citizens and the delight of American tourists.

Certainly we should be doing at least as much at home as we are doing abroad. In any event, we should have a national program for the advancement of American art. Paying the maintenance costs of the National Gallery of Art does not constitute by itself a national arts program by any stretch of the imagination.

We must put our own great cultural leaders to work developing a national cultural program for our own country, a program that makes sense and has an eye for the political realities. Particularly is this true now that the Congress is appropriating money to send our leading cultural groups abroad to show the world that we are not the cultural barbarians the Russians say we are.

There are ways to advance our own arts that will not lead to the kind of political domination and control that has destroyed the great cultural traditions of the Russians and the other Communist bloc nations. Our allies, the Scandinavian countries, England, France, Germany, Italy, and Japan could teach us much about how to do it if we were willing to take the time to study their methods.

In an article from the Washington Post and Times Herald of March 11, 1956, which I include here, it is pointed out that under Richard Bales, conductor of the National Gallery Orchestra, the free Sunday evening concerts have given American composers a sounding board for new compositions. The concern with American music contrasts strongly the Gallery's lack of interest in contemporary work in the field of painting, sculpture, and the graphic and applied arts. The New York Times reported in 1953 that "under its own charter the National Gallery cannot concern itself with work by artists less than 20 years dead."

Perhaps, in view of the enormous subsidy which the Congress gives the Gallery, the Board of Regents of the Smithsonian Institution and the Board of Trustees of the National Gallery should rethink their position in regard to American art. This 15th birthday of the gallery would be an excellent time to do this.

I would like to suggest at this time that some exhibit rooms be set aside in this gallery for the exclusive use of the National Collection of Fine Arts, which like the National Gallery, is a branch of the Smithsonian Institution. These exhibit rooms should remain under the exclusive management of the National Collection of Fine Arts until its own Gallery, authorized by Act of the Congress in 1938, is built.

The 75th Congress, which accepted the Mellon gift, authorized the building of the Smithsonian Gallery of Art to house the National Collection of Fine Arts which is currently valued at $10 million. Since the Smithsonian Gallery of Art has not yet been built I have introduced legislation, H. R. 7974, which would amend the 1938 act to bring about the early establishment of the new gallery which, I have been assured by Dr. Leonard Carmichael, Secretary of the Smithsonian Institution, has the very highest priority.

What I am proposing today is that exhibit rooms to set aside in the federally maintained National Gallery of Art for the exclusive use of the National Collection of Fine Arts until the Smithsonian Gallery of Art is established, be it 1 year, 10 years, or a century from now.

Secondly, I would like to see a plan jointly developed by the Board of Regents of the Smithsonian Institution and the Board of Trustees of the National Gallery of Art, to carry out section 4 of the joint resolution of May 17, 1938. This is the joint resolution which authorized the establishment of the Smithsonian Gallery of Art.

For the information of my colleagues I include here the text of the joint resolution, Public Resolution No. 95, 75th Congress, which authorized the Smithsonian Gallery of Art:

Resolved, etc., That for the purpose of providing a site for a suitable building for properly housing and displaying the national collections of fine arts, comprising paintings, sculptures, bronzes, glass, porcelain, tapestry, furniture, jewelry, and other types of art; to display portraits of eminent American men and women; and to exhibit the works of artists deserving of recognition, the National Capital Park and Planning Commission shall designate and the President shall assign a suitable tract of public land in the District of Columbia between Fourth and Fourteenth Streets and Constitution and Independence Avenues.

SEC. 2. (a) A Commission, to be called the Smithsonian Gallery of Art Commission (hereinafter referred to as the "Commission"), comprising a member to be designated by the Regents of the Smithsonian Institution; the Secretary of the Smithsonian Institution; a member to be designated by the Secretary of the Treasury; the Chairman of the National Capital Park and Planning Commission; the Chairman of the Commission of Fine Arts; the chairman of the Joint Committee on the Library; the chairman of the Committee on the Library of the House; and the Chairman of the Art Commission of the Smithsonian Institution, is hereby created and authorized to make all preliminary investigations and to secure appropriate designs, by competition or otherwise, preferably by competition, for a building to be constructed on the site above described, said building to be so designed as to permit of future expansion, parking arrangements, and for landscaping its surroundings. The Commission shall choose a chairman from its own membership.

(b) The members of the Commission shall serve as such members without compensation and the Commission shall terminate upon the submission to and approval by the Regents of the Smithsonian Institution (hereinafter referred to as the "Regents") of the said design for the building and grounds.

(c) The Commission may employ such technical, clerical, and other assistants and make such expenditures (including expenditures for personal services at the seat of Government and elsewhere) as may be necessary for the performance of the duties vested in the Commission: *Provided*, That architectural, engineering, and other necessary consultants may be employed without regard to the civil-service laws and the Classification Act of 1923, as amended. All expenditures of the Commission, including the

cost of any design which may be accepted, and the compensation of a jury of award in the event a competition is held, shall be allowed and paid upon presentation of itemized vouchers therefor approved by its chairman. To carry out the provisions of this section, there is hereby authorized to be appropriated the sum of $40,000.

SEC. 3. (a) The Regents are hereby authorized to solicit and receive subscriptions of funds from private sources for the purposes specified in this subsection. Funds so received shall be placed in a special deposit account with the Treasurer of the United States, and may be expended by the Regents to meet the cost of the construction of the building, including furnishings and equipment thereof, to obtain necessary drawings and specifications, make necessary surveys and estimates of cost, defray necessary administrative expenses and secure other needful services.

(b) The Regents may, subject to the approval of the President, authorize the preparation of the site and the construction of the building, including approaches and landscaping of the grounds: *Provided*, That the Director of Procurement, Treasury Department, shall supervise the preparation of the plans and specifications, make all necessary contracts, and supervise construction.

(c) The name of the building shall be the Smithsonian Gallery of Art (hereinafter referred to as the "Gallery"), and it shall be under the supervision and control of the Regents and the Secretary of the Smithsonian Institution.

SEC. 4. (a) It shall be the policy of the Regents to maintain a worthy standard for the acceptance of art objects for exhibition in the Gallery, and to foster by public exhibitions from time to time in Washington, and other parts of the United States a growing appreciation of art, both of past and contemporary time; and the Regents are hereby authorized to solicit and receive private donations of works of art and contributions of funds from private sources for the purchase of works of art. Funds so received shall be placed in a special deposit account with the Treasurer of the United States and may be expended by the Regents for the purchase of works of art.

(b) In order to encourage the development of contemporary art and to effect the widest distribution and cultivation in matters of such art, the Regents are hereby authorized to solicit and receive funds from private sources, to acquire (by purchase or otherwise) and sell contemporary works of art or copies thereof, to employ artists and other personnel, award scholarships, conduct exhibitions, and generally do such things and have such other powers as will effectuate the purposes of this subsection. Funds received by the Regents under this subsection shall be placed in a special deposit account with the Treasurer of the United States and may be expended by the Regents for the purposes enumerated in this subsection and for no other purposes: *Provided*, That the Regents shall not incur any obligations under this subsection in excess of the funds available therefor.

SEC. 5. The Director of Procurement, the Administrator of the Public Works Administration, and other agencies of the Government are authorized to donate to the Gallery any work of arts now or hereafter under their control.

SEC. 6. Such objects of art as the Government or the Smithsonian Institution now possess, or such as may hereafter be acquired, may be housed or exhibited in the Gallery, with the approval of and under such regulations as the Regents and Secretary of the Smithsonian Institution may prescribe.

SEC. 7. The Regents may appoint and fix the compensation and duties of a Director of the Gallery and may employ such other officers and employees as may be necessary for the efficient operation and administration of the Gallery.

SEC. 8. There are hereby authorized to be appropriated annually such sums as may be necessary to maintain and administer the Gallery, including the salaries of the Director and of other necessary officers and employees, and for special public exhibitions at Washington and elsewhere.

Approved, May 17, 1938.

NATIONAL GALLERY, A WORLD ART CENTER ON ITS 15TH YEAR—TREASURES OF KRESS COLLECTION TO BE EXHIBITED ON ANNIVERSARY

(By Jean White)

The National Gallery of Art will be 15 years old this Saturday. It is now 1 of the 5 or 6 great art centers of the world.

Behind these two simple statements of fact lies an incredible achievement.

To celebrate this accomplishment and its 15th anniversary, the gallery will open an exhibit that is another incredible achievement—a treasury of 113 paintings and sculpture pieces assembled in just 5 years by the Samuel H. Kress Foundation. These masterpieces will go on public display here for the first time on March 18 after the private presentation Saturday evening.

In a field where time is measured in centuries of great traditions, an upstart newcomer has achieved a first-rank position in the short span of a decade and a half.

LAUNCHED BY FORTUNES

The story behind this comes complete with some rather fabulous personalities and bizarre twists of fortune and, more important, fortunes.

There is, for instance, the story of the art dealer who rented a Washington apartment for the art treasures he hoped to sell the millionaire collector on the floor above. It ends with one of the biggest deals in the history of the art world.

Behind the gallery's great collection also lies the background of political, social, and economic events. These, in the end, govern the movements of great works of art.

There are many threads—dissolving European fortunes and royalty, wealthy Americans searching for masterpieces and immortality, wars, dictators, and shifting regimes.

Hitler traded off an Italian masterpiece now in the gallery in his craving for pure "German" are. Several other treasures came there from the Hermitage Gallery in Leningrad, sold off by the Russians to help finance a 5-year plan in the early 1930's.

In just 15 years, the National Gallery has assembled for the American public one of the world's greatest art collections.

Not one of the 1,108 paintings and 327 pieces of sculpture in the permanent collection was bought with public funds. Private collectors gave these masterpieces and also contributed the more than 650 additional paintings on loan.

These private collectors are bankers, industrialists, and merchants who turned from amassing fortunes to amassing art with the same zeal and acumen they brought to their business.

The monument to this feat of art collecting is the long, low pink-marble building that sprawls 785 feet along Constitution Avenue from Fourth to Seventh Streets NW.

MEMORIAL TO MELLON

Thirty years ago even the idea had not shaped up in the mind of one of those private collectors. He was Andrew W. Mellon, the fabulous financier from Pittsburgh, who came to Washington to be Secretary of the Treasury under Presidents Harding, Coolidge, and Hoover.

Mr. Mellon built the $15 million marble palace to house the $50 million art collection that he gave the American public.

Mellon's art treasures became a magnet, as he had hoped, to "attract gifts from other citizens who may in the future desire to contribute works of art * * * to form a great national collection."

Even before the gallery opened March 17, 1941, Samuel H. Kress, merchant millionaire, followed through with a princely largesse of 375 paintings and 18 sculpture pieces. Chester Dale also contributed a fine group of paintings by American artists.

It was an impressive start. The National Gallery in London opened in 1824 with only 38 pictures.

Since then the gallery still has come a long way. The collection has doubled in quantity, with later benefactors filling gaps to round out the collections. In quality, the standards are those of the masters themselves. Visitors walk amid the beauty of Titians, Rembrandts, El Grecos, Raphaels, Gainsboroughs, Holbeins, Fragonards.

"If it hadn't happened when it did," David E. Finley, gallery director, muses now, "it couldn't have happened at all. Without Mr. Mellon's gift to attract other gifts, the private collections would have gone elsewhere.

It was back in 1927 that Mr. Mellon first mentioned the idea of a national gallery to Finley, then his special assistant in the Treasury.

The financier then had been in Washington 6 years. He was a reticent, slight man, who walked back and forth every day to the Treasury from his apartment at 1785 Massachusetts Avenue, NW. There he often dined alone, happy in the silent company of a Romoney or Raeburn portrait.

Mr. Mellon soon came to the conclusion it was time for the seat of Government to have a gallery worthy of the Nation's Capitol. He turned this over in his mind and often walked along the Mall, mulling over a site.

But it wasn't until Christmas, 1936, that the Pittsburgh financier wrote to President Franklin D. Roosevelt to offer his collection and a gallery to the Nation.

Mr. Mellon never lived to see it completed. He died in August, 1937, just 3 months after the building was started.

Less than 12 months before his death, Mr. Mellon bought in one fabulous acquisition of 26 paintings and 18 pieces of sculpture.

Finley went to New York to see Lord Duveen, the spectacular art dealer, with directions to bring back all things that might be worthy of the proposed national gallery. Finley came back with 30 paintings and 21 sculptures.

DUVEEN MOVES IN

Duveen rented an apartment underneath Mellon quarters. He gave the wealthy art collector the key to look at the pictures at his leisure to decide what to buy.

It took Mr. Mellon only a month. He bought 26 paintings and 18 pieces of sculpture. Among the latter was Giovanni Bologna's bronze Mercury, which now balances in the gallery's rotunda fountain.

Mr. Mellon once told Finley that he bought his first painting for $1,000. Others told Finley later that this was "considered by his friends in Pittsburgh an unaccountable aberration in a young man of such sound judgment in matters relating to business."

There is no record of their reaction when Mr. Mellon paid $1,166,000 for the Alba Madonna, now one of the prizes at the National Gallery.

Mr. Mellon's dream touched other private collectors.

Mr. Kress opened his apartment and priceless private collection to Finley and John Walker, the gallery's chief curator, for their pick of masterpieces for the gallery's opening. They went to New York and came back with 375 paintings, leaving only "nail holes in the walls."

Since then, the Kress family has remembered the gallery splendidly three other times before sending the 113 paintings and sculpture pieces for the 15th anniversary ex-

hibit. Mr. and Mrs. Dale have sent from their home a great collection of paintings by 19th and 20th century French artists.

Another treasury came from the Widener family, the work of two generations of connoisseurs, Peter A. B. and his son, Joseph E. Also, Lessing Rosenwald has given a collection of rare and finely selected prints.

A genial man with great charm, Finley has presided over this treasury and made the Gallery a cultural center of the Nation's Capital.

He organized free Sunday evening concerts in the garden courts during World War II. Under Richard Bales, conductor of the National Gallery Orchestra, the concerts have given American composers a sounding board for new compositions.

For the 24 million persons who have visited the Gallery since its opening, Finley has made culture as comfortable and pleasant as possible. Soft sofas are spotted in the exhibit rooms.

Under Finley, who will retire in July, the National Gallery has grown from a half-empty museum to one whose exhibit rooms are filled with the greatest of masters of the Western World.

It has fulfilled the hope of its founder, as expressed by his son, Paul Mellon, at the Gallery dedication, that "It would become not a static but a living institution, growing in usefulness and importance to artists, scholars and the general public."

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

The Holt Family of Oregon and Homeless Korean Orphans

EXTENSION OF REMARKS
OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 13, 1956

Mr. NEUBERGER. Mr. President, Mr. and Mrs. Harry Holt, of Creswell, Oreg., are serving as the Good Samaritan in helping the homeless orphans of Korea. There are thousands of Korean orphans of mixed blood, fathered by American servicemen; and the Holt family has helped to see that the United States lives up to its responsibility in aiding these homeless and helpless children.

Not only have the Holt family adopted eight Korean war orphans, and brought them to their fine family home in Creswell, but they have aided financially many hundreds of these war orphans in Korea. I had the honor of sponsoring, last year, legislation which permitted the Holt family to make the successful adoption of their eight children and bring them to the United States.

With his tireless energy, Mr. Holt has acted as a clearinghouse in making arrangements for other Americans to adopt these homeless children of Korea. He now plans to go to Korea this year and aid in the adoption of some 500 Korean orphans by American citizens.

Mr. President, I have worked closely with State Department officials who administer the refugee-relief program, in straightening out an unfortunate situation in Korea with regard to proxy adoptions. Certain officials at our Embassy in Seoul, Korea, without regard to the law, have attempted to prevent the adoption of these Korean war orphans by American citizens. I hope that the situation has now been remedied.

It has been my pleasure to work with Dr. Bob Pierce, president of World Vision, Inc., a nondenominational religious organization which has done so much to aid these Korean refugees. I have attempted to work out arrangements whereby surplus American food can be used in World Vision orphanages.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by James Irvine which appeared in the Oregon Journal, of Portland, on March 7, and an article from the Eugene Register-Guard of the same date:

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Oregon Journal of March 7, 1956]

HOLT SEEKS UP TO 500 MORE KOREAN ORPHANS

(By James Irvine)

CRESWELL, March 7.—Harry Holt, the Creswell farmer who brought 12 mixed-blood Korean orphans to this country last fall, is going back for more.

"I don't know for sure, yet," he said today, "but I probably will go again in May, maybe sooner."

His goal won't be just 12 this time. He hopes eventually to get as many as 500 of the half-American, half-Korean youngsters to the United States before the end of the year.

"We're working on it," he said. "Lots of these orphans have died for lack of care this winter and we want to get them over here as quickly as possible."

By we, he meant himself and World Vision, Inc., a religious organization headquarters in Portland, which supports orphanages in Korea. The organization helped Holt bring the 12 orphans—8 of whom he adopted himself—to the United States last October.

"World Vision has been rounding up these unfortunate youngsters to try to nurse them back to health," the 50-year-old farmer declared.

The urgency of Holt's second visit to the Far Eastern land is prompted by the fact that the American Refugee Relief Act, under which the orphans enter the United States, ends December 31. Thus, Holt has less than 10 months to accomplish his task.

In Korea, ravaged by war and occupied by troops, there now are between 200 and 500 white-Korean children, he estimated. Their mothers are Koreans and their fathers were American servicemen. There are up to 1,000 Negro-Korean orphans. Full blooded Korean orphans number in the neighborhood of 250,000.

Korean society, Holt claims, doesn't want the mixed-blood children. Particularly shunned he says, are the Negro-Korean youngsters and furthermore he claims word has gone out, that if the Negro-Koreans are not out of Korea by the time they reach the age of propagation, they will be killed.

World Vision says already many Korean mothers have left these fatherless children to live the best they can. As a result, hundreds are starving and homeless. The too-few orphanages, operated by World Vision and other organizations, are trying to nurse the youngsters back to health.

It is Holt's plan to get as many youngsters as possible into this country as soon as they can pass immigration physical examinations.

"There are 66 ready to come right now," Holt said. "More are being readied under doctors' care."

He hopes to get American couples—with or without families—to adopt the orphans by proxy while they are being nursed to health. When the children are physically fit, machinery will be started by Holt to get them visas and passports to bring them to their adopted parents in the United States.

"I have had correspondence from people in 46 States, all of them wanting a child or information on how they can get one or more of these unfortunate youngsters," said Holt.

The Holts' big 350-acre ranch already is teeming with youngsters, so they probably won't take any more. Besides the 8 orphans they adopted, they have a son and 5 daughters of their own.

It took Holt 4½ months to negotiate the entry of the 12 orphans into the United States last fall. He toured Korea with World Vision officials, searching for just the right dozen. When he found them, there were miles of redtape to unwind.

Under the Refugee Relief Act, Holt would have been able to bring only two orphans for himself. Special legislation was passed, however, which allowed him to adopt six more.

How long it will take him this time is difficult to estimate.

"There is lots of redtape," he said. "It's almost like the adoption laws in this country."

Holt has frankly admitted there is open resistance to non-Caucasian adoptions by Americans.

Meanwhile, the 8 additions to the Holt family—ranging in age from 13 months to 4 years—are getting ready to celebrate 5 months in this country.

[From the Eugene (Oreg.) Register-Guard of March 7, 1956]

HOLT DECIDES TO GET 500 MORE WAIFS

Harry Holt, 50-year-old Creswell farmer who last year brought 12 mixed blood Korean-American war orphans to this country and adopted 8 of them himself, Wednesday confirmed reports that he is going back to Korea—this time to arrange for American adoptions of perhaps as many as 500 mixed-blood children.

From his home on Howe Lane near Creswell, Holt told the Register-Guard that since his return from Korea last October, thousands of letters have come to him from persons in this country asking him to help them adopt abandoned babies of Korean girls and American soldiers as he and Mrs. Holt have done.

Responding to these letters, the Holts have decided that he will return to Korea—probably in May—and try to fulfill as many of the requests as possible.

The Refugee Act under which such orphan adoptions is possible will expire at the end of the year, he explained and time is a big factor in his plans. Of great concern to him is the time required to investigate the character, financial means, and other qualifications of persons who have offered to adopt the waifs.

Holt said that customary procedures of obtaining such reports likely would take more time than is available. Accordingly, he and friends who are helping him are undertaking to do the job themselves.

World Vision, a Portland religious organization which maintains orphanages in Korea, is working with Holt as it did last year when he made his first trip to Korea. Also helping are Mr. and Mrs. Harry Larson, of Portland. Larson is already in Korea making arrangements for the adoption of Korean-American youngsters, and Mrs. Larson is at the Holt home, handling volumes of correspondence.

Beals Story: A Fight for Existence

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. McINTIRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert two articles which appeared in the March 6, 1956, issue of the Bangor Daily News, a newspaper of wide circulation in my congressional district.

Mr. Speaker, these news articles, to me, symbolize the story of America—the surge upward and onward. And because America is made up of a multiplicity of small parts, it is of interest to focus our attention on the dynamic efforts of one of these particular communities.

The bicenturial drama of Beals has been one of struggle, and its climax is now the achievement of recognition. As Beals has done, so other American communities in the future will do—that is the theme of America. Right now, however, the spotlight of achievement falls on Beals, a Maine community which I am proud to say, lies within the bounds of my congressional district:

BEALS STORY: A FIGHT FOR EXISTENCE

(By Velton Peabody)

BEALS, March 5.—Nearly 200 years of obscurity for this tiny island fishing community have come to a dramatic close and none but islanders themselves can understand how it all came about.

Immediate instrument in the transition was the local basketball team, made up of 11 of the 12 boys in the school which Saturday brought home its third State championship in 6 years.

REALIZED A DREAM

Spectators at Waterville, however, were unable to see that what lay within that team was the realization of hopes and dreams of seven generations of islanders—a major victory in an age-long struggle for recognition and equalization.

Many theories have been advanced as possible explanations for the team's success. None has been acceptable to the islanders.

There is only one solution. The boys are the product of a community that has always been deeply rooted in the Christian principles. They represent 3 demoninations which maintain 5 churches for 650 people on the island and which consider their basketball victories almost in the light of missionary endeavor.

The basketball team is only a visible symbol of the Beals spirit. As the team has struggled to come to the top so has the town it represents.

STORY OF STRUGGLE

The history of Beals from the beginning has been a story of struggle for existence and equalization, rather than for mere recognition.

Beals settled in the 1760's by two families from western Maine, the Manwarren Beals and John Alleys was almost isolated up until about 1925, when it fought a hard battle for incorporation as a town.

By that time the island population had grown to about 500 and was badly in need of a secondary school of its own. At the time it was a part of its neighboring mainland town of Jonesport, which could not afford to support two high schools.

Consequently of all the island's youngsters not one was able to complete 4 years at the mainland school between 1906, when Susie Beal (Mrs. Guy Carver) was graduated, and 1925, when her daughter, Sylvina Carver (Mrs. Harold Alley), was graduated.

Incorporation was gained, however, in 1925 and in November of the same year Beals High School opened its doors. Most of the labor in building the addition to the junior high building was donated by islanders who were thrilled with gaining the status of a town.

From that time forth, Mrs. Carver and Mrs. Alley have practically devoted their lives to the education of the island's youth. The former has served as chairman of the Beals schoolboard for many years while Mrs. Alley has been high school principal for 15 out of her 27 years at the school.

Isolation molded the island community into practically one big family. Several other families have moved in but at least 90 percent of the townspeople claim direct descent from either Alley or Beal, its wellbuilt settlers.

NO LIQUOR, NO POOL

No liquor is sold in Beals. There are no poolrooms or dances, the islanders having no need for them. Lobster fishing is a rugged business and the islanders are engaged in this occupation most of their lives. Island students don't spend all their time playing basketball either; they work. Grammarschool boys spend their out-of-school hours helping their dads with repairing, setting, or hauling traps and they love it.

Several of the high-school boys have their own traps. Sports monopolize no more time on the island than in any other community.

Further education is not neglected by the islanders, either. Out of the 20 students graduated in the past 5 years 12 have gone into advanced study. Beals has supplied more than enough teachers for its own needs and has placed teachers in Bangor, Newport, Jonesport, and other schools.

Public speaking at the school ranks on a par with basketball, students having won county championships and having placed next to the best in statewide competition.

At least 60 percent of the island citizens are churchgoers. Faith in God is shown in the erection of 5 churches to serve the town's 650 residents.

Three denominations are represented: Advent Christian, Reformed Baptist, and the Reorganized Church of Jesus Christ of Latter Day Saints. Two missions are located at Alley's Bay, on Great Wass Island, by far the larger island inhabited by Beals citizens. The main community is located on the smaller island, Beals. The two are connected by a causeway.

Will a new $1 million bridge recently authorized by the people in a special election change all this?

The folk here are determined it will not. They point to the town-operated car ferry, started 5 years ago, and that it has brought many changes but all for the good. Such changes the forwardlooking people of Beals welcome with open arms.

HOW TO WIN CHAMPIONSHIPS

Recipe for making a championship basketball team:

Take 1 small high school with an enrollment which includes only 12 boys; 8 or 10 boys, or perhaps even 5, would do.

Add a nonpaid volunteer coach. Someone like Guy Carver, Jr., a lobster fisherman.

Mix these ingredients well in the calm isolation of a coastal island. Season same with something like 18 games during the regular schedule. (All of which the team wins.)

Produce the finished product at tournament time. Result:

The team will capture the State class S title for the third time, thus setting a record, and will score 81 points in the final, setting another record. Friend and foe will be unanimous in praising the squad for its spunk, skill, and good sportsmanship.

Yes; we're referring again to Beals; the islanders who regularly maraud the mainland and upset the best-laid plans of teams and coaches from schools five times larger.

Nevadan's Views on 11 National Issues

EXTENSION OF REMARKS
OF
HON. CLIFTON (CLIFF) YOUNG
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. YOUNG. Mr. Speaker, I have just conducted a statewide poll among Nevada citizens on 11 vital issues now facing Congress.

The questionnaire was submitted through the mails to well over 70 percent of Nevada families and appeared in nearly every newspaper in the State. The results have been tabulated by International Business Machines Corp.

May I call these views of Nevadans to the attention of the membership of the United States House of Representatives at this time.

In doing so may I stress my deep appreciation to the thousands of citizens in my State who took the time to consider these important matters and express their views upon them.

It has been said that the quality of public service depends upon the quality of public interest. The participation by Nevadans in these annual statewide polls is extremely gratifying to me as their elected Representative.

The poll results follow:

[Percent]

	Yes	No	Undecided
1. Is the present rate of expenditure for our national defense program (about $35 billion annually) adequate?	55.1	17.6	27.3
2. (a) Should taxes be cut before the budget is balanced?	14.6	79.9	5.5
(b) Should the national debt (about $280 billion) be reduced before taxes are cut?	68.8	19.1	12.1
3. With regard to farm policy:			
(a) Should the Government pay farmers for retiring acreage from production?	24.6	60.4	15.0
(b) Should we abandon flexible price supports and return to high rigid price supports?	8.9	76.9	14.2
4. Is the Federal Government spending enough money for civil defense (about $41½ million annually)?	51.9	22.7	25.4
5. Do you approve of membership by the United States in the Organization for Trade Cooperation which would help administer the vast international trade agreement known as the General Agreement on Tariffs and Trade?	56.0	15.3	28.7
6. Should Congress broaden coverage of Federal minimum wage legislation?	55.3	32.8	11.9

	Yes	No	Undecided
7. With regard to the Taft-Hartley Act, should it be:			
(a) Repealed?	8.9	31.4	59.7
(b) Strengthened?	33.7	8.5	57.8
(c) Left as is?	16.2	15.3	68.5
(d) Amended as recommended by the President?	41.4	7.4	51.2
8. Should the Federal Government sponsor a health reinsurance program to encourage expansion of private health insurance?	46.4	41.0	12.6
9. Should the Federal Government sponsor a flood damage insurance program?	59.7	30.6	9.7
10. Should the Federal Government help deal with economically depressed areas by technical and financial assistance loans?	67.0	20.3	12.7
11. What is your preference in financing a Federal highway program:			
(a) Bonds?	17.6	13.8	68.6
(b) Tax increase on road users?	36.5	9.9	53.6
(c) A compromise of bonds and taxes?	41.6	9.8	48.6

Origin of the Okefenokee Swamp

EXTENSION OF REMARKS
OF
HON. IRIS FAIRCLOTH BLITCH
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mrs. BLITCH. Mr. Speaker, I would like to call to the attention of the Members an editorial which appeared in a recent issue of the Waycross Journal-Herald, Waycross, Ga., written by Mr. Roy Moore, former manager of the Okefenokee Wildlife Refuge regarding the origin of the Okefenokee Swamp.

The article follows:

ORIGIN OF THE OKEFENOKEE SWAMP

(EDITOR'S NOTE.—The following article on the origin of the Okefenokee Swamp was written for the Journal-Herald by Roy Moore, former manager of the Okefenokee Wildlife Refuge and one of the foremost authorities on the vast swamp. Mr. Moore retired from the United States Fish and Wildlife Service this month with a plea that the Okefenokee be preserved in its primitive state as one of the Nation's greatest natural wonders.)

During Pleistocene time, estimated to have been between 500,000 and 1,250,000 years ago, there was a period when the coastal region of what is now Southeastern United States was about 160 feet lower in relation to sea level, than at the present time. As a consequence the Atlantic Ocean extended inland over southeast Georgia, to a coast line that was about 75 miles west of the present Georgia sea coast. The Gulf of Mexico reached up past the Georgia-Florida State line. There was a group of four islands in what is now northern Florida.

Ocean currents flowing northward past these islands, together with wave action, built up a narrow sand bar more than 100 miles long.

Later on this coastal region emerged as the ocean receded, and the shore line as it is today was established. The long narrow bar became Trail Ridge. Behind Trail Ridge a body of shallow water was caught in what had been a depression in the ocean bottom. Rains soon washed out the sea water and it became a fresh water lake. Sand bars now became islands in the lake. The main drainage from the lake was toward the southwest and the Suwannee River was formed. The St. Mary's River flowed from the southeast corner through a gap in Trail Ridge.

Vegetation grew in the shallow waters of the lake, and in the growing and dying of plants vegetative matter accumulated. When the masses of vegetative matter came to the surface other plants took root in them and grew. First there were small plants but eventually there came cypress, gum, and all other trees and shrubs found today in the Okefenokee Swamp. Animal life came in, each kind and species seeking out its preferred environment, and eventually adapting its way to the swamp.

The story of the origin and development of the Okefenokee Swamp has been half a million years, perhaps longer, in the writing, and it is not yet finished.

The Golden Years Can Be Glorious Years

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. YATES. Mr. Speaker, Congressmen were talking about children when I entered the cloakroom one day last week. One had remarked about how quickly children grow up today, when another Member interrupted to tell about the adolescent whose father decided that the time had come to educate him about some of the facts of life. After much hesitation, the father mustered enough courage to invite the boy into the living room, saying: "Son, you're getting on in years now. I'd like to have a good heart-to-heart talk with you about the facts of life." "Sure, dad," said the boy, "what do you want to know?"

Youth knows so much. Mark Twain used to describe his feelings toward his father in this way:

When I was 15—

He said—

I thought my father knew so little about so many things. When I became 21, however, my father suddenly became very bright. I was amazed by how much he had learned in the last 6 years.

We cherish youth in this country. We cherish youth so much that we are really quite immature in our attitudes toward our older people. We discard them, perhaps not in the same barbaric manner as some primitive tribes, which drive their older people out of the community, but our treatment is nearly as bad. Each year we consign healthy, alert men and women by the hundreds to the scrap heap and to an early physical and mental breakdown, because we refuse to recognize the fact that most of our older people want to work and can work, and that a job is the best guaranty of their self-respect and independence.

The sloughing off process begins early—at age 45 for men and 35 for women. At these early ages, according to a Department of Labor finding a few years ago, the odds are 6 to 1 against their getting new jobs even in a tight labor market. The Federal Government, which used to be one of the worst offenders in refusing employment because of age, no longer does so because of my amendment last year which prohibited the Civil Service Commission from using age as a qualification. For some time Secretary of Labor Mitchell has made a determined and worthy effort to persuade private industry to abandon its long-standing preference for young people only. I'll wager, however, that the 6 to 1 odds haven't fallen very much.

At age 65 comes the culminating blow. If a person has been lucky enough to work until he reaches that age, compulsory retirement takes him out of his job, regardless of his capabilities. A few years ago I received a letter from a toolmaker in Detroit, in which he said:

I was getting along fine at my job, feeling good and doing my work well. I had worked there for 30 years and I was 64. Along came my birthday and I was out of work. I was good enough at 64; I was not good enough at 65. And yet I was the same man.

Older people are like other people in the respect that they need enough money to live on and to take care of themselves. Obviously this must come from work, savings, social security, or from some kind of public assistance. It is difficult to accumulate enough savings to retire. Most people who reach age 65 will live another 13 years, and if they want to retire on their savings, they will have to have accumulated about $17,000 in order to have an income of $100 a month for the rest of their lives. For most American families who are trying to get along on less than $3,000 per year, this amount is unattainable.

Social-security benefits, even with the increases in recent years, are still inadequate to provide a minimum standard of living. The law itself denies to beneficiaries the right to supplement their benefits by earnings of more than $100 per month, a provision which seems most unreasonable because it permits only a minimum standard of living. Until such time as social-security benefits allow a decent standard of living, beneficiaries should not be prohibited from supplementing their benefits with adequate earnings to permit them to live with independence and dignity.

Last week I filed a bill to establish a bureau of older persons in the Department of Health, Education, and Welfare, to deal with the problems of people age 65 and over. The bill also sets up a program of grants-in-aid to the States to encourage them to undertake prompt measures to train needed personnel and to lay out a course of action in handling the problems of our older citizens. The bill recognizes that primary responsibility rests with the States and local communities and that the Federal Government can only help them to help themselves.

"Grow old with me," said Rabbi Ben Ezra in Robert Browning's poem; "grow old with me, the best is yet to be." The golden years can be glorious years, if our older people have enough to live on, good housing accommodations, something to keep them active, and the feeling that they belong—that the community has not discarded them. We are still far from that goal, but it is one toward which we must strive.

The Danger of Republican Overconfidence

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, March 13, 1956

Mr. WILEY. Mr. President, both the Nation and the Republican Party, in particular, have naturally rejoiced over the decision of President Eisenhower to run for a second term.

As I see it, there is however a danger on the part of the Republican Party that it may tend to become overconfident; that it may get the psychology of it's in the bag. Such a psychology, which proved so harmful in 1948, could not only lose the excellent Republican chances of winning the Presidency, but the chances of recapturing the Congress.

I send to the desk two different expressions on this same theme. The first is an editorial from the Tuesday, March 6, Green Bay Press-Gazette, entitled, "Danger of Republican Overconfidence"; the second is the article by David Lawrence in last night's Evening Star. Mr. Lawrence addressed himself to this topic with his customary forthrightness. While there will be some who will disagree with a few of his observations, I believe that most thinking Republicans will commend the vigor and candor with which he expresses his deep convictions. And certainly, we will all agree with him on the danger of overoptimism.

I ask unanimous consent that both these items be printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Green Bay Press-Gazette of March 6, 1956]

DANGER OF REPUBLICAN OVERCONFIDENCE

The tremendous buildup of public interest that naturally accompanied Mr. Eisenhower's making up his mind whether to run for a second term contained an element that could be very dangerous to the Republican Party this fall.

That element was the tendency of Republican leaders—and perhaps some Democrats as well—to assume that the President's decision spelt life or death to Republican hopes in the presidential and congressional elections this year. Actually, neither side presented a true picture—the President's "Yes" does not assure a Republican victory any more than a "No" would have meant sure defeat.

But we suspect that many Republicans—from the precinct to the national level—persuaded themselves as they anxiously awaited the President decision that this was the case. Now there is a danger that they will assume that Ike is a shoo-in.

Certainly as of today Mr. Eisenhower rates as a strong favorite to win reelection. But the odds on the Republicans winning control of either or both Houses of Congress are not anywhere near as great. And if the GOP goes into this campaign with the kind of complacency that led to its defeat in 1948, there is a strong chance that the Democrats will retain control of Congress, and there is also a possibility that that complacency might drag Mr. Eisenhower down to defeat also.

The Democratic Party certainly has its work cut out for it in trying to unseat Mr. Eisenhower, but that does not mean that it can't be done. The Democratic Party still enjoys the trust and loyalty of a good many million Americans; in fact, it is probably true that Americans who feel an instinctive loyalty to the Democratic Party still outnumber those who feel that the Republicans best represent their interests. The great problem of the Democrats is to translate this feeling into votes for the Democratic nominee for the Presidency.

Whenever a party is led by a great personality such as Mr. Eisenhower, there is a danger that its partisan enthusiasm will tend to be centered on him, with a resulting loss of enthusiasm leading to hard work on the precinct, county, congressional district, and and State levels. The present emphasis in Republican ranks on Mr. Eisenhower as leader is dangerous, from the point of view of Republican partisanship and prospects; the party's leaders would be wise to try to shift this emphasis back to the lower levels of political activity, to the recruiting and building up of strong candidates, especially in those areas where the GOP candidates have been relatively weak (Wisconsin's Fourth and Fifth Congressional Districts, for instance).

The Democrats, meanwhile, can pull off an upset surpassing even that of 1948 if they play their cards right and really get out and work on the hustings. It is true that nationally the odds are against them—peace, prosperity, and Ike make a terriffic combination to beat. But if they concentrate on Republican weaknesses and capitalize on their own opportunities—unrest among the farmers, resentment in the South against integration, the political potential of the new AFL–CIO—they stand a good chance to keep control of Congress and a long-shot chance of putting their man in the White House.

The democratic watchword for 1956 should be, "Don't let 'em scare you." The Republican watchword should be, "Beware of overconfidence."

[From the Washington Evening Star of March 12, 1956]

EISENHOWER COULD BE DEFEATED—DISAFFECTION INSIDE GOP COULD CAUSE PARTY TO LOSE IN SEVEN DOUBTFUL STATES

(By David Lawrence)

The next presidential election looks very close. If no more than 702,000 persons out of the 9,164,000 who voted for Mr. Eisenhower in 1952 in 7 doubtful States should change their minds next November the Republican presidential ticket could be defeated. It involves a change of only about 7½ percent which can readily result from disaffection inside the Republican Party.

This tabulation assumes that the 4 Southern States with an electoral vote of 57 which went for Mr. Eisenhower last time—Texas, Florida, Tennessee and Virginia—will surely be lost to the Republicans in 1956 in resentment over the segregation issue.

The reason why an Eisenhower majority of 266 in the electoral college might not develop this time is that these 7 doubtful States—Minnesota, Missouri, Illinois, Pennsylvania, Maryland, Michigan and Oklahoma—comprise 120 electoral votes and the evidence shows they are leaning toward the Democratic side.

When 120 are subtracted from the 385 electoral votes that Mr. Eisenhower got outside the solid South in 1952, it leaves only 265, which is 1 less than the majority of 266 needed to elect a President.

Actually the picture for the Republicans is even dimmer. There are, for instance, 19 other electoral votes which also are doubtful—Arizona, New Mexico, Montana, Rhode Island and Delaware. In each of these States the margin was narrow in 1952. Also in the 1954 elections the drop in percentage points on the total votes cast for Republican as against Democratic Members of the House of Representatives in those 5 States was considerable.

There is a substantial segregationist sentiment in the border States of Oklahoma, Missouri and Maryland, and this can be expected to wipe out the Republican margin of 1952. Already, in the 1954 election, Republican strength showed a dropoff in these as well as in 4 other Northern States which together comprise the total of 120 electoral votes. Here is a table which shows the percentage of the total vote gotten in these 7 doubtful States by the Republicans for seats in the House in 1954 as compared with the congressional vote in 1952.

	1952	1954	Electoral vote
Oklahoma	41.3	35.1	8
Maryland	51.8	46.3	9
Missouri	47.8	43.8	13
Minnesota	54	47.2	11
Michigan	52.6	48.1	20
Illinois	53.9	49.6	27
Pennsylvania	52.3	49.3	32
Total			120

Examining also the Eisenhower majorities in 1952 in each of these 7 doubtful States, they could be overturned by a change of only 3 percent in Oklahoma, less than 6 percent in Maryland, less than 1 percent in Missouri, less than 5 percent in Minnesota, less than 6 percent in Michigan and about 5 percent in Illinois.

The farm disaffection is strong in Missouri, Minnesota, and Oklahoma and could be a factor in southern Illinois, and upper Michigan, where the rural vote is normally Republican. As for Pennsylvania, it elected a Democratic governor last time by reason of the Democratic strength in Pittsburgh and Philadelphia and the falloff of the regular Republican vote in the other parts of the State. Michigan told the same story in the senatorial race in 1954, with Detroit increasing the Democratic strength and the rest of the State showing a big stay-at-home total of regular Republicans.

Whichever way the Republican strategists may look at the picture they find plenty of trouble spots. There is, for example, danger in New York State with its 45 electoral votes. Senator IVES, Republican, who had won by a majority of 1,332,198 in 1952 lost by 11,125 as a gubernatorial candidate in November 1954. This was due to defections of regular Republicans who were resentful over the way Senator MCCARTHY was opposed by the Eisenhower administration as indicated in the turnover of Queens County, which had given Senator IVES a big majority in 1952 and had rolled up Republican majorities consistently for Republican candidates in previous years.

Plainly the Republican managers will have to figure out a way to get a united party and a ticket that will persuade Republicans to go to the polls in 1956. They should be worrying far less about what will attract leftwing Democrats and more about winning back regular Republicans. As one prominent Republican Senator put it to this correspondent the other day: "For every Democrat supposedly attracted by deserting NIXON, we will lose two regular Republicans who will stay at home."

The United States Foreign Aid Program

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 13, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Dorothy Rice Sims, and published in the Havana (Cuba) Post of February 10, 1956, on the subject of the United States foreign-aid program.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DOROTHY RICE SIMS SAYS

(By Dorothy Rice Sims)

This article is about our foreign aid program, which unfortunately despite the billions we are spending, too often has made us enemies and antagonized people.

To throw some light on this subject, let us take South Vietnam, an analyze our handling of that situation.

For background: Vietnam is a very rich little country in natural resources, but the people have never shared in its wealth. They did not thrive under the French rule. Instead, they lived in want and squalor, hopelessly from day to day. Such conditions were made to order for the Communists.

Then came the Geneva treaty. The country was partitioned and South Vietnam was proclaimed free. Flags and hopes were raised.

Last year, as we remember, 80,000 refugees, mostly Catholics, were dramatically evacuated from the North and resettled in the South. A tremendous operation, conceived and financed by our Government and several benevolent and Catholic organizations.

A couple of months ago, curious to see how the project was making out, I stopped off in Saigon.

Though the press had lauded its success up to the skies, they had not overstated the case. Whole villages had sprung up. Villages of smiling, well-fed people. Simple sanitation had been installed, and wells with pumps for drinking water. Work plans had been arranged. Crude sawmills were operating, hand-worked looms for weaving cloth, ovens for charcoal, to say nothing of fields of doctors and nurses and traveling dispensaries, that circulated from village to village to bring weekly aid.

Naturally, after seeing the refugees so well established, I began to wonder about the people of the country and asked what was being done for them. Then I was told the shocking news. Nothing was being done for the Vietnamese. Nothing.

No sanitation had been installed. No wells dug. No mills constructed. No looms built, or medical teams circulated with supplies. Unbelievable though it may seem, the vast majority of the 80 million Vietnamese, are still living in the same state of hopelessness and squalor, as prices climb higher and higher, due to the influx of population.

Communism has struck paydirt again.

I called on a reprsentative of Operation Brotherhood, an organization that has done wonderful work for the refugees, and asked why the native Vietnamese were being so completely neglected.

She said, "Eventually we hope to help them, too."

I said, "Why not now? Can't you see how resentful they are becoming at the favoritism shown?"

She said, "I wish that we could do something—but we have so little money."

"Why not allot a portion of it to them?"

She shook her head, "I'm sorry, but they are not included in our budget. Our appropriations were raised for the refugees. It must be used for them."

I spoke to an officer of the International Rescue Committee and asked him the same question. He agreed that the Vietnamese were having a hard time, but explained that the International Rescue Committee's field was aiding the intellectuals of a country. That all their funds must go for them.

Even our own Government contributions have strings. I quote figures on the latest allotment:

[From the New York Herald Tribune of January 18, 1956]

"VIETNAM AID SET

"The International Cooperation Administration announced yesterday that it had earmarked $37 million to help Vietnam resettle 50,000 refugees. The aid requested in President Eisenhower's new budget will be used to supply tools, seed and fertilizers, work animal loans for the refugees, equipment for land clearance, and food distribution. Last year the United States advanced $35 million to finance the refugee program."

And yet, oddly enough, in spite of facts and figures, reports of our democratic triumphs continue to make headlines in the press. As a sample, here are excerpts from an article in the Paris edition of a New York paper:

"COMFORTING SPOT IN ASIA

"(By Ansel E. Talbert)

"The best news in months is coming from the new Republic of Vietnam. * * * A democratic beachhead is being organized and strengthened economically and militarily with American aid. * * * For the first time democratic Vietnam is winning the psychological war in its own territory," etc.

Comforting spot is hardly the way to describe Vietnam at this moment. Comforting to whom?

And there you have a perfect example of how to lose a nation and alienate its people.

Home Economics

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. LECOMPTE. Mr. Speaker, in the State of Iowa we not only have the best farmers in the country but the most resourceful and ingenious farm wives. They use both time and money to the very best advantage, and it is not surprising that they are somewhat indignant when they are advised by some home economist, who may never have lived outside of a city, how to cut operating costs. Mrs. Les Hendrick, of Seymour, Iowa, in a recent letter to the editor of the Sunday Des Moines Register, takes a turn at giving advice and suggests that the home economist tell the city wife how to cut corners and stretch the dollars as the farm wife is already proficient in those lines. Under leave to extend my remarks in the RECORD, I include Mrs. Hendrick's letter:

To the EDITOR:

The news article in the February 5 Sunday Des Moines Register quoting Mrs. Clara Leopold, assistant extension home economist, of Lincoln, Nebr., telling farm wives how to cut operating cost is just infantile.

There is no one under the sun who knows more about cutting corners to stretch the dollar than the farm wife. It is the farm wife who works hard all summer in the garden and who cans hundreds of quarts of food. She is the one who makes over old garments for the children. How much harder do you want the farm wife to work?

I suggest the home economist start lecturing the city gal; she is the one that makes the husband go on strikes so she can have a little more to throw in the garbage pail. This would be a better country if the city gal would save just half as much as the farm wife.

Mrs. LES HENDRICK.

SEYMOUR, IOWA.

The Racial Problem

EXTENSION OF REMARKS
OF
HON. SAMUEL J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 13, 1956

Mr. ERVIN. Mr. President, I seek unanimous consent to have printed in the Appendix to the RECORD a thoughtful editorial from the Charlotte News for March 5, 1956, commenting upon a reasoned and eloquent address made before the Civitan Club of Charlotte, N. C., by Judge Fred B. Helms, one of North Carolina's ablest lawyers and finest citizens. The address of Judge Helms emphasized the undoubted truth that the racial problem can only be solved on the local level by people of both races possessing good will and understanding hearts.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EXTREMISTS MUST BE ANSWERED CLEARLY

For a moment Judge Fred B. Helms' voice rang clear above the angry mouthings of the racial opportunists and extremists.

The reason was simple. He knew what he was talking about. When he talked about the desegregation decision he quoted from it. When he discussed interpretations, he turned to the precise analysis of Judge John J. Parker. Commenting on the Constitution, he referred to its articles. It is a strangely uncommon practice.

From the context of those definitions and interpretations, leavened by his own experience in high State councils, emerged an address to the Charlotte Civitan Club that brought the South's reaction to its desegregation dilemma into sharp focus.

Significantly, it expressed the thoughts of a southerner who assisted his State in seeking a different decision, and who disagrees with the one that was rendered. Significantly, it was an honest evaluation of the South's position today.

It is not a pretty picture. The dominant strokes are those of anger, defiance, mounting violence, threats, and the preaching of the false doctrines of amalgamation, integration, and nullification. Judge Helms is disturbed by that, but more concerned about what is not seen in the current picture—the influence of the majority of reasoning, constructive southerners. He is fearful that "another catastrophe comparable to the tragic era following the Civil War is in the making," because the "men of goodwill, men of courage, men of Christian statesmanship and farsightedness" are silent.

What is happening in their silence?

"Desperate men in positions of leadership are openly advocating defiance to the courts and to the supreme law of the land. From the other extreme, men flushed with victory in courts are seeking to substitute coercion for concord between the races in the South. The great mass of moderates which comprise probably more than 95 percent of both the races in the South are strangely silent and inactive while the extremists in both races are rapidly destroying the good will and understanding of both races which have been built up through men of brotherhood and good will in positions of leadership during the decades which have followed the Civil War."

Judge Helms' indictment is clear and complete.

It is no easy thing he asks of the moderate majority. It is easier to stir fear than to promote calm, easier to promise wrong solutions than to strive for infinitely complex answers that will work. It is simpler to promote violence than to stop it.

If he is going to speak, the moderate must speak now.

But what is he going to say? It will not be enough to cite the suicidal violence of the extremists. They can be checkmated only by advocacy of a reasonable counter solution. A way must be found to reduce the complexity of that solution into concrete terms.

Governor Hodges, whose moderation has kept North Carolina relatively free of the dangerous tensions in other States, is conscious of that need. Thus, the strong indication that the General Assembly will be called into special session.

The governor's assurances that he disagrees with the Supreme Court decision and that no child shall be forced to attend a school of mixed races against the wishes of his parents or himself have not been enough. He must make his solution concrete and readily grasped.

Luther Hodges has been tossed about on occasion by the eddies of extremism. But it is clear that his basic purpose is to conserve the State's institutions and the peace and good will between the races. He is the State's best hope for achieving that purpose, and if moderates would rally, they must rally to him.

What Happens in a Depression

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I include an article from the Minneapolis Star of Friday, March 9, 1956, by Don Brown, publisher, the Waseca Herald and Journal.

This article follows:

To fill this column I have gone back to the files of my column during 1932. A fisherman on Lake Erie had caught a sea serpent 10 feet long and it was making news. Remember, those were prohibition days, before which time the boys used to throw that kind back. I've been trying to warn my sons about what happens in a depression but it wasn't until I started rummaging the 1932 newspaper files that I realized how tough it was. A Waseca farmer advertised in a magazine for a farmhand. He received 287 letters, 16 long-distance telephone calls, 8 men made personal visits and some offered to work for as little as $10 a month. Things were so bad that one fellow proposed printing a little gossip on the currency to get it back in circulation. So many people were committing suicide (and this was no exaggeration, Freeborn County in 1931 had the largest number in its history) that Colt Arms was recommended as the stock market buy. People quit tying a string around their finger to remember—they tied ropes around their necks to forget. I lost all fear of the wolf coming to our door, knowing that the children would eat him up. "Feeling like 30 cents" lost all its meaning. Out West the coyotes were staying up nights to hear the people howl. In 1931 there were 46,271 more aliens who left America than entered it. Best crack I recall of the depression came from the wag who said it was getting harder to borrow money than to pay it back.

Address of Adlai Stevenson

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. McCARTHY. Mr. Speaker, under leave to extend my remarks, I am pleased to include the following address by Adlai E. Stevenson at the Minneapolis Labor Temple, Minneapolis, Minn., on March 2, 1956:

Commissioner Matthews, Senator Humphrey, Governor Freeman, Congressman McCarthy, distinguished guests, and ladies and gentlemen, I have been honored and flattered by all that has happened to me here today, and what is more, I think I have been reminded of something that I have neglected to do.

I propose to talk a little about some of our party's business in this crowded, fateful year. I am reluctant to do this in the presence of Senator HUMPHREY, in the presence of perhaps the most articulate voice in the United States today. I think he probably knows more about what ails this country, indeed what ails this world, certainly as much as anybody in public life today. I would pay to him here my profound respects. I only wish I were touched with his eloquence. I only wish I had his heart and his voice. I know I have his confidence in our party and its principles.

I have no doubt that in this fateful year of 1956 that we are going to win the election and we are going to win this election because this time we go to the mat against a President and a party with a record in office, a record that it will have to defend if they can. You have all probably read some of your favorite Republican newspapers and observed that there aren't, as they say, any real issues in this campaign, that there is really no difference between the Republican and the Democratic Parties any longer. What that translates into is that it is no time for a change.

Well, it is true, that the Republicans have appropriated the labels from most of the Democratic programs, those very same programs that our Republican friends spent the last 20 years denouncing and voting against. But it is not the labels on the programs that count. It is what is inside the package, and I can tell you that all around the country the gaudy wrapping has been taken off and the people are beginning to discover what they really bought in 1952, and what they didn't get in 1953, 1954, and 1955.

No issues in this campaign? I say, tell that to the farmers whose income has declined 27 percent since 1952, and I say, tell it to the boys in the union halls like this one, who haven't had a promise kept yet. And I say, tell it to the small-business man, those fellows who have some pretty strong views on what is really good for General Motors. And I say tell it to the mothers who send their children off to overcrowded schools and to the schoolteachers who have been waiting 3 years for the conference to end, so that somebody could do something.

I would suggest that you tell it to the 8 million families in this country that have to get along on something less than $2,000 a year. And maybe we ought to tell it to the leaders in the Kremlin too, who may not believe that they are losing the cold war in Asia just because Secretary Dulles says so.

I say they are all over the place. I just came across a new issue here in Minnesota today. I discovered lately that you have had regular visits from one of your fellow citizens, Harold Stassen. I thought he was supposed to be in charge of peace. I hadn't heard much about him lately, not since he sent me a message via the newspapers, in which he challenged me to a debate on the farm issues. I said then it was good to have Governor Stassen around again. It was sort of like the first robin of spring—you know, he flies in every 4 years to remind us that an election is about to come off.

Well, I understand that his purpose out here is not national, nor international, that it has to do with Minnesota State politics. They tell me here today that he has been trying to scare up a Republican candidate to run against Orville Freeman. But I gather that every time that Harold endorses one, the lucky fellow promptly withdraws.

It's tough enough to have to run against Orville without having to run with Stassen's endorsement.

But I suppose this kind of work keeps Mr. Stassen occupied and amused. Well, I don't suppose we should complain. It's sort of an odd mission, however, for the secretary of peace.

But I guess it keeps him and us out of troubles which is more than I can say of the extensive travels of the Secretary of State. You know, HUBERT HUMPHREY told me that he was considering offering as his own contribution to peace a Senate resolution forbidding Mr. Dulles to leave the continental limits of the United States.

Now, I think that might help, HUBERT, it might help. But if it is going to be really effective you will have to amend the resolution to also bar the Secretary of State from the newsstands. That man is in the air so much that I wonder if he has any visible means of support.

Well, maybe it is all right to have Harold Stassen working on a farm program. You know, as a farmer friend of mine said the other day, he would be glad to have anybody work on it except Secretary Benson and it may be if Harold works on it long enough he will complete his education. Maybe he will even find out what a "rube" is, Orville.

Well, I tell you, my friends, in all seriousness, I say to you that there are too many real and urgent issues in this country at this time. On the domestic side they mostly head up into one big one, the issue of single-interest Government. You all know the composition of our Government today, and how it has changed in these past 3 years. I say to you that there is nothing wrong in my judgment, with big business in Government unless you reach the point where nobody else is in Government. The big thing is to achieve a balance between the farmers and the working man, the consumer, the businessman, and all the rest, a balance that guarantees that each is represented and all advance together, and none gains at the expense of the other. The Democratic Party understands that problem. In the years of power it has so organized our Government

and in the process we have succeeded in guaranteeing a steadily rising standard of living for all Americans, including business, both big and small, and I say that such a balance is necessary if we are to meet the other great issues of our times, the issue of this Nation's survival.

We are engaged, as I said this morning at your great and distinguished university, in a war of ideas, in a struggle for the minds of men. We know the nature of our enemy. We know he is ruthless, that he makes his own rules as he goes along. He switches from smiles to frowns, from rattling the saber to soothing talk of peaceful coexistence, but his purpose never changes, to spread the Marxist theology over the earth.

We must organize this Government so as to guarantee some consistency in our lives while we retain the necessary flexibility to meet a shifting situation. It means a total effort and certainly it requires steady control at the top level of administration. It should be clear by now that these minimum conditions cannot be met while Mr. Dulles continues to run the State Department out of his briefcase. But it is equally clear that we will not see these vital affairs adequately managed until the final responsibility and authority are clearly fixed once more in the place where they have long resided, in the President.

And that brings me to the new dimension, the new and compelling issue in this campaign. The manner and mode in which the duties of our highest office are to be discharged. I have shared with you the whole Nation's concern over President Eisenhower's misfortune. And I share with all of you our pleasure at the progress of his recovery. He had not only the sympathy of our party, but our understanding in the weeks following his illness when, of necessity, his activities were severely limited. But now I understand that the condition of his recovery is that the special arrangements made to accommodate him, of necessity, must be made permanent.

To delegate the functions and, of necessity, the authority of the President on a scale that we have not known in our time represents an issue that is not the personal one of the President's health, but the public matter of how the office of President can and should be conducted. To add to our other vast problems at home and abroad, there appears also to be emerging for the people's careful consideration a reexamination of the nature of the greatest office on earth. It is an office designed to be filled by an executive. Can the functions be altered without significantly altering the structure of the Federal Government? And the question is the more solid at a time when tensions are rising at home and abroad, when the day-to-day management of our public affairs demands close and exacting attention and a firm and a certain hand.

Now what will we do? What do we Democrats mean to do when we take up the reins of Government again? Let me see if I can say it briefly before I subside. I say that we will tackle the problem of agriculture which is so eloquently represented in Washington today by the Senator from Minnesota, HUBERT HUMPHREY. We will take up the problem of agriculture in order to restore farm income to fair levels. We will seek to protect the place of small business in our free-enterprise system. We will continue to fight to preserve the heritage of natural resources, our public lands, our national forests, our soils and parks. We will give urgent consideration to the plight of substandard families in blighted or depressed areas into which the tide of prosperity has failed to flow.

Yet the battle against insecurity is only half the battle for a better life. A full dinner pail is, to be sure, a necessity, but Americans have never lived by bread alone. We have lived by ideals and by moral values. So we Democrats are for a country in which our children grow up, not in ramshackle country shacks or in ugly city slums, but in decent surroundings, where they can see the sun, where they can breath fresh air. We are for a country where our children go to school, not in crowded classrooms or basements or in half-day shifts but in decent buildings with good teachers, proud of their jobs.

We are for a country where no family lives in dread of crippling diseases that add to their pain and fear. We are for a country where older people are not doomed to live out empty years with only the solace of a small pension, and we are for a country where all of our people can work under fair labor standards, where responsible unions are protected by a law that guarantees fair collective bargaining.

We are for a country where we defend the liberties of all by defending the liberties of each, where the Bill of Rights and the Golden Rule are part of our lives, where there is freedom to live, to speak, to doubt, and to be yourself. We are for a country where no family's aspirations are bounded by unyielding barriers of race or of religious prejudice.

This, I say, is a rough outline of the presidential campaign of 1956 and of the objectives of the Democratic Party as I see it. I am, as I have told you, confident that we have well begun the march to victory. Since 1952 I remind you the Democrats have won almost every election in the entire country, from Oregon to Maine. It is you, people like you here this evening, steadfast, loyal party workers, representatives of this remarkable strong, clean, new Democratic-Farm-Labor Party of Minnesota. It will be people like you who will be out point of contact with our fellow citizens and who must win the biggest and most important election of all. If I can help you, let me know on primary day.

And, in conclusion, let me thank you from a very full heart for the welcome that you have given me here in the Twin Cities today, for the encouragement that you have given me, whom you have already once honored with the greatest honor within your reach, the nomination for the Presidency of the United States. I approach this undertaking for a second time with only gratitude for the opportunity, with a prayer that I may not disappoint your hopes. Thank you.

The Impact of the Passing Time

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, March 13, 1956

Mr. WILEY. Mr. President, every once in a while it is a good thing for each of us to take note of the tremendous changes which have occurred on the national and international scene.

The tremendous increase in population has meant that vast numbers of Americans are growing to maturity in almost a new world from that which the older generation had become familiar with over the years.

This fact was brought home to me by an editorial in the La Crosse Tribune of last Friday, March 9, entitled "Hard to Believe."

I ask unanimous consent that its text be printed in the Appendix of the RECORD as a brief reminder of the population increase in the changing world.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HARD TO BELIEVE

Sometimes it is difficult to keep in mind that the element of change is a primary characteristic of a growing country such as ours. For instance, consider that during the last 10 years:

Fourteen and one-half million people have died.

Almost 17 million marriages have taken place.

Close to 36 million babies have been born.

Over 20 percent of all present families in the United States today have been formed.

Out of the one-hundred-and-sixty-five-odd-million people in the United States today, over 70 percent do not remember World War I.

Forty-six percent do not remember what conditions were like before World War II.

Forty percent have never heard Russia referred to in any terms other than as an adversary.

Fifty-three percent do not have any personal recollection of what a major depression is like.

America's Achilles' Heel

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. YATES. Mr. Speaker, it has been clear for some time that we are way behind in our efforts to catch up with the Nation's ever-growing educational needs. A bill approved last year by the House Committee on Education and Labor to provide Federal funds for the construction of schools is only now being considered by the Rules Committee and is moving very slowly. A number of witnesses remain to be heard before the Committee decides if and when it will grant a rule on the bill so that it may come to the floor of the House.

Many Members who favor the bill are pessimistic about its chances of final passage. The Supreme Court decision which outlawed segregation in public schools has engendered such deep feeling among southern Members that many of them are inclined to vote against the bill, regardless of whether or not it contains an antisegregation clause. Their argument is based on their traditional claim of States' rights: education is the business of the States and not the Federal Government.

Much is heard in support of that contention every day. More will be heard when the bill comes to the floor. The fact remains, however, that the Federal Government is interested in education and will continue to be—as a matter of national security, if for no other reason, for the Russians are engaged in a massive crash program to educate scientists, engineers, and mathematicians.

A few weeks ago Adm. Lewis Strauss, Chairman of the Atomic Energy Commission, and Adm. H. G. Rickover, designer of the atomic submarine, expressed concern not so much with Russia's 300-division army, or with its more than 300-submarine navy, or with its ability to explode A-bombs and H-bombs although these did disturb them. They were worried about the dearth of scien-

tific and engineering schools in this country and the decreasing number of engineers and scientists being graduated. They termed this gap in our educational system "America's Achilles' Heel," and called attention to the fact that the Soviets were training and graduating currently twice as many such professional people as we were.

In an article last October, Dr. Charles A. Thomas, president of Monsanto Chemical Co., pointed out that only 1 out of 11 American high-school students studies chemistry; that since 1900 the percentage of students studying algebra has declined from 56 percent to about 25 percent. In sample surveys, teen-agers voted mathematics and foreign languages the two most unpopular subjects in school. Many of them thought of scientists as "cold and calculating, without interest or moral standards." Science was described as "an occupation for queer geniuses." Dr. Thomas believed that the disinterest in science could very well be due in great measure to inadequately trained or uninspired and uninspiring science teachers, and that something should be done to correct this. But what should be done?

This week, the Appropriations Subcommittee of which I am a member, heard the testimony and the request for funds of the National Science Foundation. They confirmed the statements of Strauss and Rickover that our advantage over the Soviets in trained scientific and engineering personnel will not last very long unless we step up our own educational programs. This the National Science Foundation is attempting to do by grants of research projects to universities, by granting fellowships and scholarships in science to worthy students, and by reeducating high school and college science teachers in current scientific and educational developments. Teachers are given scholarships to improve their competence by additional courses of study. Efforts are being made to rewrite scientific textbooks to make them more interesting and attractive for students of all levels.

We do have some good teachers, like my good friend, Mrs. Annette Yancey, who is a teacher at Lane Technical High School. She told this story in a letter to me last week, and I thought you would like to hear it because I think it is appropriate:

A 10-year-old girl had a test in geography. One question, "In what State is St. Louis?" At home that evening she explained, "Daddy, I didn't know how to spell Minnesota and I didn't want to make a mistake in spelling so I wrote Missouri." I tell such stories to my classes believing a spontaneous reaction, indicating an alert sense of humor, is closely allied to high intelligence. The story got a loud laugh from one boy, then a few chuckles. At last one sober-faced lad muttered, "It's too bad no one has told her by this time it's in Kansas."

We want our sons and daughters to be well educated. And yet, fully half of our young people having the intellectual capacity to continue their education beyond high school do not do so, for one reason or another. Until this percentage is greatly improved, we will still have our Achilles' Heel.

Two Thousand Five Hundred and Sixty-five Residents of 20th Congressional District of Pennsylvania Take Part in Newspaper Poll of Public Opinion on Current Issues

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. VAN ZANDT. Mr. Speaker, recently I conducted a newspaper poll among the residents of Blair, Centre, and Clearfield Counties comprising the 20th Congressional District of Pennsylvania which I have the honor to represent.

As of March 1, 1956, 2,565 questionnaires were returned and of this number 1,135 were from Blair County, 880 from Centre County, and 550 from Clearfield County.

A further breakdown of the 2,565 questionnaires by occupation is as follows: educators, 235; professionals—doctors, lawyers, and so forth, 165; students, 55; military, 15; retired, 410; railroaders, 210; skilled trades, 190; farmers, 140; businessmen, 415; laborers, 75; housewives, 270; miscellaneous, 385.

The tabulation of the 15 questions representing the views of the 2,565 residents of the three-county area follows:

	Yes	No
1. Do you favor reduction of taxes before balancing the budget?	425	2,140
2. Do you favor Federal grants to States to help build schools?	1,545	975
3. Do you favor increased social security benefits supported by larger deductions from pay envelopes?	1,345	950
4. Should foreign aid be increased?	610	1,955
5. Are Americans being fooled by Russia's attempt to pose as a peace-loving nation?	1,315	1,090
6. Which in your opinion represents the soundest agricultural program:		
(*a*) High, rigid price supports for basic crops coupled with production controls?	120	0
(*b*) Flexible price supports and the soil-bank program as advocated by the present administration?	870	300
(*c*) No price supports, permitting agricultural commodities to find their own level in the market?	1,040	175
7. Do you favor President Eisenhower's highway program, the cost of which is to be paid by bonds?	1,700	715
8. Do you favor more federally subsidized public housing?	855	1,500
9. What do you think Congress should do about the Taft-Hartley Act?		
(*a*) Should it be repealed?	285	35
(*b*) Let alone?	1,090	330
(*c*) Amended	720	90
10. Should the electoral college be abolished and the President of the United States be elected by popular vote?	1,480	510
11. Do you favor reduction of Federal Government competition with privately owned business and industry?	2,020	540
12. Should England discontinue trading with Communist China?	1,610	775
13. Do you favor admission to the United States of more displaced persons?	995	1,515
14. Do you favor federally subsidized power projects?	735	1,630
15. Do you favor an increase in postal rates to meet Post Office Department deficits?	1,690	820

A study of the questionnaires discloses that about 15 percent of them were accompanied by explanatory letters either qualifying the vote on the various questions or commenting on other subjects of national importance.

Many of the letters also revealed that the conclusions reached followed a family conference or a discussion of the questions with neighbors. In one instance, a service club discussed the questions at its regular weekly meeting and after polling its members sent me a tabulation of the views expressed.

A great many residents voiced their concern over the seriousness of world conditions and their effect on our standard of living and our future as a Nation.

It is significant that not a single letter or questionnaire revealed a belligerent attitude on the part of newspaper readers. While there was criticism of some governmental policies and agencies, it was of a constructive nature and revealed a desire to be helpful in my efforts to secure a cross section of sentiment on national issues.

I wish to thank all the newspaper publishers and their readers for their cooperation in making the newspaper poll a successful venture.

This method of sampling public opinion has proved mutually profitable because it has given my constituents an opportunity to voice their sentiments on the manner in which their Government is conducted and it affords me helpful information in carrying out my duties as a Representative in Congress of the 20th Congressional District of Pennsylvania.

The Place of the Community in the Employment of the Physically Handicapped

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. McCORMACK. Mr. Speaker, on December 8, 1955, the President's Committee on Employment of the Physically Handicapped conducted its first New England regional meeting at the Bradford Hotel in Boston. Massachusetts acted as host to the six participating New England States, and arrangements for the meeting were made through the Governor's Committee on Employment of the Physically Handicapped under the leadership of the chairman, Edward D. Callahan, and W. Scott Allan of Liberty Mutual Insurance Co.

Discussions during the 1-day conference of the President's committee in Boston emphasized the need for community action in providing more employment

opportunities to meet the needs of the rehabilitated handicapped people who are now ready to return to productive work, as well as the increasing numbers who will join them as the result of Public Law 565, amendments to the Vocational Rehabilitation Act. Discussion leaders included Dr. Paul Dudley White; E. B. Whitten, National Rehabilitation Association; John F. Mungovan, Massachusetts Department of Education; Charles S. Wilson, Bay State Society for the Crippled and Handicapped, Inc.; Leslie Woods, Raytheon Manufacturing Co.; Stanwood L. Hanson, Liberty Mutual Insurance Co.; Dr. George F. Wilkins, New England Telephone & Telegraph Co.; Edward C. Uehlein, attorney at law; J. Angus Morrison, Brown Co.; Richard J. Kellar, Sears, Roebuck & Co.; Ervin Pietz, Barre Controls, Inc.; Joseph Chervarie, American Federation of Labor; and Kurtz M. Hanson, Champion-International Co. and Associated Industries of Massachusetts.

The luncheon invocation was given by Rev. Fr. Thomas J. Carroll and remarks were made by the Honorable John B. Hynes, mayor of Boston, and the Honorable Sumner G. Whittier, Lieutenant Governor, State of Massachusetts.

The principal address at the luncheon was given by Earl Bunting, Vice Chairman of the President's Committee, a very informative address which I include, with pleasure, in my extension of remarks. The informative address of Mr. Bunting should receive as wide reading as possible.

THE PLACE OF THE COMMUNITY IN EMPLOYMENT OF THE PHYSICALLY HANDICAPPED

I regret that the man for whom I speak today cannot be with you himself. Maj. Gen. Melvin J. Maas, Chairman of the President's Committee, had every intention of being with you, however, his doctors have ruled otherwise and he is taking their orders like the good Marine that he is.

While I have the opportunity, I wish to take this occasion to pay my personal tribute to our dedicated Chairman who is at present conquering his own crippling ailments, and they are many and varied, through rest and medication at the United States Naval Hospital, in Bethesda, Md., whose erection he helped sponsor when he was in the Congress of the United States years ago. Gen. Mel Maas has been many things in his lifetime—flier, fighter, statesman, politician, businessman, field leader, and hero both at home and abroad.

Totally blind for 4 years now, bothered by diabetes and arthritis, plagued by bothersome dentures with which he must make as many as 4 and 5 speeches a day while traveling an average of 100,000 miles yearly on his voluntary and unsalaried mission for the President, Mel Maas is the perfect example of a man who has conquered crippling through employment, and in the noblest employment of all, service to others as a volunteer.

As Acting Chairman of President Eisenhower's Committee, I am happy to bring you warm best wishes and personal appreciation of the President for all that has been done in making this meeting successful.

Physical handicaps are not job handicaps. Those among us with physical limitations are an integral part of the labor force of our country, with equal rights to equal opportunities for gainful employment through equality of treatment. For about 10 years the principal job of the President's Committee on Employment of the Physically Handicapped has been to bring about widespread public recognition of the foregoing truths.

This involves elimination of all prejudgment or prejudice regarding employability of the physically handicapped and also obtaining employer recognition that such people do possess or can acquire skills and abilities of value to industry, business, agriculture, and government—and are fully capable of meeting efficient and profitable production standards.

Special training programs have been devised to better equip those with limited physical qualities to carry their full share of the load in jobs which they can be fitted to do. But, to be of real value to the disabled worker, the community, and the Nation, vocational rehabilitation must result in employment. Preparing the handicapped for jobs has value only if their skills and abilities are recognized by both large and small employers.

While it is encouraging to know that many enlightened employers throughout the country are now hiring the physically handicapped in recognition of their skills and abilities, we must face the fact that a great many more employers still do not consider those with such limitations as acceptable parts of the available labor force. Our job is to reach these other employers.

This may seem to be a large order, but actually it isn't. Remember that many of the physically handicapped who are now employed in industrial plants, in stores, in offices, on construction and farm jobs, a relatively short time ago were considered unemployable. Our goal is attainable. All that is required is understanding and cooperation.

Understanding alone, in a program of this nature, will bring the intelligent cooperation necessary to solve many of the employment problems of the physically handicapped. The problem of gaining this understanding, however, has many facets, each of which is a program by itself. First in importance is community understanding of management problems and management understanding of community problems. Knowledge is one of the paths to understanding; knowing something of each other's problems is a big step toward understanding them.

But before we ask employers to understand the community's problem regarding its unemployed handicapped citizens, we must be prepared to understand problems of operating a successful plant or business. Because an employer must earn a profit to stay in business, his necessary objective is maximum production and quality at minimum cost. If he is to maintain and improve his competitive standing among others who are also after a share of the consumer's dollars, the employer must not only undertake solution of problems such as capital needs, potential markets, access to raw materials, technological improvements, plant lay-out, work-flow, and customer delivery obligations; but also the vast and intricate human problems of personnel administration and labor relations—problems which directly affect the worker. It is demanded of him, also, that he meet successfully problems of personnel performance such as employee efficiency and productivity, tardiness, absenteeism, work injuries, labor turnover, and other personnel factors which may impede his efforts to maintain maximum production and quality at a minimum of cost. He must constantly guard against any unusual personnel costs that will diminish his ability to compete for business.

It is basic then, that the company does a good operating job at a profit, so as to be an asset instead of a liability to the community. It is important that the employer secures his own competitive position and then transmits this security to the community. Consistent with these responsibilities, the employer can and will assist in helping the community to solve its problem of finding suitable jobs for the physically handicapped. But, first he must be provided with the knowledge he needs to understand the skills available among the handicapped, how to put them to use without assuming an abnormal financial risk, and what performance he can expect from such workers.

Some employers fear financial risk through employment of the physically handicapped based on lack of understanding regarding the true concept of the handicapped as members of the normal labor market, effective methods for employing them, their performance history in industry, and the effect such a personnel practice has on the cost of group insurance and workmen's compensation costs. This lack of understanding the employability of the physically handicapped is preventing many employers from tapping needed skills and abilities offered by these people, particularly by those employers who institute rigid and inflexible preemployment physical examinations, screening out all but nonhandicapped applicants for emloyment.

Community organization and intelligently planned programs will provide emloyers in the community with the knowledge they need to understand the employment problems of the physically handicapped and the possibilities for company assistance in helping the community to solve such problems. This is the community responsibility. The job of increasing employment opportunities for the handicapped is the job of the community where these problems actually exist. The community is the scene of action. Here the physically handicapped worker is known. Here his problem can best be considered in relation to job opportunities available in the area. Here the employer is known. Here is where the actual employment of the physically handicapped must be accomplished.

Promoting employment of the physically handicapped should be guided by a community committee composed of community leaders and sponsored by the top community official, such as the mayor or selectman. In this manner, the community can provide for local united action in stimulating and coordinating programs for the employment of the physically handicapped, avoid duplication of community effort, and furnish the handicapped with direct and needed vocational rehabilitation and job placement services. Community committees can widen the field of research to obtain facts regarding the employment problems of their physically handicapped people. These facts can be used as a basis for intelligently gaging the employment needs and capacities of the handicapped with a view to devising ways and means for meeting those needs and utilizing those capacities to the utmost. Organized in such a manner, the community efforts in behalf of its unemployed handicapped citizens will draw the respect of the key people in the program—the community employers.

In many areas employers are very active and enthusiastic members of community committees on employment of the physically handicapped. Those who have had successful experiences with the handicapped appreciate the opportunity to relate their experiences to other employers who do not understand and, for that reason, may be reluctant to attempt utilization of this important source of labor.

How should the community organize to be on common ground with its employers? What programs can be planned that will assure the community of employer assistance in finding jobs for the physically handicapped?

Any program for the employment of this valuable segment of the labor force must take into consideration the fact that top management is the policymaking group and from that group will come acceptance of the handicapped as it relates to policy favorable

to their employment. These policies sometimes must depend upon the participation of labor groups in organized plants having rules of employment set forth in labor-management contractual agreements. Also, labor can encourage employee acceptance of the handicapped as coworkers. It can assist handicapped workers to view themselves, the labor market, and employment realistically and recognize that they must have or prepare for the skills and abilities of value to the employer before they can hope to obtain suitable gainful employment.

Top management acceptance is the first step; then personnel managers and industrial physicians can set up suitable employment practices which will provide for the induction of qualified handicapped persons through use of the worker physical capacities appraisals and the job physical demands analysis techniques. Of course, this induction of the handicapped through the employment practices of the personnel and medical departments would depend upon the acceptance of the handicapped by foremen and supervisors as profitable employees within the various departments. In many cases, the supervisor has the final say regarding acceptance of new workers in his department. If he is not agreeable to the idea that handicapped workers can help him with production, quality, and operating costs, the supervisor can block or diminish the effectiveness of the entire company policy of hiring qualified handicapped applicants.

Many communities have found that in addition to representation from government agencies and community organizations directly concerned with the vocational rehabilitation and job placement of the physically handicapped, community publicity media, educational institutions, religious groups, veterans organizations, organized labor, and industrial insurance agencies, the community committee should include representation from all levels of management.

There should be top representation from the local manufacturers' association and the chamber of commerce, as well as representation from the local personnel managers' association and foremen's group. A qualified industrial physician who understands the employment problems of persons with physical impairments should also be included in this group. In this manner, management from top to bottom is represented on the community committee.

Proper management representation on the community committee should provide for a powerful and influential unit of the committee with the members in a position to arrange for suitable talks and the showing of appropriate films at meetings of the local manufacturers' association, chamber of commerce, trade associations, personnel directors and employment managers' associations, foremen and supervisory clubs, medical societies, labor organizations, service clubs, and others.

The members representing management can be the basis of an employer subcommittee of the community committee. Thus, a division of program responsibilities can be accomplished, with the employer subcommittee assigned the specific task of increasing employment opportunities by working toward the elimination of employer prejudgment and discrimination.

The program of the employer subcommittee is to ascertain the actual employment problems of the physically handicapped and to initiate appropriate action programs specifically designed to remove barriers to the employment of the physically handicapped found in employment policies, personnel practices, recruitment techniques to obtain workers available in the labor market, preemployment physical examination standards for worker acceptance, facilities for matching the abilities of prospective employees with the actual work to be done, employee induction programs, supervisory resistance or practices, labor-management contractual agreements setting up procedures to be followed in filling job vacancies, promotions, layoffs, and recalls. Within these areas can be found many of the barriers to the employment of the physically handicapped. Also, the employer subcommittee can study and recommend needed changes or new legislation to remove any real barriers to the employment of the physically handicapped which exist as a result of industrial insurance regulations and workmen's compensation laws.

It is the job of the community to organize effectively so that it may ascertain accurately the actual community barriers to the employment of its unemployed citizens who possess bodily defects, but who are qualified to perform work that is available in the area. It is the job of the community to initiate appropriate action programs specifically designed to remove these barriers. You may find them in the employment policies of top management. They may be the result of personnel practices and recruitment techniques used by personnel directors and employment managers. Preemployment physical examinations may be the source of their rejection. Lack of knowledge and facilities for matching the handicapped with jobs for which they are qualified may be preventing these people from obtaining jobs. Problems may be found in labor-management contract clauses. Supervision may be the only stumbling block. There may exist the need for changes in industrial insurance laws and regulations, or the need for new legislation to remove statutory impediments to the employment of the physically handicapped. Among other things, the employer's attention is on the effect of workmen's compensation liability in hiring the handicapped. Such legislation must be designed to give the employer parity of risk if he employs handicapped workers, or that barrier to the employment of the physically handicapped is beyond his control.

These are some of the sources of barriers to the employment of the physically handicapped. There are others. Look for them. Remove the barriers and give the handicapped equal opportunity to qualify for the jobs available in the community. Cultivate the help of the community employers. They want to help the community and contribute their efforts in assisting the community to solve its problems.

In many European countries, through statutory quota systems, 1 out of every 10 employees must be handicapped. While this sounds like a fine humanitarian program, the end result is neither desirable nor workable, for instead of conquering crippling through employment, the end result is the spreading of many cancers. The employer resents the worker who is imposed upon him, the fellow worker dislikes this extra worker who may not be qualified, and the handicapped man himself is unsure and unhappy about his place in society.

Our way is by far the better. Let's keep doing it our way, but let's do it better and faster and more often. For our way breeds no resentment and calls for the best cooperative efforts and leaves each individual with the dignity and respect which is so necessary for the handicapped, the employer, and the fellow worker.

At our annual meeting this May the distinguished chairman of the Tennessee Governor's committee made the point that "we are bound up in the bundle of life." These nine words were cited by Mr. Russell Brothers as a credo for those working in this rewarding field. If we keep these words and this challenge as our goal, we shall more certainly assist our handicapped fellow Americans in their conquest by jobs.

Participation Essential to Democratic Process

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

"Young people throughout the Nation must not only interest themselves but must participate actively in public affairs, if democracy is to remain strong," said Congressman PHILIP J. PHILBIN, addressing the Leominster Junior Chamber of Commerce last night.

"Our system presupposes the active participation of our citizens," said PHILBIN, "but large numbers of Americans often stay away from the polls and its is becoming more difficult every day to get qualified citizens to serve their communities."

"More than ever people are completely engrossed with their own affairs and occupied by the many demands of modern day living. That is quite understandable and necessary from the individual point of view" said PHILBIN.

"But if the democratic way is to retain its vitality and achieve its maximum goals in the world and in strengthening and building this great Nation, trained young people will have to assume some of the responsibilities of the leadership which will be theirs in the future.

"And the people as a whole must ever maintain a lively interest and keep constantly on guard in order at every level to insure honest, capable government, expressive of the popular will and the American ideal of freedom."

PHILBIN declared that "your new organization of able, aspiring young business and professional men can do much not only to promote your own group interest, but by the example of your vigorus spirit elevate the tone and level of community contributions."

PHILBIN said that business, industrial and professional leaders were as vital as political statesmen to the proper development of the country.

"We are coming into great, revolutionary changes in business and economics stemming from continuing, astonishing advances in science.

"There are more opportunities in American business than ever before," he said, "because the national economy is moving ahead in leaps and bounds. Immediately confronting us in the greatest age of all history, if we can only preserve world peace. But in any event we will need business leaders of patriotism, marked capacity and social consciousness. They will be recruited from the ranks of your generation.

"And they will have to know, just as those charged with leadership today should know, that in a free enterprise competitive society, if it is to endure against radical panaceas, true national prosperity and opportunity must extend to all.

"If in our philosophy and practice, we maintain proper balance in our economy between legitimate self-interest and human social needs, the American people of every class is destined to move steadily in the direction of unparallelled prosperity.

"Meanwhile, let us resolutely build our national strength. Tensions have eased somewhat. Smiles have replaced scowls in Soviet diplomacy. But the Marxist plot still surges toward world conquest. Neutralism impairs the unity and strength of the free

world. Great problems and dangers confront us from the Communist conspiracy.

"But I think that if we remain strong and powerful, militarily, economically and spiritually, we have nothing to fear."

Commenting on the current diplomatic impasse, PHILBIN said, "It is our task as well as our duty to press for peace even in the face of discouragement. In time, if we persevere in our militant devotion to freedom and properly develop our strength, God willing, there is a good prospect for world peace.

The Congressman congratulated and lauded the junior chamber for its efforts and predicted that it would enjoy great success and render distinctive service.

Dulles on the Brink

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. YATES. Mr. Speaker, it has been expected for some time that the policies of Secretary of State John Foster Dulles would be made a lively subject of review when Congress reconvened. The growing number of Russian diplomatic successes, coupled with the weakening of American influence in vital areas, has stimulated considerable congressional dissatisfaction. Speeches by Democratic leaders critical of administration foreign policy have become increasingly frequent, until the administration, much disturbed by the questioning, hastened to take refuge in the cry that the Democrats were violating the tradition of bipartisan cooperation in the field of foreign affairs. Then, not satisfied with the adequacy of this approach, Secretary Dulles resorted to the well-established sports maxim that "a good offense is the best defense," and gave an exclusive interview to Life magazine. The resulting article, which was published last week under the title "How Dulles Averted War," heaped lavish praise upon the Secretary and was the spark which touched off the long-anticipated argument on the administration's foreign policy.

The Democrats did not take seriously the Republican accusation that they were breaching the tradition of bipartianship in foreign affairs. In the first place, they thought the charge should not be made by an administration which considered the tradition satisfied by occasional consultation with House and Senate Democratic leaders. In contrast to his two Democratic predecessors, who appointed such outstanding Republicans as Frank Knox, James Forrestal, Henry Stimson, Paul Hoffman, Harold Ickes, Robert Lovett, John J. McCloy, John Foster Dulles, and others to positions of high responsibility, President Eisenhower has made no such appointments. This administration seems to be allergic to Democrats.

Last summer Secretary Dulles suggested to the President that he thought it would be a good idea to appoint a Democrat to our United Nations delegation. They selected Benjamin V. Cohen, who had served with great distinction as a member of the U. N. delegation under President Truman. Mr. Eisenhower approved Dulles' suggestion and when Cohen was asked to accept the appointment, he agreed to do so if he could clear it with Senate Democratic Leader LYNDON JOHNSON, Speaker SAM RAYBURN, and Senator GEORGE. When their blessing was obtained, it seemed the matter had been decided.

However, while the President and Mr. Dulles were in Geneva, Presidential Assistant Sherman Adams, fearful of the reaction of certain Republican leaders to the appointment, visited Cohen and asked him to withdraw his acceptance. He did so. When the President and Secretary Dulles returned from Geneva, they made no effort to overrule Adams or to renew their offer to Cohen. Thus ended, like so many good intentions, the administration's attempt toward realistic bipartisanship.

Second, the critics of Dulles were much upset by the low level to which American prestige had fallen throughout the world. When reputable, on-the-spot foreign correspondents, report that "United States influence hits new low in the United Nations"; or "Morocco a blot on the foreign policy of the United States"; or "Dulles' Goa statement termed ourage by India"; or "Goodwill for United States ebbs in Cyprus"; or when Canada, our neighbor with whom we must maintain the best of relations, finds fault with our surplus dumping policy, what should Democrats do? Should they commend the Secretary of State? Should they say nothing? Or should they seek an explanation? The answer is obvious.

The article in Life magazine describes Mr. Dulles' work as "the greatest display of personal diplomacy since the great days of the Franklin-Adams-Jefferson triumvirate." It also gives credit to Mr. Dulles for having averted war on three different occasions, implying that Mr. Dulles was able to do so because of his special talent for getting only to the brink of war and stopping without getting into war itself. One has difficulty reconciling the article's glowing tribute to Mr. Dulles with the daily newspaper articles reporting new American diplomatic reverses.

When President Cleveland's second child was born, the doctor asked Cleveland to fetch a scale so that the baby's weight could be determined. Cleveland land searched throughout the house without success. Finally he remembered that he had an old scale in the basement which he had used on his fishing trips. He got it and brought it upstairs. Carefully, the doctor placed the baby on the scale and was amazed to learn that the new born infant weighed 25 pounds.

It all depends on the scale you use. It seems to me that now is the time when we ought to use the Senate Committee on Foreign Relations as the scale to weigh Mr. Dulles' policies. Now is the time to find out where in the world we are and where in the world we are going.

Old-Fashioned Patriotism

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. FASCELL. Mr. Speaker, I would like to call to the attention of my colleagues an editorial entitled "Old-Fashioned Patriotism" which appeared in the March 8, 1956, issue of the Homestead News, of Homestead, Fla.

This editorial very accurately and poignantly points up some of the failings of our educational system to instill pride and interest in our country's history and achievements, and at the same time, gives its hearty endorsement to a bill which I have introduced to designate April 30 of each year to be known as Presidents' Day. To specifically set aside one day out of each year during which our country's citizens and schoolchildren can stop for a moment to honor our past Presidents for their efforts in building up this great Nation, certainly would go a long way toward overcoming the lethargy and indifference now directed toward study of and interest in our heritage and accomplishments.

The editorial follows:

OLD-FASHIONED PATRIOTISM

Congresman DANTE FASCELL last year introduced a resolution, House Joint Resolution 294, seeking to designate April 30 as Presidents' Day.

In support of this bill the citizens of the country are asked to write to their legislative representatives and urge its passage. We add our plea to the endorsement of this measure, for we believe it may help us to reestablish a feeling of pride and comfort in the sentiment of patriotism.

Time seems to have dulled appreciation of our heritage. New generations feel that references to patriotism and love of country are embarrassing, old-fashioned, unsophisticated flag-waving gestures. Our schools do little or nothing to disabuse their minds from this erroneous thinking. This failure needs the full light of publicity.

An Army psychiatrist, who spent 4 years studying brain-washing of nearly 1,000 soldiers captured in Korea, concludes that "the American soldier has weak loyalties—to his family, his community, his country, his religion and his fellow soldiers."

He states: "There is little knowledge or understanding—even among university graduates—of American political history and philosophy, the Federal, State and community organizations, civil rights, freedoms, safeguards, checks and balances and how these things all work * * * From these things, it is tragically clear that the American educational system, fine as it is, is failing miserably in getting across the absolute fundamentals of survival in a tense and troubled international society."

Remember the old-fashioned Fourth of July celebrations, when there were flags flying from the window or porch of every home? Remember the speeches that were made in the city parks? Remember the warm thrill of pride that tingled our spines when the sounds of martial music preceded the rhythm of marching men in the Memorial Day parade? In those days we didn't need to rely upon the schools to teach patriotism.

That was before the Communists set out to undermine the stability of our way of life and if you don't think they have been quite successful, meditate upon the changes in our attitudes toward the fundamentals of good citizenship. We are more interested now in collectivism than cooperation; party comes before patriotism, delinquency comes before decency, and greed comes before God.

We need some day in the year when the people of this country can stop for a moment and think about the many reasons we have for pride in our heritage. What better day than the anniversary of the inauguration of George Washington, April 30?

John Marr Dille Recipient of Conservation Award

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. HILL. Mr. Speaker, the Second District of Colorado rejoices and is exceedingly proud of the fact that the Colorado Big-Thompson project is nearing completion. In fact, for 4 years we have been drawing water through the Adams Tunnel from the western slope of the Rocky Mountains through the Continental Divide. This is one of the outstanding engineering feats of our times. A wonderful irrigation project to supply supplementary water. This supplementary water has been a lifesaver to our area during this extreme drought cycle the entire High Plains area has been experiencing the past 5 years.

In placing in the RECORD the citation as a conservation award to our very good and personal friend, John Marr Dille, of Fort Morgan, Colo., the Reclamation Department pays high honor to a most patient, persistent, wise, and tactful supporter and promoter of reclamation projects of the entire West.

I am happy to make this a part of the RECORD of Congress from which all conservation projects spring.

In closing let me quote from the announcement by the Commissioner of the Bureau of Reclamation, W. A. Dexheimer:

Mr. Dille's contribution as a private citizen in overcoming obstacles and discouraging delays faced in the construction of the project earned him the friendly title of "ramrod"—the man who gets things done. Mr. Dille figured in many preliminary tasks in the 1930's in getting public support for a Federal project, raising money for preliminary feasibility surveys, determining a fair means of settlement of project cost obligations, and many other matters necessary for construction of the "Big T" development.

The citation follows:

SECRETARY MCKAY ANNOUNCES CONSERVATION AWARDS TO RECLAMATIONISTS

Secretary of the Interior Douglas McKay today announced the award of a group conservation citation to a volunteer reclamation organization in the Mountain States, and a conservation award to 80-year-old John Marr Dille, of Fort Morgan, Colo., called the "ramrod" of the Colorado-Big Thompson project in northeastern Colorado.

Commissioner of Reclamation, W. A. Dexheimer, said that the Department's Conservation Service Award approved for Mr. Dille is due to the latter's "patience, persistence, wisdom, energy, tact, and diplomacy" in the formulation and construction of the Colorado-Big Thompson project.

"Mr. Dille's contribution as a private citizen in overcoming obstacles and discouraging delays faced in the construction of the project earned him the friendly title of 'ramrod'—the man who gets things done," Commissioner Dexheimer said.

Mr. Dille figured in many preliminary tasks in the 1930's in getting public support for a Federal project, raising money for preliminary feasibility surveys, determining a fair means of settlement of project cost obligations, and many other matters necessary for construction of the "Big T" development.

A Conservation Service Award will be given also to the Water Users Irrigation Conference, headquartered at Billings, Mont., representing water users principally on Bureau of Reclamation constructed projects in the States of Montana, North Dakota, South Dakota, and Wyoming. This group award is made for the contributions by the water users in developing a more effective working relationship among water development agencies and the local beneficiaries of the projects.

Mr. Dexheimer said that the award to the Water Users Irrigation Conference is particularly appropriate. He said, "This group—voluntary, objective, and governed solely by the consensus of open forum—has assumed a stature in the affairs of reclamation making it fully deserving of this nomination." The organization is now in its eighth year.

Concerned with improving irrigated agriculture, this group has worked with local, State, and Federal agencies to achieve at all levels improvements in water conservation, watershed protection, irrigation practice, and many other activities related to farming and water use—such as fish and wildlife protection, fire control, and elimination of weeds.

The Man for the Job

EXTENSION OF REMARKS
OF
HON. FRANK IKARD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. IKARD. Mr. Speaker, the following editorial which appeared recently in the Wichita Falls, Tex., Daily Times, refers to a recent statement made by Speaker RAYBURN concerning the distinguished majority leader of the Senate, Senator LYNDON B. JOHNSON.

This fine editorial, I believe, bespeaks the opinion of a great majority of Texans as well as the thinking of a great many Democrats throughout the country.

THE MAN FOR THE JOB

The Times congratulates Speaker SAM RAYBURN in coming out yesterday for Senator LYNDON JOHNSON as Texas' favorite son.

We heartily agree with the Speaker of the House when he says that Senator JOHNSON is the key to Texas' political troubles. Our hat is off to Speaker RAYBURN for his forthright conviction and good judgment in suggesting such an able leader as LYNDON JOHNSON to be the State's favorite son and chairman of the Texas delegation to the Democratic Convention in Chicago.

Under his outstanding leadership, Texas without a doubt, would have a real voice in the proceedings of the national convention and would work for the nominees of the Democratic Party.

Senator JOHNSON, who is keenly aware of national responsibilities and who knows Texas and Texans, is a natural for the job. Under his leadership, we can begin now to put our house in order.

LYNDON JOHNSON has all the qualifications that are needed for Texas' favorite son and chairman of the Texas delegation at Chicago. He is the man for the job. Let's ask him to take it.

Senator JOHNSON can do for the Democratic Party of Texas the same kind of job he is doing for the Nation as the majority leader of the United States Senate, where his service is underscored by courageous, forthright, faithful, and plainspoken qualities.

Texans can accept with confidence the man they know best. Senator JOHNSON has proved by his tolerance, forbearance, and believable pledges to the people that he is fully qualified for this new leadership he is asked to assume.

LYNDON JOHNSON is no extremist. Rather, he is a happy warrior who has the tact and ability and understanding to unite in confident comradeship all fellow Texans. He is the man best equipped to restore order and prevent a repetition of chaos.

The honorable and venerable Texan, Speaker RAYBURN, has launched a movement which should strike spontaneous accord from Brownsville to Texline, from El Paso to Texarkana. LYNDON JOHNSON, majority leader of the Senate, Texas' senior Senator, is the man to whom we now look.

United for Freedom

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

Speaking before the Amalgamated Clothing Workers at Leominster last night Congressman PHILIP J. PHILBIN called for "more practical application in American government and American life of the spirit and ideals of Abraham Lincoln whose great work in preserving the Union and uniting the Nation," he said, "was one of the most illustrious features of history."

"More perhaps than any other President," declared PHILBIN, "Lincoln was a man of the people. He understood their problems and ever strived to better their condition. He believed in American principles and did everything in his power to guard them."

"Some of our problems today," said the Congressman, "are similar to those which Lincoln faced because there are bitter conflicts of opinion regarding constitutional questions which seriously threaten national unity and there is an insidious world conspiracy which menaces our freedom and security," he said.

Lauding the working people for their contributions, PHILBIN said: "On the other hand, the Nation as a whole is enjoying the greatest prosperity it has ever known with more people employed than ever before. We must see to it that this prosperity not only continues, but that it extends to every section and every class of the American people. We must insist that our great free-enterprise economy which is the one thing our potential enemy fears, and which is so essential to

our national defense is encouraged to expanding productivity, high levels of employment, and social standards—health, housing, education, security, and civil rights.

"We pride ourselves on our free-enterprise system because it has given us greater material benefits and abundant living than men and women have ever experienced in the long struggle to establish civilization."

PHILBIN praised the flexibility of the American economy: "It must always be remembered that this free system which we prize and cherish cannot be merely static, and it cannot be purely material. It must move forward with the times in which we live. It must constantly adapt itself to the new social needs arising in this fabulous atomic age. It must never challenge human dignity or lose sight of great moral and spiritual truths from which it draws its very life. This system, like our Government itself, belongs to all the people and no economic oligarchy can be allowed to exploit it for selfish ends inimicable to public interest.

"Under our Constitution there must be opportunity for all and there must be equality before the law, opportunity for everyone regardless of his racial derivation, his religious affiliation, his social or financial standing or his station in life to get ahead according to his ability and his ambition, to receive just compensation for his labor, to be protected in the conditions under which he works and lives and to be respected in his fundamental right as an individual and a human being. There can be no second-class citizens in this country."

Urging greater responsibility of citizenship PHILBIN said: "We may have the feeling sometimes that there is to much emphasis placed upon rights and not enough on responsibilities. If we hope to enjoy the fruits of a great free government which guards and protects our rights, it logically follows that we must willingly assume our share of responsibility for keeping the Government as well as the economic system sound, honest, well managed and responsive to the will of the people. The greatest danger to this Nation is not from foreign attack, not from foreign enemies, not from atomic or hydrogen bombs, not from communism, socialism, or any other ism. The greatest danger to this country comes from within, from complacency, from apathy, from indifference, from failure to accept and share responsibility for protecting the precious heritage of freedom."

Stressing obstruction of world peace as holding up human progress, the Congressman continued: "Not for one moment would I minimize the very grave dangers that confront us as the result of the present world situation. There are a host of very grave problems which, up to this time, have not been solved despite Geneva and all the other conferences. If it were not for the existing international threat against peace, order, and freedom, this Nation and the world, because of the astonishing advance of science, industrial know-how and economic technique, would be on the threshold of the greatest age in all history. Amazing scientific discoveries are being developed daily which hold the key to untold prosperity, progress, and happiness for the whole human race. The tragedy of it all is that up to this time these great new inventions are being implemented for war mostly rather than for peace. Thus a black shadow of fear, doubt, and skepticism hangs over the world and people everywhere are in constant dread that a great war waged with atomic-laden rockets and guided missiles will destroy the monuments of civilization.

"I cannot predict when these conditions will change, when peace will come to this disillusioned planet, but I do know that peace can never be based on further appeasement of those who are seeking to destroy us, or upon the surrender of our most cherished political and spiritual ideals. On the other hand, I believe very sincerely and with deep conviction that we would have secured peace long ago if real resolution, firmness, determination, and courage had been displayed by those charged with leadership of the free world. I am convinced that it is only through strength, not through weakness, timidity, and cowering fear, that peace can be established, and I may say that I also believe that peace may be closer at hand than many people think, because we can be sure that the potential enemy is just as anxious to avoid wholesale destruction as we of the free world are. It is for this reason that we must exert every effort to promote the cause of international disarmament and peace."

PHILBIN hailed recently adopted flood measures and plans for an atomic plant in this area as splendid signs for the future:

"I am optimistic, too, about the business and economic outlook for our State and for New England. Two things happened just this past week in Washington which are most encouraging: First, the passage by Congress of flood-control legislation which will enable a start to be made on projects to protect our area against these great natural disasters, and, secondly, the announcement by the Atomic Energy Commission that it is authorizing an atomic powerplant for our region. In my opinion both these measures, in time, will give tremendous inpetus to our prosperity, our economic and social well-being."

The Congressman closed his remarks with a plea for unity and toleration: "It is for us then as sovereign citizens of the greatest democracy on earth to look forward to the future with expectant minds and courageous hearts. If we keep our country united in freedom, if we preserve our great constitutional system with its safeguards of individual rights, if we nurture the true American spirit of toleration and fairness toward our own and other peoples, if we faithfully practice the principles of social justice, if we exercise eternal vigilance against the enemies of our country, foreign and domestic, if we insist upon honor, honesty, and integrity in our public affairs, if we individually and collectively discharge our responsibility as the proud inheritors of the lagacy of American liberty keeping our country strong against aggression, vigorous, and progressive in its economic life, resolute in its high purpose, we need have no fear of future events. Our Nation and the world under God will go on to enjoy the fruits and blessings of a glorious age of security, plenty, and peace."

From Drill Sergeant to Admiral—Adm. Murrey Royar

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. JOHNSON of California. Mr. Speaker, "Murph" Royar literally stumbled into the Navy. As a student at the University of California, he was obliged to take military training under the Army's Reserve officer-training program. California was a land-grant college and every student was required to "left, right, hep, hep" as a part of the ROTC. Young Royar soon earned the wrath of a hard-boiled veteran Army drill sergeant stationed at the school.

One hot afternoon, after a particularly poor performance by Royar on the drill field, the sergeant became so incensed he bawled him out in front of the whole company. "Royar," he bellowed, "you've got two left feet. You'll never make an Army man."

At that precise moment in 1916 Murrey L. Royar decided that if he ever went into the Armed Forces it would not be the Army.

A few days after the United States entered World War I on April 6, 1917, Royar tried to enlist in the Marine Corps. The Marine Corps lost a foot soldier; the Navy gained a bright young man who was to become one of its top officers.

Royar was a rear admiral, Chief of the Bureau of Supplies and Accounts, Paymaster General of the Navy, and the head of the Navy's Supply Corps. Those were his titles. His job as Chief of BuSandA made him head man over the purchasing, fiscal, and transportation functions of the Navy.

He was responsible for seeing that every man and woman in the Navy was paid, fed, and clothed; he directed the procurement activities for all of the supply parts used by shore installations as well as ships and planes of the fleets; he paid the Navy's bills and, as head of transportation, the movement of all Navy material by commercial carrier in the continental United States came under his direction. Approximately 5,600 Navy Supply Corps officers on ships and the stations looked to him for management, supervision, and guidance in their assignments.

In his capacity as Chief of the Bureau of Supplies and Accounts, Admiral Royar was the Navy's No. 1 businessman. The Bureau's inventory of supplies is equal in value to the total of the Nation's nine largest corporations. Its annual transactions run into billions of dollars. Nearly 60,000 civilian workers were under his direction. He managed the buying, selling, storage, bookkeeping, and accounting, transportation, and the feeding and clothing of approximately 800,000 men and women. In addition, he directed the activities of a chain of stores—commissaries, exchanges, and ships' stores—with branches in every part of the world where there were shore installations and ships of the fleet.

As he himself once put it, "If I were wearing Army khaki instead of the Navy blue, I'd be wearing 3 hats, figuratively speaking, as Quartermaster General, Chief of Finance, and Chief of Transportation." His post incorporated the duties of all three. If any Navy officer could get a maximum of work out of his subordinates with a minimum of effort it was Admiral Royar. A commander, one of a number of officers who had served under Royar in various stations, went to him.

"Admiral Royar," he said, "I am not happy in this job. There simply isn't enough responsibility and enough work to keep me busy."

Admiral Royar listened sympathetically to his tale of woe. Then he said, "Son, suppose you go back to the office and give this assignment another 2 months' trial." The commander went

back to his office. As important new assignments came along, Admiral Royar saw to it that they were given to the commander. Finally, at the end of 2 months, the commander was back begging for a letup.

Royar was popular with his subordinates. Perhaps it was because the gray-haired Bureau chief was kind, patient, willing to listen to their explanations when things did not go as they should.

Through the years, Admiral Royar has not changed his philosophy to any great extent in dealing with his fellow members of the Navy—no matter whether they were officers or enlisted men. During World War II, while serving as Inspector General of the Supply Corps, Admiral Royar adopted a policy of correcting rather than commanding. If, on inspecting a supply depot, he found something wrong, he called it to the attention of the commanding officer for action, and he invariably got it immediately. If corrective action was not taken, it was time enough to report the laxity to headquarters in Washington. His thoughtful consideration and friendly approach has endeared him to subordinates, both officers and civilian employees, wherever he has been stationed.

Those who failed to respond to the friendly approach learned to their dismay that Royar could be hard-boiled too if the need arose. As a Navy man for more than 36 years he demanded discipline and performance. However, he seldom lost his sense of humor and he found that a slight needling usually got action and quickly.

Born in Los Angeles, Calif., November 22, 1894, young Royar attended the public elementary schools. When he was 12, his father died. The family was not wealthy and "Murph" Royar carried papers to supplement the family income. As grammar school graduation approached, Royar, the boy, looked forward to entering high school. However, Los Angeles High School was already overcrowded and the number of freshmen who could matriculate was limited.

The Los Angeles Times announced a subscription-selling contest, with the winner to receive a scholarship to a California private high school.

Working day and night, "Murph" Royar sold subscriptions in Los Angeles and Redlands, Calif., then a growing young community near Los Angeles. Fortunately, the boy's uncle owned the Redlands Newspaper Distributing Agency, and Royar astutely decided to concentrate his campaign in the smaller town where there was less competition. When the campaign ended, "Murph" Royar was the winner. The Los Angeles Times called him the Redlands Rustler and carried his picture and a story of his accomplishments. Later, he was able to transfer to Los Angeles High School and was graduated from that institution.

In January 1914, Royar matriculated at the University of California at Berkeley, later graduating with a bachelor of science degree.

In the spring of 1917 and graduation approaching, the United States was already at war. Turned down by the Marines, Royar learned that the Navy was accepting applicants for its Pay Officers' School. Royar determined to apply and take the examination. Royar passed the examinations but was obliged to wait several weeks for appointment to the Pay Officers' School.

On June 29, 1917, he was appointed ensign in the Navy Supply Corps and assigned to the school.

By late September 1917, when he finished training at the Pay Officers' School, Ensign Royar was, in his own mind, as they say in the Supply Corps, ready for sea.

His first duty assignment was as supply officer aboard the U. S. S. *Columbia*, which was tied up in New York harbor in preparation for convoy duty when he reported to the captain.

Royar has only one surrender on his record and that was to the charms of a pretty nurse who was on duty with the Army at Vladivostok, Russia, shortly after World War I in 1919. Then a two-stripe lieutenant, Royar was aboard the U. S. S. *New Orleans*, which was station ship for the Asiatic area. Part of his duties included outfitting men for a newly organized Czech navy at Vladivostok. It was there he met and fell in love with Nurse Mabel L. McVey.

A few months later Mabel McVey was in Manila, en route to the United States. Lieutenant Royar also was on duty in the Philippine capital. Their days together passed swiftly and the day for her departure arrived. The ship was to sail on the evening of January 28. A few hours before sailing time "Murph" Royar and Mabel McVey were married.

Throughout his long naval career, Mabel Royar has been a source of encouragement and cooperation to her husband. Moving from station to station, the bane of a Navy wife's existence, waiting at home for her husband to return from sea duty and the long tough years of living on a junior officer's pay did not faze Mrs. Royar. The difficulties and worries of raising a family under those circumstances did not affect her looks either because Mrs. Royar is a beautiful woman today by any standards.

In 1927, Royar was transferred from the U. S. S. *Relief* and became assistant supply officer for the 12th Naval District with headquarters at San Francisco.

In 1931, Royar was assigned to the U. S. S. *Chicago*, a cruiser that was just commissioned. He served aboard the *Chicago* for 3 years. Then followed a tour of duty in Washington as assistant to the officer in charge of the stock division of the Bureau of Supplies and Accounts. From 1938 until 1940, he was supply officer on the aircraft carrier, the U. S. S. *Saratoga*. From 1940 until 1942, he was senior assistant to the supply officer at the Washington, D. C., Navy Yard. In May 1942 he reported once again to the Bureau of Supplies and Accounts, serving consecutively as officer in charge of the maintenance division, responsible for plans and operation of the budget and overall administrative control over civilian personnel in the field. In 1944, he became officer in charge of 7 divisions of the Bureau's accounting group. He had already assumed charge of the Bureau's part in the lease-lend program and for all reciprocal aid activities.

He was appointed Inspector General of the Supply Corps on November 1, 1944. On April 3, 1945, he was promoted to rear admiral to the time of his retirement from June 16, 1943. He served in that capacity until January 4, 1946, when he took command of the Navy Supply Center at Norfolk, Va., where he served more than 2 years. In February 1948 Admiral Royar took over command of the huge Oakland Navy Supply Center. When the Korean hostilities started in June 1950, NSC Oakland was ready to start pouring out millions of tons of supplies to the Pacific fleet. On October 10, 1951, Admiral Royar was sworn in as Paymaster General of the Navy and Chief of the Bureau of Supplies and Accounts.

A few months after becoming Chief of the Bureau of Supplies and Accounts, Admiral Royar launched a program of streamlining the Navy supply system. Called Operation Slim-Trim, the program provides for the elimination of thousands of items of Navy stocks, which no longer are useful to the Navy.

Admiral Royar, besides holding various campaign medals, has been decorated with the Legion of Merit, the Order of the British Empire (Commander), the Legion of Honor from the French Government, and the Haakon VII Liberation Medal from the Government of Norway.

This year Royar completed his tour of duty as Chief of the Bureau of Supplies and Accounts. He and Mrs. Royar, who have 2 daughters and 3 grandchildren, plan to make their home at Walnut Creek, Calif., 10 miles from Oakland, where he will work on his valuable stamp collection. He specializes in first day covers, and has a cabinet full of well-filled stamp albums. Meanwhile, he will carry on with the motto which he has adopted for all of his activities in the Navy:

Nothing is impossible as long as nobody cares who gets the credit.

The most beautiful part of the day is the sunset. Admiral Royar has had a happy home life, the key to real happiness. His superb record is one of which he, his family, and his friends are very proud.

He is a freeman and may do what he chooses. I predict that he, like the sunset, will find beauty and satisfaction to the day when the twilight of his life goes beyond the horizon.

Ideal Spot for Navy Trainees

EXTENSION OF REMARKS

OF

HON. JOHN JARMAN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. JARMAN. Mr. Speaker, the proposed action by the Navy to shut down the Normal Air Technical Training Center has caused great concern among the Oklahoma congressional delegation and among civic leaders and constituents of

Oklahoma. I ask unanimous consent that the following editorial from the Norman Transcript of Friday, February 24, 1956, be printed in the Appendix of the RECORD.

There being no objection, the following editorial was ordered to be printed in the RECORD, as follows:

IDEAL SPOT FOR NAVY TRAINEES

Dollars count in the Navy training-school program, but so do the mental attitudes and the morals of the young men who become naval trainees in such schools as naval air technical training.

There is little doubt that Norman is just about the most ideal city in the Nation in or near which the Navy operates a training school. We have a friendly, wholesome community, free of gambling and liquor joints and houses of prostitution.

Everybody treats Navy personnel just like they treat their friends and neighbors. The University of Oklahoma adds an educational and cultural atmosphere to the community which is conducive to good study habits and good conduct on the part of the sailors who come here.

Merchants charge only fair prices and Navy personnel find the cost of living here considerably less than in any of the large Navy centers in the country.

No jet planes roar overhead all day here, as they do at Jacksonville and Memphis, distracting the students from their studies and classroom activities. Navy officials tell us that students at the Norman base do better work generally than do those in the some type school at other places.

On the whole, everything here makes for an ideal training school, and that factor is worthy of serious consideration by Navy operating officials who have decided they can save some money by moving the NATTC to Memphis. However, even the saving possibility is subject to question in the light of possible world developments of the next few years.

The increased tempo of the cold war between the free and the Communist worlds, and the steadily increasing number of incidents which threaten a shooting war are in themselves sufficient to question the merits of any proposal to curtail Navy operations which are directly concerned with air and sea activities.

And the American people, while wanting efficiency and economy in the Armed Forces, do not want false economy, as Representative JOHN JARMAN terms the proposed closing of the Norman base, or pennywise, pound-foolish policies as the move is described by Senator MIKE MONRONEY.

The fact that the primary naval air technical training program has been moved four times since 1945, from Norman to Memphis, then to Jacksonville, back to Memphis and back to Norman, supports the suggestion that the school should have been continued at Norman all of the time from 1946 to 1952 when it was reactiviated.

It is estimated that transfer of the school to Memphis as now proposed would cost $1,200,000. That in itself means no saving could be effected by the transfer for 2 years. In the meantime if world conditions call for further expansion of the Navy and the Memphis base becomes overcrowded again, chances are the Navy would again move the primary school to Norman.

Considering the likelihood that the Navy will have to expand that phase of training again in the next few years it is taking an unnecessary risk in closing down the Norman installation.

It also is pointed out that when the Norman base was reactivated in 1952, the Navy spent about $4 million in repairs and improvements to get it underway again. If it is allowed to run down again, it would cost far more to reopen at some future date than it would to keep it operating now.

People's Capitalism

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. BOW. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD an interesting and pertinent comment on the USIA exhibit, People's Capitalism, which appeared in a recent monthly letter of the First National City Bank of New York:

PEOPLE'S CAPITALISM

Workers will be busy in Washington's Union Station for the next few weeks packing and crating this country's latest entry in the worldwide "war of ideas." It's a United States Information Agency-sponsored exhibit to illustrate People's Capitalism. This is the newest name to describe our economic system—one under which a large percentage of the people own the means of production and under which workers share in the results of increased output through higher wages and more abundant goods at lower prices.

The exhibit's main features are a typical worker's house, 1776 vintage, and one of today's models—complete with automatic dishwasher, garbage disposal unit, and a car parked in the garage. Panels and displays chronicle the tremendous improvement in living standards that has taken place in the United States over the years. Some 25,000 people trooped through the exhibit in a week-long Washington preview last month; it's now being readied for shipment to India, Japan, and other Asian countries before reaching the European trade fairs this summer.

The Advertising Council, which advanced the idea to the United States Information Agency, thinks the exhibit will demonstrate to the world the benefits for individuals under the American economic system. Dramatic illustration of some of these benefits came out in fairly routine announcements not long ago. The American Iron and Steel Institute reported steelworkers have become men of substantial means, averaging a weekly paycheck of $103. Ivan L. Wiles, vice president of General Motors and manager of the Buick division, announced average earnings of the 90,000 people employed by GM in its five divisions in Flint, Mich., were $5,460 last year, compared with $4,200 for fewer persons in 1950. Significantly, he added:

"The employee in our shop can, and does, buy a Buick. For the first time, it's gotten so the man on the assembly line can buy what he makes."

These evidences of growing and widely diffused prosperity in this country contrast sharply with workers' rewards under different economic systems. The idea of the exhibit, of course, is to show all people how our way of doing things provides more of the necessities and good things of life to more people than any society man has yet produced, all under a system that cherishes individual freedom. The story needs telling; ignorance and misunderstanding crop up here, and abroad, not only among uninformed workers, but in high political circles as well.

This spectacle of abundance for the common man calls to mind a recent statement by Hugh Gaitskell, Chancellor of the Exchequer in the former Labor Government of Great Britain and now Clement Attlee's successor as British Socialist leader. His Labor Party appeals to voters with a "fair shares for all" slogan. A few months back Mr. Gaitskell explained his reasons for backing Socialist economics this way:

"I am a Socialist because I hate and loathe social injustice, because I hate the class structure that disfigures our society, because I hate poverty and squalor. I want to see a society in which rewards go according to merit * * * I want to see all this achieved by democratic means."

As the United States Chamber of Commerce has aptly suggested: "Mr. Gaitskell, you might try capitalism."

Reforming Our Federal Tax Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, March 13, 1956

Mr. WILEY. Mr. President, virtually every day all of us receive various suggestions for tax revision. For example, I have noted with interest the program recommended by the National Association of Manufacturers designed to modify what it feels to be extremes in the surtax rates on individuals and corporations—a program geared to foster economic growth in our land.

And other groups, as well, have presented and will present their programs to the Congress.

On Saturday night, it was my pleasure to deliver a radio address by transcription over station WGN, Chicago.

In the course of the program I mentioned various possibilities for tax relief, assuming the revenue situation in our country will permit.

I send to the desk the prepared text of my broadcast, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR WILEY PRESENTS 12-POINT TAX REFORM PROGRAM—URGES CONSIDERATION OF LIBERALIZED DEDUCTIONS, RELIEF FOR SMALL BUSINESS—TAX AVERAGING—MORE DIVIDEND TAX RELIEF—SPURRING OF OVERSEAS INVESTMENT

It is a real pleasure to address you once more through the courtesy of station WGN.

I have selected as my topic this evening a subject which affects 55 million American taxpayers. It is the subject of taxes themselves.

You remember wise old Ben Franklin said that "Nothing is certain except death and taxes."

Yet, I know that you will agree with me that they are a necessary part of the price we pay for national survival.

Meanwhile, they should be as fair and equitable as possible.

So, during these next few minutes, I would like to talk to you about taxes and about tax reform. I would like to submit a few ideas about some necessary changes which I feel should be made in the tax laws—changes in taxes on income, on corporations, on dividends, in order to assure fairness for all our people.

After all, you know, on April 15 you and I are going to have to send in our Federal income-tax returns. In addition, there are sizable State and local returns to be paid.

And, so, this subject is of real importance to all of us.

Here, then, is my report to you, through a series of questions and answers on this very complex subject.

NINETEEN HUNDRED AND FIFTY-SIX LAW STILL MONTHS AWAY

Question. Senator WILEY, the questions in most people's minds are: What is the actual long-range outlook for tax revision? Should there be tax relief now? And what is the real status of tax-relief legislation at this point in the current Congress?

Answer. Let's start with that last question first. A new tax law is still months away. In other words, it will probably be quite a while before the House of Representatives and the Senate have concluded hearings and have drawn up a definite program for tax changes.

Moreover, remember that most Federal appropriation bills are still to be enacted. So, at this early stage, it is difficult to try to anticipate the actual amount of tax reform we can expect.

What we do know is this: The tax burden on our people is very heavy. So, almost everyone is agreed that, at the first possible opportunity, the burden should be lightened.

THE HEAVY BURDENS OF THE UNITED STATES TREASURY

At the same time, we know that Uncle Sam still has very heavy obligations to pay. That means obligations of national defense against international communism. It means obligations of paying interest and principal on the $281 billion national debt, obligations of looking after the needs of our 22 million veterans, particularly the sick and wounded, as well as obligations for the overall expenses of running the Government. That all adds up to $65 billion or so.

Question. Obviously, then, the question of tax relief ties in with the question of balancing the huge national budget.

EISENHOWER STRIVING TO AVOID DEFICIT FINANCING

Answer. Of course. We Americans want a balanced budget. We don't like to mortgage still more the welfare of future generations. We want to avoid another Government deficit if it is at all possible. Remember, during the last quarter of a century, we have unfortunately, had a deficit in all but 3 of the years.

A deficit is, of course, bad business. Borrowing, issuing more printing-press money represent inflationary steps. A deficit depreciates the value of every dollar in your pocket, in your savings bank, in your life insurance policy, in your pension.

Fortunate, President Eisenhower now anticipates a balanced budget for the 1957 fiscal year, provided the line can be held.

And of course, if our economy is indeed held in high gear, if national income and gross national product continue to run high, if 65 million people are employed, then there should be ample revenue coming to Uncle Sam.

And, I firmly believe, that all these good things will indeed happen.

Question. You feel, however, Senator, that some form of tax revision is overdue?

Answer. Very definitely.

THREE PRINCIPLES OF FAIR TAXATION

Question. Well, what do you feel are the principles on which taxes should be levied—the principles on which tax reforms should be effective?

Answer. Well, first taxes must still be based primarily on the ability to pay.

Second, taxes should as a matter of principle, provide reasonable incentive to earn, to grow, to expand.

You know, in these high-cost days, it takes more than $15,000 of risk capital to develop a single new American job. And in some modern industries, with high costs of machinery and plant, it may take double and triple that amount, $30,000–$45,000.

We can't expand America—we can't look after the needs of our growing population—unless there is adequate incentive to the free enterprise system.

Taxes which may be too high—excessive taxes which confiscate almost all profits or compensation—turn out to produce very little revenue, instead of a lot of revenue.

And third, of course taxes, insofar as possible, should be nondiscriminatory, should be fair and equitable, as between different groups.

Question. Senator Wiley, thus far, you have discussed the possibility of tax relief and you have mentioned some of the fundamental American principles on which taxes should be based. Now, would you tell us some changes which should be considered in the tax laws? What specific proposals do you personally have in mind, for example, to encourage a more prosperous America?

CAUTION AS REGARDS WHEN TAXES CAN BE CUT

Answer. I'll be glad to spell out almost a dozen possible tax changes. I mention them however, only as possible for the immediate present, because obviously, until the expert committees—the House Ways and Means Committee, and the Senate Finance Committee, and the Joint Committee on Internal Revenue have completed detailed studies of these proposals, it is hard to try to say which tax changes should come first.

In other words, it would be unsound for us at this early stage to assume that we can "wave a magic wand" and get all of these tax changes enacted at once. Instead, the various costs must be figured out, the various degrees of urgency. Then, those changes which are found to have the highest priority of need should be enacted.

So I would like you, my friends, to think over these various tax reform possibilities. I would like you to figure out which of these possible changes should come first, because they may be the most needed.

So far as I am concerned, there is real merit in the entire list that I am going to mention now. But the question is one of relative cost and of relative priority, and of Uncle Sam's own serious financial needs.

Question. Would you list, then, Senator, some of the specific changes which should be taken up as the revenue situation may permit?

END TAX DISCRIMINATION AGAINST SMALL BUSINESS

Answer. Yes. Let's start off with a tax affecting the group which is the backbone of America—small business.

I, for one, very definitely feel that smaller United States enterprise should not be hit by taxes which are so high and so heavy that the small business cannot possibly grow. Right now, if a business earns more than $25,000 per year, it gets hit immediately by so heavy a tax as to find expansion very difficult.

There have been many proposals, therefore, to raise the minimum floor at which small business will be taxed at high rates. To raise that floor to, says, $250,000 would provide a real break for millions of small enterprises.

DEDUCT LIFE INSURANCE PREMIUMS

Question. Now, what about taxes on the average man?

Answer. Well, let me refer to a tax change on an item which affects just about every American family. I am referring to life insurance.

Right now, you cannot, on your Federal return—deduct the cost of any life insurance premiums which you pay to protect your own family.

But, so far as I am concerned, if a man wisely invests his savings in a life insurance policy to protect his wife and children, that man should be encouraged. He should be permitted to make a reasonable deduction—say, at least the first $100 or $200 of those life insurance premiums. In that way, we will be encouraging thrift; we will be encouraging protection of the American home.

TAKE A NEW LOOK AT NUISANCE TAXES

Question. How about a third change?

Answer. Well, thirdly, there is the whole matter of the excise taxes—the so-called nuisance taxes—on everything from transportation to entertainment, telephone calls, jewelry, pens, club dues, cameras, restaurant checks, and a wide variety of other items.

We should take a whole new look at the excise tax structure, because there are definitely a great many inequities in it. We should make sure that excise, basically, affect luxuries—I emphasize—luxuries, instead of day-to-day necessities, as happens in far too many instances of excise taxes today.

DIVIDEND TAX RELIEF SOUND

Question. Now, how about a fourth subject for possible tax change? How about taxes, say affecting American stockholders?

Answer. I am glad you brought that up, because this is a most important area of the free enterprise system.

You know, back in 1954 when Congress enacted the first big change in the Internal Revenue Code in the last 75 years, Congress wisely decided that there should be some modest relief from the evil of double taxation of corporate dividends.

In other words, Congress felt that it is not fair to tax a corporation on money which it actually pays out in dividends, and then to put a double tax on the very same money as it enters the shareholder's pocket—that means the pocket of the man who owns the corporation in the first place. And so, Congress provided a minimum amount of dividend tax relief.

Unfortunately, there are some people who want to eliminate—wipe out—even this modest relief from dividend taxes—which covers only the first $50 and then 4 percent thereafter.

But I feel exactly to the contrary. I'm against eliminating this modest relief. I feel that when the fiscal situation permits, as I am hoping it will in the not too distant future, Congress should think over the possibility of still further dividend tax relief.

WIDEN STOCKOWNERSHIP IN AMERICA

Question. What would be your reason for taking that position?

Answer. Very simple. I want more and more Americans to invest soundly and wisely in their own free-enterprise system.

It gives them a real property stake in America. It gives them an understanding of the problems of industry. It gives them incentive to see an expanding America.

You know, there are fortunately 1.4 million stockholders in the American Telephone & Telegraph Co. There are 540,000 stockholders in General Motors, and around a third of a million Ford Motor Co., in General Electric and Standard Oil of New Jersey, plus millions of stockholders in other corporations.

To me that is a healthy characteristic of our free economy. We need more sound investment—I emphasize sound investment—not speculative fever, not a get-rich-quick psychology—but sound stockholding by people, even of modest means.

That is the principle being encouraged by good brokerage houses and by stock exchanges. It's the principle behind the very fine monthly investment plan for stock purchases. It's the principle behind the sound program of enacting new laws for stock gifts by parents to their children.

TAKE A LOOK AT CAPITAL GAINS TAX

And tied up, too, with this whole question of wider stock ownership is a fifth matter—reviewing the present capital gains tax. A great many folks feel that this tax serves to prevent turnover in investment and to limit expansion of our economy. They feel that we ought to look closely at other major countries' practice of avoiding this type of capital gains tax.

Question. We have covered five possible tax changes. How about a sixth, Senator?

STIMULATE SAVINGS BY SELF-EMPLOYED

Answer. Well, a sixth proposal which to me has very definite attractive features, is one which would permit various self-employed people temporarily to postpone paying taxes on a limited amount of money during their most productive years, so that they can build up some savings for their later years.

In other words, let them build up their nest egg for their retirement years. Right now, the House of Representatives has before it what is known as the Jenkins-Keough bills. This sound legislation would affect up to 10 million self-employed Americans—doctors, lawyers, architects, engineers, accountants, shopkeepers, farmers, and workers who are not now covered under pension plans of employers.

I think that Congress should very definitely take action to help these self-employed people save up for their later years.

THE SOUND TAX AVERAGING CONCEPT

Question. That brings up a most interesting subject, Senator. It is the question of tax averaging for those few groups which have a relatively high income perhaps for just 1 or 2 or so years of their entire lives, perhaps in their early twenties or thirties and then, after their popularity is over, get only a low income. What do you think about that idea?

Answer. I think that a strong case can be made for the idea of tax averaging. In other words, take the situation of an athlete—a baseball player on the Milwaukee Braves or Chicago Cubs; a basketball star or any actor or acress or playwright or dancer or singer. That person—on the average—may have only a couple of years of high income. Then, for the rest of his or her life, he or she may have only a very modest income.

But in the 1 or 2 or 3 years of peak income, Uncle Sam may confiscate almost their entire earnings. Then, when the athlete is past his prime, or when the actor or actress or singer has been succeeded by new stars, they often find that their income has dropped disastrously to a very low level. And so, there is almost nothing left to show for their 1 or 2 years of high income.

Thus, there has been proposed a tax averaging concept. This would follow up on existing precedents in other fields. It would permit folks to average their income over a period of time so that they would be taxed at relatively reasonable rates in any 1 year.

Recently, I have been glad to note evidence that the various performing arts—as well as leaders in athletics and other fields—are becoming aware of their own problems and are getting together. They are forming an organization in Washington to present their case to the Congress and to the "Bar" of American public opinion.

I think that they have a good case in principle. And it should be considered carefully in the interest of fairness and equity.

WORKING MOTHERS, EDUCATION, OVERSEAS INVESTMENT

Question. In the short time remaining, Senator WILEY, would you mention other real possibilities for tax reform—changes which have real merit?

Answer. Delighted. Here are a few:

1. Liberalize tax deductions for working mothers. They have to pay heavy expenses for baby sitters and boarding houses to look after their youngsters. The ceiling on the income of these working mothers, so far as deductions are concerned, is too low. It is only $4,500 per year for husband and wife. So, let's raise that ceiling.

2. Second, permit deductions of heavy costs incurred by parents in putting their youngsters through higher education—in colleges and universities.

3. Third, limit taxes on American earnings from private investments overseas. In that way, we can encourage more private investment abroad and reduce the necessity for Government economic aid as such.

4. Deduct the first $100 in election campaign contributions made by the average man. This will encourage wider participation in the financing of campaigns.

5. Consider permitting deductions for moving expenses when a man's job or location is changed. After all, new industries are rising all over America, and that requires moving.

Question. Senator WILEY, you have covered a broad range of tax reforms—reforms affecting not only individuals, but businesses and the free-enterprise system as a whole.

You indicated that it is a part of your philosophy that taxes be used to encourage our economy to grow, instead of freezing it, limiting it, preventing its expansion.

I know, too, that it is a part of your philosophy that Americans should be realistic and should not expect tax reforms overnight.

Answer. Absolutely right. I mentioned at the outset that we can't expect all these meritorious tax changes to be taken up immediately. I have mentioned that the ones with highest priority should come first. And, most important of all, the needs of the Federal budget, the need for preventing a deficit, should be weighed.

LOWERING TAXES MAY INCREASE REVENUE

Question. I know, too, Senator, that you feel that, sometimes, lowering taxes may actually result in increased revenue to Uncle Sam, because it helps to expand the tax base. In that way, more income will come in to the Federal Treasury.

Answer. Of course. We have luckily found in our history that sometimes, when you do lower the tax rates, you actually increase tax take, because you encourage an expanded America.

TAX CRIMINALS, PREVENT EVASION

Let me say, however, very realistically that most of the possible changes I have mentioned would involve losses to the Treasury of considerable amounts of revenue, unless there are some ways of making up the lost revenue. That is why, for example, I want to see certain taxes increased.

I am thinking, for example, about the taxes which are levied on that group of questionable Americans who evade and violate the law. You know, for example, that gambling in America is a $20 billion business. A lot of that gambling money escapes its fair share of paying taxes. In addition, I point out, as a former member of the Senate Crime Investigating Committee, there are other criminal influences which have evaded their fair share of taxes. And of course there are always a certain amount of chiselers who may not be criminals in another sense; that is, robbers, thieves, gamblers—but who are not paying their fair share of taxes. I am for cracking down on those chiselers. Thus, I am for making up the revenue which might otherwise have to be paid by you, the honest man, the decent taxpayer, the man who comprises most of our citizenry.

CONCLUSION

Question. Well, Senator, you have spelled out how you feel the tax structure can be changed, so that the man who contributes to America gets a tax break, while the small minority which violates our laws is treated accordingly.

I know that our listeners have enjoyed your summary of the tax situation in our country. I know, too, that they will remember your word of caution, not to expect tax revision too fast, because the present situation in the Treasury, is not an easy one.

Answer. That about sums it up. It has been a real pleasure to address you tonight through the courtesy of station WGN. I hope that I may have your comments on the views which I have expressed. This is Wisconsin's senior Senator, ALEX WILEY, signing off from Washington.

AAA View of Road Taxes

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I would like to include the following extract from the testimony of Mr. John S. Giles, chairman of the highway committee of the American Automobile Association, who appeared before the House Ways and Means Committee on February 21, 1956. This extract was reprinted in a recent issue of the St. Louis Post-Dispatch. Mr. Giles is a distinguished citizen of Reading and Berks County, Pa. He is an expert on highway and traffic problems, formerly serving as police commissioner of Reading. He is currently the president of the Reading Automobile Club.

The extract follows:

The American Automobile Association comes before you strongly urging an expanded highway program, favoring pay-as-you-build financing, and recognizing the necessity of additional taxes. The basic principles of our policy are as follows:

1. Any proposal for a Federal aid highway program should reflect pay-as-you-go financing.

2. While major emphasis should be placed upon improvement o fthe national system of interstate highways, provision also should be made for concurrently increasing the Federal aid primary, secondary and urban highway programs.

3. A program of this magnitude on a pay-as-you-go basis will require a large increase in available Federal funds for highway purposes.

TAXES BASED ON HIGHWAY USE

4. Federal excise taxes on gasoline, diesel fuel, lubricating oil, tires, tubes and camelback form a realistic basis for measuring highway use, and revenues equal to the proceeds from these taxes should be applied to financing the highway program.

5. Heavy trucks are not now paying an equitable share of highway costs and adjustments in the tax structure should be made so that this class of vehicle more nearly meets its fiscal responsibilities.

6. The Federal share of the cost of improving the national system of interstate highways should be 90 percent of the total cost.

7. The Bureau of Public Roads, with proper statutory authorization, is the logical Federal agency to administer the expanded highway program.

8. Congress should declare its intent to strive for completion of the interstate highways within 15 years; should authorize funds for the first 5-year increment to the over-all program in 1956; and should indicate that the second and third 5-year increments will be authorized in 1961 and 1966, respectively.

PREFERS PAY-AS-YOU-BUILD

The association advocates a 15-year authorization period, and a financing period of 18 years. It is further urged that a provision be included in the law under which the Congress will review every 5 years the progress being made, both as to construction and financing, so that any warranted adjustments may be made.

This will avoid a crash plan involving too quick a buildup in funds, and too short a total construction period.

We urge a pay-as-you-build plan. Certain tax sources should be relied upon in financing this highway program because they are directly related to highway use. These include Federal excise taxes on gasoline, diesel fuel, lubricating oil, tires, tubes and camelback.

Large trucks pay 23.2 percent of the yield on the selected excise taxes. That means that passenger cars and light trucks pay 76.8 percent or over three-fourths of these present taxes.

The AAA program calls for these large trucks to pay 26.2 percent—or an increase of 3 percentage points of the total.

In other words, the AAA plan proposes a tax rate differential as contrasted to the "across-the-board" tax theory. Why, it may be asked, should the Congress include the principle of a tax rate differential for large trucks? The answer is that equity requires it. As reported by the Bureau of Public Roads:

"All States, in their motor-vehicle registration fees, distinguish between passenger cars and commercial vehicles and graduate the fees of the latter group with variation in weight or capacity."

FACTORS IN CONSTRUCTION

There are many factors which enter into the higher road construction and maintenance costs occasioned by heavy truck use. These include the effect of the height of vehicles on overpass and underpass structures, the effect of width of vehicles on width of traffic lanes and bridges, the effect of the length of vehicles on the design of highway curves and bridges, and the very considerable effect of weights of trucks upon bridge design and effects of axle loads upon road foundations, bases and pavements.

Although heavy commercial vehicles travel more miles and use more fuel than lighter weight vehicles, the State legislatures have concluded that the larger individual taxes per vehicle paid by the heavy trucks are not, in fact, adequate to measure the differential which they should pay.

FACTORS IN CONSTRUCTION COSTS

If the situation with respect to Federal aid had remained static, with contributions by the Federal Government of 50 percent of project costs and with those funds being derived from the Treasury without respect to the source of revenue, the AAA would not raise the question of tax-rate differentials at the Federal level.

However, we are now faced with totally changed conditions. Whenever the Federal Government contributes 90 percent of the cost of a system of highways and proposes to finance this program primarily from the yield on highway user taxes, then the Congress should parallel the State legislatures in recognizing the principle of the tax rate differentials for the large trucks.

It is quite understandable that representatives of large trucks seek to establish the principle of across-the-board taxation. They wish to avoid at all costs a Federal taxation concept which, in accordance with State tax practices, would include a tax rate differential for heavy trucks. If they succeed, the inevitable result would be a shifting of millions of dollars annually onto the shoulders of owners of passenger cars and light trucks.

Insure Against Disaster

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement which I made before the House Committee on Banking and Currency:

Mr. Chairman and colleagues, thank you very much for the privilege of appearing before you in behalf of the principles of my bill, H. R. 7944, and other similar bills to provide a national system of disaster insurance. My own bill which is based on the principles of the War Damage Corporation, which functioned so successfully during the war, recognizes our free enterprise and in general designates the insurance companies to place and service all the policies and establishes a revolving fund out of which losses can be paid upon a given contingency.

I appreciate the fact that there are far more sweeping proposals presented by Senator LEHMAN and others which cover manmade, as well as natural, disasters, and frankly I have no objections to them, because I think they all move in the right direction; namely, of providing for our fellow citizens, individuals, bodies corporate and public, appropriate insurance against disaster of whatever kind wherever it may strike.

Admittedly, this is a very broad question, and I think that Congress in providing this type of insurance, as now appears inevitable and imperative, will have to establish appropriate limitations to make such a program actuarily and fiscally sound and confine any inflationary effects that might otherwise appear. Members of Congress can all take judicial notice, I think, of the tremendous, horrible potentialities of nuclear and thermonuclear damage to the Nation in case of war or attack. And it can be demonstrated beyond question, based on our experiences over a long period of time and particularly of recent date, that natural disasters can inflict tremendous damage which should be recognized and anticipated by enacting indemnity legislation embracing the principles of insurance.

I first introduced my bill on this subject following the Worcester, Mass., tornado of 1953, which created such great havoc and dreadful loss of life in one of our great American cities represented in the Congress by our able and distinguished friend, Congressman DONOHUE, and when the ravaging floods of August 1955, and since that time, struck my district, State and the Northeast and later the great State of California with such terrific impact and huge damage, my interest has naturally become all the more intensified. There can be no doubt, I think, that the time has come for action in this field, if we are to be prepared to cope with future disasters whether they emanate from war or nature.

There are many kinds of natural disasters which would and should be covered by this legislation—floods, tornadoes, earthquakes, forest fires, hurricanes, droughts, and other similar visitations of nature. It is estimated by a very eminent economist, Prof. Seymour E. Harris, head of the economic department at Harvard College and prominent public figure, that over 25 years the average cost of floods has been about $160 million per year and other qualified economists have estimated that these costs might be as high as $300 million per year or more. Actually, the latest available figures of the Army engineers appraise the damage done in New England prior to August 26, 1955, as $1.7 billion, or about 10 percent of the region's income for the year. And that does not include, of course, the severe damage of later floods which ravaged our area and caused untold damage.

Clearly, action by Congress is imperative and it must be on a broad front, it must embrace adequate relief, rehabilitation measures, effective protection, and insurance. While to some extent these remedies are mutually inclusive, and again they may not be, for example, if a widespread efficient, system of flood control is speedily inaugurated and completed that would, in the opinion of engineering experts, insure against the repetition and reocurrence of periodic floods in given areas. However, nature's caprice is unpredictable and future floods could conceivably overcome or bypass technical protective projects and strike even at areas that have not been heretofore hit. This is one strong and sound reason for insurance against floods and other disasters because not even the wisest and most accomplished scientist can forecast with certainty when one or the other of these terrible natural disasters which visit us from time to time, will descend.

Most of us will agree, I think, that disaster-insurance coverage or even flood coverage cannot be provided by the private-insurance companies. Admittedly, the rates would be prohibitive without Government support. This principle was recognized in the war damage-insurance legislation and by President Truman in 1951 after the Missouri River floods when he proposed a Federal underwriting program of disaster policies up to a billion and a half dollars. This measure was not adopted at the time and, as an alternative, the Bureau of the Budget suggested that Congress enact a measure authorizing the Government to pay out $22 billion for disaster insurance, an amount that would involve about 2 percent of the current wealth of the Nation.

As the able members of this committee so well know, there are many broad pending proposals relating to risks and the apportionment of rates, incentive plans, rate differentials between and within States and the like.

Of all these proposals it seems to me that in principle at least the one I have suggested affords a ready answer to the problem, namely, a Federal reinsurance program with Government backing, limiting the total coverage to perhaps twenty or twenty-five billion dollars, entailing about an average rate of $1 per $10,000 value. This insurance would be cheap and attractive and would, most experts agree, result in wide coverage. If the States were permitted to participate as suggested by Professor Harris, by committing the property tax to a certain limited amount of the rate, it is believed that each home owner would be charged something like 50 cents to $1.50 per year. Personally, I am of the opinion that the Federal Government should underwrite and support this program by itself, because I think the general property tax is already very heavily burdened in most States and communities. These damages are national in character and effect even though they strike at localities and areas and they greatly affect the national economy and I, therefore, believe the solution lies in the national field by enactments of this Congress.

It is undeniable that once the costs of disasters could be distributed over broad enough an area it would not only be general participation because of low rates and the need for coverage but also a more realistic contribution by the Federal Government from tax revenues collected from the States.

Of course, it does not seem to me that it should make any difference whether we call

this protective legislation indemnity or insurance. It also seems to me that it will be desirable for us in the first instance to experiment with this new type of program in order to acquire sufficient experience to enable us in the long run to provide a mechanism that will be actuarily and financially sound. I do not believe that this program should entail matching contributions from the States at this time.

There will also be a problem of reconciling the new program with other types of personal property insurance and the crop insurance. It will be more beneficial in the long run, I think, to start with a broad support program excluding Government competition with private companies and preserving the principle of our free-enterprise system.

I also agree that whatever form this legislation takes it should provide, insofar as it is practicable, for the ultimate elimination of subsidies and for a self-sustaining program, although we can all envision situations involving manmade disasters when no program of this character which the Congress might adopt could possibly carry itself and stupendous Federal payments would be necessary. In fact, in that event, doubtless the entire taxing power of the Federal Government would have to be thrown into the breach. I agree with Professor Harris that the fund should be limited to about $20 billion or so, in order to cope with possible inflation.

I would suggest that the maximum coverage under any bill for any one corporation, individual, State, or municipality should not be limited to $250,000, as proposed by the administration bill, but extended to cover every possible loss. To illustrate the need for this provision, I may say that in my own district in the recent floods, one company sustained an actual loss of well over a million dollars and several companies sustained losses well over $250,000.

The principle of reinsurance of private companies underwriting disaster risks is a sound one, and I think it should be incorporated into any legislation, but here again I feel that the matter of limiting the amount of authorized reinsurance ought to be carefully studied so as to provide adequate funds to cover all contingencies.

Under the situation now confronting us, I believe that the Government, and the Government only, can feasibly inaugurate disaster insurance. I hope that in considering this legislation that this able committee will consider the principles of my bill, H. R. 7944.

I may add that under my bill payments for damages incurred would be made only upon a declaration by the President of a disaster area.

In my judgment the idea of disaster insurance is not only sound but economically feasible and imperatively demanded by existing conditions in order to safeguard our economy and spare many of our fellow citizens from ruin or great economic loss.

There are elements in the problem that are extremely challenging, I know, there are great complexities to be sure, but I have confidence in this able committee embracing in its membership so many outstanding Members of the Congress, will not only give the matter painstaking and thorough attention, but also be able to come up with effective solutions that will square with our free-enterprise system, protect the public interest, and save large numbers of our fellow citizens from virtually irreparable economic loss.

As chairman of the Massachusetts congressional delegation committee on flood prevention and relief, a body composed of several very able Members of the House, in behalf of my own constituents, our State, and area which suffered so greatly from past and recent floods and in the name of the very many people and communities throughout the Nation which have been and will be in the future confronted with the horrible conditions that arise from natural disasters I respectfully urge your continued careful, and expeditious, study and prompt action upon disaster-insurance legislation.

Let me express my deep appreciation, Mr. Chairman, to you and members of the committee for your great kindness in hearing me.

Toledo Has Least Ohio Strike Loss

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. ASHLEY. Mr. Speaker, in 1955 the city of Toledo achieved the excellent record of lowest strike losses of all Ohio cities for the year. I am indeed proud to ask unanimous permission to insert in the RECORD an article from the Toledo Blade setting forth the figures of this impressive record for labor-management cooperation:

[From the Toledo (Ohio) Blade of February 8, 1956]

TOLEDO HAS LEAST OHIO STRIKE LOSS—CLAIM OF TIDC OFFICIAL BASED ON FIGURES FROM STATE AGENCY

Toledo had the best record among Ohio's major cities as far as strike losses during the year 1955, William L. Batt, Jr., executive secretary of the Toledo Industrial Development Council, reported today.

Mr. Batt made the statement after compiling quarter-by-quarter strike loss totals for the State's eight major cities, furnished by the Ohio Department of Industrial Relations.

His calculations showed that during the entire year Toledo lost only 32,600 man-days production as a result of strikes. Dayton was second best with 38,100.

Other totals, according to Mr. Batt, were Canton, 96,400; Youngstown, 111,000; Cincinnati, 152,800; Akron, 185,100; Columbus, 292,300, and Cleveland, 433,000.

Mr. Batt noted that it will probably be some time before the Ohio Department of Industrial Relations releases its official totals for the year 1955, but his calculations indicate Toledo should be the leader in industrial peace in the State report. If anything, calculations which show the percentage of Toledo's total work force involved in strikes during the year will reflect even more favorably on the city, he predicted.

NO STRIKES IN DECEMBER

Meanwhile, the Department of Industrial Relations' official strike-loss report for the month of December 1955 showed both Toledo and Youngstown had no strikes during that month. December totals for the number of man-days lost in other major Ohio cities were Columbus, 79,000; Cleveland, 47,000; Canton, 2,900; Cincinnati, 2,800; Akron, 2,100, and Dayton, 300.

Totals for the fourth quarter of the year showed that strike idleness throughout the State reached its high point for 1955 in this period, with 1.1 million man-days lost, compared to 790,000 in the third quarter. The majority of man-days lost were due to the Westinghouse Corp. strike.

FOURTH QUARTER FIGURES

During the fourth quarter, Toledo had a total of 4 strikes involving 3,700 workers and resulting in 18,000 man-days lost, or sixteen one-hundredths of 1 percent of estimated total working time, according to the State figures.

Other fourth-quarter totals were Cleveland, 190,000 man-days lost in 8 strikes or four-tenths of 1 percent of working time; Columbus, 230,000 in 5 strikes or 1.53 percent; Cincinnati, 24,000 in 7 strikes or one-tenth of 1 percent; Youngstown, 9,800 in 8 strikes or eight-tenths of 1 percent; Akron, 5,100 in 5 strikes or four-tenths of 1 percent; Canton, 3,100 in 3 strikes or four-tenths of 1 percent, and Dayton, 3,100 man-days in 5 strikes or two-tenths of 1 percent.

The Church of Silence in Czechoslovakia

EXTENSION OF REMARKS
OF
HON. JAMES C. MURRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. MURRAY of Illinois. Mr. Speaker, last Thursday and Friday the Right Reverend Ambrose Ondrak, O. S. B., abbott of St. Procopius Abbey, in Lisle, Ill., offered the opening prayer in respectively the House and Senate. In his prayer he appealed for divine help for Archbishop Josef Beran, who has been separated from his flock for 5 years.

The whole free world cannot pass by with silence the sad fifth anniversary of the shameful banishment of the heroic primate of Bohemia, His Excellency Josef Beran, archbishop of Prague, from his see in this capital of Czechoslovakia. Archbishop Beran, like Cardinals Mindszenty, Stepinac, and Wyszynski, has become a symbol of the fight against communism in satellite countries in eastern and central Europe.

It was on March 10, 1946, during the turbulent postwar years in Czechoslovakia, that Pope Pius XII appointed the capable Msgr. Josef Beran as archbishop of Prague and primate of Bohemia. Coincidentally 5 years later, March 10, 1951, His Excellency was unlawfully deported from his see in Prague. According to the State Bureau of Church Affairs in Prague he was deported for "his negative stand toward new church laws in Czechoslovakia." This event climaxed the Calvary of the Catholic Church in Czechoslovakia; it marks the coup d'etat by which the State usurped power to dominate the affairs of the Catholic Church. And so masterfully and subtly was it effected that it became for other satellite countries the policy and pattern of Communist perfidy.

To speak of the Calvary of that country of which Archbishop Beran is the symbol of persecuted freedom is my honor today, and the overtones of sadness attending this dual anniversary are relieved in part by considering that I speak in the sanctuary, as it were, of the great American Constitution that safeguards freedom for its own people; that I speak to the legislative body of a nation dedicated by justice and its present position as world leader to protest the violation of that freedom in other nations as well.

I do not need to remind my esteemed audience that the present struggle in

Czechoslovakia is not a new one. It is simply a contemporary revival of the conflict between good and evil that has been ever present in human history. As early as 1846 the spiritual leader of Christendom, Pope Pius IX, raised a prophetic voice against this evil, calling communism "that infamous doctrine which is absolutely contrary to the natural law itself, and if adopted would utterly destroy the rights, property, and possessions of all men, and even society itself"—Encyclical Qui Pluribus, November 9, 1846, Acta Pii IX, volume I, page 13. Later on, Pope Leo XIII defined communism as "the fatal plague which insinuates itself into the very marrow of human society only to bring about its ruin"—Encyclical Quod Apostolici Muneris, December 28, 1878, Acta Leonis XIII, volume I, page 46. With clear intuition His Holiness pointed out that the atheistic movements existing among the masses of the machine age had their origin in that school of philosophy which for centuries had sought to divorce science from the life of the faith and of the church. Even stronger condemnation of communism is found in the numerous encyclicals of Pius XI: the Allocution of December 18, 1924; Miserentissimus Redemptor of May 8, 1928, AAS, volume XX, 1928; Quadragesimo Anno of May 15, 1931, AAS, volume XXIII, 1931, pages 177–228; Caritate Christi of May 3, 1932, AAS, volume XXIV, 1932, pages 177–194; Acorba Animi of September 18, 1932, AAS, volume XXIV, 1932, pages 321–332; Dilectissimo Nobis of June 3, 1933, AAS, volume XXV, 1933, pages 261–274.

These encyclicals were followed by another on March 19, 1937, Divini Redemptoris, in which Pope Pius XI presented an unmistakably clear and forceful exposition of the stand of the Catholic Church against atheistic communism. The present Pope Pius XII has proved himself a fervent executor of the policies of his predecessors by various declarations and decrees against communism in action. No one today can reasonably doubt that communism has moved from theory to practical reality. Its drastic applications are only too apparent: communism robs man of liberty, it despoils human personality of its dignity, and removes all restraint from human passion. No man has any natural rights. He is a cog in the Communist machine. It is at least a surprising fact that the voice of the Popes remained too long the "voice of one crying in the wilderness," unheard and unheeded until almost the 11th hour.

But Christians all over the world were alerted to the real dangers of communism. Especially were the American people informed on this pressing issue by statements and resolutions of the American hierarchy, November 15, 1950; November 19, 1951; November 21, 1953—see NCWC news release of these dates. These historical documents reveal the tragic situation of the church of silence behind the Iron Curtain. Information is likewise available in other mediums: Radio Free Europe, Voice of America, newspapers, periodicals, books, publications of universities, even CONGRESSIONAL RECORDS and releases of the State Department, such as the recent Moscow's European Satellites, published January 1956, which stresses again in résumé the plight of religion behind the Iron Curtain.

A man of prophetic vision and exceptional courage, Archbishop Beran from the very beginning assumed leadership on this pressing issue of communism in Czechoslovakia. Through pastoral letters, memorandums, protests, this man of small stature but great spirit, showed the whole world his uncompromising stand in the matter of the God-given rights of man, church laws, and the rights of the nation. In the critical days of the Communistic coup d'etat of February 1948 he accepted the confidence reposed in him by all his people. All his actions and sufferings thereafter personalized the struggle of the Czech and Slovak bishops, priests, religious, and the faithful of Czechoslovakia. The free world will never forget the historic pronouncement made on June 18, 1948, in the Strahov Church of the Abbey of the Premonstratensians, in which he exposed the activities of Czechoslovak Communists:

> Perhaps very soon you will hear on the radio all sorts of things concerning me. You may hear that I have made a confession, or other statements. I hope you will trust me. If one day you learn of the conclusion of an agreement between the church and the state, you should know that I would never conclude an agreement which would infringe on the rights of the church and of the bishops. It is possible that one day you will learn that I have concluded an agreement, or that I have given my consent. Maybe you will hear it from the wireless morning and night. But I declare before God and before the nation that nobody shall force me to do that. * * * No true Catholic can exist where the bishops are not with the church. You know I would like to talk to you from here, but I will not. I do not want you to be persecuted. I do not know how often I shall be allowed to speak from the pulpit in the future.

The following day, Sunday, June 19, 1949, a scandalous incident took place in the Cathedral of St. Vitus in Hradacany-Prague. On this day a celebration of the Corpus Christi holy days was to take place. The faithful were hindered by all means possible from assisting at the celebration, but the services were attended by secret police and some hundreds of hired men sent there as members of the civilian militia corps. At the beginning of the sermon by Archbishop Beran, when he condemned the fraudlent Catholic action, these men started to whistle and yell. Since the secret police made no attempt to restore order, Archbishop Beran, after making some effort to continue speaking, left the cathedral. Since that time, he was a prisoner under the watchful eye of Communist police, silenced and unable to perform his episcopal duties, and finally banished from his see on March 10, 1951.

This is the man, a great hero and a moral victor over the persecutors, whom we commemorate today. Undoubtedly he is the central figure in the defense of Catholics and the prime figure in the whole national resistance to communism. He fulfilled all the prerequisites for this role. He excelled in all departments of Catholic action, in the Catholic press, and in apostolic work. He lived a very modest and irreproachable life. Since 1933 he had educated young priests in modern pastoral work. A faithful cooperator with Cardinal Kaspar, he eventually became his successor. The maxim of his life was, "All for the greater glory of God," and he consequently carried out all the instruction of the Pope, the Vicar of Christ on earth. Born in Pizen in 1888 of a family of teachers, he prepared himself for the profession of teaching. He studied theology in Rome, was graduated in 1912 as a doctor of sacred theology, and thereafter acted as chaplain in various institutions. Later he was appointed rector of the Teachers Institute of St. Anne in Prague, and from 1934 he was rector of the major seminary there. In 1942 he was arrested by the gestapo and deported to the infamous concentration camp at Dachau, being known there as prisoner No. 35844. From there after liberation by the American Army he returned in 1945 to Prague. His freedom, however, was short lived; 3 years later he was imprisoned again, this time by the Communists, for refusing to render to Caesar the things that are God's. He continued to insist that the state had not the right to dominate the affairs of the Church of God. Specifically, he protested against the confiscation of church properties, March, 1948; education law bypassing church authorties, April 21, 1948; ban on Catholic publications, 1948; right of the state to organize a false Catholic action, June 10, 1949; payment of priests' salaries directly by government rather than through heirarchy, October 1949; the establishment of a government office of church affairs, by which new church laws were formulated, October 1949; the expulsion of the papal representative, March 16, 1950. In other ways he protested Communist usurpation until his banishment, insisting always on rendering to Caesar the things that are Caesar's in the sense of Holy Scripture.

The good archbishop has been imprisoned outside his own archdiocese for 5 years—imprisoned without a trial after a 20-month restriction to his palace. He cannot speak and lead by word. But by his inspiring example he leads the entire Czech nation closer and closer to God, closer and closer to the truths of their holy Catholic faith.

The American Nation protests and condemns the Communist violence committed against the good Archbishop Beran and other bishops, priests, religions, and people of Czechoslovakia. On this the fifth anniversary of his banishment a request on their part for his freedom is most appropriate. Included in their request is freedom also for the bishops who signed the pastoral letters, documents, and letters defending church rights against the Communists. Altogether they form a unique picture of most courageous defense against Communist tyranny. Wherefore we request specifically that—

First. His Excellency Archbishop Josef Karel Matocha of Olomouc, primate of

Moravia, be freed from imprisonment in his residence.

Second. His Excellency Josef Hlouch, bishop of Budejovice, deported from his see in 1952, be returned to his diocese and to his people.

Third. His Excellency Stepan Trocha, bishop of Litomerice, sentenced to 25 years at hard labor in prison, be freed and returned to his diocese.

Fourth. His Excellency Moric Picha, bishop of Hradec Kralove, regain his freedom.

Fifth. His Excellency Karel Skoupy, bishop of Brne, capital of Moravia, be returned from jail to diocese to perform there has episcopal duties.

Sixth. His Excellency Stanislav Zela, auxiliary bishop of Olomouc, sentenced by a fraudulent trial to 25 years in prison, be freed.

Seventh. His Excellency Jan Vejtassak, bishop of Spis in Slovakia, heroic aged defender of the faith, sentenced for 24 years, be freed from jail.

Eighth. His Excellency Eduard Nescey, bishop of Nitra in Slovakia, be released from imprisonment.

Ninth. His Excellency Robert Pobozny, bishop of Roznava in Slovakia, be freed from jail or domestic internment.

Tenth. His Excellency Pavel Gojdic, bishop of the Greek Catholic See in Presov in Slovakia, sentenced January 1951 for life imprisonment, be freed.

Eleventh. His Excellency Basil Hopke, auxiliary Greek Catholic bishop of Presov, be released from imprisonment in jail.

Twelfth. His Excellency Michal Buzalka, auxiliary bishop of Trnava in Slovakia, sentenced to life imprisonment, be freed.

Thirteenth. His Excellency Daniel Briedon, vicar capitular of Banska Bystrica in Slovakia, be freed.

Fourteenth. Other bishops, namely, their Excellencies Bishops Ambroze Lazik, bishop of Trnava, and Josef Carsky, bishop of Kosice in Slovakia, be no longer subjected to the vigilance and pressure of Communist police.

Fifteenth. All other bishops, abbots, priests, religious nuns, and all the thousands of faithful who suffer for their religious convictions and trust for freedom be freed.

Sixteenth. That the thousands of people confined in concentration camps and slave labor camps, suffering hardships from hunger and in desperation worse than that of galley slaves of ancient times, be liberated.

Seventeenth. Revocation of all anti-Christian laws and measures be effected, with the restoration of freedom of religious practice, the press, education, and assembly.

Eighteenth. Restoration of free and Christian Czechoslovakia.

Nineteenth. Finally, His Excellency Josef Beran, archbishop of Prague, be returned to lead this free and Christian Czechoslovakia. His influence has been worldwide; his inspiration, the source of hope that the Church of Silence is not suffering in vain.

We cannot overlook the example of Archbishop Beran. The means and opportunity to help the cause of justice and right to its final victory is for us a matter of conscience. The Church of Silence began with the passion of Christ, but it ended in His resurrection. St. Augustine reminds us that Jesus suffered, was buried, and arose from the dead. It is our fervent hope that a resurrection is in the immediate future for the persecuted people of Czechoslovakia.

Research Department, Los Angeles Chamber of Commerce, Tells About Los Angeles

---

EXTENSION OF REMARKS
OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. DOYLE. Mr. Speaker, being a native-born Californian, and a very long-time resident of the great county of Los Angeles, and having already been one of the Representatives in Congress from Los Angeles County now completing my fifth term, I am naturally pleased to have received unanimous consent to include with my own remarks certain data and text published by the Board of Supervisors of Los Angeles County, and compiled and distributed by the research department of the Los Angeles Chamber of Commerce.

As you know, while a vast majority of the population residing in the great 23d district, which I represent, reside in 50 prosperous, forward-looking communities outside of the corporate limits of Los Angeles, my 23d district boundaries do run clear through and up to within about 20 blocks of the city hall of Los Angeles City. And, since the text of the Researcher for February 1956 includes much valued and pertinent information about Los Angeles County and about Los Angeles metropolitan areas as well as of the city of Los Angeles, I consider it a privilege and pertinent to call to your attention and that of my colleagues of this great legislative body this valued information and statistical data:

RESEARCH NOTES

(By the Editorial Staff)

Sumner H. Schlicter, Harvard University economist, claimed that all in all the present outlook is that production will be higher in the second half of 1956 than in the first half. (Boston Globe, January 1, 1956.)

In the November 10 edition of Sales Management magazine, Dr. Schlicter forecasted a $570 billion economy for 1965.

Weldon B. Gibson, economic research director, Stanford Research Institute, predicts a United States population of over 280 million for the year 2000. His projection is 221 million for 1975, at which time a gross national product of $800 billion can be expected. (Industrial conference, Stanford Research Institute, January 30, 1956.)

The Census Bureau reveals that standard metropolitan areas have grown (1950–55) 13.7 percent (11.5 million) against 0.5 percent (319,000) for territory outside the metropolitan areas. Suburbs within the metropolitan areas have gained 28 percent (9.6 million) while the central cities increased only 3.8 percent (1.9 million) (series P–20—No. 63).

Mobility figures 1950–55 indicate that people move within the United States at surprising rates. Between 1950 and 1955 over 30 million people (20 percent of total) moved each year. Twenty million (13 percent) moved within their own county boundaries; of the other 10 million (7 percent), 5 million changed residence to other counties within their home State; the remaining 5 million migrated to other States.

As might be expected, westerners moved at higher rate than the rest of the United States. Thirty percent of the population of the 11 Western States in 1955 (6.6 million people) had moved during the year. Eighteen percent (4.1 million) remained in their home county. Six percent (1.2 million) stayed within their own State and 1.3 million had migrated from other States.

In the 11 Western States (1954–55) 70 percent of the migrants came from other areas in the West; 12 percent came from the Southern States; 11 percent from the North Central States and 7 percent from the Northeast section of the United States. (Census Bureau series P–20—No. 61).

The Times Washington Bureau reported (January 11) more United States Government workers in California (230,200) than in Washington, D. C. (229,615).

Jack M. Mosier, city planning director, estimated San Bernardino city population, January 1, 1956, at 85,419. During 1955, 1,635 people were added by annexations. (Los Angeles Examiner, January 8, 1956, p. 5).

RESULTS OF THE RESEARCH COMMITTEE SURVEY

In December a questionnaire was sent to all members of the research committee in order to find out what committeemen thought of a number of economic research projects being contemplated by the Chamber. Here are the results of the questionnaire:

A total of 68 questionnaires were completed and returned, representing about one-half of the research committee membership. On the basis of the answers received for those having an opinion, here are the five most popular projects in order of their popularity:

1. LONG-RANGE LOOK AT SOUTHERN CALIFORNIA ECONOMY

It has been suggested that we direct more effort in this direction to help members and others who must plan ahead. This type of activity would also dovetail with other chamber efforts to help solve future problems of community development.

2. POPULATION ESTIMATES BY CENSUS TRACTS

Requests have been made for us to update the estimates of population and dwelling units made in the Los Angeles Marketing Atlas as of April 1, 1954. It has been proposed we issue a supplement to the Atlas making new estimates as of April 1, 1956.

3. QUARTERLY BUSINESS FORECASTS

Many claim the science or art of forecasting has advanced to the point where it would be feasible and useful to set up, under the auspices of the chamber, an "economists panel" to make short-run forecasts of local business conditions every quarter.

4. INDUSTRIAL CENSUS DATA BY AREAS WITHIN LOS ANGELES COUNTY

Steps have already been taken to see if detailed data from the 1954 census of manufactures can be purchased for areas within Los Angeles County. These industrial areas would be established by the industrial marketing subcommittee of the research committee, and the Census Bureau would tabulate employment, value added by manufacture and other information for the various industrial classifications for each of these areas.

5. ADD ORANGE COUNTY TO THE MARKETING ATLAS

It has been suggested we issue a supplement to the Los Angeles Marketing Atlas

showing Orange County in map form similar to the Los Angeles County portion. Shopping and industrial areas would be shown, but in lieu of census tracts, probably postal zones would be indicated.

The earliest preliminary release is expected sometime in April.

This will be the largest special city census ever undertaken and several months are required to tabulate the vast amount of data collected.

Market researchers, economic analysts, planners and others are keenly interested in the results. The information received, since it will cover a broad cross section from San Pedro to the San Fernando Valley, will reveal the various and divergent trends and movements in the area over the past few years.

Los Angeles Special Census To Begin in February

The Census Bureau will begin its enumeration of the Los Angeles City population on February 27, 1956, it was announced by Mrs. Gladys Evans, district supervisor.

Special census reports in southern California

City	County	Population	1955 date	1950 census	Since 1950	
					Monthly increase	Percent change
Bishop	Inyo	3,270	Nov. 12	2,891	6	13.1
Chula Vista	San Diego	[1] 31,314	Dec. 30	15,927	223	96.6

He's Fit and Ready

EXTENSION OF REMARKS OF HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. WESTLAND. Mr. Speaker, the Everett Herald, the largest daily newspaper in the Second Congressional District, on March 2 ran an editorial commenting on President Eisenhower's decision to seek a second term.

Since this editorial reflects the views of millions of Americans, I am placing it in the RECORD so that my colleagues in Congress and others who read the CONGRESSIONAL RECORD may know what the grassroots thinking is on the fitness of Mr. Eisenhower to lead our Nation through another term. The editorial follows:

GREAT AMERICAN MAKES GREAT DECISION IN TALK TO NATION

President Eisenhower went before the people of America Wednesday evening and expressed his willingness to seek a second term in the White House. To those who viewed Mr. Ike before the microphone he appeared the same commander in chief who so often had addressed them prior to his heart attack. There was no hesitancy as he projected his thoughts to the Nation.

There is an election coming up in November and obviously the people will select the occupant of the White House for the ensuing

4 years. Yet the announcement by the President stands out as the biggest news to break since that fateful evening when word came of his illness. That America has taken Mr. Eisenhower into their hearts is seen by the effect his illness had upon them.

President Eisenhower says his campaign platform will be his record. He also makes plain that he will make no barnstorming drive for reelection. Both were to be expected. The voters will not expect their President to make a strenuous campaign. As to his record in office, it stands forth for all to see in the clear light of day. Of course, this record will be subject to the political oratory of the opposition. It will be up to the voter to separate the wheat from the chaff.

It is clear to many people that the Eisenhower administration has been marked by a great deal of tranquility. It has had its ups and downs and has been the target for criticism.

Yet all in all, it can look back upon the tenure of achievement beginning with the conclusion of the police action in Korea. The cold war with the East has not become colder. President Ike in his deliberations with other leaders of state has more than held his own and has gathered for himself increased stature in statesmanship. At home the problems of domestic nature are many and they are complex. Yet the steadying influence of the President has made itself known in this field and the country can assume a degree of confidence that solutions to all of them will be gained as time goes on.

The American people have attained a new degree of confidence under President Eisenhower, the confidence that comes from the regained right to proceed as individuals to work out their destiny. The warmth of the Chief Executive has spread throughout this land to the end that there is a new togetherness prevailing tonight, a new spirit of cooperation toward a common goal.

A great American has made a great decision.

Eisenhower in 1956

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. BEAMER. Mr. Speaker, under unanimous consent, I wish to insert in the Appendix of the RECORD the attached editorial, Eisenhower in 1956, which appeared in the March 6 issue of the Anderson (Ind.) Herald:

EISENHOWER IN 1956

Four years ago this week, the Herald became the first Republican newspaper in Indiana to endorse Dwight D. Eisenhower for the Presidency of the United States.

"Dwight D. Eisenhower," we wrote on that occasion, "undoubtedly does not want to be President in the sense that an ordinary political figure may aspire to that high station. At the same time, he recognizes that in an hour of peril, a man eminently equipped to discharge the duties of that office cannot escape service.

"The Republican Party today has a whole host of men with exemplary qualifications for service to the public. * * *. But it is not often that a figure emerges with the nationwide appeal with which Dwight D. Eisenhower is endowed. Without a doubt, he is the most esteemed, respected, and beloved living American.

"He is unmistakably a Republican. He is clearly available for the Presidency of the United States at a time when the Republican Party must return to office and at a time when it must extend its appeal to the 27 million Americans who pick their candidates without regard to party label.

"We of the Herald are for Eisenhower without qualification because we recognize in him everything for which the Nation is crying—personal integrity, international goodwill, and the ability to inspire the devotion and the harmonious teamwork of his countrymen."

AMERICA AND THE WORLD 4 YEARS LATER

To assess fairly and adequately Mr. Eisenhower's contribution to the Nation, we should turn back to March 1952 and recapture as realistically as we can the political facts of that year of decision.

Perhaps the most striking fact of 1952 was the Korean war—a military expedition that had bogged down into an endless, aimless, futile blood-letting.

Another political fact of 1952 was widespread corruption and impropriety in Government—official conduct that threatened to shake—if not to destroy—the faith of confidence of rank-and-file Americans in the very structure of representative government.

Still another was the apparent laxity with which the old administration wrestled with the vitally significant issue of enemy subversion. No one—then or now—questioned the patriotism of Mr. Eisenhower's predecessor in the White House; but the American people 4 years ago were losing faith in an administration that chose to minimize the Communist threat for apparent reasons of purely political advantage.

One more political fact of 1952 was Government spending. The administration that preceded Mr. Eisenhower's collected more Federal taxes than all other administrations in our history combined. Those expenditures were dictated, of course, by the peril that confronted the American people. But Americans were beginning to wonder in 1952 whether the perils of economic dislocation nurtured by deficit spending, by unbalanced budgets and by unrelenting burdens of taxation might not be nearly as great as the perils of enemy assault.

ARMED WITH THE FACTS, THE PEOPLE ACTED

Against this background, alive to these considerations, the American people went to the polls in the fall of 1952 and accorded a powerful mandate to Dwight D. Eisenhower and the Republican team. By the time the last vote had been tabulated, 39 States and 33,936,252 popular votes stood in the Eisenhower column. To their 34th President, the American people had given the most smashing victory in American political history.

Installed in office slightly more than 3 years ago, President Eisenhower and his team went to work.

Within a matter of months, the Korean war had ended—and for the first time in a generation, the American people looked out upon a world free from flaming battlefields.

Similarly in short order, the Eisenhower administration had restored integrity to Government service. Government service, in fact, became not a right, but a privilege—a privilege to be forfeited in the face of misconduct. At the same time, the administration moved forward with a program to protect the Nation from the inroads of Soviet agents in our midst.

Most significantly of all, perhaps, the Eisenhower administration produced substantial reductions in the cost of our Military Establishment—without weakening the Nation's voice in world affairs, without magnifying the threat of war.

So unmistakable, so resolute has been United States policy during these past 3 years, in fact, that the Soviet Union has assumed its most conciliatory air since the end of World War II.

FROM THE PRESIDENCY, THERE IS NO ESCAPE

When Mr. Eisenhower arrived late last month at his decision to be a candidate for renomination and reelection, he shared with the Nation the cardinal fact about the Presidency: it is an office and a responsibility from which there is no escape. The problems of the Nation, the duties of guiding the Nation are with the President every moment of the day and night.

After a thorough exploration of his own capabilities, Mr. Eisenhower is firmly convinced of his ability to cope with those responsibilities and duties. The Nation that greeted that decision was a Nation still convinced of Mr. Eisenhower's personal integrity and professional skill.

Our faith in Mr. Eisenhower is sturdier today than it was 4 years ago; it has been reinforced, in fact, by achievement. He has given his friends of 1952 every reason to work with renewed dedication for his reelection in 1956.

Slovakian Independence Day

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. BENTLEY. Mr. Speaker, I should like to call the attention of the House to the fact that 17 years ago, on March 14, 1939, the Diet of Slovakia proclaimed the Independence of Slovakia at Bratislava.

During the approximately 6 years that it was in existence the Republic of Slovakia was recognized by 27 states, including the Holy See, The Soviet Union, Spain, Switzerland, Sweden, Great Britain and France. Its international individuality, therefore, was an accepted fact.

Mr. Speaker, in commenting upon the Slovak Republic itself, I should like to quote a few lines from Special Report No. 8 of the Select Committee on Communist Aggression, as follows:

Even though the Slovak State was largely the result of a tense international situation, it neverthless corresponded to the aspirations of the Slovak people for freedom and the principle of self-determination and self-government. * * * The Slovak State was far from being a perfect democracy in the traditional sense. It reflected a compromise between the past and the present, between an old tradition and a temporarily determined political dynamism in central Europe. But, in general, it was an expression of the self-preservation instinct of the Slovak nation.

Ever since the end of World War II there has been carried on a lively and at times bitter controversy between those persons in this country who stand for a separate, independent Slovakia and those who endorse the idea of a united Czechoslovakia. It is not my purpose to take sides at this time in such a dispute but I do believe that the stated policy of our administration is the correct one: that is, not to commit this Government to any course of action except that of permitting the Czech and Slovak peoples

themselves, following their liberation, to work out their own problems in the spirit of freedom and self-determination. Meanwhile, I urge both parties to recognize that the question of liberation from Communist tyranny is the immediate problem to be faced. There can be no political solution to this Czech-Slovak problem until liberation comes first. Nevertheless, on behalf of the thousands of people in this country of Slovak origin, many of them residents of my own congressional district, who are firmly committed to the idea of a free, independent Slovakia, I call the attention of the House to this, their independence day. I am sure that the desire for freedom and self-determination is just as strong in the hearts of the people of Slovakia who are today existing under Communist domination. And as long as that desire remains alive, the Soviets face an impossible task in their efforts to communize the Slovaks. I know we all join in the hope that soon liberation and the right of self-determination will again come to the Slovak people, as to all other peoples now behind the Iron Curtain. At that time, whatever form of government the Slovak people themselves choose, I am confident that free nations everywhere, including our own, will honor their election and their choice.

Economic Aid

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, recently I introduced House Concurrent Resolution 216, which proposes that the Congress urge the President to undertake a series of actions which would have the effect of, first, strengthening the Atlantic alliance; and second, suggesting a share-the-cost plan for providing much-needed development capital for the have-not nations. My resolution has been referred to the Department of State for comment.

The need for action along the lines suggested in my proposal is most urgent. While I recognize that in an election year the difficulties involved in facing up to the massive nonmilitary offensive which has been launched by the Soviet Union may be great, it is my belief that the necessity for continuing American leadership in the free world far transcends any supposed political advantage to be achieved by gambling on the Soviets making no further penetration until after the November election. While we equivocate, our NATO allies are almost unanimously urging additional emphasis on economic aud cultural means of strengthening the Atlantic alliance and on economic means of cooperating with the uncommitted nations. Our allies are in effect suggesting that they are prepared to undertake a share-the-cost plan for meeting the need for development capital in the have-not nations—a plan which would greatly benefit free world foreign policy and would in the long run mean less cost to the American taxpayer.

The speech to Congress by Italy's President Gronchi, urging action along these lines, is fresh in our minds. This past weekend Prime Minister Eden, of England, and Premier Mollet, of France, jointly urged this course. I quote from the Washington Post and Times Herald of March 13:

> The emphasis they put on the necessity of the North Atlantic Treaty Organization and the Manila and Baghdad pacts giving increased importance to economic action in the Far East, Middle East, and Africa, was set forth in a communique covering private talks Eden and Mollet held yesterday.

This emphasis is directly in line with part I of my resolution and in my view argues strongly for favorable action on the resolution at an early date. I believe the Congress should proceed with this action, recognizing, of course, that leadership must rest with the Executive. I urge Congress to move because I feel that part of the hesitancy of the Executive is based on fear of adverse congressional reaction. A favorable response to my resolution in the Congress would greatly strengthen the hand of the Executive in formulating proposals which would crystallize the thinking of our European allies on this subject. Delay will not only permit continued Soviet penetration of southeast Asia, the Middle East, and Africa, but will weaken United States leadership in the Atlantic alliance by leaving us in the ludicrous position of not taking advantage of our allies' offers to cooperate with us in assisting the have-not nations.

I wish to call the attention of the Congress to the complete newspaper account of the Eden-Mollet talks which I referred to above:

EDEN, MOLLET STRESS ECONOMIC AID
(By William J. Humphreys)

LONDON, March 12.—Prime Minister Anthony Eden and French Premier Guy Mollet, falling in line with recent criticism of western diplomacy by French Foreign Minister Christian Pineau, today proposed that the whole network of free world alliances provide more economic help for underprivileged nations.

The emphasis they put on the necessity of the North Atlantic Treaty Organization and the Manila and Baghdad Pacts giving increased importance to economic action in the Far East, Middle East, and Africa was set forth in a communique covering private talks Eden and Mollet held yesterday.

In a speech at Paris March 2 Pineau said the western powers were putting too much emphasis on security and not paying enough attention to the inroads the Soviet "peace" campaign and promises of economic aid were making in underdeveloped nations. Secretary of State John Foster Dulles seemed to be one of the main targets of the speech.

Some diplomatic observers here were reading into today's communique implied criticism of American leadership of the western alliances and of Dulles, who directs American foreign policy. But British authorities were inclined to reject this view. They said Pineau's speech was also aimed at Britain.

The Eden-Mollet talks consisted of exchanges of views rather than making decisions, hence no suggestions were made for implementing the call for greater economic assistance, according to officials.

Observers here also attached importance to that part of the communique which recognizes that both Britain and France have worldwide responsibilities which they are seeking to carry out. Here it was indicated the two statesmen reached a clearer understanding of each other's actions in the Middle East and north Africa.

Racial Problem in Alabama

EXTENSION OF REMARKS
OF
HON. ARMISTEAD I. SELDEN, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. SELDEN. Mr. Speaker, on Sunday evening, March 4, 1956, I appeared on Washington television station WMAL as the guest of news commentator Joe McCaffrey. In answer to his request that I present the viewpoint of the majority of Alabamians on my State's current racial problem, I made the following statement:

It is a pleasure for me to be here with you tonight, and I hope that in the next few minutes I can throw at least a little light on the problems that face the people of the South.

The friendly relations that have existed in Alabama between the white and Negro races have been badly strained in recent weeks.

In my State of Alabama, as in other sections of the South, we have always operated under a segregated system. The Negro race, under that system, has made great progress—perhaps greater progress than any race anywhere at any time in history. This progress had been made with the help of the southern white people, and I am happy to say that, at the same time, racial strife and hatred had been reduced to a minimum.

Under the separate-but-equal doctrine, promulgated by the Supreme Court more than 60 years ago and reaffirmed several times since, steady progress has been made in providing equal facilities of all sorts. Negroes had their own homes and their own businesses and their own jobs. Negro teachers taught their own children and Negro schools were—perhaps slowly—but surely being placed on a par with those of the whites. In the city of Tuscaloosa, for example, the Negro high school, recently completed at a cost of almost $2 million, is on a par or superior to many white high schools in the State. The rank and file of the Negroes knew these things and most of them were satisfied with the progress that was being made.

Then, on May 17, 1954, the Supreme Court of the United States, disregarding all legal precedent, issued its decree banning segregation in the schools of the Nation. As a result of this decree, and as a result of the confusion and unrest agitated by the NAACP and other determined integrationists, tension between the two races in the South that heretofore had existed on an almost negligible scale has increased alarmingly.

As a result of the Supreme Court's decision, we have a problem in Alabama and the South that cannot be fully understood by those who live in other parts of the country. We are not dealing there with only a few members of the Negro race but with large masses. For example, in several counties of the congressional district I represent there are 3 to 5 times as many Negroes as there are whites. To upset by judicial decree in one

fell swoop the customs and traditions under which the whites and Negroes in the South have lived and worked side by side for generations is to invite dissension and strife and hatred.

If left alone, the responsible leaders of the South, both white and Negro, will continue their efforts to work out in peace and harmony a solution satisfactory to both races. But prodded by the NAACP, an organization now bitterly resented by the people of Alabama and the South, it's highly likely the tension that now exists in my State will increase rather than diminish.

I hope you who are listening tonight will realize, if you have not already done so, that the problem now facing the people of the South is one that calls for the understanding and the prayers, rather than the criticism, of the people of the other sections of this great Nation.

Strange as it may seem to many who do not understand the problem now confronting the people of the South, many southern Negroes also resent the action that is being taken by the NAACP and other integrationists. As an illustration, I call your attention to the following letter, written by a Negro citizen of Alabama, that appeared on Saturday, March 10, 1956, in the Birmingham (Ala.) Post-Herald:

I would appreciate if you will give my version of integration in the South. I am a Negro plasterer. My grandparents were slaves to the grandest white people that ever lived, so I was told by my grandparents and father and mother.

They lived in west Alabama and moved to Birmingham where I was born 42 years ago. I attended school until I was 15 and then went to work as a helper and learned the plastering trade. I have worked all my life with the white people and have made as much or more than the average building tradesmen.

My association with the white people has been as a workingman only. After my day's work I went about my business and the white men went about theirs. In all my life my white friends outnumbered my Negro friends. I have been helped on many occasions by my white friends and I know during the depression they helped my parents to the extent of feeding and clothing us.

The worst thing that ever happened to the Negro race was the organization of the NAACP. It is not advancing the Negro race, but is creating hatred, distrust, economic pressure, and loss of friendship that existed between the white and black races, especially, here in the South.

The Supreme Court decision in my humble way of thinking was not to help the black man, but to help the greedy and selfish politicians, to get their votes and help them get elected.

The northerners are always blaming the southerners for mistreating us, but they are no friends of the Negroes, but are still trying to penalize the South as they did during Reconstruction days following the Civil War, when the carpetbaggers invaded the South.

The southern Negro has advanced faster in the South in the last 30 years than in any other part of the world, and it has been through the help and advantages given him by our southern white people. The Negro that complains of mistreatment brings it on himself and deserves it, but he is not persecuted for his act as the NAACP tries to infer.

The real southern Negroes do not want integration. They want to be left alone. The white people are as much segregated from the Negroes as the Negro is segregated from the white. We have everything they have and every advantage they have if we are smart enough to work for it. The NAACP, Autherine Lucy, Polly Ann Hudson, Arthur Shores, and others like them are tools of the Communists and, if not curbed, will set the Negro race back 100 years.

I love the South as my parents and grandparents did. I love the white people, who have been my friends and helped me. They respect and trust me, and I don't want to lose their friendship. I am not ashamed of being a Negro, but I am ashamed of what some of my race are doing.

I do not blame the southern white people for taking the stand they have. I do not blame them for organizing to keep segregation. We and the Supreme Court will have to answer for whatever comes of it.

The press, television, and radios are helping to create this fast-growing tension by so much publicity. If they would curb so much publicity, I believe it would gradually die.

To my race, I hope and pray that you will awaken and realize that you are a Negro and should be proud of it, that your way of life is not threatened by our white brothers and you should not threaten his way of life by integration, regardless of what you are told by fanatics, radicals, and Communists. The white southern people are our truest friends, so let's keep him our friend.

WILL JACKSON.

ZION CITY.

Ingredients of Courage

EXTENSION OF REMARKS
OF
HON. OMAR BURLESON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. BURLESON. Mr. Speaker, it is seldom I insert material in the CONGRESSIONAL RECORD. At this particular time, however, an editorial in the Abilene Reporter-News, Abilene, Tex., is in my opinion most appropriation.

In the present day and under prevailing conditions, it becomes extremely easy to yield to emotions, but stability cannot rest on emotions alone because emotion eventually becomes a shifting foundation.

The editorial to which I refer is as follows:

[From the Abilene Reporter-News of February 2, 1956]

INGREDIENTS OF COURAGE

There is a notion abroad in some quarters, political, intellectual, and other, that moderation is the course of weakness, that only by "taking a firm stand" does a man exhibit courage and integrity.

We would suggest that many times, though certainly not universally, the exact opposite is true. Again and again the moderate path is the hard one.

Often it is unspectacular as compared with the more dramatic extremes. Since, too, it so frequently stresses compromise, it can be very unpopular when the social, political, or moral atmosphere seems to favor "no compromise."

There are many occasions, too, when it is by far the most difficult course to work out. The extremes may offer pat, simple answers to problems. Solutions in the middle range may call for delicate balances, fine adjustments. They may demand resistance to extremes on two sides.

The man who seeks sane solutions in the middle and fights for them with all vigor need never bow his head. He is always fit company for the best of those who aggressively champion the more exposed positions in life.

GOP Hucksters the Sliding Scale

EXTENSION OF REMARKS
OF
HON. GEORGE H. CHRISTOPHER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. CHRISTOPHER. Mr. Speaker, on Friday evening Vice President NIXON voted to break the tie when 45 Senators voted for and 45 Senators voted against the price support for wheat thus sustaining this administration and the Secretary of Agriculture in their position that the farmer should receive a lower price for his wheat than he is receiving at this time.

President Eisenhower is reported by the Washington Evening Star as having congratulated Secretary Benson on obtaining a Senate victory over the program of 90-percent price supports as passed by the House March 5, 1955. Now, this is the same Mr. Eisenhower who, as a Republican candidate for President in 1952, said he was for 100 percent of parity.

A check of the Senate vote reveals that 41 Republicans and 13 Democrats indicated by their votes that they believed the farmer should not have even 90 percent of a fair price for the food and fiber which feeds and clothes the people of this country. Thirty-five Democrats and only 6 Republicans were willing to support a program at 90 percent of a fair price. That program as directed by a Democratic administration kept the average price of farm products at or above 100 percent of parity for 11 consecutive years, namely 1942 to 1953.

The vast majority of Republicans have always been opposed to price supports for farmers and the recent Senate vote proves that they are still opposed in a ratio of 41 to 6, or almost 7 to 1. Democrats in the main have been in favor of adequate price supports and still voted for their continuation 35 to 13, or almost 3 to 1. The farmer should check this Senate vote quite carefully, for by so doing, he can learn exactly who his friends are so that he may remember them and show his appreciation in November.

Appended hereto is the Senate vote on price supports by geographical sections. The parliamentary situation at the time this vote was taken was such that a nay vote was a vote for 90 percent price supports and a yea vote was a vote against 90 percent price support.

Under leave granted by the House, further appended hereto is a very timely newspaper article which I commend to my colleagues.

SENATE VOTE ON PRICE SUPPORTS BY GEOGRAPHICAL SECTIONS

MIDWEST REGION

Illinois: DIRKSEN, Republican, yea; DOUGLAS, Democrat, nay.

Indiana: CAPEHART, Republican, yea; JENNER, Republican, yea.

Iowa: HICKENLOOPER, Republican, yea; MARTIN, Republican, yea.

Kansas: CARLSON, Republican, yea; SCHOEPPEL, Republican, yea.

Michigan: MCNAMARA, Democrat, nay; POTTER, Republican, yea.

Minnesota: HUMPHREY, Democrat, nay; THYE, Republican, nay.
Missouri: HENNINGS, Democrat, nay; SYMINGTON, Democrat, nay.
Nebraska: CURTIS, Republican, yea; HRUSKA, Republican, yea.
North Dakota, LANGER, Republican, nay; YOUNG, Republican, nay.
Ohio: BENDER, Republican, yea; BRICKER, Republican, yea.
South Dakota: CASE, Republican, nay; MUNDT, Republican, nay.
Wisconsin: MCCARTHY, Republican, nay; WILEY, Republican, yea.
Midwest regional total: Yea, 13; nay, 11.

NORTHEAST REGION

Connecticut: BUSH, Republican, yea; PURTELL, Republican, yea.
Delaware: FREAR, Democrat, yea; WILLIAMS, Republican, yea.
Maine: PAYNE, Republican, yea; SMITH, Republican, yea.
Maryland: BEALL, Republican, yea; BUTLER, Republican, yea.
Massachusetts: KENNEDY, Democrat, yea; SALTONSTALL, Republican, yea.
New Hampshire: BRIDGES, Republican, yea; COTTON, Republican, yea.
New Jersey: CASE, Republican, yea; SMITH, Republican, yea.
New York: IVES, Republican, yea; LEHMAN, Democrat, nay.
Pennsylvania: DUFF, Republican, yea; MARTIN, Republican, yea.
Rhode Island: GREEN, Democrat, yea; PASTORE, Democrat, yea.
Vermont: AIKEN, Republican, yea; FLANDERS, Republican, yea.
West Virginia: Vacancy, not voting; NEELY, Democrat, nay.
Northeast regional total: Yea, 21; nay, 2.

SOUTHERN REGION

Alabama: HILL, Democrat, nay; SPARKMAN, Democrat, nay.
Arkansas: FULBRIGHT, Democrat, nay; MCCLELLAN, Democrat, nay.
Florida: HOLLAND, Democrat, yea; SMATHERS, Democrat, yea.
Georgia: GEORGE, Democrat, nay; RUSSELL, Democrat, nay.
Kentucky: BARKLEY, Democrat, nay; CLEMENTS, Democrat, nay.
Louisiana: ELLENDER, Democrat, nay; LONG, Democrat, nay.
Mississippi: EASTLAND, Democrat, yea; STENNIS, Democrat, yea.
North Carolina: ERVIN, Democrat, nay; SCOTT, Democrat, nay.
Oklahoma: KERR, Democrat, nay; MONRONEY, Democrat, nay.
South Carolina: JOHNSTON, Democrat, nay; THURMOND, Democrat, nay.
Tennessee: GORE, Democrat, nay; KEFAUVER, Democrat, nay.
Texas: DANIEL, Democrat, nay; JOHNSON, Democrat, nay.
Virginia: BYRD, Democrat, yea; ROBERTSON, Democrat, yea.
Southern regional total: Yea, 6; nay, 20.

WESTERN REGION

Arizona: GOLDWATER, Republican, yea; HAYDEN, Democrat, yea.
California: KNOWLAND, Republican, yea; KUCHEL, Republican, yea.
Colorado: ALLOTT, Republican, yea; MILLIKIN, Republican, yea.
Idaho: DWORSHAK, Republican, yes; WELKER, Republican, yea.
Montana: MANSFIELD, Democrat, nay; MURRAY, Democrat, nay.
Nevada: BIBLE, Democrat, yea; MALONE, Republican, yea.
New Mexico: ANDERSON, Democrat, yea; CHAVEZ, Democrat, nay.
Oregon: MORSE, Democrat, nay; NEUBERGER, Democrat, nay.
Utah: BENNETT, Republican, yea; WATKINS, Republican, yea.
Washington: JACKSON, Democrat, nay; MAGNUSON, Democrat, nay.
Wyoming: BARRETT, Republican, yea; O'MAHONEY, Democrat, nay.
Western regional total: yea, 14; nay, 8.

GOP HUCKSTERS THE SLIDING SCALE

The Farm issue was plunged into politics last month when the Republican senatorial and congressional committee launched a nationwide, half-million dollar promotion campaign to "help Eisenhower pass the new farm program."

Full page advertisements, radio announcements, booklets, posters and ready-written editorials jumped out at farm families as they leafed through farm magazines, country newspapers, or listened to their radio.

A handy coupon was available at the bottom of the advertisements for farmers who wanted to let their Congressmen and Senators know they supported the Eisenhower farm plan of flexible price supports and an unworkable "soil bank."

COUPONS DRAW "NUTS"

Washington observers report that a flood of coupons are arriving in Congressmen's offices, but many are inscribed with such remarks as "baloney" or simply "nuts."

The ads piped the familiar tune that "price-depressing surpluses built up because of wartime policies * * * hang over your farm like a hidden mortgage."

In the meantime, very few of the magazines and newspapers which ran the paid ads and printed the free editorials supplied to them by the Republican National Committee have reported the remarkable evidence revealed by hearings of the House Agriculture committee beginning February 20.

Under the aggressive leadership of Chairman COOLEY, Democrat of North Carolina, stiff quizzing by committee members forced Benson to admit that, for one after another of the nine points being advertised as Eisenhower's "hurry up" farm program, the Department of Agriculture has virtually unlimited authority in present legislation to proceed at any time it wants.

On most of the points listed in the Republican party ads, for example, USDA officials admitted under committee questioning that they did not have any specific new legislation to present to Congress.

Here, as the committee made the record, is the present status of the nine points of the Eisenhower farm proposals:

1. Soil bank

The administration didn't even have a bill ready to recommend to the House. The Eisenhower plan, Benson admitted grudgingly, is the same as the one that the Department of Agriculture turned down as unworkable just last July. Moreover, Benson confessed, he couldn't answer the objections to the soil bank which he himself raised just 6 months ago to prove it was an undesirable piece of legislation. It would do nothing directly to raise farm prices, Benson admitted, but he claimed that it would have a psychological effect of creating buoyancy in the markets.

2. Surplus disposal

The only new legislation the administration wants is freedom to sell CCC stocks to Communists, Benson admitted. He also admitted that already the administration has practically unlimited authority to sell, swap, or give away United States surplus commodities any place in the world. Moreover, Benson admitted, the administration had not initiated a single piece of the surplus disposal legislation put on the books in the past 3 years, and actually opposed most of it. Needless to say, not much has been done with the authority Benson has enjoyed to make use of surpluses.

3. Commodity programs

These programs, Benson admitted, all call for further reductions in farm prices. For corn, Benson urged that full flexibility authority be granted to him so that he can cut supports even below the 75 percent of parity sliding scale floor—or eliminate corn supports altogether if he wants. For wheat, Benson urged relaxation of controls on production, but admitted that this would weaken rather than strengthen wheat prices.

4. Limits on support payments

The administration is not recommending any specific action on setting dollar limits on support payments to individuals, Benson admitted. (The Wall Street Journal reports that Eisenhower has decided not to push this because it displeases backers of flexible supports.)

5. Rural development

Administration spokesmen complained that Congress has not given them authority to make loans to part-time farmers. Aside from that, they admitted grudgingly, they already have all the laws they want—and more than they have been willing to use.

6. Great Plains program

New legislation has not yet been readied for presentation to Congress, Benson admitted.

7. Increased research

No new laws are needed, Benson admitted. Moreover, he confessed that Congress has always given the Department all the money for research that the President has ever asked for.

8. Strengthened credit

No new laws were asked for. Something along this line "is awaiting final clearance," a Benson lieutenant said, but is not ready to be laid before Congress. (Eisenhower has repeatedly attempted to reduce funds for farm loans in his budget requests, and Benson has used discretionary authority to raise interest rates when he had money for disaster loans to farmers.)

9. Gasoline tax refund

This is going through Congress at top speed. It is the only one of President Eisenhower's nine points that will produce increased incomes for farmers. It will amount to $60 million a year for United States farmers, averaging $12 per farm family.

The Late Howard Aldridge Coffin

SPEECH
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. McGREGOR. Mr. Speaker, the passing of our former colleague, Howard A. Coffin, leaves us shocked and saddened beyond expression. It was my privilege to become well acquainted with Howard Coffin. His courage was unquestioned, his integrity was unassailable, and his energy was amazing. Greed for power never goaded him and there was no scheming and no conniving in his makeup. He would not compromise with wrong nor waiver on a principle.

To his wife and family we extend our sincere condolences. They have lost a loving husband and father, the country has lost a great American and I have lost a true and loyal friend.

Steady Flow of Iron Curtain Arms to Egypt

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. ROOSEVELT. Mr. Speaker, the reputation of the London Times for accurate, unbiased news reporting is worldwide. My attention has been drawn to an article in that newspaper's edition of February 10, 1956, from its correspondents in Cairo. It will be of interest as background material to the ever-increasing signs of its accuracy and its very grave danger signals for the future:

STEADY FLOW OF IRON CURTAIN ARMS INTO EGYPT—FORMIDABLE QUANTITIES NEAR BORDER

CAIRO, February 9.—Photographs have been made public of some of the military equipment from behind the Iron Curtain which is now in the hands of the Egyptian forces. Though they naturally show nothing startling, the evidence is that formidable quantities of material have already reached forward areas near the border of Israel and that Russian-designed jet fighters and bombers are steadily being supplied to the Egyptian Air Force.

It is certainly too soon for the Egyptians to have mastered these modern and complicated weapons, or to have adapted their logistical arrangements to cope with their supplies. Nevertheless, it seems probable that weapons already in Egypt are sufficient to transform the Egyptian military position vis-a-vis Israel and to make the Egyptian armed forces (by the relatively modest standards of the Middle East) an imposing instrument of policy.

Arrival of arms at Alexandria has been shrouded in secrecy. The unloading area has been prohibited to the public, and aircraft of all kinds have been instructed to give the place a wide berth. Heavy equipment has been ferried across the Suez Canal at night and covered in tarpaulins. Colonel Nasser, the Prime Minister, remarked recently that it was the first time that the Egyptian Army had ever had a secret.

RUSSIAN AIRCRAFT

For this reason it has been difficult to assess either the quality or quantity of the arms received. Every Cairo resident, however, knows that Russian aircraft (probably made in Czechoslovakia) are already here. MIG 15 fighters are a common sight, though generally only in ones or twos. They are, it is reported, being assembled here with the help of Czech technicians, and it is unlikely that Egyptian pilots yet know them sufficiently well enough to go into action with them. There are thought to be some 75 of these fighters now in Egyptian hands.

More important from the strategic or diplomatic viewpoint are the jet bombers which it is now established are being supplied to the Air Force. These are twin jet IL 28's, roughly comparable to the Canberra, and much the most advanced striking weapon on either side in the Arab-Israel dispute. Estimates of their number vary, some observers believing them to be in unusually high proportion to fighters. There are probably, however, not more than 40, and perhaps less.

Two types of tank are apparently being supplied under Colonel Nasser's agreement with the Czech Government. More powerful is the Joseph Stalin Mark III, which mounts a 122-millimeter gun and is roughly comparable to the earlier marks of the Centurion. There are thought to be a few of these already in Egypt for instructional purposes, but none has been reported in operational service. The chances seem to be that the Egyptians have contracted to buy sufficient to equip one heavy armored regiment.

MATCH FOR SHERMANS

The second tank is the T34, mounting an 85-millimeter gun. This is an older model, used extensively (in its early marks) by the Russian Army during the war, and then thought to be one of the best tanks in any army. It was also used in Korea. It is certainly not in the top class now, but is perhaps more than a match for the Shermans with which the Israel armored forces seem to be equipped. T34's are already in operation with the Egyptian Army in northern Sinai, probably in regimental strength. More than 50 are now in Egyptian hands, and it seems likely that to keep them in fighting trim the Egyptians have contracted for about 100. Crews were trained in the handling of these tanks in the canal zone, and by now they are doubtless reasonably familiar with them.

Photographs just published show some command cars described as being of Russian origin, and it is suggested that Czechs may also be supplying some self-propelled antitank guns, of which one type it is reported has been both designed and manufactured in Czechoslovakia. Photographs also show a light antitank gun. The Egyptians are certainly getting supplies of a Russian gun comparable to the British 25-pounder (at present the standard gun of the Egyptian artillery). They may also be buying something equivalent to the French 155-millimeter.

Various kinds of small arms are shown in the photographs, including machine guns, light machine guns, and bazookas. It is improbable, however, that Colonel Nasser contracted for large quantities of Czech light arms. The Egyptian Army is already well equipped with Belgian and British weapons, and rifles, submachineguns, and ammunition are now being made in substantial amounts in Egyptian munition factories.

BRITISH EQUIPMENT

In considering this speculation—nobody knows the facts, only probabilities—it must be remembered that Egypt is also in the possession of sizable quantities of British equipment, not all of it to be disregarded. The most powerful armored fighting vehicle in the Middle East remains the Centurion Mark III, 32 of which have so far been supplied by Britain under current contracts. The Egyptian Navy has two fairly modern British destroyers (so has the Israel Navy). The air force has a large number of Vampire fighters, including some made in Italy, and some Meteors. The artillery is quite well equipped with the splendid 25-pounder.

This mingling of weapons will of course raise supply difficulties—and logistics are the Achilles heel of Egyptian military organization, the Army being faced with a long and vulnerable supply route across the Sinai Desert. It is suggested that the supply of Czech-Russian arms may be lavish enough to enable the Egyptians to jettison much of their older equipment and concentrate on new types, but the purchase of the notorious Valentine tanks, almost museum pieces, seems to show that nothing of that sort is planned.

Are the Egyptian forces overreaching themselves in accepting these large accretions of new, strange, and elaborate equipment? Some people think that they are, but then some people thought the equipment would never arrive. Certainly such a drastic infusion will tax Egyptian training facilities. Tanks need transport to supply them and tank transporters to convey them (though on Egyptian terrain the last named are not vital). Not only tank crews and technicians must be produced but lorry drivers, mechanics, and supply personnel staff of all kinds. Young men with very high qualities will be needed to do justice to the new fighters and bombers.

It would be unwise to suppose that in the new climate of Egyptian life all this cannot be done. The Egyptian Army, by its handling of the Centurions, has shown that it is now capable of maintaining the most complicated military devices (though it probably needs foreign technical help in such things as radar). Officers' schools are now turning out graduates of a quality that would astonish observers of the old Egyptian Army.

One reason for such publicity at the moment is probably the suspicion that Israel may be planning to divert the waters of the Jordan at the end of this month as she has threatened to do unless the Arab States accept Mr. Eric Johnston's Jordan waters scheme. The Egyptians have made it clear that such action would be considered a warlike move. It is commonly held therefore that the next few weeks may be crucial.

Another reason is doubtless the desire to establish Egypt once and for all as the most powerful member of the Arab world and as the leader of the campaign to restore Palestine to the Arabs.

Tax Equity for American DP's

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 12, 1956

Mr. AVERY. Mr. Speaker, under leave to extend and revise my remarks, I want to point out certain provisions of the Internal Revenue Code which I feel create inequities in their application. I introduced H. R. 9827 on March 7 to amend certain sections of the Code and thereby improve these unfair administrative requirements. This bill is now under consideration by the Committee on Ways and Means.

The inequity of the existing statutes governing the Federal capital-gains tax is the subject at hand. It has become a matter of special concern to me because of the resumption of work on Tuttle Creek Dam, in the First District of Kansas.

I want to state again that my position on the Tuttle Creek project has not changed. I am unalterably opposed to its construction, as I have stated previously on the floor of the House.

However, since the 1st session of the 84th Congress saw fit to appropriate more money for construction of this project, even without the recommendation of the Bureau of the Budget, and since the actual transfer of property has begun, I think the property rights of persons displaced by the reservoir must now be given realistic consideration by the Congress.

Although my interest in this matter stems directly from the Tuttle Creek project, I know there are many persons in other sections of the Nation who are affected by other Federal projects and

whose interest also would be protected by this bill.

The present statutes provide that a citizen, required through forced sale to dispose of his property because of the construction of a Federal project, has 12 months in which to reinvest the proceeds of this sale in a similar farm or business without paying a capital gains tax. If he does not elect to reinvest in a similar type of operation, he is required to pay a capital gains tax of approximately 25 percent on the proceeds of the sale.

But the law does not take into consideration the resulting hardship of a forced sale, especially to older persons involved.

One of the amendments which I have offered would eliminate the capital gains tax in instances where those persons who are forced to sell their property as a result of the construction of a Federal project are 60 years of age or over. Persons over 60 years of age are not inclined to start a new farming operation or business venture and they should not be penalized through tax payments for this perfectly natural attitude.

A second phase of my bill would reduce the capital gains tax on property taken by the Federal Government from the present 25 percent to a rate of 10 percent in cases where the owner is less than 60 years of age. In instances where persons are forced to sell their property to the Federal Government special consideration should be given. I do not feel they should be required to pay the same capital gains tax as would the willing seller or the land speculator.

Since the esteemed Members of Congress saw fit to authorize the resumption of construction on Tuttle Creek dam and reservoir, and I might add that authorization was made over my opposition, it would seem the Congress now should be willing to give early and favorable consideration to this bill, H. R. 9827, which would partially compensate the unwilling seller for the sacrifice he is making in what has been described as the public interest.

National Campaign To Advertise Famed Louisiana Seafoods

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 12, 1956

Mr. WILLIS. Mr. Speaker, we in Louisiana are very proud of our seafoods. No State can offer more in fine fish, shrimp, crabs, oysters, crayfish, and other such delicacies, or better cooks who know so well how to prepare and serve these delightful dishes in such a variety of delicious and unusual ways.

To further increase the fame of our seafoods, a national campaign is under way through the use of postage meter advertising, sponsored by the Louisiana Wild Life and Fisheries Commission, which is headed by Director L. D. Young, Jr. On the mailings of several commercial and civic organizations appears the excellent advice, "Dining Out Tonight? Try Louisiana Seafood," accompanied by the picture of a chef emphasizing the matter with his excalmation of "C'est bon"—it is good.

According to the commission's Mr. Charles A. Murphy, industrial services, commercial seafoods division, this is the first of a series of postage ads designed to increase Louisiana seafood sales. It is hoped to sell the program to restaurants all over the country and have "Louisiana" on the menu when seafood is served.

Mr. Murphy states that the commission is indebted to the Louisiana Restaurant Association, Louisiana Hotel Association, New Orleans Hotel Association, New Orleans Area Chamber of Commerce, Houma Chamber of Commerce, New Orleans Dock Board, International House, and Diners Club for their cooperation.

Equal Time on Networks

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, March 13, 1956

Mr. JOHNSON of Texas. Mr. President, recent developments in Chicago have highlighted a major problem that must be solved if we are to have reasonable legislation regulating Federal elections. It is the problem of demands for valuable radio and television time by fringe candidates who do not have sufficient standing with the American people to warrant the demands.

It was with this thought in mind that the sponsors of the elections bill now before the Senate Rules Committee have proposed certain amendments to the Federal Communications Act. These amendments would increase the opportunity for American citizens to be informed on the issues of the day while at the same time protecting radio and television licensees from unreasonable burdens.

I ask unanimous consent that an article in the March 13, 1956, edition of the Washington Post and Times Herald bearing upon this question be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EQUAL TIME DEMAND JOLTS NETWORKS

A Chicago politician has the major radio and television networks in a dither over his demands for equal time to answer President Eisenhower.

The demand is being made by Lar Daly, an America First candidate for the Republican nomination. Daly told Broadcasting-Telecasting magazine that he will carry his appeal to the Federal Communications Comsion if the networks refuse his request.

Spokesmen for the major networks have said they are "studying the request."

Section 315 of the Communications Act says: "If any licensee shall permit any person who is a legally qualified candidate for any public office to use a broadcasting station, he shall afford equal opportunities to all other candidates for that office."

Daly, according to the Chicago Tribune Press Service, is seeking nomination as both Governor and President in the April 10 Republican primary in Illinois.

Networks and stations may get partial relief from the demands of section 315 through a Senate bill (S. 3308). This bill would allow broadcasters to deny equal time to small minority and splinter party presidential candidates. The bill was introduced by Senate Majority Leader LYNDON B. JOHNSON, Democrat, of Texas. Broadcasting-Telecasting reported yesterday that 67 Members of the Senate are supporting the bill.

H. R. 9006, a Bill To Effect Mandatory Inspection of Poultry

EXTENSION OF REMARKS
OF
HON. DON HAYWORTH
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. HAYWORTH. Mr. Speaker, we Americans pride ourselves on our health-consciousness and our efforts for health protection. This is especially true concerning foods. Our Nation undoubtedly leads others in the safeguards we take against illness caused by adulterated, contaminated, or unwholesome foods.

It is amazing, therefore, that one of our most widely consumed foods may now be sold with little attention given to whether or not it is fit for human consumption. I am speaking of poultry. It may be sold diseased or healthful, contaminated or wholesome, filthy or clean.

Virtually no effective inspection of poultry for sanitation or wholesomeness exists today. On the Federal level, a voluntary system is in operation, but it is inadequate in safeguarding the consumer with regard to even the small percentage of poultry which is inspected.

Clearly, legislation for effective mandatory inspection of poultry is needed. I have introduced such legislation in the form of H. R. 9006.

An excellent presentation of the need for this legislation has been prepared by the Amalgamated Meat Cutters and Butcher Workmen of North America, AFL-CIO. This report is well-documented. It makes a very able and concise case for poultry inspection to assure the consumer a clean and wholesome product.

Under leave to extend my remarks in the RECORD, I include excerpts from their statement on the need for mandatory poultry inspection:

POULTRY INSPECTION AND HEALTH HAZARDS

This memorandum seeks to present evidence concerning the need for compulsory Federal inspection of poultry for wholesomeness in interstate commerce.

The data contained in this memo forms the highlights and a summation of the findings made by the Amalgamated Meat Cutters and Butcher Workmen of North America, A. F. of L., during more than a year of study. The information is presented in the hope that you will interest yourself in the problem of bringing standards of wholesomeness

and sanitation to the mushrooming poultry industry. You, thereby, can help end the flow of diseased and filthy poultry which is currently endangering the consumer and poultry worker.

LACK OF POULTRY INSPECTION

The poultry industry stands alone among the major producers of food for the Nation in that it is not properly regulated to assure wholesomeness or freedom from disease. Unlike red meat, poultry can be, and is, sold filthy and diseased with immunity. No law exists on a national level to provide for the compulsory inspection of this much-eaten food.

The phenomenal growth of the poultry industry in the past 20 years is responsible to a degree for the existence of this condition. In 1940 143 million broilers were raised commercially. In 1954 1 billion 50 million were raised. During the same period of time the production of turkeys increased from 34 million to 61 million birds. This expansion has caused the poultry and egg industry to become the third largest source of agricultural income in the United States. The national poultry and egg income is estimated at $4.1 billion for 1954, and latest figures show it is still expanding at a rapid rate.

An inspection service for sanitation and wholesomeness is maintained by the Production and Marketing Administration of the United States Department of Agriculture. However, inspection is purely voluntary. The processor is under no obligation whatsoever to have his product inspected. If he does seek the inspection, he must pay the full cost of it. In other words, not only can he get by without assuring the public of the wholesomeness of his product, but he is monetarily penalized if he seeks to provide that assurance.

It should be noted that only 21 percent of the poultry in interstate commerce is inspected for wholesomeness and sanitation. In 1953 the United States Department of Agriculture veterinary inspectors condemned as unfit almost 2 million (1,843,446) poultry carcasses. This figure does not take into account the many organs and parts condemned when the carcasses in whole or in part were certified as wholesome.

These sad facts do not tell the full story of the inadequateness and ineffectiveness of the permissive inspection by the Production and Marketing Administration. One of the major dangers is that PMA often permits the owner of the poultry business or one of his employees to serve as official sanitarian and grader. Here certainly is a tremendous conflict of interests, and the interest of the consuming public becomes secondary.

This system does not meet the criterions laid down by Brig. Gen. Wayne O. Kester, Office of the Surgeon General, United States Air Force, who declared:

"An inspection agency, to be acceptable, must comply with four cardinal prerequisites for an adequate inspection system.

"First, the inspectors must be competent and qualified.

"Second, they must have tenure of office, so that no one may put pressure on them in connection with their duties.

"Third, the inspectors' agency or supervisors must be responsible and accountable to the consumer.

"Fourth, the inspector must have no financial interest or connection with anyone in the organization being inspected."

INEFFECTIVENESS OF PMA PROGRAM

Actually, it is little wonder that the Production and Marketing Administration has been ineffective in its inspection, for this service was not intended primarily to safeguard the public health. Instead, it was established to promote the marketing of poultry products.

Many people believe mistakenly that the PMA inspection service was established to provide a form of inspection and regulation paralleling that of the Federal Meat Inspection Act. In reality, the Production and Marketing Administration initially provided only a grading service which was utilized in trading between dealers. At the request of certain processors, this service was extended to include inspection for wholesomeness and sanitation on a take-it-or-leave-it basis.

But even when diseased poultry is rejected under the present system, the carcasses are not necessarily condemned. For example, there is the classic case of the 60,000 birds of a Brady, Tex., poultry plant. The Army rejected the turkeys because they had been hit by the 1954 Texas outbreak of ornithosis (psittacosis). But instead of disposing of the carcasses, the processor sold them for civilian consumption. Public health authorities traced them to east coast cities—many of them carrying live ornithosis (psittacosis) virus.

There are even instances in which health officers of cities having rigid poultry inspection programs have excluded poultry that came from plants inspected by the Production and Marketing Administration. For example, Dr. Aaron H. Haskin, health officer of Newark, N. J., wrote on December 7, 1954, to Earl W. Jimerson, president of the Amalgamated Meat Cutters and Butcher Workmen of North America, AFL:

"About 1 month ago I excluded from sale in the city of Newark, N. J., the products of a poultry processing plant which bore a USDA inspection legend. Meat inspectors from this office upon visiting the premises found numerous pertinent violations which had existed for a long time."

LIMITED ACTIVITIES OF UNITED STATES FOOD AND DRUG ADMINISTRATION

The only Government agency responsible for preventing diseased and filthy poultry from coming to the market place is the United States Food and Drug Administration. Acting under the Federal Food, Drug and Cosmetic Act, that agency has the right to seize any adulterated food, including poultry.

However, the slashes in appropriations the Food and Drug Administration has suffered and the lack of a compulsory ante-mortem, post-mortem inspection law has made its job impossible.

Thus, when Congresswoman LEONOR K. SULLIVAN, of Missouri, asked in September 1954 about the United States Food and Drug Administration's ability to police the poultry industry, then Commissioner C. W. Crawford replied:

"We estimate that there are approximately 1,300 interstate poultry dressing, freezing or canning establishments in the United States. For the past 2 years we have made about 400 poultry establishment inspections each year, of which we estimate that perhaps one-fourth represent reinspection of the same firms. Thus, our program contemplates complete coverage of this industry about once every 3 or 4 years."

His successor, the present Commissioner, George P. Larrick, went even further in an April 21, 1955, letter to Shirley W. Barker, Director, Poultry Department, Amalgamated Meat Cutters and Butcher Workmen of North America, AFL. Mr. Larrick wrote:

"Your assumption is correct that our average rate of inspection coverage of the poultry processing plants amounts to a spot check once every 3 or 4 years. One such inspection of one plant at one time requires on the average, 5 or 6 hours of an inspector's time. It is also true, as you suggest, that such a spot check cannot guarantee the wholesomeness or the legality of products prepared at other times. * * *

"Although some lots of cull poultry are recognized as obviously diseased from the external appearance of the carcass, it is our view that not only post-mortem but also ante-mortem examination is essential to a full program of protection of the consumer from diseased poultry."

In other words, the present and the former heads of the United States Food and Drug Administration bluntly state that their organization cannot, under present circumstances, guarantee protection against diseased poultry for the consumer. The present commissioner adds that not only after-slaughter inspection is needed to protect the consumer, but also a before-slaughter inspection. Such a program can only be put into force by new legislation providing the compulsory inspection of poultry.

INDUSTRIAL AND CONSUMER HAZARDS

There are many diseases of poultry transmissible to man which constitute a public health danger. Dr. James Lieberman, D. V. M., M. P. H., consultant, Poultry Inspection and Sanitation, Milk and Food Branch, Division of Sanitation, United States Public Health Service, Washington, D. C., stated at the American Veterinary Medical Association, 19th annual meeting, Toronto, July 20–23, 1953:

"Veterinary investigations have concluded that there are over 25 diseases of poultry to which man is also susceptible. Some of these diseases, such as staphylococcosis, streptococcosis, and salmonellosis, cause food poisoning and, hence, constitute a threat to individual and public health. Others, such as psittacosis, Newcastle disease, and erysipelas, must be viewed from an occupational standpoint, since they affect primarily our poultry plant workers."

Only one of these diseases, psittacosis, has resulted in the following officially recorded cases listed by the National Office of Vital Statistics of the Department of Health, Education, and Welfare:

Year	Deaths	Morbidity (illness)
1940	3	----------
1941	1	----------
1942	4	23
1943	0	1
1944	2	6
1945	0	27
1946	2	26
1947	1	27
1948	0	32
1949	0	35
1950	0	26
1951	1	25
1952	5	135
1953	4	169
1954	3	445
1955	0	[1] 168
Total	26	1,145

[1] Jan. 1, 1955, to July 16, 1955.

These figures, however, do not tell the full story of lost man-hours, illnesses, and deaths. The National Office of Vital Statistics lists no deaths and only 32 cases of illnesses due to psittacosis in 1948, but Dr. J. B. Irons, director of laboratories of the Texas State Department of Health, has reported 3 deaths and 22 cases occurring among turkey-plant workers in Giddins, Tex., alone during that year. This situation emphasizes that public health authorities are not fully aware of the annual frequency of these diseases.

The tremendous impact of more sanitary methods and control of diseases in poultry processing plants is well illustrated by W. Vic Pringle of the Rockingham Marketing Cooperative, Inc., Broadway, Va. Speaking before the Outlook Workshop of the Institute of American Poultry Industries, Kansas City, Mo., in 1955, he said:

"One firm I know saved $12,000 last year in compensation insurance, by controlling infections and skin rashes, thanks mainly to a better sanitation program throughout all parts of its plants. It is also a known fact that cleanup labor and supplies can be materially reduced when plants are constantly

maintained in a sanitary manner versus the occasional thorough cleanup, with a hit-and-miss job most of the time. The preventive maintenance principle applies in any field."

As for the hazards to the consumer, while it is true that most of the disease organisms are killed by thorough cooking, to allow diseased birds to be sold is somewhat like condoning the cooking of garbage for human consumption. Edible from a medical standpoint, but certainly not desirable.

Let us look at an affidavit taken from an employee working on poultry processing without ante-mortem, post-mortem inspection:

"My job was to pull feathers and those who were on the job with me and I were the first ones to handle the chickens after they had passed through the scalding process and roughing machine. When the chickens reached me most of the feathers were off the bodies and I could see the skin of the birds very clearly. It was quite often that thousands of chickens would pass on the line with sores on their bodies. Thousands of them would have large swellings as large as a chicken egg on their bodies. These swellings were filled with a yellowish puss and the odor was very strong."

Or as a worker in another plant has said:

"I work on many different jobs on the line. During this time I saw lots of chickens with lumps on them and some were full of sores. Sometimes when the lumps were cut off or they would burst they smelled awful bad. All of these chickens went right through with the other chickens for shipment."

These affidavits, taken from workers employed by national concerns who sell their products under reputable name brands, certainly bear out the statement "somewhat like cooking garbage." There is, however, a very real danger with present methods of cooking poultry—broiling and baking at low temperatures—that it might not be thoroughly cooked. This would make real hazards of many diseases, such as salmonellosis, tuberculosis, streptococcosis, brucellosis, staphylococcosis, and others. Food infections caused by poultry constitute a major public health problem. This is illustrated by the findings of the United States Public Health Service showing that 1 out of 4 food poisoning cases studied were the result of poultry or poultry products.

Dr. Joe W. Atkinson, D. V. M., consultant, Poultry Inspection and Sanitation, Milk, Food and Shellfish Sanitation Program, Division of Sanitary Engineering Services, Bureau of State Services, Public Health Service, stated at the 38th annual meeting, Central Atlantic States Association of Food and Drug Officials, May 5, 1954, Baltimore, Md.:

"In 1948, a study of 8,832 cases of food-borne disease, as reported by the States, indicated that 2,492 (or 28.2 percent) were attributed to poultry or poultry dishes. Relatively many cases so reported each year since 1948 have similarly been attributed to poultry and poultry products. These figures indicate the relative importance of poultry among sources of food-borne disease.

"Research indicates that poultry constitutes one of the important reservoirs of disease organisms affecting man. Such diseases may be transmitted to man, either during the preparation of poultry for marketing, or through the consumption of poultry products."

A 1954 United States Public Health Report summarizing "disease outbreaks" for the previous year reveals the following:

"In one-third of the (Salmonellosis) outbreaks, chicken or turkey was found to be the vehicle of infection. Considering the frequency with which these fowl are found with Salmonella infections, this cannot be considered an unusual finding."

PROTEST BY PUBLIC HEALTH AND CONSUMER GROUPS

Many organizations, medical men, health officers and persons in important positions have expressed interest and alarm over the present situation in the poultry industry. A notable number of them have indicated their willingness to stand up and be counted as soon as a program, which would result in correction, is offered to protect the worker and the consumer alike.

At conference after conference of public health officers and veterinarians, the lack of compulsory inspection in the poultry industry has been a subject of serious discussion and suggestions have been made to correct this condition.

On June 5, 1955, for example, the Central Atlantic States Association of Food and Drug Officials, meeting in Atlanta, Ga., resolved unanimously:

"Whereas poultry that enters into interstate commerce need not be processed in federally inspected processing plans; and

"Whereas uniformity in the inspection of poultry for wholesomeness is most desirable and essential for the welfare of the consumer: Therefore be it

"Resolved, That the Central Atlantic States Association urges that the Federal Government take the necessary measures to require that all poultry entering interstate commerce be inspected for wholesomeness by duly authorized representatives of a Federal agency."

The fourth annual conference of Public Health Veterinarians of the American Public Health Association, meeting in St. Louis on October 30, 1950, received from its Committee on Poultry Inspection and Sanitation a report which includes the following:

"The committee further felt that all poultry entering into interstate commerce, if killed, should be federally inspected. They (sic) felt that if there is a need for the interstate inspections of 'red meats,' there should be a Federal law requiring the interstate inspection of 'poultry meats' and they recommend that this conference go on record as recommending such congressional action as would be needed."

The 91st annual meeting of the American Veterinary Medical Association, meeting in Seatle, Wash., August 23 to 26, 1954, resolved that:

"The American Veterinary Medical Association recommends that the Poultry Inspection Service be transferred and combined with the Federal Meat Inspection Service where adequate veterinary supervision can be provided to conduct an acceptable inspection program."

This transfer would automatically bring about compulsory antemortem, postmortem inspection for wholesomeness and inspection for sanitation of all poultry processing plants.

Public health officials and veterinarians have viewed this situation with alarm. The Hoover Commission's task force on Federal medical service reported in February 1955:

"Both the United States Livestock Sanitary Association and the Conference of State and Territorial Health Officers have recommended that State and local governments strengthen their poultry inspection and sanitation programs. But, as yet, only a few States have compulsory poultry inspection. Especially, in view of the recent growth of the poultry industry, we do not believe we can expect the States alone to provide the needed controls."

LEGISLATIVE SUGGESTIONS

The legal propriety of an effective Federal inspection in the poultry processing industry is well established. In fact, under existing Federal enactments, jurisdiction over the industry has long been asserted by the Food and Drug Administration of the United States Department of Health, Education, and Welfare and the Poultry Branch of the Production and Marketing Administration of the United States Department of Agriculture.

The products of the poultry processing industry prepared for, or while in interstate commerce or at any time thereafter, are subject to the provisions of the Federal Food, Drug, and Cosmetic Act, which is administered by the Food and Drug Administration. In this connection, section 304A of that act provides the authority under which the Food and Drug Administration is empowered to seize adulterated food products. Definitions of adulteration in section 402 are broad indeed and provide an ample frame of legislative authority for the promulgation of codes prescribing standards of wholesomeness of poultry and poultry products. It should likewise be noted that the same Federal statute provides the legislative concepts concerning investigations necessary to conduct an effective inspection program.

It is here suggested that the establishment of an effective program of inspection for wholesomeness in the poultry processing industry would not necessitate the establishment of a new Federal agency, nor would it establish any new era of federal jurisdiction.

Those who have been actively concerned with the establishment of an adequate Federal poultry inspection program have considered the advisability of the compulsory application of the voluntary regulations promulgated by the Production and Marketing Administration. It is of interest to note that Herman I. Miller, Acting Director of the Poultry Division of the Agricultural Marketing Service of the USDA, in a letter dated August 9, 1954, stated as follows:

"The responsibility for regulating the interstate shipment of adulterated, unwholesome, and misbranded products is vested in the Food and Drug Administration of the Department of Health, Education, and Welfare."

It is significant to note that the promulgation and effectuation of an adequate Federal inspection program in the industry does not require any extension of existing Federal jurisdiction, nor will it necessitate experimentation with unknown or untried operational procedures.

Command Management School

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. CELLER. Mr. Speaker, it was recently my pleasure to appear as a guest lecturer at one of the newest additions to the Army school system, the Command Management School at Fort Belvoir. The importance of the Army's schools in the success of our Armed Forces has been universally recognized. I am confident that this new activity will prove its great value in terms of increased efficiency in the Army.

As the appropriating agency of the Government, the Congress has a special responsibility for the effective utilization of the national resources. Our defense program must be so administered that the American people receive the maximum value for every dollar spent and the maximum effectiveness from every man. It is most gratifying to realize that the Department of the Army, which of course shares this desire, has taken such worthy action to provide its senior commanders with a development program commensurate with their managerial responsibilities.

The school was established in November of 1954 to provide commanders and

key staff personnel in the ranks of colonel, brigadier and major general and civilians of comparable grades with an intensive 3-week course in the most advanced concepts and practices of modern management. Although fully alined with the Army's tradition of excellence in its school system, under the direction of Col. Frank Kowalski, Jr., commandant, the Command Management School is unique in its methodology and atmosphere. It employs the case method and offers no fixed or formal solutions. Free discussion and creative thinking are the standard operational procedures here and the results in improved understanding and technology are very encouraging. Programs and policies are being examined on their merits and in the light of present and past experiences.

The Department of the Army is to be congratulated for its vision in making the program available to its commanders. The motto of the Command Management School is a fitting one for those entrusted with the great responsibility of our military leaders, "From knowledge the power of decision."

George Washington and Masonry

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks, I include a magnificient address on George Washington and Masonry delivered by my friend of long-standing, Orville F. Rush, at the annual dinner meeting of the National League of Masonic Clubs on Tuesday evening, February 21, at Washington, D. C.

This timely, informative and provocative speech should be made available to all our citizens, particularly those who belong to the Masonic fraternity and their families. Orville F. Rush, who is internationally known in Masonic circles, has accomplished a splendid job of diligent research in this forthright presentation, given as the principal address before a large group of masons representing organizations throughout the Nation, on the eve of participation in the George Washington Birthday celebration. I have been a master mason for 50 years and I have never witnessed a more masterful rendition.

Orville F. Rush is a renowned public speaker and is an eminent citizen of our country. When I came to Congress 21 years ago, Orville Rush, though a very young man then, was performing splendid service as Representative of our great State of Alabama. He is now an officer and director of several nationally known business concerns and is a past president of numerous organizations. He is a leader in civic, educational, religious, and fraternal affairs. The address follows:

GEORGE WASHINGTON AND MASONRY
(By Orville F. Rush)

Brother Toastmaster, Brother National President Hellriegel, distinguished guests, ladies and brethren, I appreciate very much that most gracious and complimentary introduction. It reminds me of a friend of mine who has frequent arguments with his good wife. One evening, in one of their numerous exchanges, she exclaimed somewhat heatedly: "You are worthless, lazy, bad-tempered, shiftless, a thorough liar and a no good bum." Somewhat meekly, the husband replied: "Well, my dear, no man is perfect." So, although we realize we are not perfect, it is always nice to hear a little flattery about ourselves.

It is a delightful experience and a privilege to be the speaker of the evening at this annual important gathering of representatives of Masonic clubs throughout the Nation. The National League of Masonic Clubs, in supporting a nationwide organization of affiliated Masonic clubs in the United States, its Territories and possessions under the respective grand lodges having jurisdiction, is performing magnificent service in the vineyards of Masonry. I applaud your majestic endeavors.

Tomorrow, marks the 224th anniversary of the birth of George Washington, the Father of our Country, our first general of the armies, our first President, and a distinguished Master Mason. Grand Masters of Masons and the titular heads of the various Masonic related bodies in the United States will tomorrow make the annual pilgrimage to the George Washington National Masonic Memorial at Alexandria, Va., and to Mount Vernon, to pay homage to and honor this great man and Mason. It is particularly apropos that this League, which is dedicated to the preservation and protection of the ideals and principles upon which this country and Masonry were founded, should meet on the eve of this important event.

A powerful electronic carillon, valued at $25,000, was placed in operation last fall in the memorial at Alexandria, a gift in memory of George Washington the Mason by an Oklahoma widow of a 33d degree Mason. The carillon will be formally dedicated tomorrow at the ceremonies being held in conjunction with the observance of Washington's birthday. A fitting tribute to one of history's noblest men and Masons. Of Washington, Thomas Jefferson said: "His integrity was most pure, his justice the most inflexible I have ever known; no motives of interest or consanguinity of friendship or hatred being able to bias his decision. He was, indeed, in every sense of the word, a wise, a good, and a great man."

This wonderful man did so much for America during his 67 years of life; so much to insure the freedoms which we enjoy today. There are scores of passages in the Bible that would be appropriate in describing the impeccable character of this stalwart individual but the following from St. Paul's Epistle to the Galations apply particulary, in my opinion, to this awe-inspiring man who devoted his life to serving his fellow coutrymen:

"Bear ye one another's burdens, and so fulfill the law of Christ. Whatsoever a man soweth, that shall he also reap. He that soweth to the Spirit shall of the Spirit reap life everlasting."

I have always believed that our Heavenly Father, in His infinite wisdom, looking down on the earth from the battlements of Heaven, lays His hands upon certain individauls who are destined to fulfill specific jobs in life. Certainly, God's hand charter the course for Christopher Columbus as he sailed across uncharted seas to discover America. Certainly, His hand was upon the shoulders of Samuel and Suzanna Wesley as they laid the foundation of their son John's character so he could withstand the hardships of a busy life during which he founded the Methodist Church. And certainly, the hand of God was guiding the life of young Washington as he fought and won battles of temptation, danger, and frustration during his teen-age years.

When Washington's older brother, Lawrence, died, Mount Vernon was left to young George, then aged 20. But this youth did not accept it as a means of providing him a life of leisure for the rest of his natural life. No, he accepted it in the true spirit of his deep convictions. To him, Mount Vernon was a way of life, a means of livelihood, and an opportunity to enjoy the great out-of-doors he loved so well. He rapidly became prominent in community affairs. He was an active member and later a vestryman of the Episcopal Church. He was a sagacious manager of his plantation and continued to purchase land until he had acquired 4,000 acres. He accepted dangerous military commands and commissions without hesitation, feeling it his patriotic duty to do so and relying upon Almighty God to give him the strength and wisdom to perform successfully. Washington's guardian angel was with him on that terrible day near Fort Duquesne on July 9, 1755, when his commanding officer, General Braddock, received a fatal wound after four horses had been shot from under him and yet Washington raced back and forth all day, had two horses shot from under him and four bullets pierced his clothes, but came out of the battle untouched. He was only 23 years of age at that time. At the age of 24, he had to protect a weak, thinly settled frontier nearly 400 miles in length, with only 700 ill-disciplined, poorly fed, and not at all enthusiastic colonial troops. Also, he had to endure constant wilderness hardships. Many would have thrown up their hands and quit, but not Washington. His strong penchant toward duty and his grim determination to win against all odds, carried him through.

The spirit of God must have been with Washington at Valley Forge that terrible Winter of 1777 when he waited with a handful of half-starved men, virtually naked soldiers who left bloody footprints in the snow, waiting for he knew not what—but hoping the tide would turn for the Americans in the Spring. Said President Dwight D. Eisenhower: "We remember the picture of the Father of our Country, on his knees at Valley Forge seeking divine guidance in the cold gloom of a bitter winter. Thus Washington gained strength to lead to independence a Nation dedicated to the belief that each of us is divinely endowed with indestructible rights."

Now, I ask you, how many young men of today, or even in our entire history, inheriting at age 20 a Mount Vernon, would stand the hardships, the vilification, the abuse, the trials and dangers that Washington withstood, in preference to sitting before a big log fire in a comfortable room with a good book, servants waiting to serve him hand and foot? Ah, yes, there is no doubt that Washington was filled with the Spirit of God as he made decision after decision that was to affect your life and mine. Certainly, he "sowed to the Spirit" and he "bore one another's burdens." Ralph Waldo Emerson once said: "When a man lives with God, his voice shall be as sweet as the murmur of brook and the rustle of the corn."

George Washington's eminent Masonic record and his devotion to the Craft are well known to every Master Mason in the United States. During his entire adult life, he surrounded himself with members of the Order. He was made a Master Mason at Fredericksburg, Va., in August 1753. He was Worshipful Master of the Alexandria-Washington Lodge in Alexandria. He was offered the po-

sition of Grand Master of Masons in Virginia but felt compelled to decline due to sound reasoning. In 1784, General Brother Mario Jean Paul Joseph Roche Yves Gilbert du Motier, Marquis de LaFayette visited General George Washington at Mount Vernon and presented him with a Masonic apron of white satin. It bore the national colors of red, white and blue, and was embroidered elaborately with Masonic emblems. It was made by Madame the Marquise de LaFayette. The apron was enclosed in a handsome rosewood box. Washington wore the apron on September 18, 1793, when he laid the cornerstone of the Capitol at the Federal City (now Washington, D. C.). It is presently in the museum of the Grand Lodge of Pennsylvania. The Washington Monument in this city was erected in honor of this stanch supporter of Freemasonry. The cornerstone was laid with Masonic rites on July 4, 1848.

In addition to Washington, the Masonic craft in our country has had other saviors, and its share of martyrs, prophets, lawgivers, teachers, trail blazers and showmen, who, in their own spirit, have been of equal character and stature with those in patriotism, the arts and sciences, politics and religion. There are more than 700 fraternal organizations in the United States. The Masonic Order is not only the oldest of these, but also the largest and most distinguished. It has had a long and impressive history. It has always stood for the rights of the individual and the opportunity of the individual to mold his own life. Its ancient rituals and ceremonies dwell upon these truths: "Masonry builds its temples in the hearts of men." Masonry understands and takes very much into account the differences which prevail in the circumstances of life.

The Masonic fraternity stood out like a beacon light among the organizations which took a major part in securing our liberty and freedom. Besides Washington; Thomas Jefferson, Benjamin Franklin, James Madison, Samuel Adams, John Hancock, Alexander Hamilton, Robert Morris, Gen. Joseph Warren who fell at Bunker Hill, Dr. Benjamin Rush (one of my forebears), and many other men prominent in the affairs of the country at the time of the Revolution were members of a Masonic Lodge. Another colonial leader was John Rowe, provincial grand master. Our Masonic lodges certainly aided materially in achieving our independence.

Benjamin Franklin was a member of the first lodge in Philadelphia, was a provincial grand master, and published the first Masonic book on the continent. He was sent as our Minister to France and, soon after arrival in Paris, he made the acquaintance of LaFayette and other French noblemen who were members of the Masonic fraternity. Franklin expeditiously outlined to them America's plight in her struggle for independence. Promptly, he procured from France a loan of $6 million (a large amount in those days), coupled with large secret shipments of arms and ammunition. Later, the French Fleet was sent to America to assist in the conflict. Washington once asserted that we never could have won the fight except for the assistance rendered by the French Fleet.

Fifty-six very brave men, and I am proud to say one of them was Benjamin Rush, signed the Declaration of Independence. Of those 56 signers, 31 are declared to have been Masons—three-fifths of the entire assembly. After we convinced Great Britain of the futility of ehdeavoring to conquer us, our independence was recognized but we had no stable government. The heroes of our fight for independence were obligated to formulate a sound and lasting government of the 13 colonies. Thirty-nine patriots signed the Constitution and 23 of them were declared to be Masons. In that group were Washington, Hamilton, Franklin, and Madison. Of those who signed the Declaration of Independence, only 6 placed their signatures after the Constitution but 4 of the 6 were Masons.

Thomas Paine, a Masonic brother, first emitted the words, "The United States of America." Paul Revere, who took that famous ride to Concord and Lexington and warned the British were coming, was right worshipful grand master of Massachusetts. William Dawes, who also alarmed the colonists and was known as "the other Paul Revere," was a Mason. James Otis and Patrick Henry were members of the order. Robert Newman, who hung the lanterns in the Old South Church, was a member. John Paul Jones, a Mason, was the first American to receive a salute to our Star Spangled Banner. James Hoban, prominent in the construction of the United States Capitol and the White House, was the initial worshipful master of Federal Lodge No. 1 of Washington, D. C. Henry Price, of Boston, has been called the first Masonic statesman in America. He was the founder of the initial regular and duly-constituted lodge and grand lodge. Sir William Johnson, in the generation immediately preceding Washington, Franklin and others previously mentioned, was Ambassador of the British Empire to the Six Nations. He was a pioneer of Freemasonry in the northern marches and was one of the founders of the Scottish Rite in the North. Stephen Morin brought with him authority to establish the Scottish Rite degrees when he came to the West Indies. Moses M. Hays, who became a grand master in Massachusetts, was appointed by Morin inspector for North America and the Mother Supreme Council was constituted at Charleston in 1801. The first book of constitutions of the grand lodge of Massachusetts was edited by Thaddeus M. Harris and contributors of other early Masonic classics include Simon Greenleaf, one of the founders of the Harvard Law School; Salem Town, of Massachusetts, who wrote "A System of Speculative Masonry"; and Thomas S. Webb, known as the father of the American royal arch, who published "The Freemason's Monitor" in 1797.

The Boston Tea Party is famed in Masonic history. It is said it was an adjourned session of a Masonic lodge. The Lodge of Saint Andrew, Boston, was founded in 1756 by the grand lodge of Scotland and has met regularly for 200 years without interruption. John Hancock, first signer of the Declaration of Independence, was a past master of this lodge, also grand master of Massachusetts. There are no recorded minutes of the lodge for December 16, 1773, but someone drew a huge "T" on the empty page. Apparently, the Boston Tea Party had priority among the members.

Virginia, the home of George Washington, has a great Masonic history. Many illustrious sons of the Commonwealth have been previously mentioned. The first grand master of Masons in Virginia was Gov. John Blair. James Monroe was one of the greatest President in our brief history, famed for the Monroe Doctrine. While a student at William and Mary College, he became a Mason. The sixth grand master of Virginia was John Marshall, probably the most famous Chief Justice of the Supreme Court in the history of the United States. Virtually all of Virginia's leaders through the years have been Masons.

The membership of the Masonic order, both present and past, is filled with a plethora of eminent names. Fifteen Presidents of the United States have been Masons, from Washington through Truman. Eisenhower is not a Mason but he has a great respect for the fraternity and many of his close relations are Masons. Harry Truman was the only President to receive the 33d degree, although President Harding was elected to receive the same but died before the date set for the conferral. Harding incidentally, it is reported, waited 20 years between his E. A. and F. C. degrees. President Andrew Jackson was the first President to become a Scottish Rite Mason. Seven Chief Justices and 37 members of the United States Supreme Court have held membership in Masonic lodges. The late Chief Justice Fred Vinson was a Mason and he was succeeded by past grand master of Masons in California Earl Warren. Six of the Justices of our current Supreme Court are Masons. Our United States Senate has 96 Members, of whom 57 are Masons. In the United States House of Representatives, 224 of the 435 Members belong to the craft. Of the 12 Cabinet members, 5 are Masons. At a recent event in the West, 13 governors of States were present. Ten of them are Masons of whom 9 are wearers of the red fez.

Every Mason has the undisputed right to his own personal, political, and religious beliefs. There is no politics in Masonry and there is no Masonic vote. Not any President has ever been elected on the Masonic vote. One Mason, William Jennings Bryan, was three times the nominee of his party but was never elected. Several Masons have been twice the nominee and never elected, as evidenced recently in the case of Thomas E. Dewey, of New York. One Mason was three time defeated for his party's nomination. Displaying that there is no Masonic vote as such, in the presidential election campaign of 1948, the four leading candidates were all either 33d degree or 32d degree Masons. Two of the vice presidential running mates were Masons.

Most of the Kings of England for the past 200 years were Masons. The husband of Queen Elizabeth, the Duke of Edinburgh, Prince Philip, was made a Master Mason in Navy Lodge No. 2612, London, on December 5, 1952. His Grace, the archbishop of Canterbury, was present on this occasion. Queen Elizabeth's father, King George VI, took particular interest in the Masonic hospitals of Great Britain. Recently, she visited one of the hospitals. She appointed the Lord of Scarborough as Lord Chamberlain of the Royal Household. He is most worshipful grand master of Masons of Great Britain. Many kings and titular heads of other countries throughout the world, over the years, were and are members of the order such as King Oscar II, of Sweden, and Chiang Kai-shek. Prime Minister Hatoyama, of Japan, was made a Master Mason on March 26, 1955. Present was the United Nations Far East commander, Gen. John E. Hull, who congratulated the Premier. A congratulatory message was read from 33d degree Mason Gen. Douglas MacArthur, the first United Nations Far East commander. Speeches made on that occasion were flashed throughout Japan by radio and television. The Nippon Times devoted a quarter of a page to the description of the event. Just 15 years ago, it was forbidden by the Government for any Japanese national to become a member of a Masonic lodge. Masonry and time march on.

I have dwelt considerably with a great number of our distinguished members, but the Masonic fraternity is composed of all types, rich and poor, educated and uneducated, industrialists and workers, men from every walk of life. They are all equal inside the lodge room. When President Theodore Roosevelt became a Master Mason at Oyster Bay, N. Y., the master of the lodge was Roosevelt's gardener and "Teddy" was called "Brother Roosevelt," just like the others in the lodge.

Charles Lindbergh became a Mason just prior to making his historic flight to Paris in the Spirit of St. Louis. The Reverend Peter Marshall, late famed Presbyterian minister and chaplain of the United States Senate, the inspiration for the best-seller book, A Man Called Peter, was a life member of Old Monkland St. James lodge, No. 177, of Coat-

bridge, Scotland, and an honorary member of Temple-Noyes lodge, No. 32, of Washington, D. C. Henry Ford was an ardent Mason and his grandsons, William Clay Ford and Benson Ford, were recently raised to the sublime degree of Master Mason. Andrew Mellon was a member of the lodge. Matthew Ridgway, who succeeded General Eisenhower as commander of the armed forces of NATO in France, and Gen. Mark Clark, now head of The Citadel, are devout Masons. Gen. George C. Marshall is a Mason and his father was master of his lodge in Uniontown, Pa. Gen. Jonathan Wainwright, of Corregidor fame, was buried with Masonic honors. Admiral King is a brother. John Philip Sousa was an active Mason, as were Tolstoi, Victor Hugo, Davy Crockett, and Buffalo Bill Cody. New York's former mayor, Fiorello H. LaGuardia, belonged to a lodge. Director J. Edgar Hoover, of the FBI, is a 33d degree Mason. Other public figures recently elected to the honorary rank of 33d degree include Gen. Curtis LeMay, of the Strategic Air Command; Associate Justice Tom Clark, of the United States Supreme Court; Hollywood Producer-Actor Harold Lloyd; Governors Stanley, Virginia; Shivers, Texas, and Simpson, Wyoming; Senators Daniel, of Texas, and Hruska and Curtis, of Nebraska; and Representative A. S. Herlong, Jr., of Florida.

Among the captivating names in the entertainment world who are Masons include Charles Correll and Freeman Gosden, better known as Amos and Andy; Gus Wayne, the midget known as Johnny who calls out a certain brand cigarette over radio and television; Bud Abbott, of Abbott and Costello; Gene Autry, Roy Rogers, Richard Arlen, Monte Blue, Joe E. Brown, Clark Gable, Red Skelton, Arthur Godfrey, Conrad Nagle, Jean Hersholt, Dick Powell, Victor McLaughlin, "Parkykarkus," and Directors and Producers Cecil B. DeMille, Mervin LeRoy, Jack Warner, David Butler, Darryl Zanuck, and Harry Rapf. The late Tom Mix, Al Jolson, Doug Fairbanks, Sr., Warner Baxter, and Scotch comedian Harry Lauder were lodge members. The great Will Rogers was an active Mason. All seven of the Ringling brothers and the immortal Houdini were wearer of the square and compass.

The sports field is replete with famous athletes who are Masons but time only allows the listing of a few. As an example in football, the only player to be voted all-time all-America in both college and professional football, Don Hutson, the stellar end from the University of Alabama and the Green Bay Packers, is a Mason and Shriner. Most of the famous names in professional baseball are attached to the Masonic fraternity. As examples, in the Baseball Hall of Fame are Walter Johnson, Grover Cleveland Alexander, Ty Cobb, Home Run Baker, Cy Young, Honus Wagner, Paul Waner, Eddie Collins, Mickey Cochrane, Charlie Ebbets, Jimmie Foxx, Clark Griffith, Frankie Frisch, Mel Ott, Rogers Hornsby, Carl Hubbell, Christy Mathewson, Herb Pennock, Eddie Plank, Ray Schalk, George Sisler, Dazzy Vance, Bill Terry, Poe Traynor, and Tris Speaker. The celebrated heavyweight boxing champions, Jack Dempsey and Gene Tunney, are listed as brothers in the craft. The basketball coach with the greatest record of them all, Adolph Rupp, has many Masonic honors, including past potentate of Oleika Temple, Lexington, Ky. Red Dutton, the great hockey performer, is a past potentate of one of our Canadian Shrine temples. And on and on, ad infinitum.

There are numerous other illustrious figures in Masonry who could be mentioned, such as Charles E. Wilson, Paul Hoffman, John L. Lewis, John Sparkman, Strom Thurmond, Estes Kefauver, et cetera. Then we have our Masonic statesmen, who have a thorough understanding and knowledge of Freemasory as a whole. Some of their names are famous—some you have never heard, but all sincere in their devotion to the order.

Masonry has proven to be a tremendous force in this Nation. It was responsible, in a great measure, for removing the hatreds of the War Between the States. It is well known that many courtesies were extended across the bloody lines of the battling brothers. Thomas Stigenwall, Union Army scout is Missouri, was on scout duty in enemy territory when he was taken captive by Quantrell. He was sentenced to death for spy activities and the story goes that while the noose was being drawn about his neck, he gave out the cry of distress known to all Masons. He was then sent to the Masons in the Quantrell camp for conference. They agreed to release him when he promised that he would return to his own lines and would not engage in further spy maneuvers. Andrew Johnson, who became President of the United States after Lincoln's assassination, and Isham G. Harris were bitter political enemies in Tennessee. They despised each other's attitude toward the Confederacy. Harris heard of a plot to assassinate Johnson. Both were Masons. Harris warned Johnson in time to save his life. There are many similar examples of a Mason going to the aid of his brother.

Masonry has had a weighty influence on the lives of scores of men. I believe it influenced George Washington in many of his deliberations and decisions. Wrote Carlyle: "The healthy soul discerns what is good, and adheres to it; discerns what is bad, and spontaneously casts it off." The influence of Masonry was evident in the prayer which closed a letter General Washington wrote on June 8, 1783, at his headquarters in Newburgh, N. Y., to the governors of the 13 States, informing them he was resigning as commander in chief and turning the office back to Congress before retiring to agricultural pursuits at Mount Vernon. I feel that this prayer is an appropriate conclusion to this address:

"I now make it my earnest prayer that God would have you, and the State over which you preside, in his holy protection; that he would incline the hearts of the citizens to cultivate a spirit of subordination and obedience to government, to entertain a brotherly affection and love for one another, for their fellow citizens of the United States at large and particularly for their brethren who have served in the field and finally, that he would most graciously be pleased to dispose us all to do justice, to love mercy, and to demean ourselves with that charity, humility and pacific temper of mind which were the characteristics of the divine offer of our blessed religion and without an humble imitation of whose example in these things, we can never hope to be a happy Nation."

This prayer is lasting proof of Washington's Christian heart and his deep and abiding convictions concerning Almighty God.

"He that soweth to the Spirit shall of the spirit reap life everlasting."

Thank you very much for your kind attention and forbearance.

The Late Earl Lewis

SPEECH
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. McGREGOR. Mr. Speaker, in the passing of our former colleague, Earl Lewis, the country really has lost a great American. Earl Lewis will be remembered in history as a champion of the freedom that he cherished and as a competent, courageous, and forceful legislator. His life is an example of devotion to his country. The State of Ohio has suffered the loss of a beloved son and the country has been deprived of a great citizen.

We extend to his loving wife and family our sympathy in their bereavement.

Attacks on Nixon Will Fail Again

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. HOSMER. Mr. Speaker, comparing Vice President NIXON's handling of the Office of the Vice Presidency with that of any of his predecessors cannot be done. Never has a holder of the office accomplished an infinitesimal fraction of the service in both domestic and foreign affairs that NIXON has. For the first time in our history the Vice Presidency has been utilized in a real and effective way to forward the progress of America. Perhaps it is because for the first time in our history two conditions have coincided which make it possible: First, the Vice President is a man of skill, resource, ability, and courage; second, the President is a man possessing exceptional administrative ability and singularly lacking in petty jealousy toward others.

An interesting analysis of the current crop of politically inspired attacks on the Vice President has been made by editorial columnist Larry Collins of the Long Beach Independent. Mr. Collins' abilities in the field of commentary have been sufficient to earn him an honorary master of humanities degree bestowed by the California Board of Education, so his words are not to be regarded without weight:

WHAT ABOUT NIXON?

Within a few minutes of the President's anouncement the attacks started on Vice President NIXON. That was expected and we may expect them to continue right up to the minute the November ballot boxes close.

The Democrats know they cannot successfully attack President Eisenhower. It is therefore their plan to tear down NIXON while at the same time trying to put over the idea that the President cannot live out his term of office. It is a natural plan for them to follow—but it is doubtful that they can hurt NIXON more than they did in 1952 or than they have consistently tried to do since he took his present office.

First crack at NIXON, after the President's announcement, was "Why didn't Ike come out for NIXON?" The answer should be obvious. The President would have been acting with poor taste if he took such a solemn occasion to tell the people he was willing to run again, but that he must insist on who was to be his running mate. The President was speaking of his own condition and his ability to continue on the job. Bringing NIXON into his speech would have been resented by millions who were thrilled over the way the President presented his case.

However, it should not be overlooked that in his press conference where he indicated his decision, the President had this to say, when asked about NIXON: "He has my unbounded admiration and respect. He has been a loyal and dedicated associate and a successful one. I am very fond of him but I am going to say no more about it." That certainly should be clear enough to any who question Mr. Eisenhower's thoughts concerning NIXON.

The next question naturally is: How will NIXON get along when the convention opens in August? Will he be nominated for the second place on the Republican ticket? The answer to that was shown in a poll taken of the chairmen of State Republican Party organizations. The results showed that the State leaders in 36 States favored NIXON. These States will have 1019 convention votes—357 more than needed for nomination.

Another question naturally is: Will NIXON make or lose votes for the ticket? A lot of people in this State, including some of his greatest admirers, have thought NIXON far the most popular of the State leaders of the party. It is certain he has increased his prestige since taking office. He was then, and before, the target of left wingers because he was blamed for bringing out the Alger Hiss case. He is hated by the Truman crowd because he spoke out clearly about the deep freeze, mink coat and other chiselers around and supported by Mr. Truman. But the resentment against NIXON for this was as great 4 years ago as it could be now.

The big issue which will be presented by opponents of an Eisenhower-Nixon ticket will be that Eisenhower is a sick man and NIXON not capable to take his place in an emergency. All public opinion polls show the people have already discounted the talk about the President's health. Those polls show that he would be re-elected today with an even greater margin than he had in 1952. It is reasonable to expect that the people who have so expressed themselves have done so expecting NIXON to be his running mate. To these people Mr. Eisenhower and Mr. NIXON have conducted themselves the way the people like to have their highest officers conduct themselves.

Are We Hurting or Not?

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. LAIRD. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial from the Rice Lake Chronotype, Rice Lake, Wis., under date of January 18, 1956. The edtorial is as follows:

ARE WE HURTING OR NOT?

Some extremely interesting, perhaps even surprising, information the general economic condition of Barron County at the close of 1955 is contained in two stories on the front page of this week's Chronotype.

The stories deal with the year-end financial statements of the 11 banks in Barron County and with the business volume, as measured by bank debits, during 1955 for Rice Lake, Barron and Cumberland.

What is interesting—and surprising—is the clear-cut indication that the general economy of Barron County as 1956 gets underway is, in short, quite rosy. This is in contrast to the view, quite widespread, that our economy in the county is pretty shaky because of depressed farm prices.

Yet deposits in the 11 banks of the county at the close of 1955 were up more than $710,000 from the close of 1954, reaching more than $25 million—an alltime high.

Simultaneously, the volume of bank debits (the turnover of funds in banks) for Rice Lake, Barron and Cumberland for the year just ended climbed to $131,722,000—up more than $8 million above 1954. That, too, is an alltime record.

With so many dairy farmers in our midst who bank in one or another of the 11 county institutions and who do the preponderance of their shopping in either Rice Lake, Cumberland or Barron, it must certainly be agreed that the new records set in 1955 were achieved only through farmer participation.

The revelation of these economic facts indicate that perhaps all is not quite so dark on the farm level in Barron County as one might have concluded from the talk that's been going around of late.

And since 1956 is an election year, the local politicians might have to revise some of their preelection views and strategy. This analysis might be wrong—but the figures are there to support it.

Foreign Aid Bolsters Cartel Economy in Europe

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a letter from Mr. Harold H. Moss, chairman, Conference of American Small Business Organizations. Mr. Moss has had an opportunity to judge the effects of our foreign-aid handouts in Europe on a recent trip there. His letter points out that by and large the people who are receiving aid have no knowledge of it. Only those who are in Government or identified with some cartel organization seem to realize that the American taxpayers are supporting their economies. The letter follows:

CONFERENCE OF AMERICAN
SMALL BUSINESS ORGANIZATIONS,
Chicago, Ill., February 29, 1956.

Hon. LAWRENCE SMITH,
House Office Building,
Washington, D. C.

DEAR MR. SMITH: We want to compliment you on your lucid explanation of the cost to communities of foreign spending. It brings it down to where we smaller folks live and in language people can best understand.

I spent time in Europe as the guest, by invitation, of medium and small business people of several European nations. This unique circumstance enabled me to observe as few Americans have been so privileged.

I met not only individual businessmen but also leaders of enterprise and arts and crafts associations of medium and smaller business. I found they do not receive the benefits, according to what they have told me, which we are led to believe are serving them by our lavish handouts.

The money is being used to buy government friendship and bolster the cartel economy. One president of a medium size business in West Germany told me that in rehabilitating his bombed-out plant, he could only borrow on a 90-day basis and at 9 percent interest.

If you and our conservative Members of Congress fully understand the attitude of the medium and small entrepreneurs and the rank and file of the people over there, and how little they know about what we have been pouring into their government coffers, which has little direct benefit to them, I believe there would be a very critical reevaluation of our entire foreign-aid program.

The medium and small businessmen I met feel very keenly that government (socialistic) controls and monopolies are the greatest cause of their plight. They want free enterprise much more than they want or need our dollars.

Why should we smaller people of America be taxed $30 per capita to buy 21 French Governments since 1945 and with it all, have no more security than when we began, and what's more, very doubtful friendship?

It keeps Mr. Dulles hedgehopping all over the globe to patch up these top level friendships. But with all of it we ask, what has he bought of lasting benefit to the people of this Nation?

Further, what has been truly accomplished in releasing the individual initiative of the people abroad so that they may develop a sound domestic economy through free enterprise?

I might add that the independent businessmen and people I met in Europe, only talked to me freely after they had been fully assured that I, nor the organization I represent, was not in any way subsidized by our Federal Government.

Read into this whatever you may, but the hard truth as I see it, is that our dollars, doled out by our Government, have not bought the confidence of the rank and file of the citizens of European nations.

When we realize that it is those people who go to the polls (when opportunity is given them) and overthrow governments or give rise by their public opinion to the uncertainties which militate against the ultimate results of our lavish spending, we will begin to take stock of the program of foreign aid.

Is it that we do not know how to do something really tangible to aid them to help themselves, or is it rather that we are competing with Russia who keeps us on edge with its offers of economic aid?

It looks to us like the old sales badger game I've seen over here so often. One firm sets out to drain its competitor of capital and thus break him? How? He quotes the other fellow's customers a low price for high volume unit delivery, then sits tight until the competitor, not wishing to lose his customers, quotes a better price or makes extra concessions. The first man smiles to himself and says, let the other fellow take the business. It will break him which is what I want. Maybe this is a homely illustration, but this is foreign spending as we grassroots folks see it. Is Russia smarter than we are in this respect?

Again, may we commend you for your courage in pointing to the grim reality of the burden placed upon our local communities and people who need this money for schools, etc.

Sincerely yours,

HAROLD H. MOSS,
Chairman.

Billy Graham

EXTENSION OF REMARKS
OF
HON. D. R. (BILLY) MATTHEWS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. MATTHEWS. Mr. Speaker, we are all interested in the outstanding contributions made by Billy Graham to the

cause of world peace and human brotherhood. Mr. Graham will be in the caucus room of the Senate on Monday, March 19, from 4 to 5 p. m., and will be delighted to see Members of Congress and members of their family and staff.

Stevens Reports on Jap Threat to United States Textiles

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. DORN of South Carolina. Mr. Speaker, Robert T. Stevens is one of the greatest textile manufacturers in the world. He was Secretary of the Army under President Eisenhower for almost 3 years. As Secretary of the Army he traveled widely and was thoroughly familiar with the world situation and our allies in the cause of freedom. The following article appeared in the Anderson, S. C., Daily Mail. I am sure the House will find Mr. Stevens' observations on the threat of Japanese textiles very interesting:

STEVENS REPORTS ON JAP THREAT TO UNITED STATES TEXTILES

NEW YORK.—Robert T. Stevens, president of J. P. Stevens & Co., told stockholders at their annual meeting here that he had visited all of the company's 41 plants and 20 mills of other companies, since his return to business after almost 3 years as Secretary of the Army in Washington. Japanese competition is greater than realized, he said.

Joseph H. Sutherland, vice-chairman of the board and director of sales, said the company expects tough competition this year. He said the advertising campaign is stressing packaged goods of Utica-Mohawk sheets and pillow cases. These products are made at Clemson and Seneca.

Last year the company ran production 45 percent on synthetics, 32 percent on cotton, and 23 percent on wool. Production of rayon however was reduced somewhat in recent weeks.

The meeting was attended by 150 stockholders. Many questions were asked, a good many of them directed to Mr. Stevens on the effects of Japanese imports.

The Japanese have a labor cost advantage of 10 to 1 over American mills he said, and they purchase cotton 8 to 10 cents a pound cheaper in world markets.

"We believe that the industry is entitled to a reasonable return on its invested capital, so that fair dividends may be paid, plants may be kept constantly up to date and employees may be kept steadily at work," said Mr. Stevens. "The Japanese threat has the capability of disrupting all three of these outstanding objectives. I commend this problem to your consideration, both as Americans and as investors in one of America's leading textile companies," he added.

"We expect to increase the total volume of our business by a modest and solid percentage during the current year," said Mr. Stevens, "and to do the same in the years immediately following. The increased sales require that we take a good look at the capital requirements of the business. Our balance sheet, as reflected in the annual report, showed a most satisfactory and liquid condition," he said, in referring to the 5-year growth project.

The improvements in the organization and acquisitions were cited by J. P. Stevens, Jr., as an encouraging prospect for raising the dividend rate from 37½ cents quarterly to 50 cents quarterly.

Blast These Secrets Open

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. BOSCH. Mr. Speaker, there has been considerable controversy which, to my mind, will never be ended or abated until the full text and a complete disclosure of the conferences held at Teheran, Yalta, and Potsdam are published and made available to the American people.

In the 83d Congress I introduced House Concurrent Resolution 22 calling for the publication of the text of these agreements, private or otherwise; again in the 84th Congress, I introduced this resolution, House Concurrent Resolution 44. I believe the time has come to take action on this resolution and thus put to rest the qualms, fears and anxieties so often expressed as to the commitments made at these various conferences.

Only yesterday, the New York Daily News in an editorial reopens this entire field.

Under leave to extend my remarks, I include the aforementioned editorial:

BLAST THESE SECRETS OPEN

In May 1953 the State Department was asked by the Senate Appropriations Committee to arrange for early publication of the records of various World War II top-level Conferences.

Among these were the meetings at Cairo, Tehran, Yalta, and Potsdam.

State said could do, and would do. It promised publication of the four records above listed by June 30, 1955, and of other and less important ones before June 1956.

The Department assigned a number of its historians to the job of assembling the papers for publication on schedule. Then things not foreseen by the Senate Appropriations Committee began to happen.

These things consisted of efforts by holdovers from Truman-Acheson times to keep the records of the big Allied war conferences from ever getting into print. If the boys couldn't keep the stuff secret, they hoped at least to mutilate it to the extent of omitting passages which might show President F. D. Roosevelt and his wartime cronies as having been neither all-wise nor all pro-American. Plenty of such passages are said to be discoverable.

Two of the historians held out for complete publication of the records, and on the schedule originally set up by the State Department. These men were Bryton Barron and Donald M. Dozer.

Both were longtime State Department employees with good records. Yet both were finagled out of their jobs without a hearing.

LET'S HAVE AN INVESTIGATION

Only the Yalta papers have as yet been published—with some 50,000 words omitted.

Among these was Roosevelt's crack to Stalin about how the only concession he could see himself making to King Ibn Saud of Saudi Arabia was that he might offer "to give him [Ibn Saud] the 6 million Jews in the United States." This passage is alleged to have been censored out on orders from Gen. Walter Bedell Smith, on the ground that "it is not pertinent history."

The story is told in detail in the March 14 issue of the National Review, by Bryton Barron, one of the two State Department employees who wanted to publish full and honest records of the big wartime conferences and lost their Federal jobs on that account.

If you want a look at a United States State Department operating under a Republican Administration but still run largely by second-string bureaucrats surviving from Roosevelt and Truman times, you're respectfully advised to get hold of this article. It will help you to understand the frequent charge that Secretary of State John Foster Dulles is in many respects a prisoner of the old New-Fair Deal crowd which the voters thought they had voted out of power in November 1952.

How to end this suppression and mutilation of important recent United States and world history? Mr. Barron says the only answer he can see is an early and honest congressional investigation of the State Department.

Such an investigation can't start too soon to suit us.

Commodore Vanderbilt Had a Word for It

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. ABBITT. Mr. Speaker, under leave to extend my remarks, I desire to include therein an editorial of the Petersburg (Va.) Progress-Index. This is one of the outstanding newspapers of Virginia and exerts a role of leadership throughout its area of distribution. I commend the editorial to the membership of the Congress:

COMMODORE VANDERBILT HAD A WORD FOR IT

An airline that recently applied to Civil Aeronautics Board for permission to fly coach service to Europe has been turned down with what the line says will mean a delay "for years—if not forever."

CAB said the two-flight-a-day plan of North American Airlines—one of so-called non-sked carriers—raised questions of importance and complexity needing a full hearing and approval of the President.

The airline charged the "monopoly minded air carriers want to keep overseas air travel in the champagne and caviar luxury class," and said CAB rejection of immediate permission to start cheap trans-Atlantic service was a "bow" to these lines.

This is a fairly common language in the business. Today's increasing danger of airport collision is matched, figuratively at least, with flying invective.

Whether any settlement of differences between airlines can satisfy all parties is doubtful. There is not enough traffic on some routes for everybody to fly them and Government regulation of competition appears necessary, though some say not.

Government regulation is a fact, however, and is going to continue. This regulation should benefit the consumer—synonymous with taxpayer here—but doesn't always do so. Judging from CAB instructions that North

American apply for a certificate of public convenience and necessity, there is justification for considering the regulatory board more partial to its brood of charges than to general public interest.

Not only about transatlantic coach flights, but in practically every decision CAB makes public there are more passages debating the merits of line A's request and line B's case against it than there is discussion of what effect the request will have on service to the public. Since the Government is helping support lines that fly the poorer routes, this is in part understandable, but obscures the real issue.

The public does not exist for the airline, the airline exists for the public. This seems to be overlooked more often by CAB when considering coach-fare flights than when making most other decisions.

Increased Citizen Participation in Campaign Financing Best Safeguard for Clean and Honest Elections

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call the attention of my colleagues to a letter which appeared in the New York Times recently. Charles M. Hardin, Walter Johnson, and Jerome G. Kerwin, three distinguished students of American politics, have devoted considerable time and scholarship to the subject of financing the political campaigns of candidates for public office.

These three professors recognize the evil consequences which may result from large campaign contributions, and come to grips with the essence of the problem in seeking to expand the number of contributions. They propose that each taxpayer be permitted to deduct from his payable income tax $5 for contribution to the party of his choice.

Mr. Speaker, I firmly believe that some such proposal would go a long way toward lessening the danger inherent in the present haphazard method of financing our political parties. Increased citizen participation in campaign financing would result in additional citizen interest in the campaign and be the greatest safeguard for clean and honest campaigns this country could have. I strongly recommend this article for your consideration:

TO SUPPORT POLITICAL PARTIES—PROPOSAL TO RAISE CAMPAIGN FUNDS THROUGH TAX STAMPS IS OFFERED

To the EDITOR OF THE NEW YORK TIMES:

This is a proposal that Congress enact an amendment to the income tax law to permit individual taxpayers to subtract up to $5 each from their income tax payments to the Treasury because of like contributions to the political parties of their choice. Note that this proposes to permit subtraction from taxes payable and not merely to permit the deduction of contributions to political parties from taxable income.

Free elections are essential to our form of government. In countries like the United States the only apparent way to make elections work is through political parties. But elections are expensive. How much national elections cost in this country no one knows. After November of 1952 the New York Times estimated a "rock bottom figure" of $32 million for the contest between Eisenhower and Stevenson. (Apparently this sum did not include expenditures in races for Congress or for the many State and local offices that were filled simultaneously.)

DIFFICULTY ENCOUNTERED

Congressman CLARENCE J. BROWN, Republican of Ohio, declared of the same Eisenhower-Stevenson race: "I would hate to have to pay all the expenditures out of my own pocket over $80 million that were made in the last campaign." All practicing politicians know how hard it is to scratch up the necessary campaign funds.

This kind of deduction would be novel. Heretofore contributions to political parties have not even been deductible from net incomes for taxation purposes. Some may object that it is absurd to deduct the payment from the tax bill itself. The answer is that political parties are essential parts of government; their finance is just as important as is the finance of the executive, the legislature, or the judiciary.

One way to administer the deduction would be to have the Government print stamps (to simplify presentation, let us assume that they sell for $5 each). These stamps would be sold at their cost of production to bona fide political parties which would resell them at $5 each to persons who agreed to make contributions to the parties. Only 1 stamp would be sold to an individual (or 2 to husband and wife making out joint returns). Purchasers would affix stamps to their income tax returns and deduct $5 from their total tax bills.

POSSIBLE SUMS

How much the parties might realize from this proposal depends on several factors, some imponderable. In 1949, for example, about 51 million tax returns were made but some 15,500,000 of these paid no tax. At the time there were about 150 million persons in the United States. It seems reasonable to assume that in 1956 perhaps 25 million taxpayers would pay enough taxes to be possible of recruitment by the political parties. If Democrats and Republicans each managed to sell $5 stamps to 4 million taxpayers annually, the gross take would be $20 million. In a 4-year period the gross might run from $80 million to, say, $100 million.

This sum would by no means defray the probable total costs incurred by the several party committees during current 4-year periods, but the sum could be considerably increased by vigorous stamp sales to individuals. In any event, this proposal, if enacted, should enable both parties to put themselves in position of considerable independence respecting campaign contributions with strings attached.

The proposal would prompt the parties to develop active organizations in order to collect contributions in lieu of taxes; the writers believe that this is preferable to the alternative, proposed by some, that Congress make outright appropriations to the parties.

Finally, the proposal would enlist large numbers of individuals in a direct and tangible way in support of the parties of their choice.

CHARLES M. HARDIN,
WALTER JOHNSON,
JEROME G. KERVIN.

CHICAGO, February 20, 1956.

Victims of Reds Are Sent to U. S. S. R.

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. BOSCH. Mr. Speaker, under leave to extend my remarks and for the information of my colleagues, I include an article from the Tablet of March 3, 1956, dealing with the policy of forced repatriation. This once again pinpoints the necessity for adoption of House Resolution 137.

The article follows:

VICTIMS OF REDS ARE SENT TO U. S. S. R.—URGES INVESTIGATION OF UNITED STATES POLICY OF REPATRIATION

(By Julius Epstein)

Forced repatriation of prisoners of war, of civilian refugees and of displaced persons, a crime against humanity, a gross violation of the Geneva Convention and a reversal of the Christian-Occidental tradition of right of asylum, has been going on without interruption since the end of World War II.

We Americans, the British and the French have forcibly repatriated millions of anti-Communists to Stalin's executioners.

We even repatriated Soviet nationals who had fought in our ranks against the Nazis in Italy and elsewhere.

Pro-Communists, if not members of the Communist Party, sold General Marshall and President Truman the bright idea that we are bound by agreement to repatriate by force the anti-Communist Soviet nationals in our custody.

CITES MANY INSTANCES

The French repatriated by force anti-Communist prisoners of war in Vietnam. The Austrian Government just recently released forcibly returned many Yugoslav refugees.

The Portuguese are right now preparing to return anti-Communist refugees from Red China who came via Hong Kong to Macao.

As a result of the solution of the Trieste question, the Italian Government is forcibly repatriating Yugoslav refugees who lived as long as 10 years peacefully in Italy. The Yugoslav Tito government is at the same time forcibly repatriating refugees to Rumania, a 100 percent Moscow satellite.

An endless list of tragedies, going on and on with no end in sight. And this in the year of the Lord 1956, years after we fought our battle against forced repatriation of the Korean prisoners of war in the United Nations!

We even preferred to prolong the Korean war for 14 months to an earlier end, which would have resulted in forced repatriation of the anti-Communist North Korean and Chinese prisoners.

We have now some reason to hope that Congress will soon start an investigation of the whole forced repatriation program as carried out by our own military and civilian authorities after the end of hostilities in 1945.

But such investigation, necessary as it is, will not be enough. In order to free mankind from the crime of forced repatriation, we badly need the enactment of an "International Convention Against Forced Repatriation."

WOULD ROUSE PUBLIC OPINION

Such a convention can only be enacted by the United Nations, whose next General Assembly will convene in New York or elsewhere in September 1956.

A preliminary study of the possibility and chances of such convention in the U. N. showed that it can be done, if American—and other—public opinion can be sufficiently aroused to demand it.

It should be easy to start the ball rolling if great American organizations as, e. g., the Tolstoy Foundation, the International Rescue Committee, the National Catholic Welfare Conference, the Church World Service and others would launch a nationwide campaign for the enactment of such a convention.

There is no doubt in the mind of this writer that untold other organizations, as for instance the Assembly of Captive European Nations and the many organizations of Americans of Russian, Ukrainian, Polish, Hungarian, and Baltic origin, would enthusiastically join in such a campaign.

If such a campaign is skillfully handled, it should be very difficult, if not impossible, for any delegation to the United Nations—the American mission to the U. N. included—to deny the moral and judicial justification of a convention against forced repatriation.

This writer has prepared the following draft convention as a possible basis for discussion:

The contracting parties,

Recognizing that forced repatriation of prisoners of war, of civilians who, in the course of war or peace, revolution, violent or peaceful change of governmental regimes became displaced persons and of political refugees is a crime against humanity, already outlawed by international law as well as by the tradition of ready asylum for political exiles; and

Being convinced that in order to free mankind from such crime against humanity an internationally recognized codification of the crime of forced repatriation and international cooperation is required;

Hereby agree as hereinafter provided.

ARTICLE I. The contracting parties confirm that forced repatriation of prisoners of war, of civilians and of political refugees whether committed in time of peace or in time of war, is a crime under international law which they undertake to prevent and to punish.

ART. II. In the present convention, forced repatriation means any of the following acts:

(a) The forcible extradition of prisoners of war to the country in which they were taken prisoners or from which they came before they were taken prisoners.

(b) The forcible extradition of civilians who in time of peace or war became displaced persons to the country of their origin or to the country from which they came before they became displaced persons.

(c) The forcible extradition of any person who fled from his country of origin or residence for a political reason to this country.

The term "political" in the sense of this convention shall be understood in its broadest meaning, including economic motives if the economic condition which caused the person involved to flee must be considered as an integral part of the politico-social structure of the country of departure.

LISTS PUNISHABLE ACTS

ART. III. The following acts shall be punishable:

(a) Forced repatriation as defined in article II of this convention;

(b) Conspiracy to commit forced repatriation;

(c) Direct and public incitement to commit forced repatriation;

(d) Attempt to commit forced repatriation;

(e) Complicity in forced repatriation.

ART. IV. Persons committing forced repatriation or any of the other acts enumerated in article III shall be punished, whether they are constitutionally responsible rulers, government officials, or private individuals.

ART. V. The contracting parties undertake to enact, in accordance with their respective constitutions, the necessary legislation to give effect to the provisions of the present convention and, in particular, to provide effective penalties for persons guilty of forced repatriation or any of the other acts enumerated in article III.

ART VI. Persons charged with forced repatriation or any of the other acts enumerated in article III shall be tried by a competent tribunal of the state in the territory of which the act was committed, or by such international penal tribunal as may have jurisdiction with respect to those contracting parties which shall have accepted its jurisdiction.

ART. VII. Forced repatriation and the other acts enumerated in article III shall not be considered as political crimes for the purpose of extradition. No diplomatic, parliamentary or other immunity shall apply to the crime of forced repatriation and the other acts enumerated in article III.

ART. VIII. Any contracting party may call upon the competent organs of the United Nation to take such action under the Charter of the United Nations as they consider appropriate for the prevention and suppression of acts of forced repatriation or any of the other acts enumerated in article III.

ART. IX. Disputes between the contracting parties relating to the interpretation, application or fulfillment of the present convention, including those relating to the responsibility of a state for forced repatriation or any of the other acts enumerated in article III, shall be submitted to the International Court of Justice at the request of any of the parties to the dispute.

Exhibition of Sportsmanship

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. WAINWRIGHT. Mr. Speaker, how many people noticed that incredible exhibition of sportsmanship, which took place in Australia last Saturday? John Landy, world mile record holder, gave up the chance for cracking another world record and jeopardized his own berth on the Olympic team by helping a fallen teammate.

The great Australian athlete was way ahead to another 4-minute mile when a fellow competitor tripped and fell 600 yards from the finish line. Landy stopped and turned to help his fallen colleague. But the downed man urged him to go on. Ron Clarke shouted, "Get going, John. See you later. Don't worry about me."

Not only did Landy get going, but he made up the 30 yards he had lost and won the race in 4:04.2—still an incredible time. Roger Bannister's coach—Bannister being Landy's chief rival—said:

It was the most gallant action I have seen in a lifetime of athletics. Landy is the sort of man who would do that, an Olympic berth was at stake, but that did not matter to Landy. All that worried him was the man on the ground.

When Landy stepped to the rostrum to accept the winner's medal, pandemonium broke loose in Melbourne Olympic Park Arena. And well it might. Landy's action exemplified everything that is good and decent in our world today. None of us is too big or too important to learn a lesson from this fine Australian lad's actions.

Little Farmer Wants Help, Too

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article entitled "Little Farmer Wants Help, Too, Reporter Discovers," which appeared in the Burlington (Wis.) Standard-Press on February 23. I commend this article to the attention of all Members who are interested in the farm problem and believe that this reporter has made an important discovery.

The article follows:

LITTLE FARMER WANTS HELP, TOO, REPORTER DISCOVERS

Probably the most widely publicized part of President Eisenhower's 9-point farm program now being debated in Congress is point 1, the so-called soil bank.

Briefly, under the plant, it is proposed to withdraw 40 to 45 million acres from production of problem crops in an attempt to get rid of the surplus and raise farm prices. The two major points in the plan are: (1) An acreage reserve; and (2) a conservation reserve.

The acreage reserve plan is reported to be a method to use the surplus to reduce the surplus. It is supposed to work in this way: In exchange for placing a portion of his allotted acreage in the soil bank the farmer will receive certificates which will be good for cash at the bank for commodities from surplus Government stocks.

It is estimated that the conservation reserve will take 25 million acres out of all crop and livestock production for several years. This land will be put into wood, grass, or water storage. It is voluntary and is reported to provide generous incentives for widespread participation.

This week the Standard-Press is carrying an ad sponsored by the national Republican senatorial and congressional committee on the measure. And, a reporter made inquiries among area farmers and feed and implement dealers to find out what the local feelings were on the plan.

NOT IN FAVOR

A great majority of the people interviewed on the subject stated that the plan would not benefit the average Wisconsin farmer. About the only ones in the area to benefit would be the cash crop farmer and the larger landowner, was the reply received from several of those questioned. The average farmer in the area is now faced with a land shortage and not an excess of land, it was learned. One farmer stated that the dairy farmer couldn't participate because the dairy herd takes so much to feed and if he cuts his acreage he would be forced to turn around and buy his feed.

Elmer Boll, general manager of the Burlington Consumers Cooperative, stated that the plan would aid the grain farmers but would be of little aid to dairymen. When asked his opinion of the plan, Walter Uebele,

Sr., of the Burlington Feed Co. stated, "As far as the Wisconsin farmer is concerned the soil bank is a detriment because the Wisconsin farmer is a dairy farmer and he needs all the feed he can get. If a part of his land lies idle the farmer must sell part of his herd or go out and buy feed for his livestock which would cost him a lot more than the Government would pay for leaving the land idle."

BENEFIT GRAIN FARMERS

The only favorable comment came from a part-time farmer who has a full-time job in town. He stated that he would be ahead if he could be paid for leaving his land lay idle. The man declined to permit use of his name.

Phil Warren, town of Burlington chairman, stated that he saw the soil bank as a good deal for the plantation owners and the wheat farmers of the West. He added that in his conversations with local farmers he found that they did not feel that it was the answer to their problem. In conclusion, Warren stated that some plan would have to be devised that would benefit the small farmer as well as the large farmer if the farm problem is to be completely solved. All previous plans have helped the "big boy" and not the "little fellow."

Some More Encouragement on the Right

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. GWINN. Mr. Speaker, I was very much encouraged to read the following letter which appeared in the February 24 Wall Street Journal from William J. Ackerman, a junior at Iowa State College. He protests against the use of college textbooks slanted toward socialism, especially in subjects such as government and economics. Undoubtedly there are many intelligent students in schools all over this country who realize that their textbooks are so slanted. It is upon them that we must pin our hopes for maintaining a free and democratic America. That biased textbooks are selected for use in our colleges is evidence of the insidious methods used by the elements described by Ackerman as follows:

COURSE IN ECONOMICS

EDITOR, THE WALL STREET JOURNAL:

At the present time I am about two-thirds of the way through my junior year at Iowa State College, following the program leading to a bachelor of science degree in electrical engineering. As a result of some of the courses I have taken so far, I've reached the conclusion that most businessmen are not aware of what is being taught in some of these courses. In particular, I am referring to the so-called liberal arts subjects such as Government and economics. In order to be more specific, I will confine my remarks to the particular course in economics which all engineering students at Iowa State are required to take, although the subject matter in other courses follows the same general trend.

It can't be said that the student isn't warned about what the course will be like because the authors of the economic textbook used here clearly state in the foreword that they have placed least emphasis on private claims and most on the means for serving social progress. Reading on, it soon becomes clear that the authors feel social progress can best be served by conscious social organization, by reforming the market and industries to make them serve the needs of the largest number of people, by increased Government responsibility, and by greater restraint on the actions of irresponsible private businessmen.

Starting with some of the earlier economic theories, the textbook informs the student that Adam Smith developed the formula that "put a halo of morality around naked selfishness and greed," making this rule of business palatable and respectable; whereas, on the other hand, the logic of Marx's position was irrefutable.

Soon after we come to the part concerned with the 1929 depression. We learn that the New Deal had heart as well as head, that it championed the rights and welfare of the common man, it was a notable advance over the policies of President Hoover, and recognized that Government intervention in the economy was imperative in the emergency and would be required in numerous areas in the future.

According to the book, the best way to preserve the system of private capitalism is through steeply progressive income taxes along with high inheritance and gift taxes. Even so, developments in Britain since the war strongly suggest that social planning will supersede the hit-or-miss economy which has survived in this country. The experiment in Britain seems to show that public enterprise is "surer and more resourceful than private enterprise can be," and that security and progress can be obtained by no other means.

Concerning the Federal budget, we are told that "deficit financing" is a term of reproach and an incorrect description, in that while there are red figures on the Treasury's books the economy is getting richer because of the public spending policy. Furthermore, the Federal debt is little or no economic burden to the country, it is merely an accounting trick—"the left pocket owes money to the right pocket."

Moving on to postwar developments, we find that the Taft-Hartley Act "was a threat to the progress of all organized labor," and unions discovered that "trying to live with the law was like passing over a military terrain that had been mined by the enemy."

At the present time, the most urgent needs are extension of benefits and coverage of social security, further guaranties of civil liberties, elimination of slums, raising diets to "minimum adequacy," "effective educational opportunities made available to all," and a compulsory health insurance program; all these being done by "immediate" Federal action. The main problem confronting us in the future is the question of whether we want planning by and for private interests or by organized society for the public welfare. We are assured, however, that public claims will surely advance.

As another indication of the authors' thinking, the book informs the student that "cooperative production enterprises may be owned by those who work in them, as notably the kolkhozes (farms) and artels (factories and workshops) of the Soviet Union," and that the Soviet economy does no serious violence to consumers' wishes. Furthermore, Soviet consumers are presented with considerable variety in many classes of goods.

I could cite many more specific examples, but they would just be repetitious of those already given. Not once, throughout the entire book, did I find a single reference or statement that could be taken as being favorable to free enterprise. The impression is given that the only reason America enjoys a high standard of living is because of the efforts of the political and bureaucratic "humanitarian reformers" in Washington. The overall theme of the textbook can be summed up in one sentence: Public (government) enterprise is good, private enterprise is bad.

I might add that this is the only course in general economics that 99 percent of the engineering students at Iowa State College will ever take. It seems difficult to believe that the idea of private enterprise will be able to survive in this country as long as there is no effective effort to contradict the Socialist propaganda now being taught the majority of college students. It is for this reason that I feel it would be helpful if businessmen would take more interest in the matter. Otherwise freedom and free enterprise will lose by default.

WILLIAM J. ACKERMAN.

AMES, IOWA.

New York City Extends Real "Benvenuto" to President Gronchi and Foreign Minister Martino of Italy

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. ANFUSO. Mr. Speaker, from Saturday March 10 to Wednesday, March 14, the city of New York was the proud host to Italy's President, Giovanni Gronchi, and its Foreign Minister, Gaetano Martino. Millions of people lined the streets of New York to say "Benvenuto" to the distinguished visitors from abroad.

"Benvenuto" means welcome in Italian. Indeed, it could be said with sincerity and affection by the million and a half citizens of New York who trace their ancestry to Italy. It is an established fact that there are more persons of Italian origin in the city of New York than there are in Rome or in any other city of Italy.

But the descendants of Columbus were not the only ones to extend a warm welcome to the President of the Republic of Italy. His name was on the lips of nearly all of New York City's 8 million people. Whether the people heard President Gronchi on the radio, on television, or at public and private receptions, they were impressed with his genuine admiration and affection for the United States. It was truly felt that here was a leader speaking for his people, who were proud of the ties of affection and blood which bind our two countries.

This affection for the United States and genuine love for the American people is strongly evident in the two addresses which President Gronchi and Foreign Minister Martino made at a banquet in their honor, Sunday evening, March 11, at the Waldorf Astoria in New York, attended by more than 3,000 representative New Yorkers.

Mr. Speaker, you and my colleagues well remember the address which President Gronchi made before a joint session of the Congress on Wednesday February 29, 1956. You, too, were impressed, I am sure, with the case which President Gronchi had made out on behalf of Italy and the peace and security of the world. Most of us were convinced after that address that a more worthy ally of the

United States would be hard to find in the European family of nations today.

I cannot let this occasion go by without giving due recognition to some of our outstanding public officials and citizens who made New York City's "Benevenuto" to Italy's President Gronchi and Foreign Minister Martino possible. Among them are: His Eminence Francis Cardinal Spellman; the Honorable Averell Harriman, Governor of New York; the Honorable Abraham A. Ribicoff, Governor of Connecticut; the Honorable Robert F. Wagner, Mayor of New York; the Honorable Ellsworth Bunker, president of the American Red Cross and also of the America-Italy Society; Mr. Fortune Pope, publisher of Il Progresso Italo-Americano; and Mr. Luigi Antonini, president of the Italian American Labor Council.

Mr. Speaker, I now wish to put into the RECORD excerpts from the addresses of President Gronchi and Foreign Minister Martino:

SPEECH BY THE PRESIDENT OF THE ITALIAN REPUBLIC, GIOVANNI GRONCHI

Messrs. Chairmen, Your Eminence Cardinal Spellman, Ambassador Luce, the governors, guests of honor, ladies and gentlemen, I wonder whether you now expect me to deliver a major political speech—I should say, whether you are afraid I might do so.

Have no fear, for this is not my intention. Rather, I want to tell you that I am deeply touched by this impressive meeting, by the statements made here by so many distinguished speakers, and, most of all, by this atmosphere of warmth and affection for the nation which I have the honor to represent.

This is a great emotional experience, stirred by your welcome and by the thought of the loyal friendship, gratitude, and affection which is felt by my nation for the United States.

The close relationship existing between our two countries is not a matter of coincidence or of material interests. It originated and became stronger through a concurrence of efforts and identity of ideals which make us feel like close neighbors, in spite of the geographic distance between our two countries. It survived many trials, even of a political nature. The friendship between our two nations stems from ties of affection and blood which existed long before diplomatic treaties and agreements. This is a historical fact of extraordinary importance which becomes clear and leaves an indelible imprint upon those who, like myself, were privileged to travel across this country and to come into contact with your people.

I arrived in this huge metropolis of yours after having had already a glance of the United States at work, from the Atlantic to the Great Lakes and to the west coast. All that I have seen, your great industrial plants and your prosperous farms, your universities and laboratories, and the manifold aspects of the American way of life confirms me in my conviction that this Nation is really what hundreds of million human beings, all over the world, feel and think that it is, namely, a gigantic force in the service of peace and democracy, a source of tremendous hope for the future. I do not think anyone shares this hope or is aware of this reality more than the Italian people.

Here in your country we can see a new flowering of the civilization which became universal in Rome and which still has strong roots in that city. Here in this country, which the efforts of Italian explorers and navigators helped to discover, dwell now millions of people who came or originated from Italy and whose efforts and energies became channeled through the mighty river of the American society. Surely if there is another country, a people and a nation, to which the Italians have a sense of belonging, this is America, as so many of you who came here tonight can nobly testify.

This gathering with which you honor me tonight is under the joint sponsorship of the America-Italy Society and of the Italo-American organizations of New York. I wish to thank the sponsors on behalf of my country, and I am particularly gratified because they had the idea of this joint sponsorship, confirming once more the fact of Italo-American solidarity, which, just as it contributed in the past to the prosperous development of the United States, is now an equally important factor in the development of international cooperation and the strengthening of democracy throughout the world.

The relations between Italy and the United States have never been as intimate and fruitful as they have been after the war. The past 10 years have imparted to our relations a meaning and a pattern which is pregnant with the greatest potentialities. We now look forward to the further unfolding of such potentialities, through closer economic, social and cultural exchanges. We gratefully remember that in our most trying hour the United States were ready to extend their friendly hand to us. In turn we justified your confidence by a demonstration of what can be accomplished by a people endowed with strong moral and intellectual resources, and anxious to restore its fortunes through peace and freedom.

The reconstruction of Italy, her economic and social recovery, matched by an increasing strengthening of the fabric of her democratic institutions, have reassured the world—and in particular our American friends, who first had faith in us—that Italy is again to be reckoned as an important factor working for the progress of civilization, at home and abroad. What we accomplished since the end of the war enabled us to look confidently to the future. We still face, of course, many problems, old and new. We are aware of them and do not underestimate them. In fact, we are already coming to grips with them, such as for instance those related to the development of our southern regions, and we are doing so with stronger determination than at any other period of our history. Millions of visitors, who come to Italy every year from all parts of the world, can testify to our efforts and our determination. The pace of our progress will be even steadier and our contribution to the general welfare will be further increased if and when more liberal principles will prevail throughout the world with regard to the movements of commodities and persons.

I wish I could tell you in detail what we are doing, in our own country and abroad, to serve the great common objective of building a better world for ourselves and for all other people. I shall attempt, however, to give you a brief outline of these efforts. I see here in this ballroom representatives of all segments of American life, and this gathering therefore appears to me as a symbol and a representative cross section of this great country of yours.

To you, representatives of Italian-American communities and of labor organizations, I say this: Italy thanks you for your affection, and reciprocates this affection with the heart of a mother. Italy is proud of all that you have accomplished in the United States, and of the many fruitful ties which your generosity and your sense of civic duty created between the two countries you love. Have your sons follow on this same path, so that the feeling of brotherhood among our peoples may become even more strengthened. Rest assured that the nation of your fathers is now full of energies and vitality, and that it intends to give peace and work to all its sons. The task is great but so is our determination, and your solidarity will cheer and sustain us in our efforts, as it did in the past.

To you, representatives of the American industrial and business economy, I say this: In 10 years Italy accomplished a degree of reconstruction and development such as the most optimistic observer would never have dreamed after the devastations of the war. Like many other times in the course of its long history, possibly with greater energy and speed than in other times, our people bravely stood the test of its hour of adversity, and started on the road to a new, peaceful existence. Our industrial production index in 1955 was 200 as compared with 100 in the prewar peak year. Our merchant fleet in 1955 reached a total of more than 4 million tons, as compared with 3.5 million tons before the war. New industries, such as for instance natural gas and oil, motor-scooters, and motion pictures, opened wider horizons for the Italian economy, giving employment to hundreds of thousands of people. A huge program is now under way in the southern regions of Italy, to raise the basic economic and social conditions of the people. Hundreds of thousands of acres are being distributed to small farmers. New modern highways will link, in a few years, all principal points of our territory, including our islands, to meet the requirements of our expanding economy including trade and tourism. In fact there is no economic or productive field in which work is not being done to modernize and to expand our facilities. This is today's Italy at work, a nation worthy of the cooperation and trust of a great industrial land like the United States.

To you gentlemen, who are serving your country in all walks of public life, I say this: Italy has resumed her place of responsibility and cooperation in the international family, fully aware of her duty as a great civilized nation in this fateful hour of history. Long before Italy's accession to the United Nations, which sanctioned its full restoration to the world scene, our country dedicated its efforts to the establishment and strengthening of European integration and of the Atlantic alliance, which are the twin foundations of our peace and freedom. In the Atlantic Pact, in the Council of Europe, in the Organization for European Economic Cooperation, in the European Community for Coal and Steel, in all other initiatives aimed at promoting solidarity and unity, Italy has been all along an active element of progress. The western nations must still travel a long way until the foundations of their common future are fully secured. We shall continue along this path with the same determination of the past, confident that our contribution is now just as significant as that of any other nation. In fact, international solidarity is conditioning the life of all our peoples, and it is up to us to turn this fact into a new guarantee of strength, security, and common well-being.

With the help of God, Italy will not fail to the tasks which lie ahead, in the spirit of its great human and Christian civilization.

To you, Mr. Vice President, to you, Your Eminence, to you, governors, to you, Mr. Mayor, to the presidents of the sponsoring committee, Mr. Bunker, Mr. Pope, and Mr. Antonini, to all those who came here and are around this table, to the organizations which they represent, go my sincere thanks for the honor which, through my person, you paid to my country. I assure you this honor will not be forgotten, and its memories will be ever cherished, as a pledge and symbol of friendship among our peoples.

In this spirit I raise my glass to the prosperity of the President and the people of the United States. Long live the United States, long live Italy.

SPEECH OF HIS EXCELLENCY, GAETANO MARTINO, THE MINISTER OF FOREIGN AFFAIRS OF ITALY

I am very sorry that Mrs. Clare Boothe Luce is not here tonight. She had to address you before me and it is, of course, not possible for me to take her place. She has such a sense of humor and such other attractive qualities that you surely cannot expect me to match them.

I want to take this opportunity to express my most cordial wishes for her quick recovery.

In Italy we all know and appreciate the interest, the intelligence, and above all the enthusiasm, with which your Ambassador works to make ever stronger the traditional friendship between the United States and Italy. If perseverance is, as I do believe, a quality of men, certainly Mrs. Luce is displaying also this quality at the highest degree, teaching a lesson and giving an example to many representatives of the sex to which I belong.

Her work, accomplished with the tact of a diplomat and at the same time with a delightfully feminine gracefulness and intuition, conquered for Mrs. Luce first the appreciation and then the respect, and also the affection of the Italian people and its representatives.

On this important occasion, and in my capacity as Italian Foreign Minister, I am delighted to be interpreter and witness of these feelings.

And now, my American friends, Americans of Italian origin and Italian residents of the United States, let me tell you how happy I am to be once more with you in this great city of yours as a representative of the Italian Government in this visit in which our American friends are welcoming for the first time the Italian Chief of State.

I am sure that Italians and Americans alike are looking at this visit as an omen for further developments in the relations between our countries, which already are so close and fruitful and acquire an ever-increasing significance against the background of current international events.

During the year which elapsed since my last visit to this country, Italy, as anyone can see, followed the course expected by all of you and the other sincere friends of my country: a course leading to progress along the way of democracy, freedom and peace.

Within its borders Italy took a series of appropriate actions to accelerate the economic and social evolution of its people; developed its scarce resources; insured better conditions of life for all its citizens.

As I see it, this means to have well proceeded on the main road of democracy. In the international field, Italy's action continues to be directed toward full participation, with all our strength and will, to the strenuous and difficult task of insuring a stable and safe peace, for all people, a peace which will be all the more stable and safe if it will succeed in strengthening the bonds between free nations dedicated to common ideals and in eliminating reasons of suspicion and disagreement. With this spirit Italy recently entered the great family of the United Nations. This very important event does not represent for us a final goal but rather a starting point for new action; we see in it the recognition of our rights, from which at the same time originate a series of duties and responsibilities which we readily accept, convinced as we are that the high purposes of the great international organization are worthy of all our efforts and sacrifices. Speaking of Italy's admission to the United Nations I feel I must publicly address my thanks to all the Americans who, either in their official position, as representatives of the administration or the press, or as private citizens, often pointed out the painful position of Italy, kept outside of the United Nations, and with their action and understanding helped to reach a solution which did justice to Italy and at the same time enhanced the prestige of the United Nations in the world.

As you know, I recently completed a long trip in the Far East where there is a lively and friendly interest for Italy. I say this because I think you will be pleased to hear it. It is not only a matter of interest for the Italian cultural traditions, but rather a warm, widespread appreciation for the hard work and the achievements of the Italian people. Even to those countries Italy does not appear any more only as an heir to a wonderful past, but rather as a modern nation, striving to solve great social problems, eager to contribute to the progress of mankind, taking its share in the responsibilities and hopes of our days. This is, in fact, the new position of Italy, which is known to have the faith, the will, and the courage to work together with other free nations, for the establishment of a better world, free from the fear of war, of hunger, destitution, and slavery.

It is because of this faith, this will and courage, in addition to so many other common ideals and interests, that the American and the Italian people today stand close in their purposes and work as never before in the course of history. We understand each other very easily because we follow the same ideals. The friendship with the United States of America is one of the foundations of the new Italian democracy: a guaranty and a condition for its future development.

This happy understanding between our two nations make us sure that they will continue in the future to proceed always together, side by side, for the accomplishment of our common ideals and aims.

It is in this assurance that I address to you all my thanks and my cordial greetings.

New Competition Could Bring Lower Air Passenger Rates

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. BOSCH. Mr. Speaker, many of my constitutents have written me recently regarding the need for new competition in air transportation as an effective spur to lower fares and better service on both our domestic and overseas air routes.

I have been advised that our Civil Aeronautics Board, while it publicly states, for example, that overseas air fares should be brought down, has nevertheless recently approved a 10 percent increase in first-class overseas air rates.

Shortly before approving this 10 percent increase—admittedly under tremendous pressure from the big overseas air carriers—the Board turned down a proposal by the independent North American Airlines group to launch overseas air coach service charging fares about 50 percent lower than the present minimum off-season air tourist rates across the Atlantic.

This obvious inconsistency is disturbing millions of Americans who would like to fly to Europe but cannot afford to. It is also alarming to those of us who believe that the way to get costs down is to create a mass market for products and services, and allow new competition to bid for public preference on a price and quality basis. That has always been the American way, but it does not seem to apply in air transportation.

Under leave to extend my remarks in the RECORD I call your attention to a recent discussion of overseas air fares which appeared in the Sunday New York Times for March 4. This article puts the finger squarely on the fact that the person of average means deserves a far better break on overseas air travel fares than he is now getting. Certainly if a small independent airline such as North American proposes to give him that break by cutting trans-Atlantic fares in half, it would be in the public interest to open up the airlanes over the Atlantic to this kind of new competition. The same independent competition has forced down coast-to-coast air coach fares in the United States and there seems to be no logical reason why it could not perform a similar service for the traveling public between the United States and Europe. I commend to my colleagues a careful reading of this article:

AVIATION FARE RISE—A PRICE INCREASE SPURS A DISPUTE ON SOME FUNDAMENTAL ISSUES

(By Richard Witkin)

The airlines have so accustomed the public to annual improvements in trans-Atlantic service, this year, a respectable quota of new flights, equipment and routes, that one element of backsliding comes as something of a jolt: The international carriers have raised first-class fares 10 percent. Effective April 1, the on-season New York-London fare will be $792 round trip, compared with $720 in 1955. The increase, agreed upon at a conference of the International Air Transport Association in Miami last year, covers both North Atlantic and Pacific routes.

The fare rise has provoked a sizable commotion, but not for the obvious reasons. The main critics of the rate structure object not so much to an increase in first-class fares as to failure of the tourist fares to come down.

The commotion started last month when the Civil Aeronautics Board refused to approve the rate increase. The decision, if it stood, meant voiding the new fare for all lines, since price pacts must be unanimously ratified to go into effect. Tariffs had been published, tickets sold, and all kinds of planning and bookkeeping effected on the basis of the anticipated higher fare.

Washington was inundated with protests against the CAB refusal from aggrieved foreign governments. Particularly compelling was their argument that the CAB decision had come so late that it would throw plans for the approaching tourist season into turmoil. The CAB was compelled to back down. The Board said it would go along with the new fare until October 1.

CAB'S POSITION

The Board's position is this:

There has been a tendency to add frills to first-class service without a price increase. The tourist-passenger is the real sufferer; he is paying for the first-class frills by being denied the price reduction he should receive.

The CAB indicates it will not go along with any new agreed fare, to be effective after the September 30 deadline, unles the pact pays due regard to these principles:

(1) Separate charge for sleeperettes. (Sleeperettes recline further than standard seats, have leg support, and are the next best thing to beds. But conversion to sleeperettes entails a 25 percent penalty in total seat capacity.)

(2) Increase of current berth charges to at least twice the sleeperette charge.

(3) A realistic requirement on the numbers of seats for all types of service. Requirements are too low now, the CAB says.

(4) Revision of fares to eliminate tourist subsidization of first-class service.

The CAB objections to the fare rise are in addition to those of North American Airlines, whose recent proposal to schedule New York-London flights for $140 one way (the fare is now $290) was rejected by the CAB. This irregular airline is a special case, since the Board has revoked its operating authority for violating regulations. A court appeal is pending.

Legislation Needed To Eliminate Unfair Practices in Automotive Industry

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. MULTER. Mr. Speaker, I desire to call to the attention of our colleagues the testimony I gave on March 7, 1956, before the Subcommittee on Automobile Marketing Practices of the Senate Committee on Interstate and Foreign Commerce which is presently holding hearings with regard to automobile marketing practices. The testimony, including my prepared statement, follows:

Mr. MULTER. Thank you, Mr. Chairman, and members of the commitee.

I appreciate the remarks of the chairman. It was a great privilege for me to be able to serve with him when he was in the House. I appreciate the opportunity of coming here and testifying before you this morning.

I have a prepared statement which, if it is agreeable to the committee, may be made a part of the record. It is in large part, I am sure, cumulative, as far as many of the facts contained therein are concerned. So I think we might get along faster if, instead of my repeating many of the facts that you already have in your record, I give you my recommendations with reference to them and then, dilate upon the subject matter if you think it necessary.

Senator MONRONEY. You may proceed to develop it as you see fit. We will print the entire statement in the record at this point, and then whatever comments you would care to make, we would be glad to have you add.

Mr. MULTER. Fine.

(The prepared statement of Representative MULTER is as follows:)

"STATEMENT OF REPRESENTATIVE ABRAHAM J. MULTER, DEMOCRAT, 13TH DISTRICT, NEW YORK, BEFORE THE SUBCOMMITTEE ON AUTOMOBILE MARKETING PRACTICES OF THE SENATE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, MARCH 7, 1956

"Mr. Chairman and distinguished members of the committee, I appreciate the opportunity to appear before your committee. Permit me to preface my statement by commending the committee for its perseverance in conducting these hearings in a manner requiring a complete disclosure of the problems affecting the industry's relations with the public.

"THE PUBLIC INTEREST DEMANDS THIS INQUIRY

"The committee's approach in reaching the issues by receiving testimony from the manufacturers, dealers, and consumers has reassured the public that any resultant legislative action that might be undertaken by the Congress will be directed to curing the evils disclosed in the record made before this committee.

"In pointing up some of the unfair practices that demand your attention, I should like to specificate one underlying fact, namely, that in the automobile market both the consumer and the dealer have little choice in the selection of a manufacturer. As you well know, the year 1955 saw the disappearance of one more automobile manufacturer, Kaiser-Willys; today only six sources remain. It is an anomalism that as the market has grown, the number of companies in the market has lessened. The public was only amused upon reading in the press that the General Motors Corp., the biggest manufacturer in this country, which is at the same time the country's largest automobile manufacturer, in testifying before the Senate Antitrust and Monopoly Subcommittee in December 1955, said that it 'is the servant of the dealer.' It is public knowledge that dealers have been forced into serflike submission to the manufacturer. The dealer's plight is manifest in noting figures, such as those submitted by the General Motors Corp. last December, showing that the 1953 return on net worth for dealers averaged 14.40 percent, and was reduced in 1954 to 9.4 percent. Comparable figures show that the corporation earned 20 percent in 1953 after taxes and bonuses, and almost 24 percent in 1954.

"The mighty hand of the manufacturer has forced the dealer to 'take down his hair'—to the end that the industry reveals itself beset with problems on all sides.

"What is the situation today? The consumer may need a new automobile, but he dreads the purchase. Breaking in the car means running back and forth to the dealer to correct inherent mechanical failures that are uncovered long after the guaranty period has expired. The attitude of the consumer is aptly defined in two unsolicited letters I received a few weeks ago. These letters were printed in the CONGRESSIONAL RECORD—one appearing in the January 31, 1956, issue (pp. A993–A995); the other in the February 9, 1956, issue (p. A1331). The dealer, on the other hand, is called upon as a regular procedure to comply with, not his warranty, but a warranty the company requires him to make. What has been the dealer's redress? The answer to the dealer receives from the manufacturer is to step up or maintain his sales volume—even if that means come-on advertising, bootlegging, price packing, and any other unfair trade practice. Even outright fraud is countenanced by the manufacturer.

"THE NATURE OF MANUFACTURER-DEALER RELATIONS

"Let us look at some of the problems. Many an inexplicable accident is caused by defective vehicles. The manufacturer upon whom the blame should rest passes the responsibility on to the dealers who cannot assume nor begin to fulfill the obligation. The automobile manufacturer today makes only a spotcheck of one out of every 10 or 20 automobiles that leave the assembly line. The company's warranties are plainly worthless, and the dealer upon whom the responsibility falls gives a minimum of service until the guaranty period expires; after which, he charges the consumer.

"In testifying last December before a Senate committee a spokesman on behalf of 1 of the 6 manufacturers in the country stated: 'the manufacturer assumes the greater risks and bears the ultimate responsibility to the customer.' Should we not make certain, then, that this responsibility is firmly fixed? In this regard I am introducing a bill to prohibit the interstate sale, transportation, or use of a new automobile unless accompanied by a certificate of fitness from the manufacturer or assembler, showing that the automobile has been inspected and found in good working order and, further, that it has been road tested and found in good operating condition after at least 100 miles at each of the speeds of 15, 30, 45, 60, and 75 miles per hour.

"A substantial number of the problems facing the industry stem from the dealer agreement which is so drawn that the manufacturer may grant or withdraw the franchise at will. Within the past several days we have observed newspaper reports that the manufacturer's cancellation privilege will be superseded by a provision requiring the cancellation to be for cause. Will the manufacturer be compelled to define the term 'cause'? Admittedly, there is no uniformity among the court decisions construing automobile franchise agreements. The extent of legislative action should be determined after an analysis of the facts that have been uncovered in these hearings.

"The hearings conducted by this committee have revealed that the dealer must file each month several reports showing his sales and inventory volumes. The manufacturer bases his deliveries to the dealer upon these figures. Whether or not the dealer considers this quota salable is immaterial. Moreover, the dealer has no control over the various built-in accessories that are billed as extras. For instance, the automobile is listed as equipped with vacuum windshield wipers, but is later shipped in with an electric wiper billed as an extra. Every car comes with a hole in the dashboard for a cigarette lighter, but the lighter is an extra. It is the manufacturer, also, who determines the stock of parts and accessories that the dealer must purchase from the automobile manufacturer. The dealer could purchase these same parts and accessories directly from the parts manufacturer and much cheaper, too. The only way to abolish this practice is to prohibit lump-sum bills and to require of the manufacturer and of the dealer a complete itemization of all charges. No amount should be collectible by either for extras unless ordered in writing by the buyer.

"The dealers must pay for advertising literature they do not want and would not order. It is sent in to the dealer in such quantities as the manufacturer thinks he should distribute. The dealer is billed and must pay for that literature even though he throws most of it into the wastebasket. The dealers must pay a fixed sum per car to the manufacturers toward the cost of advertising. The dealer's name and address is never part of that advertising, only the product is mentioned. This policy would cease if the responsibility for exaggerated and fraudulent advertising were laid to the manufacturer and if the manufacturer were prohibited from requiring dealer contributions toward the cost of such advertising.

"I was pleased to learn that, as a result of testimony before this committee, the Federal Trade Commission has recently filed charges against the General Motors Corp. for false and deceptive advertising. Independent manufacturers have reported that General Motors use of the words 'genuine Chevrolet' to describe parts used in making repairs is diverting business from the independent manufacturers and small-repair shops. The parts manufacturers contend that the items, distributed and warranted by General Motors, actually are bought by General Motors from the independent manufacturers. The implication is that the 'genuine Chevrolet' parts are superior to the same parts sold by competitors without such label.

"For the first time in the history of the automotive industry the dealers have come forward, and through the efforts of this committee there has been full and complete disclosure of the automobile manufacturers' unfair and overreaching tactics.

"As long as the manufacturers want to have dealers under contract to handle only particular makes of cars, the manufacturers should be required to sell only to such dealers

and to prohibit bootlegging. The manufacturers should be required to cancel the franchises of bootleggers.

"The need to eliminate the unfair practice on the part of some dealers in selling as new automobiles those which have been towed or driven from the factory or used as demonstrators has long been recognized but ignored. I wish to state that I have read with interest the proposal of the honorable chairman to require the placing of windshield stickers on every new car to show each transfer of ownership as a new car. On this same point, I might state that I am introducing a bill which would make it a violation for any manufacturer or dealer to replace or disconnect the speedometer on an automobile or to change its reading in such a manner to mislead the public as to the mileage, condition, or usage of the automobile.

"Not to be overlooked in any compilation of unfair automobile marketing practices are the reports of substantial overcharges under the 'package' finance deals. Dealers complain, too, they are forced to grant 'wild credit' to consumers in order to satisfy quotas in the manufacturer's race for sales. At this point I should like to touch on a matter that involves the now well-known adage: 'What is good for General Motors is good for the country.' You will see in a moment that we can now change that to 'What is bad for the insurance companies is not bad for the automobile companies.'

"On September 8, 1955, I wrote to Secretary of Defense Wilson, calling his attention to a scheme by which armed services personnel returning to this country are being duped and mulcted of thousands of dollars in connection with the sale to them of new automobiles. I indicated that the matter had been called to the attention of the automobile manufacturers who have failed to do anything to prevent these practices. I further stated that the Secretary of Defense need not make any determination of whether these practices are fraudulent or merely unethical, but urged him to direct all commanding officers to alert their men to these practices to afford them an opportunity to protect themselves accordingly. My letter of September 8, 1955, is exhibit A, annexed. I received an answer dated September 23, 1955, a copy of which is annexed as exhibit B, in which the Department of Defense refused to take any action. I replied by letter of September 28, 1955, a copy of which is annexed as exhibit C, again indicating the need for departmental action. No answer has been received to my last letter.

"Now let us see what happened when the Department's attention was called to similar fradulent practices by insurance salesmen. No General Motors was involved. An investigation was instituted which confirmed the charges. A complete set of regulations was promulgated by the Defense Department, including a directive to commanders of all bases, making them responsible for protection of the men against such frauds. Another reason for different treatment of the phony automobile salesmen is that the fraudulent business is so profitable that the automobile manufacturers have sent their own 'direct' representatives overseas to grab this business.

"Dealers explain they are unable to pass on the factory price increase on 1956 cars to the consumers. The consumer may choose another dealer, but the dealer himself, however, has a single source. The consequence is the dealer must recoup his profit by volume sales. We learn that manufacturers are awarding bonuses and discounts for extra deliveries. Volume sales are encouraged, 'stimulator' dealers are established, and rebates to the dealers figured on their annual volume of business. The consequence is that dealers are finding themselves unable to compete in the car market.

"The manufacturer in selling to the dealer receives cash as the car leaves the assembly line. The dealer complains that sales to questionable credit risks and at terrific discounts are a necessary corollary of pressures exerted by manufacturers.

"MANUFACTURER REACTION TO THESE HEARINGS

"On the heels of the disclosure of so many unfair practices in the industry, we now see by the papers that the manufacturer pretends he is reforming. General Motors Corp. has predicted within the past several days 'the beginning of a new era—an era of good will—' in relations with its dealers. I say to you, gentlemen of the committee, that such overtures are too late.

"The public confidence can only be restored by the affirmative action of this committee. Let us recall that a similar false contrition permeated the atmosphere in 1938 after the Congress enacted House Joint Resolution 594, which directed the Federal Trade Commission to investigate the policies of motor vehicle manufacturers and dealers in their relation to the public interest. The Commission, 1 year later, made public its findings, which were not at all unlike the unfair practices that are now paraded before this committee. Unfortunately, the Congress took no action at that time, for the reason, among others, that the industry itself rejected any type of Federal legislation.

"THE MANUFACTURERS' WAY OF ELIMINATING AN UNFAIR TRADE PRACTICE

The elimination of acknowledged unfair practices in the automobile industry cannot be left to the discretion of the industry itself. Let me illustrate. The phantom freight charge has long been prevalent in the automobile industry. A similar practice among steel producers, known as Pittsburgh Plus, was eliminated in the thirties. Under this practice, the manufacturer ships the automobiles to dealers from nearby assembly plants and requires the dealer to pay for the transportation in an amount equivalent to, or even greater than, the rail freight rates from the factory to the dealers' delivery points.

"Let us examine the 1954 shipment record for motor vehicles as reported in the 35th edition of Automobile Facts and Figures, 1955. Of the 6,601,071 motor vehicles shipped, 80.5 percent or 5,314,842, left the factory by highway—on a big truck that hauls several other cars, or towed behind another new car. Shipment by boat accounted for 5.6 percent, or 370,044; while rail shipments accounted for only 13.9 percent. In other words, only 916,185 out of a total of 6,601,071 motor vehicles shipped went by rail. The phantom freight charges have amounted annually to over $280 million.

"In the hope of foreclosing any action by this committee, the industry has belatedly taken action.

"I urge that the public announcements now being flaunted in our faces by the manufacturers as to their amended ways is merely an attempt to becloud the issue.

"As of February 29, 1956, Chrysler Corp., General Motors Corp., and the Ford Motor Co. eliminated phantom freight charges. Those three manufacturers at the same time increased the wholesale price of their cars to their dealers. This in the face of the Chrysler testimony that they paid out more for freight charges than they collected. Mr. L. L. Colbert, president of Chrysler, in his testimony before this committee on March 1, 1956—2 days after the price-change announcements—stated that the industry should be permitted to deal with the so-called phantom freight on its own. Their testimony and their actions, in my opinion, indicate they cannot be trusted to solve these problems.

"I have heretofore referred to the report filed by the Federal Trade Commission in 1939, pursuant to its study of the automotive industry. It should be noted that, irrespective of whether or not legislative action was necessary, the Government controls of World War II, limiting production, obviated the need for positive action by the Congress at that time. Nevertheless, we find the same unfair practices prevalent in the industry today, and what is worse, on a larger scale. In these circumstances, our duty to the public is not discharged by a formal disclosure of their nature.

"In conclusion I should like to make this observation. The manufacturers representing the automotive industry can best be described as giant octopuses whose tentacles of economic power extend over every phase of the industry, as well as over many unrelated products.

"On the other side of the picture are the 42,340 dealers—90 percent of whom are small-business men, the very backbone of our free enterprise system. In most cases they the the civic and philanthropic leaders in their communities. In the past their position has been one of dignity among their fellow citizens. They are fast becoming the most despised members of their communities.

"There were 219 dealer bankruptcies in 1953, the highest number since 1938. Two hundred forty-one dealer mortalities occurred in 1954. We have every indication that these figures will rise. It is high time to put this house in order.

"Again, Mr. Chairman and members of the committee, permit me to thank you for the opportunity to attend here and express my views on these very important matters."

EXHIBIT A

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., September 8, 1955.

Hon. CHARLES E. WILSON,
Secretary of Defense,
Department of Defense,
Washington, D. C.

MY DEAR MR. SECRETARY: For some time Members of Congress have been receiving complaints about the tactics being used by various dealers in selling new automobiles to members of the Armed Forces returning from posts outside of the country.

It seems that some of these retailers have sent representatives abroad who through fraud and deceit induce these men who are about to return to the United States to sign contracts, and to pay deposits for the delivery of new automobiles to them at the port of their arrival in this country. As part of this scheme these retailers have made exclusive rental agreements for offices in the hotels in this country at which these men and their families are temporarily lodged upon their arrival here. The deceptive practices are continued at those places until the delivery of a new automobile is made and payment obtained.

No purpose can be served by setting forth in this letter the nature of the fraudulent representations that are made, nor is it necessary for the purpose of this letter to determine whether or not these practices are actually fraudulent or merely unethical business practices. The result of all of these practices is that these men are being duped and taken advantage of. They are paying more for these automobiles than if they bought them in their hometowns, or, for that matter, if they bought them at the port of arrival. They are paying higher finance charges than they would pay if they took the opportunity of financing their automobiles is their hometowns or in the city in which they are discharged from the service, and they are being deprived of the inspection and

service that ordinarily goes with a new car purchase when made in their hometowns.

The automobile manufacturers, when apprised of these practices, have taken the position that these retailing practices are no concern of theirs.

I believe you will agree with me that in the absence of the manufacturers undertaking to prevent these practices, something must be done to help these men.

My suggestion is that you immediately issue a directive requiring commanding officers in all stations outside of this country to alert the men under their command to this situation, and to advise those men that it is inadvisable for them to make such purchases while abroad, or, for that matter, even at the place of arrival in this country, or the place of discharge from the service in this country, and that their best interests will be served by their making such purchases from dealers in their home communities. The hometown dealers, in almost every instance, can arrange for the delivery of a new automobile to them at their point of arrival or discharge in this country, which would then be available for them for transportation to their hometowns.

I hope you will agree with me that such a directive will serve a very useful purpose. As a matter of fact, the directive and the notice from the local commanding officer can be appropriately worded so that neither manufacturers nor retailers need be accused of any wrongdoing or impropriety, and yet provide some measure of protection to the members of our Armed Forces.

With kindest personal regards, I am,

Sincerely yours,

ABRAHAM J. MULTER.

EXHIBIT B

ASSISTANT SECRETARY OF DEFENSE,
Washington, D .C., September 23, 1955.

Hon. ABRAHAM J. MULTER,
House of Representatives.

DEAR MR. MULTER: This is in reply to your letter of September 8 concerning certain practices of automobile dealers in selling to members of the Armed Forces returning from overseas posts.

You appreciate, I am sure, that no agency of the Department of Defense sponsors any plan of automobile sales such as you describe and the Department is therefore without jurisdiction to discontinue it. The selection of an automobile salesman or sales contract is a matter of individual choice.

Overseas representatives of the United States automobile dealers are not amenable to military control. So long as they comply with the laws of the locality in which they do business they can offer their merchandise for sale to both civilian and military. Control of this group like their contemporaries at the port would appear to rest with the automobile dealers, their trade associations, and perhaps the manufacturers.

I believe that the directive you suggest would be more restrictive than is appropriate for issuance by this Department and that it might affect the legitimate activities of firms and dealers who render real service to our personnel. I believe that the objective we seek, the use of caution and judgment by servicemen in their purchases from unknown vendors, can best be accomplished by a continuation of the present normal counseling given by commanders to their troops. I am taking the liberty of sending a copy of your letter to the military departments.

Your interest in the welfare of our Armed Forces personnel is appreciated.

Sincerely yours,

CARTER L. BURGESS.

EXHIBIT C

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., September 28, 1955.

CARTER L. BURGESS,
Assistant Secretary of Defense,
Department of Defense,
Washington, D. C.

DEAR MR. BURGESS: Receipt is acknowledged with thanks of yours of September 23.

I fail to understand how the directive as suggested by me is in any manner restrictive. It does not require the Department or any commanding officer to take a position on the matter, nor in any manner to interfere with automobile dealers in this country or abroad. It has always been proper for the Defense Department to alert the members of the Armed Forces against dangers that they may encounter, whether physical, moral or financial.

Alerting these men to these practices is in direct line with such procedure.

Sincerely yours,

ABRAHAM J. MULTER.

Mr. MULTER. I think probably many of the facts in my statement will be found to be in accord with those adduced by some of your witnesses. Obviously, they are going to be contrary, in part, to the testimony of some of the other witnesses.

I think possibly the only point of agreement is where consumers have come forward. I believe they will be in complete agreement with what I say.

Now the matter that you have adduced here in connection with this investigation can be broken down into several subjects and I have followed that fairly closely in my prepared statement. They can be subdivided and placed under these main topics or headings: "Padding" of new and used car prices which sometimes has been referred to as "packing"; exclusive contracts; the unfair methods of motor vehicle manufacturers in their relations with their dealers, manufacturers' treatment of dealers, dealers' associations, pressure on dealers to buy parts, etc.; abuses of installment financing; the need for itemized invoices for consumer protection; deception in charges for transportation of motor vehicles; the sale of driven cars as new cars.

Now, you won't find those headings or subheadings in my prepared statement. I have just read those subheadings from the report to the Congress dated June 5, 1939, of the Federal Trade Commission, made pursuant to House Joint Resolution 594, which was approved on April 13, 1938. But you will find similar headings in my statement and the same subject matter covered by this committee in all its investigations. You will find, as I did upon reading this report of their recommendations and conclusions, that almost precisely the same things were wrong with the automobile industry in 1938 and 1939 as have been disclosed to your committee in its current hearings. So it gives me quite a laugh when I read the full page advertisements in the newspapers of General Motors and Chrysler and Ford about a new era and a new day, and how they have now reformed and they are going to do a better job and they are going to have good relations between themselves and their dealers and the public is going to be better served. As the Chrysler representative testified here the other day before you, leave this to us. Said he, in substance: "We will take care of the phantom freight and everything else and we will mend our ways."

Well, I, for one, am firmly convinced that unless this committee and its counterpart on the House side will bring forth an all-inclusive bill prohibiting all of these abuses and attempting to correct them, the industry will never do anything. They will talk about it. They will tell us, as they did in 1938 and 1939, that they are correcting their ways, and then the minute you stop investigating, unless there is a law on the books to make them behave, they will go back to their old ways.

It surprised me to find that there is an order outstanding since 1941, November 12, 1941, against the General Motors Corp., issued by the Federal Trade Commission, a unanimous order directing them to cease and desist from their practices of compelling their dealers to buy parts whether they needed them or not, to buy parts and only the parts that were labeled with their name. That was all they could buy and that was all they could deal in and that was all they could use. I think you have heard considerable testimony about that abuse today.

I think you know about the new proceeding that was started against the General Motors Corp. because of their false advertising of "genuine Chevrolet" parts which are not genuine Chevrolet parts at all. They are bought from independent dealers, manufacturers, rather. They won't let their dealer go to the manufacturer or his jobber and buy that product. He must buy it from the auto manufacturer at a high price and, naturally, must pass it on to the consumer at that same high price, plus a fair profit to himself, plus his overhead. So, you see, that these same abuses continue today as they have all through the years since these giants took hold in the automobile industry.

Now I have recommended and I urge that this committee, after it has completed its hearings and analyzed all of the facts, bring forth a bill which should, in my opinion, cover several important matters. Every manufacturer and assembler, and I think, as well pointed out by the chairman again this morning, the manufacturers in large part today are assemblers—we will have to have all-inclusive language that will include every manufacturer and assembler of automobiles—shall be required to issue a certificate of fitness showing, among other things, that the vehicle has been road-tested at different speeds for a minimum of 500 miles. Today they deliver that automobile to the dealer. They place the responsibility on the dealer to deliver a car which he is supposed to service and put in good condition and deliver to the automobile owner, who has a right to take that car and take it out on the road and use it as though it were a safe vehicle. The situation is much worse today than when Judge Holmes wrote for the United States Supreme Court, in the *McPherson* v. *Buick* case, that an automobile is a potentially lethal weapon. That is what it is, unless it is properly tested and in good working condition. The dealer doesn't have the facilities or the ability to do that job.

They are putting a potentially lethal weapon in the hands of every automobile owner when he takes it out on the road. There is no way of telling after the driver has been killed in an accident as to whether his steering gear came off in his hand or there was some other defect in the mechanism which caused that automobile to be wrecked.

When we have an accident involving airplanes, our various agencies move in and have a thorough investigation and try to determine what caused the accident. We don't have those facilities, we never could have them, to determine those things as to automobiles. I say, from my experience as a lawyer, over many years, that there are accidents every day in the week involving automobiles that are caused by the in-

herent defects in the automobile that were there when it left the factory, were there when it left the dealer's place of business, and went into the hands of the purchaser. The only way you can make sure that the vehicle is safe for use is to require every one of these automobiles to be tested before they leave the last place of assembly.

I think the protection of our American public demands that.

Senator MONRONEY. I will say that the number of dealer complaints of bad-order cars arriving from the factory have been coming in with increasing amounts, that they allege that there has been a deterioration in the factory inspection system, and we have had testimony before this committee to the effect that oftentimes the factories think it is cheaper, instead of taking a car off the line and tying up their lines with bringing it out in good order, to ship it on to the dealer and have him do the work and then maybe make him share the cost of putting a car that was bad, ordered into proper running condition on a preservice or predelivery service charge with the factory paying only a part of it.

Mr. MULTER. That is right, and with the profit competition having it brought down as low as it is today, the dealer is going to kid his customer as long as he can until his guarantee period has run out and then he will take care of those things. I have had that complaint made to me not only by purchasers of automobiles—incidentally, I have put into the RECORD, into the CONGRESSIONAL RECORD, and if you care to have it made a part of this record, two letters which came to me completely unsolicited, one from the purchaser of a Buick automobile telling about the difficulties that she had with this brand new automobile for which she paid cash upon purchase. I have submitted a copy of that to you with my formal statement. That letter appeared in the CONGRESSIONAL RECORD of January 31, 1956. The second letter, which also came to me unsolicited, involved a Lincoln automobile, also bought for cash, and that appeared in the CONGRESSIONAL RECORD of February 9. In both those letters they tell how it is utterly impossible to get the dealer to make good on the defects or give him a good automobile, an automobile that is safe to drive. As a matter of fact, I think you have testimony from the manufacturers that they assume the burden and the responsibility of the car's being a good car. I think that is almost the verbatim testimony of the Chrysler president before this committee. Yet they evade that obligation constantly. The dealer must, because of the economic situation involved today, do as little work on that car as possible until he can make a charge for it. So whatever the guarantee period may be, whether mileage or time, when that has gone by, then the customer begins to get his big bills. But the public safety requires that that condition not be permitted to continue. Those defective cars on the road are a menace until they are put in good operating condition.

Senator MONRONEY. Well, on top of that, is it not a fact, Congressman MULTER, that the orphan cars, the bootleg cars that are sold off the used car lots as new and maybe have a lot of mileage, worn out brakes, scored cylinders, defective steering gear, rough handling from many, many miles on the road by people who have no interest in the car, also tends to give a bad service car to a customer thinking he has a new car, and plus the fact that the traditional maintenance that would be rendered on a new car is not there because the dealer hates to have to service a car that has been sold in unfair competition in his trade area.

Mr. MULTER. That is right, and although there may be a requirement in some of the manufacturers' contracts with their dealers that he take in such car for service, he will find a way of not servicing it.

Senator MONRONEY. It just destroys the good faith that should exist in the purchase of a new car.

Mr. MULTER. That is right. I think every member of this committee, and I, too, can remember when the new car dealer in our communiity was a very respected and respectable member of our community. He was one of the leaders in the civic and philanthropic endeavors of the community. He occupied a position of dignity in the community. Today he is fast becoming the most despised man in the community. Nobody trusts him anymore because of this situation, and it is a bad situation. Now your sticker idea as contained within—I don't know whether it is part of a bill you introduced——

Senator MONRONEY. It is a proposal we are considering here.

Mr. MULTER. It has been talked about favorably. I think it will help that situation. I go one step further in my recommendation and say that when the car leaves the place of assembly, the last place of assembly, the speedometer should be sealed. Then impose a criminal penalty for the breaking of that seal at any time before delivery to the new car purchaser. Then when you drive that car from Detroit to Brooklyn or any where else, to deliver a customer, whether it is driven by a paid driver, who is just driving one car or it is hooked onto the back of another car, both cars riding the road, whether it is a thousand miles or only a few hundred miles, when that car arrives at the dealer's place and he tries to deliver it, Mr. Customer can look at the speedometer and know that this car was driven over the road before it was delivered to him. He will know he is not getting a new car but is getting a used car.

Senator MONRONEY. When a customer pays $3,000 to $4,000 for the purchase of an automobile, it is a major investment in his life. He is entitled to know what he is buying, whether it is a piece of used merchandise that is beaten up by rough handling and maybe polished up to look good on the surface or whether it is a truly genuine, new, unused article, wouldn't you think?

Mr. MULTER. Yes, Senator, you are absolutely right. I drive that price car. I drive a $4,000 car. I do not know how many are in that group, numerically whether that is the greater percentage. I have an idea it is not.

Senator MONRONEY. I will say I cannot tell today what price car I am driving because of the fantastic packs that you are getting in a car. You think you have a $3,000 car, maybe, and then you find that the car is being advertised as a $4,000 car with a $1,500 trade-in for your old car, no matter what its condition. So you lost all contact with reality and values in this packing, which I know you are interested in.

Mr. MULTER. I think the greatest number of cars, however, are in the $2,000 price class and that fellow needs as much protection as you and I do. If we can afford the $4,000 car we probably can more readily afford the big maintenance bill, but that little fellow who is paying the $2,000 for his car is probably using it in his business. It is a necessity to him. It is not a luxury, and he is getting cheated. He must be protected, too. Along that same line, I recommend that every customer get a bill when he purchases the car, and the dealer, too, should get a bill, which completely itemizes every item that he is being charged for. In that connection I say you must prohibit, the law must prohibit, the manufacturer from putting anything on that new car that is not ordered in writing. I believe that every automobile that I have owned since 1939 has had a cigar lighter in the dashboard. During all that time I am sure that every automobile that comes through has a hole in the dashboard for the lighter but the lighter is an extra.

Senator MONRONEY. Is that a fact?

Mr. MULTER. Yes, sir.

Now every car comes through with windshield wipers, but if you can get to the itemization, you will find that a vacuum operated windshield wiper is standard equipment but that the car is delivered with an electrically operated windshield wiper—and that is an extra. Not all of the cars, but most of them. Yet the customer is never apprised of that. In that connection General Motors is violating, day after day, a 1941 order of the Federal Trade Commission against unfair practices as to accessories and parts. Nothing is being done about it. By the time you get through with the Federal Trade Commission, as happened in many instances, by the time they got their investigation completed the manufacturer came in and said, we have stopped doing that, we realized we should not do it and we are not doing it anymore. The result was that the Federal Trade Commission dismissed the complaint and the day after the complaint was dismissed the manufacturers started right over again. The only way you can stop these bad practices, in my opinion, is by writing into the law severe penalties, enforceable not through the Federal Trade Commission but either on behalf of the dealer or the consumer, or if neither of them takes action, then by the Attorney General.

Another recommendation that I make is with reference to the automobile franchises, the dealer franchises. I know that the dealers are split right down the middle on that problem. The men in the metropolitan communities, I think, by and large, want exclusive franchises. The fellows in the smaller communities are not sold on exclusive franchises. If, to keep his franchise, he must sell a hundred cars in a small community and his community can only take 50, 60, or 70, he wants the right to go out and dispose of those cars wherever he can get a customer. Where the competition is keener in the big cities they feel the exclusive franchise is going to protect them. Frankly, I do not know whether one is better than the other, whether you should have the exclusive franchise or you should not. I have not been able to resolve that in my own mind. But I do say that the manufacturer and the dealer should be permitted to negotiate and consummate whatever kind of contract he wants and the manufacturer should not be able to sit back as he does today and say to his dealer, we have an opinion from the Attorney General and we cannot do this, that, or the other thing with your franchise. For instance, canceling a franchise because of bootlegging activities. Everybody agrees that bootlegging activities are bad. I think there was one manufacturer who came in and said bootlegging is all right, it creates more competition and it is good to stir into action the salesman who is a little lazy. I think everybody else, with the exception of that one witness, agrees that bootlegging is very bad. If for no other reason, as you pointed out, it is bad because the buying public doesn't get the protection they need in buying a car which is supposed to be warranted as fit for use when they take delivery.

In that respect, in order to permit of a proper antibootlegging clause, the law requires change so as to permit the manufacturer to include that provision in his contract with a franchised dealer. Also, it should require him to live up to certain standards.

I think the law should set up the standards. These standards should include the prohibition of bootlegging and the prohibition of misleading and fraudulent advertising. The law should require cancellation of franchises in the event of violation of those standards.

In order to protect the dealer you must write into such a law that he will have a right to review his cancellation in 1 of 2 ways. There, again, you cannot say which

way it shall be done, but you must give him his right of review. I say the right of review of the cancellation should be either by court or, if the manufacturer and the dealer agree to arbitration, then by arbitration; but then he must write in the law a provision that arbitration must be by 3 people, 1 of whom can be chosen by the manufacturer, another by the dealer, and the third must be somebody who is not connected with the industry. Today you have these so-called dealers' councils, and in some instances they are set up as review boards to determine whether or not the manufacturer had a right to cancel the contract, but they are controlled completely by the manufacturer, even though they represent dealers, even though a dealer might be on the board. In some instances the council is a council of dealers, and dealers only. That dealer dares not stand up against the factory, or he will lose his franchise.

Senator MONRONEY. The dealer may feel: there, but for the grace of God, go I, if I don't obey and salute the command of the summit.

Mr. MULTER. That is right. If this man is going to have a right of review, it must not be by an arbitrator, who, in advance, must agree to pick the manufacturer's arbitrator.

Senator MONRONEY. Are you familiar with what used to be called the yellow-dog contract in labor?

Mr. MULTER. Yes.

Senator MONRONEY. Tell us about what that did, as a distinguished lawyer, and a sincere advocate of liberal legislation in the labor field.

Mr. MULTER. It is the same thing as the manufacturer does today to his dealer without a contract. The contract was made with a union which was not a union at all. It was made up of workers selected by the employer and who would do the employer's bidding.

Senator MONRONEY. Who would agree not to belong to unions?

Mr. MULTER. That is right.

Senator MONRONEY. Who would waive as a condition of employment his legal and constitutional rights. Now, do you not have that same line of waiving a dealer's rights written in many automobile contracts today that, when he signs the contract to be a franchised dealer, he has signed away his rights to go into court to protest against what normally could be a court case for breach of good faith or loss of equity through arbitrary cancellation by the factory?

Mr. MULTER. And hardly a day goes by—well, that is a slight exaggeration, but hardly a week or month goes by, that a regional representative of the manufacturer doesn't call on his dealer and tell him: You have to do this, that, or the other thing.

You can walk in, either in your home city or anywhere in the District of Columbia here, walk into any dealer's shop and walk into his parts department and ask him to show you his inventory; ask him to show you the part of the inventory that never moves, that he never has any use for. You will find thousands and thousands of dollars worth of stuff either in his warehouse or on his shelves that the regional director of the manufacturer came in and said: You have got to buy so much of this today. And he had to order it and put it in, and he has no use for it.

The same way they will go into a dealer and say: We don't like your plant. Your service station has deteriorated. You have to put in a new plant.

He may have to invest $100,000 or $150,000 in a new plant, and he will have no assurance when he is finished that he will still have the franchise. Those things must be covered by the legislation that comes out of this investigation so as to correct these abuses.

I was surprised to read the testimony given to you on behalf of the American Motors Co. here the other day in which the witness talked about a unique and new plan of stirring up business and helping his dealers by giving him volume discounts. Apparently the gentleman, neither he nor his lawyer, had ever read the Robinson-Patman Act. In almost every other instance the companies are giving volume discounts and hiding the fact. If you get the dealers to open their books you will see they are getting volume discounts directly in violation of the Robinson-Patman Act. He has a franchise which requires him to sell 100 cars a year, but if he sells 150 cars he gets an additional discount on every car he sold that year and it goes up by every 25 or 50 cars, depending upon the company. The additional discount that he gets is based solely on his volume sales.

Now, unless I misunderstand the Robinson-Patman Act, that is prohibited by that act, but nothing is being done about it except one company now bragging that it is a good thing to increase sales.

Senator MONRONEY. I think the Robinson-Patman Act, as I understand it, would permit greater discounts where economies in distribution can be shown as being warranted or merited and where they are publicly announced breaking points on quantity.

Mr. MULTER. But these are hidden discounts. Nobody knows about it. You won't find out about it unless you have a friend in the trade who will tell it to you. It is not based on any savings. It is not based on anything that can be saved either in transportation or in any other way whatsoever, because the dealer doesn't pay any more or any less commission or salary to his salesman that is selling the car, and the factory has no more sales expense or less sales expense on the volume distribution, and they ship them in just the same, either tow them in, drive them in, truck them in, or sometimes float them in by barges, and in rare instances by rail.

Senator MONRONEY. To keep the record straight, counsel for the committee, Mr. Busby, has called my attention to the fact that the American Motors plan departs from the normal volume discount you are making by basing the discount on sales of all dealers to some extent, rather than strictly on the individual dealer, the number of cars they sell, the greater discount all of the dealers will receive.

Mr. MULTER. Then I misread his testimony. That is quite different and I must apologize to that witness.

Senator MONRONEY. He was trying to bring out, as I remember the testimony, the point that if they could get their sales up in American Motors Co., that all dealers would profit by a greater share of the profits that the company would then be making.

Mr. MULTER. If the idea is greater sales by the manufacturer, and he can then give a greater discount to all dealers by virtue of the sales, then he has something different and unique.

Mr. BUSBY. I might comment there that they haven't gotten clear away from the individual discount in that all other manufacturers still give the discount strictly on the individual sales, as I understand it.

Mr. MULTER. That was my understanding, too. If they have a different plan, I have misread the testimony.

Senator MONRONEY. Their new plan was to base a return to all dealers as the company's volume increased.

Mr. BUSBY. Their new plan is to get half way in between the individual discount and the total discount for all dealers.

Mr. MULTER. In that connection, if the committee agrees that volume discounts are bad and should be stopped, we must by the legislation we bring out, do it without relying on the Robinson-Patman Act. You will have to write in severe penalties which will be almost automatic in their imposition, so that anyone can go in, either the customer or the dealer can go in and collect the penalty, rather than wait for a Robinson-Patman Act prosecution of the violator. No franchised dealer, as long as he still has hopes of keeping his franchise, would dare bring an action under the Robinson-Patman Act.

That brings me to the question of phantom freight that the chairman is so familiar with, as are the other members of the committee. I think you probably have already before you complete testimony on that subject. I can supplement your record with just this brief additional information on the subject of phantom freight. I give you these figures because of the testimony that you have had from some of the manufacturers indicating that they actually pay out more than they collect. Even though they charge this so-called phantom freight, they say we are abusing them when we say it is something they have no right to charge. They pretend that they actually pay out more in freight for all of their deliveries than they collect.

I don't believe that is so. Let me give you these figures. The 1954 shipment record for motor vehicles, as reported in the 35th edition of the "Automobile Facts and Figures for 1955" (that is the industry's own publication and I don't think they dare dispute it, these facts necessarily come from the manufacturers themselves) shows that of 6,601,071 motor vehicles shipped, 80.5 percent, or 5,314,841 left the factory by highway on a big truck that hauls several other cars, or towed behind another new car. Shipment by boat accounted for 5.6 percent, or 370,044 vehicles, while rail shipments accounted for only 13.9 percent. In other words, out of a total of 6,601,071 motor vehicles shipped, only 916,185 went by rail. The phantom freight charges have amounted annually to over $280 million.

Senator MONRONEY. You are reading from page 10 of your statement, and you have a typographical error. You say billion. I would suggest that be corrected on the prepared statement.

Mr. MULTER. Oh, yes. Thank you.

Now in the hope of foreclosing any action by this committee, the industry now is taking some action. They say they are not going to do it any more. At the same time they say that, they increase their prices. Now if they are not going to charge the phantom freight and the phantom freight was not giving them a complete return, why the need, when they take off the phantom freight, to push up the price to make up what they are not getting in the phantom freight?

Obviously the phantom freight was giving them a hidden profit, a profit—I am not saying they hid it from the income-tax authorities, but they certainly hid it from the public. They didn't want the public to know they were making not only a profit on the car and a profit on their parts, but also a profit on the delivery.

Senator MONRONEY. But if they can afford to sell a car without freight in Detroit or with a $5 or $10 delivery cost, then that is the price of the car, is it not?

Mr. MULTER. That is right.

Senator MONRONEY. The freight component should be the component necessary to deliver that car from the Detroit factory or from another assembly point there. Then when they adjust their phantom freight, if they have a fair equitable price to their Detroit dealers, then should the price be adjusted upward as they move away from the phantom freight overcharge?

Mr. MULTER. No, I think that they should have a price which is a fair price which gives them a fair return for the item they are sell-

ing, for the vehicle they are selling, and they shouldn't be permitted to make any profit on anything else and they should collect only what the actual charge is, and the customer should pay only that. We can't stop them from raising their prices and making more profit; as legislators we can't. But if they boost the price unduly high and the public feels they are making profits they are not entitled to on a car, the public has a fine weapon.

They sit back and say: "We won't buy." But when the dealer delivers the car and says: "Here is your car; I am giving you a break and it is only costing you $50 or $100 over the cost to me from the factory, and the rest of this is actual cost"—and gives you an item for freight, I think the customer is entitled to know that he is not actually paying freight but he is paying freight plus, whether they call it a destination charge or a freight charge, they are still fooling the public when they try to collect as a charge a sum which is not in accordance with actual cost.

Senator MONRONEY. As you say, less than one-sixth of the cars shipped move by rail. Yet every time the Interstate Commerce Commission gives one of its customary habitual freight increases to the railroads, the customer of an automobile gets clipped again for a 6-percent or an 8 or a 10-percent increase in freight when the freight is actually not running against the delivery of the car in fact.

Mr. MULTER. It is because we have permitted, or at least acquiesced, in the manufacturers' charging phantom freight, that General Motors and Ford wouldn't join with Chrysler in trying to get a reduced rail rate, and as I think you have indicated, they worked behind the scenes to see that the rate was not decreased.

Senator MONRONEY. To keep Detroit freight high.

Mr. MULTER. Yes.

Senator MONRONEY. Although that was supposed to be the source of most cars. Contrary to most freight rate procedures, the greater the concentration of shipments out, the lower the rate. But they were enjoying lower freight rates out of their assembly plants for that distance than the big shipments were moving for out of Detroit. It is impossible to tell how many hundreds of millions of dollars were tacked on to the consumers' prices because of the maintenance of that high freight rate plateau for the movement of automobiles out of Detroit.

Mr. MULTER. You are absolutely right. No one can gainsay what you have said, Mr. Chairman. I believe, sir, that I have covered each of the recommendations that I sought to make to this committee. I hope that my testimony will be of some help to the committee.

If there are any other questions you care to address to me, I will try to answer them. I don't think I have all of the answers.

Senator MONRONEY. Permit the chairman to say that you are still the tireless worker in automobile and other little business problems that you were on Banking and Currency when we sat next to one another in the House.

Mr. MULTER. Thank you, Mr. Chairman.

Senator MONRONEY. I appreciate the great help you have given this committee.

Senator THURMOND, do you have any questions?

Senator THURMOND. I don't believe so.

Senator MONRONEY. Senator PAYNE?

Senator PAYNE. No questions.

Senator MONRONEY. We appreciate very much your helpful interest in this.

Mr. MULTER. Thank you.

Civil Rights

EXTENSION OF REMARKS
OF

HON. CHARLES B. BROWNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. BROWNSON. Mr. Speaker, yesterday, 19 Senators, all Democrats, and 77 Members of the House, 75 Democrats and 2 Republicans from historically Democrat States, joined in a declaration of constitutional principles which referred to the decision of the Supreme Court in the public-school cases as "unwarranted" and pledged themselves to use "all lawful means to bring about a reversal of this decision, and to prevent the use of force in its implementations."

What they mean by "lawful means" of evading a decision of the Supreme Court, I do not know. I am sure, however, that many thinking citizens were disappointed at this move which was participated in by such an overwhelming majority of Democrats—94 to 2 Republicans.

Much of the progress in the broad area of civil rights has been made under the leadership of dedicated organizations, outside the Government and outside the field of politics, in the narrower interpretation of the word. Some accomplishments have been the result of bipartisan political activity. Some significant accomplishments have been the result of action by one of the great political parties—the record of the Republican Eisenhower administration in expanding Negro opportunities and rights for instance is widely and favorably known.

An analysis of the contributions of political parties to the progress in the field of civil rights was detailed in this Sunday's Washington Star by columnist Frank R. Kent. Under unanimous consent, I ask that it may be printed in the CONGRESSIONAL RECORD at this point:

THE GAME OF POLITICS

(By Frank R. Kent)

ANALYZING A DEMOCRATIC STRATEGEM

The really violent personal attack upon President Eisenhower made early this week by Paul Butler, chairman of the Democratic National Committee, and supplemented by a spokesman for the National Association for the Advancement of Colored People, was revealing and significant. This was not because Mr. Butler carries much weight. He seems, in fact, a rather hot-tempered young man with a not very clear idea of political realities.

Nevertheless he should be in a position to know the practical problems of his party. His frantic demand that the President act upon the suggestion of Adlai Stevenson to immediately summon a White House conference of white and colored leaders to consider means by which the Supreme Court antisegregation decision can be fully enforced in all the States, is an absurdity. Its futility is too obvious to need stressing but it does disclose the naive qualities of Mr. Butler's mind and throws light upon a hidden sorrow of which the better posted Democratic politicians are keenly aware but about which they do not like to talk—to wit, the Negro vote in the big pivotal States.

Hidden sorrow

To understand how keen is this "hidden sorrow," it is necessary to give a little history. For more than 70 years the Negro vote has been the basic asset of the Republican Party. It was the most solid thing in American politics. It just could not be shaken. The Democrats tried every way. They early discovered that Negroes could not be bought at any price to vote the Democratic ticket. They could be, and were, bought to stay away from the polls. And that was the way the Democrats handled them up to 1936. The details of what happened then have been given in this column before. There is no need to repeat, except to say that under the highly intelligent James A. Farley and his friend, ex-Senator Guffey of Pennsylvania, enthusiastically supported by the then President Roosevelt with the active cooperation of the late Harry Hopkins, then Works Progress Administrator, to say nothing of the great Negro popularity of Mrs. Eleanor Roosevelt, a plan was launched and so successfully executed that that basic Republican asset was 99 percent transferred to the Democratic Party. And there it has stayed for 20 years.

To those fully acquainted with the details this is regarded as the greatest political coup in the whole history of American politics. The Republican Party was literally wrecked. It at once transformed the Democratic Party into the majority party and the Republican into the minority. According to the late Senator Robert Taft, some of the Negroes began to drift back to their old Republican moorings in 1950. But in 1952 most of them were still registered and voting as Democrats and the Democrats were still playing the game which the late Mr. Roosevelt found so amusing—holding the Negroes in the North while still keeping the Democratic South solidly for him.

Loses effectiveness

Since 1952 this double play has become increasingly less effective. More and more the Negroes in the North and the white Democrats in the South have recognized that they were being "worked" in a very slick way. In the last 4 years resentment on both sides increased to the point where the Democratic leaders can no longer firmly count upon this incompatible support. Realization of this has become widespread among Democrats in the last few months. Mr. Stevenson's suggestion was regarded by both whites and Negroes as a weasel-worded effort to hold together the old Roosevelt-Farley alliance of Southern whites and Northern Negroes.

The reaction of both was almost equally unfavorable. It was pointed out that Mr. Stevenson is ignorant, indeed, if he thinks so great an issue can be settled by a "conference" of "prominent citizens" of both races, whether held at the White House or anywhere else. He should have known that among the whites in the South this racial issue is the deepest and widest gulf in the world; that it is utterly unbridgeable at this time by any "conference" anywhere of "prominent citizens" however notable and allegedly "broadminded." In plain truth, it is not possible to get such a commission of disinterested, wise and unbiased men. And even if such a commission could be found and if its recommendations were unanimous (which is hardly conceivable), it would not greatly change the existing situation. Only time will do that. The Stevenson suggestion is more political than constructive. Its reiteration as a demand on the President makes clear the fact that the Democrats are deeply disturbed over the Negro vote which they so cleverly corralled in 1936. And they deserve to be because it

was a coldly calculated and completely unprincipled scheme from the start.

I am proud to be associated with, and actively working in behalf of the bipartisan civil-rights group in the House. I was pleased when this group selected me as a member of the six-member committee under the joint chairmanship of EDNA F. KELLY and HUGH SCOTT, to call on the Attorney General to discuss legislation to guarantee freedom to vote throughout the entire United States without regard to race, color, or creed. There is room for all men of good faith and tolerance who believe in liberty to work for civil rights—but, there is no room in that movement for any unsuccessful local politician, suddenly lifted to the national level, who tries to distort the issues and mislead the Negro voter in a rather obvious and cheap play for his vote.

The facts speak for themselves. In the Senate there are 15 powerful standing committees. The Democrat victory of 1954 means that 9 of these 15 committees have as their chairmen Senators who signed the declaration pledging to use all lawful means to bring about a reversal of this—the Supreme Court's school case—decision. In the House, of 19 great standing committees, 8 Democrat chairmen signed the declaration—8 chairmen returned to their positions of responsibility when the Democrats won the control of the Congress in 1954.

As an example of the seriousness of the situation the Democrat chairmen of both the Senate and the House Committees on Armed Services, Foreign Relations, and Foreign Affairs, and Post Office and Civil Service are all numbered among the signers of the declaration on integration. This move, of course, is their prerogative and I have no quarrel with either their sincerity or integrity. All I want to do is clear up the record and make it plain that when a Negro supports a Democratic candidate for Congress in the North, he contributes toward building a Democratic majority in the Congress which brings into powerful committee chairmanships some southern Democrats whose beliefs concerning civil rights are demonstrably different than his own. I hope it will not always be that way.

Opposition to Organization for Trade Cooperation

EXTENSION OF REMARKS

OF

HON. JOHN. J. FLYNT, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. FLYNT. Mr. Speaker, under leave to extend my remarks, I include a statement which I made before the Ways and Means Committee of the House of Representatives expressing my opposition, and the reasons for such opposition to H. R. 5550, the bill now pending before the Congress which would authorize the entry of the United States into the Organization for Trade Cooperation.

The statement follows:

STATEMENT OF HON. JOHN J. FLYNT, JR., MEMBER OF CONGRESS, FOURTH DISTRICT OF GEORGIA, BEFORE THE WAYS AND MEANS COMMITTEE OF THE HOUSE OF REPRESENTATIVES, FRIDAY, MARCH 9, 1956

Mr. Chairman, I am JOHN J. FLYNT, JR., Member of Congress from the Fourth District of Georgia. I appear before this committee in opposition to H. R. 5550.

Because of its threat to our farm program and cotton textile and other industries, we are vitally concerned with the possibility of the enactment of H. R. 5550. This measure, on which the House Ways and Means Committee is now holding hearings, superficially viewed, merely authorizes our membership and appropriations incidental to this membership in one more international organization, the Organization for Trade Cooperation. But critically examined the implications and potentialities of H. R. 5550 are frightening.

H. R. 5550 is a short bill. Aside from its appropriation authority, which, incidentally, commits us to pay the international Organization for Trade Cooperation such expenses as OTC itself fixes, this bill is expressed in only some 60 words. But its few words suffice to give an indication of its significance. For they incorporate, by reference, provisions both of the OTC charter and the GATT agreement—that sacred international agreement whose provisions have never been before Congress for approval.

Much of the significance of H. R. 5550 is indicated by what it fails to say. To make sense it necessarily omits a safeguard which Congress insisted upon in framing trade legislation last year and in previous years. In the extensions to the trade agreements acts it was specifically provided that their enactment "shall not be construed to determine or indicate the approval or disapproval by the Congress of the executive agreement known as the General Agreement on Tariffs and Trade." These were not idle words and they were hotly contested. They are as important now as they were last year. But they are not found in H. R. 5550. Indeed such a provision would be inconsistent with H. R. 5550 as it provides for our membership in OTC whose very purpose is to administer GATT. Our approval of H. R. 5550 would be taken—both nationally and internationally—as approval of GATT by the Congress. Thus it would reverse our repeated and specific refusal expressed in the trade extension acts to approve this multilateral trade agreement which has never been submitted to Congress for consideration.

Hard on the heels of such implications for our international policy lie our domestic programs. It is important to note that passage of H. R. 5550 could be construed to override safeguards to our agriculture and other segments of our economy embodied in legislation which is clearly inconsistent with GATT.

In brief, it cannot be maintained that this Congress can act on H. R. 5550 and yet avoid pronouncements on GATT. On the other hand, if we include a disclaimer of congressional approval or disapproval of GATT in H. R. 5550, we, in effect, authorize membership in a club but refuse to avow its principles. Clearly there is a fundamental inconsistency here. To put in a disclaimer would connote an absolute lack of legislative responsibility. Not to put one in would likewise be irresponsible, for we would, in effect, be approving GATT—an open-ended agreement we haven't even considered.

But allow me to go on to point out the threat which all this poses for the Fourth Congressional District of Georgia. In so doing, I am convinced that the Fourth Congressional District of Georgia is not unique, but is typical of the Nation. For other areas throughout America would suffer comparable adverse effects through the passage of this bill, H. R. 5550.

As has already been brought out in the hearings on H. R. 5550, the bill's technical linkage with GATT are important for their practical results. There is an inescapable connection between our membership in the OTC and consequent adverse effects on our domestic interest. Such independence as we have so far preserved by refusal of Congress to approve GATT would be lost by enactment of the bill. Our commitments under the various related documents I have mentioned would universally be regarded as direct and clear. When this becomes known, it will become a proper basis for alarm among the people of the United States. For it will be found that Congress is, in effect, abrogating its constitutional functions of regulating our foreign trade.

We cannot shirk our congressional responsibility and pretend we are merely authorizing membership in an international administrative adjunct to foreign trade. Instead, our duty requires that we take the time to review the bill, OTC charter and GATT and at our peril determine the results of this combination on the problems of our industry and agriculture everywhere in our native land.

May I reemphasize that H. R. 5550, though it sparsely covers little more than a page in itself, incorporate the OTC charter consisting of 21 articles plus annexes. Also that the first of these articles specifically dedicates the OTC to achievement of the purposes and objectives of GATT. Other articles provide effective linkage with the voluminous documents of GATT—some 800 pages of text and miscellany including interpretations, waivers, etc.

May I also reemphasize that these 800 odd pages of GATT have not been submitted to us directly, despite their vital concern with our economic future. I am glad to observe that they have been given the attention of numerous good citizens who are concerned with the effect of GATT on the economic future of this country.

I have already alluded to the fact that H. R. 5550 is so framed and presented as to reduce to a minimum the apparent significance of the proposal. Great care has been used to make it difficult to find offense in the bill, although the charter of the OTC and the regulatory provisions of GATT contain plenty of offense. This strategy is designed to segregate in our minds the passage of the bill from the potential results on conflicts between GATT and our own domestic laws and policies which are in the best interests of the United States.

There are important conflicts between GATT and our American farm program. GATT principles are contrary to price supports for, and quotas on, imports of farm products. These restrictions enable our farmers to enjoy the fruits of their labor and live at a level which this country alone can afford to all of its citizens. GATT provisions merely tolerate these on a temporary basis—a concession reluctantly extended as bait for our participation. Our farm prices, thus maintained by our agricultural policy, are well above the world market prices for these products. To make our system of price supports work, we must have import quotas. Otherwise the support price would be undercut by cheaper imported products.

In many cases foreign manufacturers are able to gain an advantage over our own industry by purchasing the raw materials used in that industry under the levels of our supported prices. This is especially true in the case of cotton textiles. Thus, to protect our domestic market for our agricultural products, we must protect our domestic industry which utilizes these products.

GATT conflicts with the goals of this, our domestic policy, in that it opposes import quotas and favors further reduction in tariffs. Indeed, it provides the machinery for imposing compensatory penalties for these import restrictions, both in its rules and regulations and in their practical results. It invites and provides machinery for concerted international retaliation.

Here, then, is a fundamental inconsistency between our American farm program and the GATT program. GATT increasingly pressures toward compromises which seriously and directly hamper our farm price-support policy. It also reduces our own share in our domestic cotton market by its adverse effect on our splendid cotton textile industry.

In January of 1955, in connection with the debate on H. R. 1, I pointed out the grave threat that GATT poses to the entire economy of Georgia. The wage earner of that area, employed in the textile industry, faces competition from Japanese labor earning hourly wages which are only 10 percent of the hourly wages paid to workers in our textile industry.

As I indicated in January of 1955 before this House, it is virtually impossible to see how our workingmen can sustain their high standards of living in the face of such vicious foreign competition. This is particularly pertinent in our textile industry. There labor costs constitute about 40 percent of the total cost of manufacturing cotton textile products. Nor is it possible to gain an advantage of efficiency of operation over these Japanese producers, since they already utilize the most modern machinery available. In fact, we, ourselves, supplied the Japanese with the latest machinery as well as the money to buy it. There is talk of our working out some kind of voluntary quota with Japan, but if we do, it will not be through GATT but, rather, will be despite GATT.

The obvious threat to our agriculture and industry—the case at hand is the growing of cotton and the manufacture of cotton textiles—is in the pledge of the OTC-GATT mechanism to reduce protection, quotas and tariffs both for farm and manufactured products.

In view of the general confusion on the subject of the conflict between GATT and American farm policy, let us briefly consider a specific conflict, which is in farm legislation currently before Congress—S. 3183. This legislation contains a cotton export provision taken from S. 2702. In spite of the fact that S. 2702 was introduced by Senator EASTLAND for himself and some 60 Senators—clearly a majority of the Senate—adverse comments from the Department of Agriculture assaulted it.

Now S. 2702 has two interrelated provisions:

The first requiring the Secretary of Agriculture to encourage sales of cotton for export which would recapture the fair historical share of United States cotton in the world cotton market.

The second establishing a maximum annual import quota of manufactured products of 150 percent of average annual imports over a 2-year period.

The purpose of the import quota provision is recited in S. 2702:

"In order to prevent material interference of the sales program authorized under paragraph (1) of this section or with the cotton price-support program or to prevent loss of domestic markets for cotton or reduction in the amount of cotton products produced in the United States from United States cotton."

It is clear that the cotton export program would mean a further spread in the domestic price and world price. This would allow foreign cotton textile manufacturers to buy their raw material at prices much below those which our domestic industries pay. The foreign producers' advantage, in turn, would allow them to compete more advantageously in our domestic market. This process would tend to ruin both our raw cotton production through reducing our domestic production and our textile industry itself. Certainly it would tend to nullify the effect of our export program.

This was recognized by the Department of Agriculture when it reported on S. 2702:

"The sale of substantial quantities of all qualities of Government cotton for export at greatly reduced prices * * * would set the international price of cotton and make it possible for foreign mills to obtain their requirements at prices substantially below those paid by domestic mills."

The textile imports encouraged by actions in GATT last year would obviously be increased further.

It is all the more striking that the Secretary of Agriculture advanced as the key reason for opposing the bill that "import quotas on textiles would be in direct conflict with efforts by the United States to relax or remove impediments to world trade."

The objection was, of course, that the proposed quotas would be in violation of GATT. This is GATT—and nothing but GATT—striking at our industry. This Congress never authorized.

Yet, we are informed by the Secretary of Commerce in his recent memorandum for the Cabinet on, "The Facts About the OTC—The Organization for Trade Cooperation":

"The one major difference between the General Agreement and United States policy was eliminated in 1955 when the participating countries gave the United States broad waiver to import quotas unilaterally on agricultural products as required by our domestic agricultural laws."

He forgot to mention the apologetic nature of our State Department emissaries, and the generosity of our allies in letting us have this temporary waiver.

He also apparently forgot that this waiver of quotas prohibiting imports on agricultural production does not apply to quotas on textiles such as those proposed by S. 2702, which the majority of Senators evidently believe to be an essential part of this agricultural products legislation.

This import quota on textiles is crucial both to our domestic agriculture and our industry. For it preserves to our domestic producers and processors their rightful share of our own market.

This problem still faces Congress. The pending price-support bill, S. 3183, which is now under consideration by the Senate, has a provision in section 303 which is virtually identical with paragraph 1 of S. 2702. This section reads as follows:

"SEC. 303. In furtherance of the current policy of the Commodity Credit Corporation of offering surplus agricultural commodities for sale for export at competitive prices, the Commodity Credit Corporation is directed to use its existing powers and authorities (immediately upon the enactment of this act) to encourage sales for export of such quantities of cotton as will reestablish and maintain the fair historical share of the world market for United States cotton, said volume to be determined by the Secretary of Agriculture. [Cotton made available by the Commodity Credit Corporation under section 102 of the Agricultural Trade Development and Assistance Act of 1954, as amended, shall be sold at competitive world prices.]" (Added matter shown in brackets.)

But the import quota provision of S. 2702 is omitted even though there can be no doubt that without the import quota which is contrary to GATT commitments, the practical results of the export program provided for in S. 3183 are in serious doubt.

The Senate discussion of S. 3183 recently brought out that the 1955 GATT meeting in Geneva resulted in substantial cuts in a wide range of tariffs on textiles. These reductions took effect on September 10 and spurred a sharp increase in textile imports into this country. Our domestic industry, already suffering from depressed conditions, faced even more serious injury.

At present our most serious competitor in this sphere is Japan. In this connection, the proposed export program obviously would intensify the situation described by Senator JOHNSTON of South Carolina (CONGRESSIONAL RECORD, February 27, 1956, p. 2939):

"Furthermore, the Japanese buy their cotton for less than our manufacturers have to pay for the cotton they buy in the United States. The Japanese buy cotton on the world market; and the world market is usually from 5 to 6 cents a pound lower than the United States market, in which our manufacturers purchase the cotton they use. That situation makes it almost impossible for American manufacturers to meet the competition of Japanese manufacturers.

"Therefore, in my opinion, all we can do is have a quota which will protect American manufacturers, and make it possible for the Japanese to trade with the countries near Japan, and thereby not seriously affect our market. Of course, such trade will affect our market to some extent—but perhaps to only a small extent."

Senator THURMOND inserted in the CONGRESSIONAL RECORD (Feb. 27, 1956, p. 2940) a copy of his letter to the Secretary of State pointing out that:

"Government reports and trade reports out of Japan show that textile imports greatly increased during the last months of 1955. Based on the surge of imports since the negotiation of the GATT agreements started in Geneva last year, I believe it is no longer wise to judge the effect by comparing the total of 1955 textile imports with the 1954 total. Even that comparison shows a tremendous increase, but the data of the recent months should be recognized as a danger signal.

"Our domestic cotton producers and our textile manufacturers and the people they employ will all suffer unless adequate safeguards are established to protect against imported goods manufactured from cheap cotton and by low-wage labor in foreign countries."

Here is an incisive illustration of the fundamental inconsistency between the American farm program on the one hand and our international commitments under GATT and what would be the OTC on the other.

It is sheer folly to attempt to sustain domestic prices paid to our agriculture with price supports and production quotas while, at the same time, we import these products in processed form. The injury sustained is twofold. It hurts our industry as well as our agriculture.

These conflicts between domestic programs and GATT programs afford cogent reasons why Congress must assert its prerogatives and obligations over domestic and foreign trade—why it cannot be expected to support GATT through enacting H. R. 5550 without fully exploring GATT and the results of the bill. H. R. 5550 presents the first occasion that Congress can do so. Clearly we, acting on behalf of the American people, must regain full control over these vital issues. The necessary first step in this process is to reject any proposal for approval of H. R. 5550 without examining its potentialities.

In touching on the production of raw cotton and the manufacture of cotton textiles I have considered the interests of my constituents from the Fourth Congressional District of Georgia. In quoting from the remarks of our honorable colleagues in the Senate I believe I have shown that the concern for these products ranges far beyond the borders of that district.

An yet this is only a small part of the national picture. H. R. 5550, the OTC and GATT conflict with other worthy domestic interests. I hope and believe that some of these will be brought to the fore by other Members of the House.

Before I close let me call your attention to a matter brought to my attention by a

constituent just tis week. Many of us have long contended that other nations were not reciprocating and reducing tariffs to the same extent as the United States. I have seen figures that since the passage of the various reciprocal trade acts, many nations have increased instead of decreased tariffs. The matter brought to my attention by my constituent had to do with a used 1953 Studebaker automobile which my constituent had given to his daughter, an American citizen but the wife of an Argentine doctor. My constituent's daughter lives in Argentina with her husband and desires to import the into Argentina. The Argentine Government has set an import duty on this car of approximately $6,000 or at least five times its market value in this country. I was told that on a heavy automobile such as a Cadillac the import duty would run approximately $25,000.

I was also told that in the event this car was to be used for business purposes the above figure would be increased 50 percent.

Gentlemen, I cite this example only to show that in too many instances other nations are not reciprocating in the free-trade program.

Let me thank the committee for giving me this opportunity to appear and express my views on this bill.

Thomas G. Masaryk

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. MULTER. Mr. Speaker, March 7, 1956, marked the 106th anniversary of the birth of the great Czech leader, Thomas G. Masaryk.

It is said that with the birth of every human being a new star is lighted in the sky. Some few shine very brightly, and upon them are concentrated all the hopes and prayers of humankind who anxiously wait for a new era of everlasting peace. Most stars in this human firmament have a very dim luminosity, or are from the beginning destined to invisibility and obscurity. Often, it is only at the time of death that the greatness of a man appears in its full and complete splendor when his disappearance serves to make brighter his achievements and his glory in the eyes of future generations.

Such a man was Thomas G. Masaryk. Through his leadership Czechoslovakia became a free, democratic, and independent country. We do not err by saying that the mark of his greatness went beyond country boundaries. The entire world has known and has considered him a symbol—a man who made the achievement of lofty ideals the sole purpose and mission of his life.

From the ashes of a chaotic past he founded a new country, free and independent, which remains a symbol of liberty even though it is again temporarily forced to forgo the practice of her sacred ideals while suffering under the enslaving fangs of a tyrannic neighbor. But history is never at a standstill. Tyrants and oppressors of freedom have a short existence and sooner or later they pay for their nefarious actions. A country can be, and may remain, morally free even if her people are bound in chains because in their oppression, in their torture, and in their suffering they can lift their eyes to the still pure and free skies of their country. Then in the depth of long nights, even through the bars of a prison, they will suddenly see the brightness of a star, and they will remember their leader, Thomas G. Masaryk.

The Russians know this. They feel the spiritual presence of an immortal giant who still sustains the bleeding strength and the moral unity of his people. They are haunted by a ghost that suddenly reappears in every sneer, in every silent gesture or rabid expression of scorn.

No wonder, therefore, that they try to crush the memory of Thomas G. Masaryk in the minds of his people; to erase his name from the streets and from the marble structures erected in his honor; to accuse and belittle his memory in the books of the younger generation. In all this the Communists will fail, however, because for every monument that falls, for every book that is destroyed, for every truth that is trammeled, deeper and deeper in the hearts of his countrymen will be engraved his teachings and his ideals. They will be handed down from generation to generation, until the day when freedom will rise again in Czechoslovakia.

This is not the first time that Czechoslovakia has suffered at the hands of an oppressor. She was enslaved for three long centuries before Masaryk came, but never did her people lose faith—even when they were forbidden to pray, to worship, and, even, to speak their language. Then the country's long night suddenly fell apart, the enemy's castle crumbled, and a man rose with the dawn of a new country. In gratitude they called him the Awakener. He led them; he freed them; he built a new nation for them. He was their first beloved president.

Such men as Thomas G. Masaryk do not live in vain, and their memory will continue beyond their death as long as the sun shines upon human miseries. We in the United States are fully confident that, in spite of all oppression, the inherent democratic strength of these fine people will eventually throw off their tyrants, and Czechoslovakia will finally enjoy the freedom and independence which Thomas G. Masaryk once secured for her.

Flood and Disaster Insurance

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. PHILBIN. Mr. Speaker, I am today introducing in the House another bill providing for flood disaster insurance in addition to one I introduced some time ago. My new bill is similar to that recently introduced in the other body by the distinguished Senator from New York, Mr. LEHMAN, and my valued friend, the distinguished Senator from Massachusetts, Mr. KENNEDY.

I believe the objective of this bill is sound and I can support its provisions, even though I am convinced that my own original bill based on the principle of the War Damage Corporation is broader and would be more applicable to the needs of persons and businesses in disaster areas.

I am so anxious to see Congress enact a flood disaster insurance bill and make a start in this vital field that I am prepared to entertain and support compromise proposals, even though I might not regard them to be completely suitable to cope adequately with conditions arising from great disasters.

First, I believe that any really worthwhile bill should provide insurance against disaster and not merely against floods. There are a large variety of disasters, which come like a bolt from the blue against which our people and businessmen should be protected. In my opinion, it is not beyond the province or ability of the Government to undertake this protection. It may be costly, to be sure, but I think it would be less costly and more effective in the long run than providing direct relief after disaster strikes.

As I have stated before, any such measure should be predicated upon the participation of the private insurance companies. It should not seek to set up the Government in competition with any unit of our free enterprise system.

Our able House Banking and Currency Committee has been conducting hearings on this subject matter and I have presented my testimony before that body. It is my opinion that this committee will give the various bills pending the most mature and penetrating consideration, and it is my hope that the committee will finally draft and report to the House a bill which will satisfactorily solve this problem.

The Federal Government's Salk Vaccine Program

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, here are three objective, impartial, and thought-provoking editorials on the difficulties, vexations, and obstacles of the Federal Government's Salk vaccine program. I include these editorials not in any partisan political sense but in the hope that the approporiate agencies will act upon them.

The editorials follow:

[From the Jersey Journal]

PRODUCTION, NOT POLITICS

It is somewhat unfortunate that representatives of both major political parties have injected the Salk vaccine shortage with a political virus.

Vaccine production is in an anemic state, but it doesn't need politics. It needs a stimulant and a dose of iron determination.

In a series of editorials, the Jersey Journal has described the Nation's critical shortage of Salk vaccine. We revealed that there is still fumbling in efforts to mass produce the antipolio serum. Millions of children will face the coming polio season without even one Salk shot.

A demand already has been raised in Washington for a congressional investigation of the antipolio program.

The Jersey Journal carefully refrained from bringing politics into its discussion of the vaccine production situation. What we want—and what we believe is needed—is something better than a helf-hearted war on polio.

Perhaps it is the nature of the times that any form of criticism, or even a suggestion, brings forth the cry of politics for one plan or another. For instance, the concern for the lagging vaccine program has been laid in some quarters to politics and magnified doubts. This might be called a distressing aftereffect.

There is no doubt that the Federal administration has been too complacent. But what is needed now is a greater production of the vaccine our country's kids need—not politics.

[From the Jersey Journal of March 7, 1956]

PUNY PUNCH

Salk vaccine is trickling off the production line.

But no one connected with the antipolio program seems very disturbed because we're not getting more.

No one seems upset by the fact that millions of boys and girls will not get antipolio shots this year.

If this is a war against polio, it's a strange kind of war.

This certainly isn't all-out war—a war in which we put everything we've got into a knock-out punch.

This is a piddling, business-as-usual affair—a half-hearted effort to get the vaccine we need to lick polio.

As a result, the victory against polio—a victory that seemed around the corner last spring—is still a long way off.

What's holding up production of Salk antipolio vaccine?

The United States Public Health Service in Washington has a lot of answers—time-consuming tests to assure safe vaccine, the fragile health of the monkeys used in the tests, the delicate production process, lack of trained personnel.

These are problems in the production of vaccine. But they are problems to be attacked with everything we've got. They are problems to be licked. They should not be excuses for failure.

Here are the facts in the Nation's half-hearted effort to produce the vaccine we need:

Six firms have been licensed to make the Salk vaccine.

Only one firm, the Eli Lilly Co., of Indianapolis, is equipped to mass produce the vaccine. It turns out more than half the Nation's total supply.

Two other firms are actively turning out vaccine for inoculation. But these two, Wyeth Laboratories, of Marietta, Pa., and Pittman-Moore Co., of Indianapolis, admit they still are in no position to mass produce the vaccine.

Only a few days ago another firm, Parke-Davis of Detroit, announced it was turning out vaccine for 1 million shots. Sounds like a lot. But it's only a drop in the bucket. And it comes after almost a year of virtual standstill in vaccine production at the Parke-Davis labs.

The Sharp & Dohme Co., of Philadelphia, is in the midst of a million dollar expansion program. It hopes to start Salk vaccine production soon. But John H. Ball, president of the company, said "It may be months before we have any vaccine approved by the Government."

The sixth firm licensed to produce the vaccine is the Cutter Laboratories in Berkeley, Calif. However, it hasn't turned out any vaccine since last spring, when 39 persons came down with polio after they got injections of Cutter vaccine.

Eugene N. Beesley, president of the Lilly Co., hopes production will be stepped up after "some more of the kinks are ironed out."

"We're producing it as fast as we can," he said. "The production of vaccine is a terribly delicate process. We must be on guard constantly. Few people are trained in the basic process."

H. S. Howard, president of Wyeth Laboratories, wouldn't even venture a guess as to when production might catch up with demand.

"We just haven't mastered the problems," he admitted.

H. O. Ball, executive vice president of Pittman-Moore, was optimistic even though he foresees "no big increase in production in the immediate future."

The Parke-Davis Co. is hopeful about the future, too. But it is working on its own polio preventative—a super-secret project that will make a fortune if the product ever reaches the market. But with the company's keymen working on their own commercial vaccine, a record output of Salk vaccine from Parke-Davis is unlikely in the near future.

And that's the vaccine production picture 2 years after the mass field tests and almost a year after the success of the Salk vaccine was announced.

Has the Nation done its best?

Or have we bungled the opportunity to protect our children from polio?

[From the Jersey Journal of March 8, 1956]

EVENTUALLY IS TOO LONG

It's time to substitute an all-out effort for the half-hearted war against polio.

Millions of children throughout the Nation will face the coming polio season without the protection of Salk vaccine.

How many more polio seasons will they have to face before there is enough vaccine to go around?

In the Salk vaccine, the Nation has one of the greatest medical achievements of all time, an achievement which could banish the fear of polio.

But first we must find a way to produce the vaccine in adequate quantities.

There must be vaccine for every boy and girl and for every adult who wants a shot.

Spokesmen for the United States Public Health Service in Washington insist the vaccine output is increasing day by day and will—eventually—reach a point where the 6 licensed firms can produce the Nation's needs.

The hitch is in the word "eventually."

To date, the Nation's top drug houses have floundered looking for a way to mass produce the Salk serum. Only one even dares to claim that it can mass produce the vaccine.

The others admit they still have many production problems to iron out.

Why weren't more firms licensed to make vaccine a year ago?

Only 6 firms applied. The others sat back and watched.

For one thing, the firms are not making money on the vaccine they produce. They're selling it at cost under the Federal antipolio program for allocation to the States.

The American Medical Society has repeatedly demanded the Government step out of the vaccine picture and let free enterprise take over.

Competition in a lucrative polio vaccine market would give production a shot in the arm, the society contends.

This would also result in a sharp increase in price and would put distribution on an ability-to-pay priority.

The other extreme would be Government production of the vaccine, an operation the Government is not equipped to undertake.

There is no doubt that lack of profit to the drug firms is a deterrent to stepped-up production.

The six firms licensed to produce the vaccine have goine into the program primarily to gain the know-how to produce a commercial vaccine. When the Federal program comes to an end, they will be in a position to capitalize on their experience in producing the vaccine.

But that is not helping to increase the vaccine output now.

There is simply not the incentive to the private drug manufacturers to do the kind of job that must be done.

The Government must supply the incentive or bear the responsibility for bungling the job of protecting the Nation's youngsters from polio.

Government subsidies would help. And so would bonuses for stepped-up production.

Tax "breaks" would encourage pharmaceutical houses to expand facilities to manufacture the vaccine.

Companies which add personnel, build new plans or install new facilities for the production of Salk vaccine deserve Government assistance.

The Salk vaccine program has limped along for almost a year. It will keep limping along until bold measures are taken.

So far, we have failed to take full advantage of the opportunity afforded by the develepment of the Salk vaccine.

The time has come to reevaluate the program and revitalize it so the Nation can get the polio protection now within reach.

Who's Against Nixon?

EXTENSION OF REMARKS

OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. DAGUE. Mr. Speaker, I have never withheld praise when I felt it was deserved, even from those for whom I have a political aversion; and in the present instance I must express my admiration, albeit somewhat grudgingly, for the masterful job the partisans of labor and the ADA have done on the Vice President, a job that far exceeds in its virulence the smear campaign directed at Herbert Hoover by Charlie Michaelson, the hireling hatchetman of the New Deal back in the thirties.

A recent survey clearly indicates that the majority of the Republican leaders are for RICHARD NIXON, and it is hard to see how they could be otherwise out of deference to the hard-hitting manner in which he carried the fight to the opposition in 1952 and 1954. Up in Pennsylvania where I come from we play the game of politics for keeps, asking for no quarter and giving none; and when the fight is over we harbor no grudges, nor do we criticize our opponents for having called their shots. And I can report that the precinct workers and the party faith-

ful, the people who ring the doorbells and get out the vote, are enthusiastically for the Nixon type of forthright campaigning.

In any realistic estimate of the situation we can very well discount the opposition to Mr. NIXON that comes from the Democrat camp. They long ago recognized the futility, and indeed the political hazard, of criticizing President Eisenhower; hence it was only natural that they should center their fire on the one man who has enjoyed greater praise from the President than any other member of his team. But who are the ones in the Republican camp who find fault with the Vice President? Certainly it cannot be laid to top leaders in the Citizens for Eisenhower or among the followers of the late Senator Taft, most of whom are strongly for keeping Mr. NIXON on the ticket. As a matter of fact, the drop-NIXON group in the G. O. P. is made up principally of the nervous-nellies who unwittingly pay tribute to the A. D. A. smear artists by expressing fear that NIXON may have been damaged to the point where he will be a liability in the campaign.

I can think of no greater tragedy that could befall our party in this election year than to drop the one man who has carried the fight to our political foes with vigor but with strict regard for the rules, and who at the same time has given the President his best in loyal and devoted service. And I have no patience with the thinking of those who in order to try to capture Democrat votes would take the step that would result in a host of regular Republicans sitting out the election, a point which columnist David Lawrence makes in these words:

Plainly the Republican managers will have to figure out a way to get a united party and a ticket that will persuade Republicans to go to the polls in 1956. They should be worrying far less about what will attract 'left wing' Democrats and more about winning regular Republicans. As one prominent Republican Senator put it to this correspondent the other day: "For every Democrat supposedly attracted by deserting NIXON we will lose two regular Republicans who will stay at home."

I think most of us are thoroughly in accord with the President's refusal to name his running-mate in advance of his own nomination, and we heartily applaud his recognition of the rules of the game. In the end, however, I am satisfied that he will give the nod to the hardest-working and the most loyal Vice President any Chief Executive ever had. On that point millions of Ike supporters are supremely confident.

The Case for Arms to Israel

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 8, 1956

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter circulated by the Pro-Palestine Federation of America which sets forth most cogently the overwhelming necessity for sending arms to Israel, the lone democracy in the Middle East:

PRO-PALESTINE FEDERATION OF AMERICA,
New York City, March 10, 1956.

MY DEAR SIR: The purpose of this message is to focus your attention upon the utterly grave situation in which Israel finds herself at this moment. She is completely encircled by exceedingly well-armed mortal enemies who are determined to annihilate her. Unless President Eisenhower changes his course of action and allows the sale of defensive arms to Israel, the following dreadful events are liable to be precipitated:

1. A concerted massive assault may be launched by Egypt, Syria, Jordan, and Saudi-Arabia, by land and from the air, without any warning whatsoever.

2. Should they overwhelm Israel, her enemies plan to exterminate every man, woman, and child in Israel.

3. The extermination of the Jewish population in Israel will be effectuated by means of speedily erected gas chambers, in established concentration camps patterned after the infamous Nazi model during World War II.

The survival of approximately 1,700,000 Jewish souls at present in Israel most assuredly depends upon Israel's ability to repulse the onrushing savage armed onslaught—now expected to occur in the very near future.

Whatever your persuasion may be, we do not believe that you will contemplate with equanimity the wholesale slaughter of innocent human beings, due to a cruel and totally unjustified refusal of our Government to permit a democratic free State to buy badly needed arms to defend itself.

Perhaps you may be in a position to persuade our President that the few marines he is now dispatching will not be able to forestall the catastrophe; nor will France, England, and the United Nations be able to do anything. They were not able in 1948, to prevent the assault of the Arabs; Israel had to fight off the Arabs single-handed, in order to save herself. The United Nations looked on helplessly, until the Arabs were defeated and came running to the U. N. to plead for rescue. Then—and only then—the U. N. intervened with mediation and efforts to bring about a truce. Had the Arabs, however, been victorious, they would have massacred all the Jews in Palestine, and the U. N. would have washed their hands of the whole affair. To accept now the Eisenhower-Dulles' line, that Israel does not need arms, that Israel should rely upon a worthless paper declaration of England, France, and the United States, or look to U. N. for intervention, is sheer folly. The only salvation of Israel is a sufficient supply of defensive arms to protect herself as she did in 1948.

The argument advanced by President Eisenhower, that because there are 40 million Arabs, defensive arms would not help Israel, is without merit in fact; for if this be so, then why should the United States acquire additional arms when there are 900 million people in Russia and China, threatening our security? Why has the United States supplied Formosa or South Korea with an impressive array of modern arms? These 40 million Arabs, mentioned by the President, are an amorphous mass of backward people scattered over a million and a half square miles of territory, presenting untold logistic difficulties; they cannot, therefore, be used as justification for a denial of the legitimate arms request by Israel.

We feel that our President is grossly misinformed by a group of so-called experts in our State Department. The tragic fact of an anti-Israel policy being fostered and carried out by our State Department, may as yet boomerang and injure our most vital American interests in the Middle East. The shameful ouster of Glubb Pasha from Jordan, after England has so openly and zealously sided with the Arabs, should amply prove our fears. For if our only democratic outpost in the Middle East—Israel—is destroyed, what will become of our struggle for the rescue of the free world from reaction and Communist domination?

We trust you give considered thought to the stark reality of the dangers involved in the refusal to help Israel protect herself. Israel does not want or need American marines—what she asks for is permission to buy a modest quantity of defensive weapons which her own army is well capable to use effectively to prevent Egypt and her consorts from overrunning and destroying her territory. You will be rendering a real service to humanity and, above all, to America, if you could intercede with President Eisenhower in behalf of freedom and democracy in the Middle East.

Very sincerely yours,
PIERRE VAN PAASSEN,
President.
DR. A. BEN ELIAS,
Secretary.

Spending Can Too Be Cut

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Muncie (Ind.) Star. This editorial entitled "Spending Can Too Be Cut" is worthy of the consideration of every Member of Congress.

The editorial follows:

SPENDING CAN TOO BE CUT

The Bureau of the Budget has published a condensed summary of the administration's spending program proposals for the next fiscal year. Titled "The Federal Budget in Brief," is can be obtained for a quarter from the Superintednent of Documents.

It breaks down the budget total by various methods of classification. One of these is a division into "uncontrollable" and "other" expenditures. In this division, the Budget Bureau puts 61 percent of the budget into a grouping labeled "major national security." Another 25 percent is classed as "relatively uncontrollable," leaving 13 percent called "other" kinds of spending and 1 percent allowed for debt retirement.

Since there is a general inclination to regard "national security" budget items as untouchable, the clear implication is that only 13 percent of the proposed expenditures are susceptible to trimming by either the administration or Congress. This is a situation which has been cited year after year, by administrations of both parties and by Members of Congress under both political regimes, as the explanation of failure to bring about substantial spending reduction and to establish the habit of budget balance.

How valid is this claim that most of the Federal budget is uncontrollable? Close examination of the claim is hard to believe, because an exact detail of the uncontrollable list is not given. Only a few general items are mentioned. They at least can be examined.

One of the items, often the first cited by those arguing that the budget is irreducible, is the interest on the debt. But this is not uncontrollable at all, for from it. All you have to do to cut this expense is to cut the debt. If $1 million were applied at the start of the fiscal year to reduction of the debt, the interest cost for that fiscal year would be cut by about $30 million.

Another item cited by the Budget Bureau is veterans' benefits. It is fallacious to call these uncontrollable. Congress can adjust the rate and scope of such payments at will. And the administration and Congress could jointly adopt the Hoover Commission recommendations for more efficient distribution of hospital facilities and for limiting the medical services for nonservice-connected disabilities to persons actually unable to pay for private care. Adoption of the Commission recommendations alone would lead to budget reduction running into hundreds of millions of dollars.

A third item on the "uncontrollable" list is farm price support costs, which the Budget Bureau says are "largely governed by such factors as the weather and world prices." Nonsense. Farm price supports not only can be but in practice have been changed from year to year at the whim of Congress. Under the flexible support program they are also subject, to a considerable extent, to the discretion of the Secretary of Agriculture. By adopting a farm program aimed at eventual emancipation of farming from Government dependence, the cost of farm price supports could be progressively reduced.

There is also the huge category of "national security," which is 61 percent of the budget. The grouping includes such things as foreign aid, which of course both Congress and the administration are perfectly able to control. Congress has full control over future appropriations. And it could establish control of current spending by canceling the huge backlog of unspent appropriations. The direct budget of the Department of Defense is by no means inflexible.

The plaint that the greatest part of the Federal budget is not subject to cutting is pure hogwash. Wherever you turn, there are things which could be done to bring Government back within its proper bounds and make it more efficient, more effective, and less costly.

Nevertheless the idea that the budget is dominated by "fixed" costs has been thoroughly sold. It seems to be widely accepted even in Congress. Or at least it makes a convenient explanation. The effect of the argument that Congress cannot trim the budget enough to make the effort worth while has been so great that the second Hoover Commission made an attack on this problem one of its major objectives.

While not couched in such formal language, the first recommendation of the Commission in this field amounted to the advice that Congress should quit kidding itself with ambiguous figures. It recommended that both the administrative budget and the appropriations should be in terms of expenditures actually to be made during the next fiscal year, rather than in terms of obligational authority. This would make the budget conform to the current transactions of the Treasury, and would eliminate the fantastic influence of carryover appropriations. In some recent years the unexpended balances carried from 1 year to the next have actually exceeded the total annual budget. In the coming fiscal year it is estimated that less than two-thirds of actual spending will be from the budget to be adopted, the rest coming from unspent previous appropriations. Of course these recurrent carryovers impair the ability of Congress to control spending. That the practice should be stopped in perhaps the most significant recommendation of the Hoover report.

The Commission also recommended that Congress should reduce as much as possible the number of open end operations authorized. These are activities which, once established, carry on more or less automatically. In their operation the Government is committed to future expenditures before the budget committees of Congress even see the budget. More than $15 billion of the 1955 budget involved such programs.

A third budget control recommendation of the Commission was that all revolving funds operated by Government agencies be reviewed to determine whether their continuance adds to efficient government management. The operation of these funds is subject to little or no annual control by Congress.

These and hundreds of other actions should be taken to reduce Federal spending. Don't ever accept the argument that the Federal budget is largely uncontrollable. It can be controlled any time Congress make up its mind to do it.

Lithuanian Independence Day

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, on February 19, 1956, the Honorable Petras Dauzvardis delivered an outstanding address in my district at Kenosha, Wis., on Lithuanian Independence Day. I am inserting it at this point as part of my remarks:

ADDRESS BY PETRAS DAUZVARDIS, CONSUL OF LITHUANIA AT CHICAGO, LITHUANIAN INDEPENDENCE DAY COMMEMORATION FEBRUARY 19, 1956, KENOSHA, WIS.

In observing the anniversary of Lithuania's Independence Day, it is worthwhile to look at her past and her present plight, and her place in the international community.

Many announcements and statements state that Lithuania is this year observing her 38th anniversary. This, of course, is not quite true, for 1956 marks the 38-year anniversary of the Republic of Lithuania—not of the State of Lithuania.

The State of Lithuania is more than 1,000 years old, its modern-united stage reaching back to the beginning of the 13th century. The Lithuanian Lincoln of united Lithuania was Lithuanian Grand Duke Mindaugas. In the year 1236 he already led a united Lithuanian Army against the Teutons. In 1251 he adopted Christianity and in 1253 he was crowned King of Lithuania. So the modern Lithuania State is at least 700 years old. During 120 of these years Lithuania was occupied and ruled by the Russian Empire and many Lithuanians were exterminated and deported to the depths of Russia during this period. The Lithuanians did not, however, surrender to Russia. Succeeding generations rebelled against the occupant until finally, on February 16, 1918, Lithuania proclaimed the severance of all ties with Russia and her restoration as an independent Lithuanian Republic founded on a democratic basis.

Having regained independence, the famished and tortured Lithuanian nation performed near miracles in its own state and in the family of nations. The Lithuanians governed themselves wisely, fulfilled all of their international obligations, and did and planned no wrong against anyone else. Her rapacious neighbors envied her and in 1940 shamefully, by brute force and deceit, seized Lithuania, robbed her and sealed her in a huge Soviet prison. Enslaved Lithuania has no currency of her own, no state agencies, such as postal or foreign service. The Soviet occupant rules and annihilates Lithuania with tyrannic terrorism. The occupant has taken from Lithuania's people their enterprises, their farms, and all their other possessions, and converted the people into paupers and disenfranchised prisoners and serfs, restoring the old Czarist penal servitude to Lithuania. Out of 287,380 farms they have made 1,787 Coesher, manors-kokozes. The average pay for a day's work for the serfs on the kolkozes is 5 pounds of grain and 1 ruble in money. The official rate of exchange of the ruble is 25 American cents, but its purchasing value is about 5 cents. Out of this pay and their gardens—about an acre of ground—the people barely manage to feed themselves, but are unable to buy anything. This is proven by the letters arriving from Lithuania, in which the people ask for clothing, footwear, and medicines.

Just the matter of used clothing and gift parcels confirms what we have said about the Soviet enslavement and exploitation of Lithuania and her people. The people do not have the means to buy clothing and medicines, their relatives and friends want to help them, but the occupant prevents such aid by demanding an exhorbitant duty from the recipient or the sender. The recipient cannot, of course, pay the price, since if he could afford it he would not be requesting castoff clothing. The sender, on the other hand, has to pay the despoiler of Lithuania or his agents twice as much as the package is worth if he wants to help his penniless brother or sister. This is an unheard of thing, not practiced anywhere in the civilized world. Although she was not rich, independent Lithuania charged no duty on gift packages and needed no agents for shipping them and collecting the duty. The people sent packages by parcel post at very reasonable cost.

This much, then, about Lithuania's sad plight. Now, also briefly, let us glance at the brighter side.

Lithuania's past and the resistance and determination of the Lithuanian Nation give to Lithuania an inner strength and outside support. The occupants are torturing her for almost 16 years, but are unable to annihilate it—the Lithuanians never cease their opposition to the occupant. The occupants themselves acknowledge this opposition.

In appreciation of the Lithuanian stand and determination the free world, with the United States in the lead, is giving Lithuania moral and judicial-political support by refusing to recognize the incorporation of Lithuania into the Soviet Union; Lithuania is still recognized as an individual state and her representatives are recognized and granted full diplomatic rights and privileges; and in demanding freedom for Lithuania. The greatest thanks and respect are due the United States and her allies for this stand. This we express to them at this and every other opportunity.

Lithuania, Latvia, and Estonia comprise a new and significant precedent in international relations and international law by placing right before might. The case is heading toward the conclusion that the usurper of Lithuania and the other Baltic States be condemned as an international criminal—an unfit member of the family of decent nations.

The international indictment and proof of guilt of the Soviet Union in the seizure and strangulation of the Baltic States is at hand. It was proven by the United States congressional committee of investigation and testimony of witnesses; by the repeated statements made by President Eisenhower and Secretary Dulles and by the Eisenhower-Eden Washington declaration. It is only necessary to pass sentence which, it must

be expected, will surely come. An appropriate international agency will proclaim the Soviet Union as an aggressor and will demand that she get out of the occupied countries and pay the necessary reparations. It is not necessary at this time to try to set a date for this. Perhaps not all of us shall see the day, but many of us will. There can be no other way—every form of gangsterism came to an end in the past, and the Soviet aggressors will meet the same fate.

What must we do to expedite this fate for them?

1. We must firmly believe in the sanctity of our rights and their realization, in victory and success.

2. We must support and strengthen this faith with the zeal of our forefathers, with perseverance by winning the struggles.

3. We must live and breathe the main aim of the nation, the liberation of Lithuania from the Russian occupation.

4. We must always and everywhere keep alive the fact that the State of Lithuania is Soviet ruled and must be liberated.

5. We must do nothing which might be harmful to Lithuania and Lithuania's liberation.

6. In writing to Lithuania we must not address our letters Soviet style, Lithuania S. S. R. These three letters were hung on the neck of Lithuania by the Moscow scoundrels.

7. We must be sensible and united. We must fight for Lithuania's freedom individually and together. Let us reach for the common aim with commonsense and statesmanship. We shall win the struggle, we will restore Lithuania's freedom.

Atoms for Peace Stamp

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. ADDONIZIO. Mr. Speaker, I should like to call to the attention of the Congress a very worthwhile project, an "Atoms for Peace" stamp, that is being carried forward with unflagging energy and enthusiasm by a group of patriotic citizens in the interest of international peace and understanding. It is hoped that the United States and the United Nations will sponsor the regular issuance of an Atoms for Peace stamp and thus facilitate its adoption by the other nations of the world. The project is ably described in the following letter from a gracious lady in the 11th Congressional District, Mrs. Charles F. Robbins, who is chairman, Committee of Volunteers:

"To find the way by which the inventiveness of man shall be consecrated to his life." (a magnificent thought of President Eisenhower as quoted from his speech before the U. N., December 8, 1953).

DEAR SIR: Believing in the importance of the above, we hope that this commemorative stamp may be retained by the United States Government, and become a regular issue, widely used.

From Geneva the whole world was inspired by this precept, and our aim is to broadcast this idea, which we have translated (the students of Bloomfield College and Seminary, Bloomfield, N. J., voted unanimously to make this a student project with Chris Tirre, chairman) into 38 languages. The design of the stamp implied ease of communication throughout the entire world.

All nations print stamps, and all people buy stamps, therefore we hope that the engraving departments of other nations may find the work facilitated toward encircling the globe with this thought.

The Voice of America is cooperating, the Senator H. ALEXANDER SMITH has encouraged us.

We trust that you will assist in making this stamp a regular issue in this country, and widely used throughout the world.

Gratefully,

ELIZABETH B. ROBBINS,
(Mrs. Charles F.),
Chairman, Committee of Volunteers,
Llewellyn Park, West Orange, N. J.

Veterans of Foreign Wars Denounces Preferential Tax Treatment for Some Groups Which Is Denied to Others

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1956

Mr. GROSS. Mr. Speaker, the Veterans of Foreign Wars of the United States, one of the strong pillars in the fight for American sovereignty, properly raises the question of why certain organizations in this country are given tax exemption while organizations which seek to perpetuate consitutional government and this Republic are denied the same special treatment.

The following is a newsletter released recently by VFW national headquarters in Washington:

SHOULD THE ATLANTIC UNION COMMITTEE ENJOY TAX-EXEMPT STATUS?

Under Federal law the Internal Revenue Service can grant tax exemption to various organizations. The exemption falls into two categories: (1) exemption on the organization's own income (except for business activities not related to its main purpose); (2) exemption to individuals who contribute to the organization (their contributions are income-tax deductible).

The basic theory behind the policy of granting tax exemptions is that certain activities are good for the people and the Nation as a whole. They serve a public, rather than a private, good or purpose. The Government, therefore, should encourage and assist such activities. Tax-exempt status is usually granted to churches, educational and charitable institutions, hospitals, foundations, etc. Over 32,000 groups in this country now enjoy tax exemption.

Several months ago the Internal Revenue Service decided to recheck some organizations enjoying this privilege because it was believed they were engaging in activities barred to groups granted tax exemption.

Last October 5 the Internal Revenue Service announced that For America had been denied tax exemption for its financial contributors, although the organization did not have to pay taxes on its own income. For America is a conservative group formed to combat superinternationalism, one-worldism, and communism.

The Internal Revenue Service on last October 13 also revoked the tax-exempt status of the Institute of Pacific Relations, a supposedly objective study group on the Far East, which the Senate Judiciary Committee had found to be dominated by a clique of Communists and pro-Communists.

The Atlantic Union Committee was granted tax exemption for both itself and its contributors in early 1954 on the grounds that it is an educational organization. According to published reports, the Atlantic Union Committee is not one of the groups whose activities are now being reviewed by the Internal Revenue Service with a view toward revoking its tax-exempt privileges.

Under the law, tax-exempt educational organizations are barred from taking any part in the political campaigns of candidates for public office and no substantial part of their activity can be devoted to attempts to influence legislation or to the dissemination of controversial or partisan propaganda.

For America was denied tax exemption on the grounds that it supported the Bricker amendment, opposed communism, world government and Atlantic Union, advocated certain principles of government (constitutional government, local government responsibility and States' rights) and urged changes in United States foreign policy. Its publications, the Internal Revenue Service said were primarily designed to influence the public to accept its views on these matters. This meant that For America was engaging in political activity and, therefore, could not qualify for tax exemption as an educational organization.

Atlantic Union officials, in view of their committee's purposes and its past and current activities, were apparently somewhat surprised when they were granted tax exemption in 1954—and were also worried about their ability to retain it. This is evident from correspondence between AUC officials which has been reproduced in the newsletter of the Guardians of Our American Heritage, an anti-world-government group.

A letter from the AUC's executive secretary, Justin Blackwelder, to its then president, the late Justice Owen J. Roberts, dated April 30, 1954, and marked "Strictly confidential," read as follows:

"DEAR MR. JUSTICE: Now that we have our tax exemption, there seems to be two doubts in the minds of some of our members. One has to do with whether or not we can stay exempt, and the other has to do with the amount of political activity in which we can indulge and retain our tax exemption.

"The answers to these questions depend upon the underlying philosophy behind the order issued by the Department of Internal Revenue. Some of the members obviously feel that we were given tax exemption because we had not engaged in any political activity for more than a year. This reasoning leads to the conclusion that we will lose our exemption if and when we reengage in such activity. The World Federalists obviously think that this is how we managed to get tax exemption, and I would be just as happy if they continued to believe this. However, it is not the case.

"The Department of Internal Revenue grants tax exemption in many ways. The exemption can be so worded that it is effective on a given date, which shows that the organization was not exempt before that date and is exempt from that date on. Our exemption is not so limited. I have checked with a member of the Board of Review on this subject, and she tells me that on the basis of our exemption, upon which she herself passed, the Atlantic Union Committee not only is tax-exempt but has been from the date it was incorporated in the State of New York.

"That means that any of our past contributors may file amended returns for the past years, and deduct their contributions. However, my informant cautioned me to point out to such contributors that amended returns are usually subjected to close scrutiny, and she would advise against filing

such returns. This is a decision which each contributor will have to make for himself.

"The more important matter, it seems to me, is this. Our application stated that we had supported resolutions; in fact that we had formed the committee specifically for that purpose. We also contended that a concurrent resolution was not legislation, and promised the Department of Internal Revenue that we would not devote any 'substantial efforts' to influencing legislation. In turn the Department has looked over our literature, budget, bylaws and charter, and has declared that we have been tax exempt since the date of our incorporation.

"It therefore seems apparent to me that our activities in the future need only be guided by our activities in the past. Tax exemption has not limited us in any way.

"Our accountant feels that the Department of Internal Revenue would resent our broadcasting around the means by which we obtained tax exemption, and it is therefore fine, as far as we are concerned, if the World Federalists think that we have retired from the political arena. However, we do not want our members to share the same delusion. This is something of a problem because, if we tell them that the committee has been tax exempt since 1949, I am afraid the cat will be out of the bag. I imagine that this matter will be discussed in New York next Wednesday and I am sure that the executive committee would be most interested in your thoughts on this subject."

Carbon copies of the above letter were sent to top AUC officers.

The text of a memorandum from the same Mr. Blackwelder to members of the board of governors of the Atlantic Union Committee, dated May 5, 1954, and also marked "strictly confidential," read as follows:

"Now that the committee has been granted tax exemption under the provisions of paragraph 39.101 (6) of the Internal Revenue Code, the question has very properly been raised, 'How are we going to make sure that we keep it?' We want the committee to increase its activities, but we must be sure that we stay within the framework of the governing regulation.

"There are two provisions of the code which appear to need special attention. One is the following paragraph:

" 'An organization formed, or availed of, to disseminate controversial or partisan propaganda is not an educational organization within the meaning of the code. However, the publication of books or the giving of lectures advocating a cause of a controversial nature shall not of itself be sufficient to deny an organization the exemption, if carrying on propaganda, or otherwise attempting, to influence legislation forms no substantial part of its activities. Its principal purpose and substantially all of its activities being clearly of a nonpartisan, noncontroversial, and educational nature.' "

"It could be argued that this committee disseminates controversial propaganda, and it could be argued that a large part of the committee's activities were of a controversial nature. However, the Department of Internal Revenue studied our bylaws and all of the literature that we have circulated for more than a year and obviously decided that we were noncontroversial, since they granted us exemption. They will therefore not withdraw exemption under the provisions of this paragraph unless we make some substantial change in our purposes or literature."

DOES THE INTERNAL REVENUE SERVICE USE A DOUBLE STANDARD IN INTERPRETING LAW?

It can be seen from the foregoing material that whether or not a group is granted tax-exempt status by the Internal Revenue Service, depends on how the Service interprets certain key words and phrases in the pertinent law.

Just what is "legislation," "political activity," and "propaganda"—as distinguished from educational material? What does "controversial" mean?

Generally speaking, "legislation" is the making or enacting of laws. In the case of the Atlantic Union Committee, the Internal Revenue Service has found that a concurrent resolution is not legislation. Atlantic Union proposals that have been introduced in Congress have been concurrent resolutions. The AUC can therefore support them without being accused of influencing legislation.

Technically, this is correct and a fair interpretation of the law. In Congress, "legislation" is interpreted as meaning a lawmaking act that requires the signature of the President before it has legal effect. Concurrent resolutions are merely expressions of the feeling of Congress on certain issues. They contain no legislative matter and do not require the President's signature. Therefore they are not legislation in the strict meaning of the word.

But, technically speaking, amendments to the Constitution such as the Bricker amendment, are not considered legislation in Congress, either. A constitutional amendment requires no action by the President, and is therefore never submitted to him for signature. Its legal effect depends on State ratification.

It is extremely difficult, then, to understand how the Internal Revenue Service could recognize the fact that a concurrent resolution is not legislation when deciding the case of the Atlantic Union Committee, but refused to recognize the fact that a constitutional amendment is not legislation in making its decision on "For America."

"Political activity" has several meanings, activity or maneuvering within a political party; running for or helping elect someone to public office and, in a broader sense, any activity related to the affairs or policies of government, to internal legislation, foreign policy, principles, forms or systems of government, amendments to the Constitution, and so forth.

The decisions on the Atlantic Union Committee and "For America" leave little doubt that the Internal Revenue Service has used a double standard in interpreting the broader meaning of "political activity". The variance is so great that it raises serious question as to the integrity of the Service.

In its letter to For America denying it tax exemption, the Internal Revenue Service wrote: "An organization operated for the purpose of promoting principles of Government or engaged in activities pertaining to the conduct or form of government * * * is engaged in activities of a political nature."

But the Atlantic Union Committee was formed for the specific purpose of, and has concentrated its efforts on, promoting a drastic change in the United States form of government. How, then, could the Internal Revenue Service grant it an exemption as an organization not engaged in political activity?

Is there any logic or honesty in the argument that an organization which promotes Atlantic Union is not engaging in political activity but that an organization which opposes Atlantic Union is engaging in political activity?

It is only necessary to read the preceding quoted correspondence between AUC officers to realize that they had no doubt at all but that they were engaging in political activity and that they planned to continue doing so.

The difference between educational material and propaganda is this: educational matter presents all the facts and arguments, pro and con, on any issue so that people can weigh their relative value. Propaganda, on the other hand, is not objective; it presents one side of a case and not the other, or else offers a slanted treatment—a forceful array of facts and arguments supporting one viewpoint, and only a few of the facts and some not-so-telling arguments in favor of the opposite position.

The literature of the Atlantic Union Committee, from its very inception, has been loaded on the side of Atlantic Union. True, some AUC material has made passing references to the arguments of its opponents, but it has by no means given full and fair treatment to both sides. It is ridiculous for the Internal Revenue Service to say this material has not been propaganda.

A controversial matter is one that is debatable or subject to dispute. How many current proposals can you think of that are more controversial than the AUC's statement that it would be good for the American people to surrender their sovereignty and independence to a great superstate?

By comparison with the proposals of the Atlantic Union Committee, those of For America are, though obviously debatable, relatively mild and subject to little dispute. The Internal Revenue Service's decision on the "controversial" nature of the two organizations' proposals is certainly as weird as its findings on the other key points at issue.

The record indicates that the Atlantic Union Committee engages in political activity and disseminates controversial propaganda. The law says that tax-exempt "educational" groups may not do this. Why, then, does the Internal Revenue Service not take steps to deprive the AUC of its tax-exempt privilege?

NOTE.—The VFW has taken no position either for or against For America. It is discussed here only because the Government's action on its request for tax exemption is most pertinent to the case of the AUC.

Laymen Take Issue With Clergy

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. DORN of South Carolina. Mr. Speaker, never once did Jesus Christ go to Rome and ask for a law to supplement His spiritual teachings. Nor does the record show that He ever went to the governor of Israel or any government official to help Him out in His program. I believe the National Council of the Churches of Christ in America today is not following this great example set by Christ. The following article by David Lawrence which appeared recently in the Washington Evening Star indicates that all of us laymen do not necessarily agree with the national council:

LAYMEN TAKE ISSUE WITH CLERGY—CONFLICT OVER COUNCIL'S RIGHT TO SPEAK ON ISSUES OUTSIDE CHURCH STALEMATED

(By David Lawrence)

A dignified controversy of 5 years' standing, conducted with all the restraint and respect that befits the expression of such an earnest and conscientious difference of opinion, has finally come out into the open as a lay committee of 190 Protestant members writes a report taking issue with the bishops and other prominent clergymen who comprise the organization known as the National Council of the Churches of Christ.

Shall the clergy, in the name of that organization, issue statements on social, political,

and economic questions, purporting periodically to reflect the views of 34 million Protestant members?

This is the basic question and the clergy, according to the report, insist on answering it in the affirmative, while the Christian laymen answer it in the negative. A committee formed in 1950 to study the question has been dissolved, with each side holding to its respective opinion.

Members of the lay committee represented many fields—20 of them come from the educational world, 15 are in banking, 29 in manufacturing, 14 in labor-union executive positions, 15 in the legal profession, 10 in medicine, and 8 in agriculture, and there were also included editors, publishers, State and Federal officials, judges, scientists, and persons in other walks of life. Says J. Howard Pew, of Philadelphia, chairman, in the final report:

"Throughout our committee's term of life, it repeatedly brought to the council's attention the seriousness of the problems involved in its issuance of controversial statements and studies in the field of sociology, economics, and politics; and the danger inherent in speaking to official Washington and the United Nations General Assembly in behalf of Protestantism on matters outside their field and for which they possessed no mandate."

The lay report questioned whether the rank and file of the Protestant members would agree with the clergy's views on these topics, and hence thought it inappropriate for the National Council of the Churches of Christ to speak out as if it represented the laymen. The report says on this point:

"We, as lay people, were alarmed and unhappy as the National Council assumed the right to speak increasingly on subjects in which it was difficult to see ethical or spiritual content for that inarticulate and voiceless body called '34 million Protestants'."

The national council, it appears to the laymen's committee, is pursuing the same course as its predecessor organization, the Federal Council of the Churches of Christ, which was superseded in 1950 by the present organization. The report says the old Federal council "had been the object of protest for more than 40 years for its issuance of pronouncements which elevated the State to a position where it would increasingly control the production and the lives of its citizens."

Certain specific issues on which the national council expressed itself were cited. such as the controversy over the Bricker amendment and the procedures of investigating committees in Congress, and there is mentioned particularly in the laymen's report the council's public attitude toward investigations by Congress of subversive activities where witnesses are asked to testify "concerning their personal economic and political beliefs." On this the report says:

"Certain members of the lay committee have indicated their belief that such statements from the national council might influence the American people to believe that communism is nothing more than a personal economic or political belief and that it is a gross invasion of personal privacy for a congressional witness to be questioned as to whether he is or ever has been a member of the Communist Party."

There were other items, such as the council's authorization to its officers to write to the United States delegation in the United Nations on unification of Korea, collective security, reduction of armaments, technical assistance to underdeveloped countries, refugees.

John T. Jones of the United Mine Workers said in one part of the record, in reference to a statement entitled "Basic Christian Principles and Assumptions for Economic Life," that he never would have joined the committee if he had known that this statement issued by the council would be considered. The same pronouncement was frequently labeled "socialistic" or "communistic" by some of the lay members. The majority of the statements of the council, it is concluded by the lay committee, were made "without proper consideration and far too little research."

Not included in the text of the report but an example of what the lay committee opposed was a statement issued on the stationery of the board of Christian Education of the Presbyterian Church of the United States in November 1954 in the midst of the anti-McCarthy fight, claiming that the general assembly of the church gave implied sanction to it. The statement read in part:

"Supporting this action of the general assembly, it is urgent that as many persons as possible contact their Senators at once, urging affirmative action on the censure resolution now before them. Each concerned person should persuade neighbors and friends to take similar action."

While clergymen as individuals have the same rights as other persons in or outside of politics to express themselves, the question raised here concerned the wisdom of national church organizations in constituting themselves as pressure groups using the prestige of the church for political or quasi-political purposes. It is a controversy that many of the Christian laymen feel in the long run cannot but diminish confidence in the churches. The report warns that this activity impairs the ability of the National Council of the Churches of Christ to meet its prime responsibility. For when sitting in judgment on current secular affairs, it becomes involved in economic or political controversy having no moral or ethical content, promoting division where unity of purpose should obtain.

The report covers 300 printed pages and holds out no apparent hope that the differences can be reconciled.

Resolution on Civil Rights

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. ADDONIZIO. Mr. Speaker, it is with pride that I insert in the RECORD the following resolution on civil rights unanimously adopted at the regular meeting of the Newark municipal council on March 7, 1956. This is an affirmation of my home community's strong belief in and adherence to the democratic principles upon which our Nation was founded.

Wherefore we, the members of the Newark city council are fully cognizant of the bigoted and discriminatory tactics employed by certain citizens and certain government officials of the State of Alabama; and

Wherefore we fully recognize the rights of all human beings, regardless of their race, color, or place of origin; and

Wherefore, knowing it is an inherent right of American citizens to demonstrate their protests against said discrimination and bigotry in a law-abiding and peaceful manner; Now, therefore, be it

Resolved, That we, the members of the Newark City Council, gathered here today, the 7th day of March 1956, do commend those citizens of the State of Alabama who resist the Jim Crow laws of that State in a peaceful and law-abiding manner and condemn those tyrannical forces fomenting racial hatred, who are attempting to deprive these citizens of our great country, of their basic and inherent rights, and that a copy of this resolution be sent to our 3 Congressmen and 2 Senators of the State of New Jersey.

The Nix on Nixon?

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. DINGELL. Mr. Speaker, I feel that an editorial comment in the Boston (Mass.) Post of Friday, March 2, 1956, which strongly supported the Eisenhower-Nixon ticket in 1952 is worthy of note for its appraisal of the health situation of Candidate Eisenhower. I limit my comment to the potentially disasterous effect on the welfare of the American people and on the hopes of free men everywhere if another crippling heart attack is suffered by Mr. Eisenhower.

Imagine the President being turned into a bed patient again, and compelled to remain in retirement for a substantial period of time, if not indefinitely. What would be the effect of such an illness upon the office of the President? Who would determine whether the President was so incapaciated that the duties of the office should devolve upon the Vice President? Who would conduct the everyday affairs of the country, who would give guidance to the policies, who would conduct the foreign affairs? How would foreign countries regard such a situation, and what would the effect be on our foreign and internal policies?

Even if the Vice President were to accede to the duties of the office, how would such a determination by him or someone else that the President was incapacitated be regarded by our own people and the people of other lands? Who would determine whether and when the President had recovered, and that the Vice President should relinquish the duties of the office?

And lastly, how would we know that such a time of indecision would not be grasped by an aggressor as an ideal time to attack a vacillating, leaderless, and divided America?

The editorial mentioned above is as follows:

THE NIX ON NIXON?

The clinical data submitted to the American people by President Eisenhower concerning the physical condition of a man of almost 66 years, who has suffered a heart attack which has curtailed his activity, may be politically less important than the identity of the man nominated as his running mate.

Certainly the President's television appearance was far from reassuring. He looked worn, ill and irresolute. The pressures applied to persuade him to seek the second term were to most of the professional observers of the political scene rather obvious.

The President's careful avoidance of any endorsement of RICHARD NIXON damned NIXON with praise. The men who have the President's ear and his confidence plainly

do not want NIXON and for one central reason. If reelected, the President might die in office. They do not want NIXON to succeed.

To pussyfoot around this grim fact is being less than candid with the American people. The names of those acceptable to the President's confidants are not numerous. Secretary of the Treasury Humphrey seems to be the main choice of most of the advisers. In fact, the talk about the second man on the ticket has progressed to the point where there is open discussion of Secretary of Defense Wilson quitting to be replaced by NIXON, or of making NIXON Attorney General.

Disposing of NIXON is a prime problem. The President made that point twice in a single day by avoiding the Nixon issue.

This will be one of the strangest Presidential campaigns in all our history, a modern front-porch campaign in which the President's possible successor will have a more decisive role than the top of the ticket.

The American people have been handed a hard choice. First of all, they are asked to determine on the basis of certain unevaluated clinical information whether they want a President for the next 4 years who cannot give his utmost effort to the office. Next, they are asked to believe that this is a good thing for them and for the country. And then they are told that the President's health would improve in the White House more than if he became a private citizen.

The White House was not planned as a sanatorium or a nursing home. It was intended for the use and convenience of the Chief Executive of the most powerful nation on earth, whose constitutional responsibilities make it the most powerful and busiest office on earth.

These are things which need to be said and considered. These are matters for public discussion because the matter was made public by the President himself. It is in no sense intended to be disrespectful or unsympathetic, but to deal in realities without sentiment.

Resolution on Near East Situation

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. ADDONIZIO. Mr. Speaker, I should like to call the attention of the Congress to the following resolution unanimously adopted by the Newark, N. J., Municipal Council on the Near East situation. I believe the resolution reflects the sentiments of most Americans who are anxious that our Government adopt a realistic program to avert war in the Near East and defend that critical region from aggressive communism.

The resolution reads:

Whereas it is becoming apparent that the peace and security of the world is being endangered by the turbulence of the political situation in the Near East, and that the Communist countries are deliberately increasing these dangers by selling arms and ammunition to the Arab countries, and further, that certain policies of our own State Department permitted army tanks to be sold to Saudi Arabia by American manufacturers in defiance of all American and United Nations precepts for peace, and, finally, that denying arms to Israel is placing these friendly allies in a desperate military position: Therefore be it

Resolved, That the Newark City Council, as the governing body of one of America's great cities, memorializes the President of the United States, the two United States Senators from the State of New Jersey and the three Congressmen representing the Newark area, to request our Congress to investigate the entire situation in the light of recent events and from a practical humanitarian viewpoint and stop, once and for all time, the supplying of implements of war to any nation that reason dictates can become a common enemy of this country and the free world, but instead arm our friends, such as the free State of Israel, so that in their strength we might find a united free world strong enough to discourage the enemies of true freedom.

Pipefuls

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks I should like to include in the RECORD an excellent article relating to the type of problems which confront the Forest Service. It graphically depicts one of our most urgent problems.

The article in question is a column by Mr. Jim Day, which appeared in the March 8, 1956, edition of the Bakersfield Californian:

PIPEFULS

(By Jim Day)

Governmental neglect of one of the most popular and heavily used recreational areas in the State is specifically charged with heavy supporting data by Robert F. Poor, president of the Kernville Business Association.

"The Kernville Business Association is intensely interested in improving and expanding the Kern River public camp grounds under the jurisdiction of the United States Forest Service," Mr. Poor writes us, communicating his opinion and that of his directors. "Despite our efforts both parties and their representatives in Congress and the Senate thus far have refused to do anything.

TREMENDOUS USE

"In the 20 years since the camps were built by the CCC," he continued, "Southern California has more than tripled in population; use of the Kern River camps and the surrounding forest for recreation has expanded 8½ times.

"But in that time the camps have not been maintained. There are fewer camps, today, than 20 years ago. This year three camps are to be discontinued due to insufficient funds. Sanitary conditions are very poor.

THOUSANDS CAMP

"The 10 camps above Kernville, containing 87 individual campsites, were used 108,000 visitor days in 1955. Federal funds to provide for this wonder service totaled the staggering sum of $284 in 1954!

"This association and its members have spent more money for meetings, trips, literature and other devices to get additional funds for these camps than was spent by the Government for maintenance.

"There is a need," he continued, "for a substantial sum for repairs, replacement of abandoned camps and building of sufficient new facilities to take care of the increased number who enjoy this Kern River each year.

URGE ACTION

"We earnestly ask those who read this to add their own personal urging for action, by letters to their Congressmen and Senators. This project needs the support of everyone who has enjoyed any time along the Kern River, or who may contemplate doing so; only by a concerted effort will it be realized by our Government and its representatives that something must be done and done this year," he concluded.

SUPPORTING DIRECTORS

Supporting Mr. Poor is his board of directors composed of K. L. Blomberg, M. H. Knight, Bert James, S. C. Barnes, O. Greene, P. H. Lacquis, Cleo Chaney and A. L. Dally.

In the issue of the Californian yesterday was a detailed report of many millions of dollars being wasted on an abortive development of a Navy plane and the loss of lives too, in the costly failure. Many costly boondogling experiments of one kind and another have been recorded in the columns of this newspaper. It is too bad such money cannot be diverted to the use suggested by Mr. Poor.

We all know in Bakersfield and this county that thousands of persons move into the Kern River area for summer recreation. Indeed on opening day of fishing there are as many as 5,000 persons on the river and enough space on which to toss a sleeping bag is at a premium.

During deer hunting season there is another tremendous influx of people. But excessively heavy use of the river area continues throughout all spring, summer, and fall months.

It seems annoying in the extreme that the Government can't divert more than a couple hundred bucks to support this great asset used by thousands of persons.

NOT RANGERS' FAULT

It is certainly not the fault of the district rangers of the forestry officials here for they can't force the Government to give them the money for proper and decent maintenance of campsites used by many thousands of persons. But if we ourselves set up a howl maybe it will fall on hitherto deaf ears in Washington. We hope so.

Goodwin Acted Wisely

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the Des Moines Register of February 29, 1956. The Robert K. Goodwin mentioned therein was a highly respected Member of the 76th Congress:

GOODWIN ACTED WISELY

The Iowa Republican organization and Senator BOURKE B. HICKENLOOPER in particular owe their national committeeman, Robert K. Goodwin, a debt of gratitude.

Goodwin displayed good judgment in refusing to accept a $1,000 campaign contribution from John M. Neff, lobbyist for the Superior Oil Co.

How good his judgment was is now apparent in the light of testimony before the

Senate investigating committee concerning Neff's activities in rounding up votes for the natural-gas bill.

Hindsight makes it clear that had Goodwin accepted the money, even with "no strings attached," Senator HICKENLOOPER, who voted for the bill, would have been placed in an embarrassing position this fall in his campaign for reelection.

Robert Goodwin doesn't say so in just so many words but it is obvious that he "smelled a rat" in connection with the offer of the contribution and the implication that it took money to arrange a visit with Senator HICKENLOOPER.

Archbishop Josef Beran of Prague

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. MULTER. Mr. Speaker, this March 10 marked the fifth anniversary of the Communists' imprisonment of Archbishop Josef Beran of Prague in some unknown place. In the name of those sacred rights of freedom and justice endowed by the Creator upon every human being, I proffer this plea: That the Red regime free this man, worthy of every respect and honor and, at least, give him the right to abandon his beloved native land and to seek asylum in another country willing to receive him.

The Czechoslovakian Communist Government's imprisonment of such an illustrious man follows the Marxist doctrine that no man can freely speak and express his views. In our democracy we invite and welcome a completely free exchange of ideas, no matter how controversial and agonistic the exchange. Although we reserve to ourselves the privilege of vigorous contradiction, nevertheless, we respect the right of our opponents to voice freely their views.

Archbishop Beran is not alone in his suffering today. Many others, laymen as well as churchmen, have been jailed for insisting upon their God-given right of freedom in the choice of religious practice. It is sad, therefore, that the Communists in Czechoslovakia fail to see that their end is not served by imprisoning such a well-known champion of religious freedom. His forced silence serves only to enkindle the fire of resistance in the hearts of the Czech people. Abroad it constitutes a manifestation that no freedom exists under any Communist form of government. Mass extermination methods used by some other Communist rulers, while entirely inhuman and abominable, are probably less indicative of the false and tyrannical Communist principles than the instant example of suppressing a single man's moral freedom. In the blind search for forceful application of its will, the Communists could not have chosen a weaker case against themselves.

Archbishop Beran has been known as a champion of freedom for many years. The Nazis had already tried for 3 years, unsuccessfully, to crush the spirit, the strength, and power of resistance of this courageous man. Early in 1949 the Czech Minister of Justice, so-called, visited the Prague Catholic archdiocese in an attempt to lay down the law to Archbishop Beran. When the official had uttered his first sentence to the effect that the archbishop had better support the national front or else, Archbishop Beran stopped him and with a smile walked over to the closet, a short distance from his desk, opened the door deliberately, took out a small bundle of rags, and turned to the official saying: "Here's my uniform from Dachau. Let's go." Only the shame of a silent retreat was left to the furious Czech Minister of Justice or, let us say, for the sake of truth, the minister of injustice.

If the Czech Communists want to prove that I am wrong in my accusation against them and in my indictment of their methods, they have only to set this man free or exile him. But will they dare to have their methods exposed to the judgment of the entire world? Unfortunately, I am hoping for the impossible. Although I can only pray that the Almighty will visit Archbishop Beran in his tortures, giving him the strength of Daniel, I take this opportunity to assure the good people of Czechoslovakia and free Czechs in other parts of the world, especially our Czech communities in the United States, that the suffering of Archbishop Beran will not be forgotten. His suffering constitutes the most vivid example of the holy fight dared by a few men against an entire regime in complete faith that one day Communist oppression will be defeated in the world.

A Plan To Meet the Financial Dilemma of Institutions of Higher Education

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. JACKSON. Mr. Speaker, everyone acknowledges that colleges, universities and professional schools in the United States are in serious financial difficulty. In recent addresses President A. Whitney Griswold, of Yale University, one of the acknowledged leaders of higher education in the United States today, has stated:

> It is a common occurrence these days for meetings of university presidents to open with exciting prospects of new educational worlds to conquer and to close with despairing prophecies of insolvency. While the doctors argue, the patient grows sicker, at all events fails to recover, and the prognosis remains gloomy. The universities must be provided the kind and quantity of resources they need: the lame cannot shoulder the halt. The whole complex must first be perceived by society and understood for what it is—the mind and spirit of American Democracy in danger of its life.

In this day and age of all-out war for the minds of men, with international competition for more and better trained engineers, doctors, and educated men and women in all walks of life, and with a tidal wave of students coming on to be educated, none of us can sit by and watch our educational system deteriorate for lack of finances. The financial problem facing these educational institutions largely arises from past inflation. They are in the unhappy position of all those who have a relatively fixed income. Their costs have been run up inordinately while their income from State legislatures, endowments, and private gifts has not been able to keep pace.

Faced with resulting deficits, both public and private institutions of higher learning have tried to meet the situation in four principal ways:

First. Faculty salaries have been kept at pitifully low levels. For example, Dr. Compton, president of the Council for Financial Aid to Education, recently reported that the average salaries of full professors in the colleges of this country were $4,860 a year in the smallest colleges, $5,067 a year in the medium sized colleges, and $6,064 a year in the largest. Another report shows that throughout the Nation at large, college teachers have suffered a further net reduction in living standards since 1940 of more than 25 percent. Apart from any question of fairness to the faculties, it can hardly be considered sound public policy to leave the teaching of our economic, political and social system in the hands of teachers who are not sharing in the material prosperity of our civilization and who must feel neglected and exploited. Furthermore, although we have a desperate need for an ever expanding number of teachers, able young people are not being attracted into the teaching profession in sufficient numbers because of the low economic rewards and the competition of higher salaries offered outside of the schools.

Second. All of the schools are necessarily neglecting the maintenance of their existing plant and equipment, while at the same time what we really need in this country is a great expansion of our educational facilities. There is not a college, university, or professional school that would dare show on its balance sheet a reserve for depreciation to replace its present plant when it wears out. The best they can do is to keep the roofs from leaking and keep the plumbing operating on a month-to-month basis.

Third. The cost of gaining an education has increased so much in room, board, books, fees, and everything else that, although more and more money is being channeled into scholarships, the percentage of students attending institutions of higher education on scholarships is not being maintained.

Fourth. The above effects are still with us even though the institutions have raised their charges to students as high as they feel they can go without placing too high a price tag on getting a higher education. Even the State universities on the average now get approximately 30 percent of their educational budgets from student charges, although these are called registration fees, laboratory fees, library fees, examination fees, and

the like, rather than being called tuition. In its 500-page statistical report in 1952, the Commission on Financing Higher Education points out that from 1940 to 1950 the average increase in student fees at public institutions of higher learning was 2⅓ times per student and was still increasing. On this point the report concludes that "student charges were obviously much more important sources of income for public institutions in 1950 than in 1940. This was a major development in the financing of public higher education."

Great efforts have been made and are continuing to be made to increase donations by private individuals, foundations, and corporations to the support of higher education. These must and will be continued, but they will not fully answer the problem. The most logical and available solution is a further increase in the charges made to students, but unless some offsetting factor is provided this will pose an impossible burden to many.

The present proposal is that a partial tax credit be allowed to offset such increases in student charges and thereby accord to that part of the income of the institutions which comes from student charges a tax benefit similar to that which has always been accorded to their other forms of income. Donations to the institutions are deductible for income-tax purposes. Taxes paid to the State to support public institutions are deductible for income-tax purposes. It has been the policy of our Government from earliest times not to raise Government income out of the money that goes to educate the next generation. This policy is becoming less and less effective as a larger and larger proportion of the total income of the institutions comes from student fees which are not accorded similar tax relief.

There have been many proposals for making tuition a deductible expense for income-tax purposes, but these have been rejected for the reason that they would have a tendency to result in tax relief to those in the higher income-tax brackets rather than in additional financial support to the educational institutions. The present proposal, represented by H. R. 4621, H. R. 5429, H. R. 4444, H. R. 4568, and H. R. 6978, would provide for a partial tax credit equal to 30 percent of the tuition paid. It has been calculated that, on the average, the parents of college and university students are in about the 30 percent tax bracket, and therefore a 30 percent tax credit for the tuition paid would come to about the same loss of revenue as making tuition deductible, but the tax credit form would level out the effect on all parents. Furthermore, the 30 percent tax credit is most adaptable to increases in tuition by the institution.

The mathematics of this proposal are such that an institution could increase its charges by 42 percent without placing any more burden on the parents. Such an increase would just absorb the 30 percent tax credit and is calculated as follows: First, if the present tuition is taken as 100, a 42-percent increase would give an index of 142; second, 30 percent of 142 equals 42; third, with such an increase, the parent who previously paid $100 to the institution and $42 to the Government would now pay the entire $142 to the institution.

At first, blush the query might be raised as to whether the tax credit proposal would not result in unfairness to those who are paying tuition but do not have any income taxes against which to take the tax credit. It is submitted that the children of those who do not have sufficient income to pay an income tax are, or should be, receiving a scholarship instead of paying tuition. With the increased income to the insitutions which this plan would provide, there is no question but what scholarships would be available for the children of these low income families. Of course, there would be the occasional case of a wealthy family which had no income tax for a particular year, but these unusual and sporadic cases do not detract from the fairness of the overall plan.

Some have raised the question as to whether adding this tax credit to the others already in the law would not give rise to requests for tax credit for many different expenses of taxpayers such as merical bills and the like. Such proposals are made to practically every Congress. The difference between such proposals and the present one is that the purpose and effect of the partial tax credit for tuition is to increase the income of the institutions rather than to give tax relief to the individuals. The proposed tax credit would appear on the tax returns of the individuals, as is the case with charitable and educational contributions generally, but the purpose and effect is to benefit the charity or the institution as the case may be.

It has been calculated that, assuming the institutions all raise their tuition the full amount, the loss in revenue to the Government would be approximately $175 million per year and the increase in the income of the colleges and universities would be a similar amount. These funds would flow into higher faculty salaries, maintenance and improvement of facilities, and the support of a larger scholarship program. It is submitted that, with the present national need for more and better education, the loss of this amount of tax revenue is a small price to pay for the enormous benefits to be derived. Maintaining the revenue as it is and appropriating a similar amount to educational institutions would have the same effect on the national budget, but would bring to an end the current balance between public and independent education which the vast majority of people in this country think is healthful and necessary to the maintenance of our institutions. Dr. Wilson Compton has recently written:

> Colleges and university enrollments are now divided almost equally between institutions financed and directed by the State and institutions financed and directed independent of the State. * * * I should think, however, that if we were to reach a point at which the American people had come to rely as much as three-fourths on higher education directed by the State and only one-fourth on higher education independent of the State we should then likely be well on the way toward State control of public education from top to bottom; and hence on the way toward an eventual "statism" which would modify or might even nullify what we know as the a"promise of American life."

The proposal for a 30 percent tax credit for tuition is sponsored by the American Council on Education, which represents the entire range of public and private, low tuition and high tuition institutions existing in this country.The proposal has been endorsed by the Association of State Universities, the Association of American Colleges, the American Alumni Council, the Higher Education Committee of the National Educational Association, the Council of the Section on Legal Education and Admission to the Bar of the American Bar Association, and many others.

While there is much talk about the increasing number of students and the necessity of helping the better students to gain a college education, it would be folly to overlook the welfare of the institutions which we expect to do the educating. We must feed the willing horse if we expect him to carry the burdens. A helping hand from Congress as this time will have far reaching beneficial results not only at the present time but also 5, 10, 15 and 20 years from now. As John Adams wrote into the 1780 Constitution of the then new State of Massachusetts:

> Wisdom and knowledge, as well as virtue, diffused generally among the body of the people, being necessary for the preservation of their rights and liberties * * * it shall be the duty of the legislators and magistrates, in all future periods of this commonwealth to cherish the interests of literature and the sciences, and all seminaries of them; * * * public schools and grammar schools in the towns; to encourage private societies and public institutions.

Statement in Favor of Protecting the Collective-Bargaining Rights of Supervisors—H. R. 9142

EXTENSION OF REMARKS
OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. DINGELL. Mr. Speaker, most friends of organized labor agree about the need to repeal the Taft-Hartley Act. I hope that this will constitute one of the top priority items of a liberal and forward-looking Democratic administration, which I am sure the American people will elect come November.

Meanwhile, it is desirable that we eliminate some of the more objectionable provisions of the act. I find that the Labor-Management Relations Act is particularly shabby in the treatment of supervisors, and I have, therefore, introduced a bill which would restore to supervisors the right to collective bargaining. Under the Taft-Hartley Act supervisors are excluded from the protective provisions of the act. The Labor-Management Relations Act defines supervisors in the broadest terms and

makes it possible for unscrupulous employers to clothe many employees with titles and thus exclude them from the protection provided by the act and evade collective-bargaining obligations.

Many employees who have traditionally been regarded as eligible for union membership are included as supervisors under the broad terms of the act, and thus deprived for all practical purposes of the rights to collective bargaining.

The basis for excluding supervisors from the protection of the act is a distortion of the Biblical maxim that no man can serve two masters. If supervisors were to belong to unions, the proponents of the restrictions claim, they might be faced with serving the interest of both unions and management. This is an old argument. Opponents of unions used the same shibboleths when they fought the original National Labor Relations Act. Unionization has not increased the conflict of interest between management and labor, but has equalized the strength of the two parties and has made true collective bargaining and its many benefits possible.

Passage of H. R. 9142 would represent a step in the right direction. It would eliminate one of the inequities of the Taft-Hartley Act.

Pie for Ballots

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the poem entitled "Pie for Ballots." The Mr. Casey, referred to in the poem, is a leading citizen of the Knoxville, Iowa, community and an outstanding editor of one of the Knoxville papers. Mr. Osborn, the poet, is a long-time businessman:

OSBORN'S PIE FOR BALLOTS

"The blood flows freely in my head
And likely will until I'm dead,
So while the blood of life still flows
My ignorance I shall expose.
Casey, my friend, is ignorant too
He don't like Ike but I sure do;
Yet on some issues we agree
And eye to eye—alike we see.
He blames Ike for the farmer's plight
This makes me mad enough to fight.
I ought to kick him on the shin—
He knows who caused the fix we're in.
I lost my vote for 20 years
And lived 'Through Blood and Sweat and Tears'
While our economy was tied
To war—this cannot be denied.
Yes, I like Ike, he is sincere
And by his deeds he makes it clear
That peace, not war, will be his plan
So long as he is in command."

May I ask Mr. Casey, What sort of prosperity does our country need; more police action in Korea where 94,000 lives were lost? Ike's efforts provided an armistice.

Casey referred to a disease among farmers as Bensonitis. It is my opinion that farmers who think things through are beginning to see the light.

Sound reasoning on their part should convince them that their ballot, their independence, is too precious to exchange or barter for political promises. Politics is corrupt neither party can deliver pie in the sky for votes.

Ike inherited a $265 billion debt 4 years ago and the pie eaters in and out of Government are not content with bread—the staff of life.

The radio has just announced that Ike will run again.

Dr. Roberts has said "That the man is not living who can defeat Ike for his second term."

E. O. OSBORN.

Doctor's Bereaved Boy Waits Message Promised by Bishop Fulton Sheen

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks, I record in the CONGRESSIONAL RECORD the sad story of a dear friend. Dr. Vincent Sheeran served the United States humbly and loyally. He was charitable, patriotic, and devoted. The brief but touching account by Mr. Gene Flinn, the author, eloquently tells of the doctor's love for children. If more parents were like Dr. Sheeran there would be less juvenile delinquency in the world and more happiness. Dr. Vincent Sheeran, devoted father, doctor of the poor, faithful citizen of his country, beloved neighbor, stanch supporter of his city, humble but loving servant of his church, has answered the eternal rollcall. He will be missed by all and each.

The article follows:

[From the Jersey Journal of March 7, 1956]

DR. SHEERAN WAS FATHER, PAL, BASEBALL COACH, NO. 1 FAN—DOCTOR'S BEREAVED BOY WAITS MESSAGE PROMISED BY BISHOP FULTON SHEEN

(By Gene Flinn)

What do you tell an 11-year-old boy when the man who had been his father, pal, baseball coach, No. 1 fan, and countless other things dies suddenly?

Perhaps today's mails hold an answer to this question, for young Brian Sheeran of Jersey City is expecting a very important message—a letter from Bishop Fulton Sheen.

The bishop administered the last rites of the Roman Catholic Church to the lad's father, Dr. Vincent Sheeran, when the physician died of a heart attack in Florida Monday. The clergyman had been a guest at the same hotel.

And after her husband's death, Mrs. Katherine Sheeran had requested of the prelate: "Could you write a little note for me to take home to my son? It would help me explain to him how his father died."

But the bishop, instead, asked for the boy's address and said that he would rather write him a letter than a brief note.

Everyone in the Bergen section of Jersey City, where the physician had lived all of his 50 years, was aware of the closeness between Dr. Sheeran and his son.

And, of course, none knew it more than Brian himself.

"After office hours my father used to come down and watch me play ball with the Little Leaguers," the boy said. "He always told me, 'If you strike out, strike out swinging.' "And when I made a bunch of errors, he'd say, 'Tomorrow is another day.' "

On other occasions Brian became a spectator with his father when the two watched the major leaguers—sometimes seeing Leo Kiely of Hoboken, the youth's first cousin and baseball idol, pitch for the Boston Red Sox.

"Lots of other times he'd have a picnic in our back yard for the fellows on the team and the kids in the neighborhood," Brian added.

Dr. Sheeran, whose funeral is tomorrow, was fond of all children and the esteem in which youngsters held him was demonstrated after his death.

"The boys and girls from the neighborhood took up a collection for donations for mass cards for him," Hugh Clark, a neighbor, declared at Quinn's Funeral Home in Jersey City last night. "About 16 of them were here today to say a prayer for him."

"They liked him because he was interested in them," a friend declared. "He mended their cuts and bruises and understood their problems."

When he attended St. Peter's Prep, Dr. Sheeran was too small to make the varsity teams. But, according to a former classmate, "he stretched out his legs when he went to St. Bonaventure's College and played forward on the basketball team."

After being graduated from Georgetown University Medical School, the Jersey City physician set up his office in the Bergen section, where he was a general practitioner the past 25 years.

Dr. Sheeran, whose brother, Frank, is a Jersey City tax commissioner, was a member of the staffs of three hospitals and had been active in many medical and religious societies in Hudson County.

Yet he always managed to find time to watch his son play ball—and to console him when errors came faster than hits by reminding him, "Tomorrow is another day."

Archbishop Beran of Prague

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. DINGELL. Mr. Speaker, the persecution of organized religion and deportation are two favorite techniques used by the Soviets in the communization of captive countries. The Communists recognize that the worship of God is a powerful force in any nation and that absolute control is impossible unless worship is supplanted by obedience to the doctrines of Marxism-Leninism. Along with religious persecution the Communists concentrate on the mass deportation of other noncooperative groups. According to testimony received before the Select Committee on Communist Aggression of the House of Representatives, approximately 15 million people have been interned in slave labor camps behind the Iron Curtain.

A tragic example of the methodical religious persecution practiced by the Communists was the campaign against the Roman Catholic Church in Czechoslovakia. Emphasis was placed on the Catholic Church because of its strength among the people of Czechoslovakia. To place the church under strict Communist control the attack was concentrated

against the Catholic hierarchy, especially Archbishop Josef Beran.

Archbishop Beran fought hard against Communist control of church affairs. He fought desperately to prevent the atheistic Kremlin from interfering with the worship of God. He protested vigorously against Communist inroads on the Catholic Church and constantly opposed any measures that would limit the religious rights and freedoms of the Czechoslovakian people. Perceiving that Archbishop Beran was an instrumental force in preventing complete Red control of Czechoslovakia, the Communist government passed a series of laws and decrees in an attempt to destroy Czech Catholicism. The church was put under strict Government control and in effect all clergymen were made civil servants of the state. The Archbishop protested vehemently in defense of the rights of the church. In December of 1949 the Communist government retaliated and secretly imprisoned him, and in March of 1951 the official Prague radio stated:

Archbishop of Prague Josef Beran, because of his negative attitude toward the church laws, was fired * * * and was directed to live outside the Prague diocese.

According to latest reports, the whereabouts of the archbishop is still unknown.

In other countries behind the Iron Curtain clergymen suffered the identical fate as Archbishop Beran as the Communist regimes set out to eliminate the church as a threat to their complete control over the peoples of the satellite countries. In February of 1952 the Vatican reported that in Europe 64 out of 130 diocese in Communist-controlled countries were without bishops. Perhaps the most famous of the clergymen who were imprisoned are Cardinal Mindszenty and Archbishop Joszef Groesz, of Hungary; Cardinal Wyszynski, of Poland; and Cardinal Stepinac, of Yugoslavia.

The American people proclaim their admiration and their hearts are filled with grief for the clergymen and slave laborers who are being tortured by the godless Communists. Furthermore, they fervently pray that God grant them strength to endure the incessant oppression by the barbarous Communists. It is also essential that all the free nations of the world denounce the uncivilized tactics of the Communists and emphatically demand that these enslaved people be released from their bondage and be granted their full freedom.

For a New Foreign-Aid Concept

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, Barbara Ward, writing in the New York Times of Sunday, March 11, has an interesting article on foreign aid.

I do not agree with all the statements that Miss Ward makes in her article and my purpose for inserting it in the RECORD at this time and at this point is to present to members of the House Foreign Affairs Committee and to House Members generally, a point of view relating to foreign aid which is rather novel. Miss Ward's article is challenging and, under leave to extend my remarks, I am including it herewith:

FOR A NEW FOREIGN-AID CONCEPT

(By Barbara Ward)

The time has clearly come to do some hard, new thinking on the whole issue of foreign aid. A full decade has passed since it began to be an annual feature of budget making in the United States—and in the British Commonwealth and indeed among the European colonial powers as well. Moreover, the suggestion has now been made by the Republican administration that aid, in some form, should continue for at least another decade. The Colombo plan—under which British Commonwealth countries contribute to Asian development—has had its life extended and there are successive 5-year development schemes in many colonies.

One way and another, it is a safe generalization to say that over the last decade and probably for another decade to come, the Western powers are contributing about 1 percent of their rising national incomes to help forward the development of less fortunate lands. In some years—for instance, at the height of the Marshall plan—the American percentage has been even higher.

This vast transfer of wealth which, if sustained, could exceed $100 billion (from all Western sources) by 1966, has been undertaken, on the whole, under the spur of necessity. The Western governments rightly believe that economic collapse is the inevitable prelude to Communist expansion. Sooner than see segment after segment of the free world slip under totalitarian control, they have put their hands in their pockets and paid up.

It cannot be said that the program has been a failure. Given the scale of economic and political disintegration caused by the last war, the advance of communism might have been much more devastating. To give a concrete example, if India had failed to secure the American wheat loan during the 1951 famine, distress in the cities and resentment against internal grain hoarders would almost certainly have returned Communist governments to power in some of the southern Indian states. These areas would then have become the beachheads—the Yenans—for further Communist advance.

Even the Chinese debacle does not disprove the point, for the aid given was relatively small and the catastrophe had been prepared by 40 years of internal upheaval and civil war and nearly a decade of enemy occupation.

Yet there are plenty of voices raised to protest that the policy has not been a success, either. There is a widespread feeling that it is not giving value for money and the feeling has been intensified by Mr. Khrushchev's junketings around Asia.

Take the example of India again. Since 1949, American gifts or grants to India have amounted to about half a billion dollars. The free gifts of steel alone—with the inclusion of the recent deal for India's railroads—have reached about 750,000 tons. Yet when the Russians announce that they will sell—not give, but sell—a million tons of steel to India, the Indian press breaks out in hosannas while all America gets is a spanking for Mr. Dulles' indiscretions over Goa. If foreign aid is a program for making friends and influencing people, it seems, in India, to be a flop.

The outlook is in some ways even less satisfactory in Burma and Indonesia. Both countries have actually refused American aid on the grounds that it would weaken their neutrality. Yet Burma's Premier U Nu is all gratitude when Russia offers to sell machinery and technical aid in return for rice—once again, the element of giving is marginal—and Indonesia is ready to receive Soviet and satellite aid in expanding its oil and rubber industries without, apparently, a qualm over neutralism.

The Russians seem to be able to get more support by selling than the West by giving. Surely there is something wrong with a program that produces such an equivocal result.

These attacks on the effectiveness of foreign aid are all the more bitter because they are relatively new. Up to last year, it was difficult to attack Western foreign aid for producing fewer results than Soviet offers, since there were no Soviet offers—save to Communist China. The entry of Mr. Khrushchev into the field—with offers of dams and steel plants and machinery and technicians (all at a price)—has created an entirely new entry point for criticism and doubt.

Nor is it simply that political results can be compared—with disparagement for Western achievement. The whole concept of competitive aid-giving becomes increasingly distasteful. Where will it end? Are the Western Powers now to dance to any tune a local Asian—or, indeed, African—government chooses to play simply because Moscow is waiting in the wings and shuffling its feet?

Senator RUSSELL was no doubt hardly serious when he suggested that annual foreign-aid programs—which no one suggests should exceed $4 billion—would bankrupt an America with a national income nearing $400 billion. But his uneasiness sprang from the not unreasonable fear that Mr. Khrushchev's promises and not Asia's needs could come to determine future economic assistance.

The whole effort could get out of hand and the West would find itself maneuvered into a competitive game of aid in which ever higher grants brought it ever smaller political returns. These are not irresponsible reservations. They only underline once again the need to give the whole concept of foreign aid a long, hard look.

The first point to be noted is reassuring. Russia's entry into the field of foreign aid has not undone the solid work of reconstruction already achieved in Asia with help from the West. The internal Communist Party in such key areas as Burma and Malaya is very much weaker than it was, say, in 1948, and a principal reason for this is the fact that there has been no disastrous collapse of local economies such as preceded the defeat of Chiang Kai-shek in China. In fact, insofar as Soviet aid helps to strengthen economic life in Asia, it can even be a factor in strengthening the present non-Communist regimes.

The initiative that the Russians appear to have gained is much more in the international arena, in the sensitive, fluctuating relations between the free world, the Communists and the uncommitted nations. This initiative is political. Indeed, it is impossible either to gage or counter Russia's new economic policies unless one remembers that, under the Communist system, everything is subordinate to ideology, in other words, to political manipulation.

But this fact does not weaken Russia's effectiveness. On the contrary, the political slant of Communist economic policies—whether of loans or technical assistance or barter or ordinary trade—is their great strength. Equally, the lack of any political or ideological framework is the greatest single source of weakness in the aid program undertaken by the West.

The Soviet Union seeks to export two main ideological themes. The first is negative—the imperialist record of the West. Russia's control over its satellites in Europe

seems remote from Asia. And its earlier colonizing march eastward across the steppes did not result in imperial control over civilized and self-conscious communities such as India or Burma or the Malayan principalities. The Soviet brand of colonization has therefore barely impinged upon Asian consciousness whereas the memories of British or French or Dutch colonial control are still recent and raw.

One may ask, it is true, how Soviet propaganda has continued to include the United States—the least imperialist great power in recorded history—in the imperialist smear. But the answer is clear. It relies partly upon "guilt by asociation" brought about by America's link with its western colony-holding allies. It also uses the lunatic syllogisms of Marxism—"all capitalists are imperialists, America is capitalist, therefore it is imperialist." But it can also exploit a fact of colonial history not always understood in the West but painfully remembered in Asia.

A chief technique whereby Western powers obtained control in eastern lands was by siding with one or the other side in a local civil war and then dominating the victor to whom they had assured success. The Western Powers, for instance, secured many of their semicolonial privileges in China by helping the Manchu Emperor to defeat the great Tai Ping revolt of the mid-19th century. Against this quite recent historical background, it has been easy for Communist propaganda to interpret American support for Chiang Kai-shek in the Chinese civil war as the re-entry point of "Western imperial control" in China.

Nor have byproducts of the conflict, such as military operations by Chinese Nationalists in Northern Burma and their intrigues with local Karen dissidents, lessened suspicion. In fact, these activities were the main reason for Burma's refusal to accept further American aid while welcoming Russian offers. Asia is still mined with anti-Western suspicion. This is a fact of history and only a different evolution of future history will modify it.

But fully as important to Soviet propaganda are its positive pictures of Communist world policy and of the place of proffered economic aid within this wider ideological framework. The Soviet Union, so the propaganda trumpet proclaims day after day, stands for a world in which all domination by one nation over another will cease, in which all will cooperate in creating a peaceful brotherly international order and in which socialist production—already so brilliantly successful in Russia—will raise living standards to undreamed-of heights.

"And in proof, good friends in Asia, of the success of Communist methods at home and of the wealth which we can create ourselves and want to help you to create, here is a steel mill—at only 2½ percent interest rates—and here a million tons of steel—though paid for in Indian goods."

Aid, in short, is simply part of a much wider sales talk on communism as a method and a goal, a method of raising internal wealth and for sharing it in a cooperative world order. Soviet propaganda does not make its offers negatively—as a means of defending either itself or Asia against the West. The underlying theme is the collapse and decadence of capitalist imperialism. Not out of fear but out of success, generosity, and confidence the new economic offers are made.

All this may make Mr. Khrushchev sound unbearably brash in Western ears. But to the new nations of Asia it may seem more like the voice of achievement and self-respect.

In comparison with all this, our Western political approach makes a very poor showing. It is, in fact, overwhelmingly negative and defensive. In numberless debates in Congress, in speeches without end to Western electorates, in commentaries and articles, one theme emerges above all—that giving aid to backward areas is a painful necessity made inevitable only because they must be kept out of the Communist camp.

Nearly every program of assistance is finally rammed through the legislature with the techniques of Dicken's Fat Boy—"I wants to make yer flesh creep." Refuse this appropriation and Bongaland will slip forever under the Communist yoke.

But, then, by a remarkable psychological somersault, the same legislators who have grimly consented in pure self-interest to provide perhaps half the necessary funds, denounce the recipient peoples as ungrateful scoundrels who show no due appreciation of the magnificent generosity shown them—in strict preservation of Western skins. Yet is it logical to expect gratitude for steps taken openly and crudely in self-defense?

This sense that western economic assistance is, in western eyes, no more than a weapon in the cold war has, of course, been intensified by its close association with military aid. Not only do nations which sign on militarily receive more aid, but the balance of military and economic assistance in the general western aid budget is heavily weighted on the military side. Yet if there is one hope more determined than any other among the peoples of Asia it is to keep out of atomic war. The Russians rarely mention war, except to rattle their own hydrogen bombs. If Soviet tanks are sent to Egypt, Colonel Nasser promises nothing. He is not pressed to take sides. No Russian envoy inveighs against Indian or Burmese neutralism. On the contrary, they are praised for being peace-loving. Even where close Russian defense ties exist, as with China or North Korea, the economic aspects of aid are underlined, the military glossed over. Russian aid does not, therefore, appear to tie the recipient to either side in the world struggle. It appears to respect neutralism.

Many western statesmen, on the contrary, are forever nagging at Asia on this issue. As a result, they seem for their own selfish reasons to be drawing the East toward an atomic armageddon. There can be no doubt which attitude has the greater political appeal.

In all this welter of western insistence upon self-interest and self-defense, one looks in vain for any consistent exposition of a positive policy of foreign aid, some general political philosophy to match the Communist confidence in world brotherhood based on socialist production, some framework of solidarity between givers and takers of aid, some aspect of human concern beyond the narrow limits of common fear. Once or twice, a more generous western initiative has been taken.

President Truman's original point 4 concept of aid called for a "bold new program" of shared technical progress. President Eisenhower, in one major speech, spoke of pledging the free world's resources to combating want and disease and hunger—the permanent enemies of mankind. But by no effort of imagination can these few initiatives be stretched out into a consistent, sustained expression of western intent. The positive utterances are quite drowned in the flood of argument and debate based exclusively upon fear and defense and cold war and the Communist menace.

If the West has a positive policy, Asia has not heard of it. But it hears about Communist brotherhood and Socialist solidarity every day of the week. Is it surprising that the political impact of Soviet economic offers is heightened thereby, while the West goes on giving more but with less effect?

The urgent question now is whether the Western powers can do anything to lessen or end the ambiguities and disappointments so far attendant upon the giving of foreign aid. There are, in fact, only 3 alternatives—to stop giving it altogether, to put up with the political disadvantages and to continue the present program on a "cold war' 'basis, or to try to find the proper political framework for a consistent program.

The first may be ruled out, for, whatever the political disappointments of the last decade, the fact remains that Western aid can still make a crucial difference economically between stability or collapse in Asia, for collapse helps one side only—the Communists.

The second alternative is possible but very unattractive. It could lead in the end to total frustration for, if Western giving continues without corresponding political advantage, domestic pressures against the program will grow, the aid will be given ever more grudgingly, the effects will become even less advantageous—and so on in a downward spiral of resentment and ill will.

There remains the third alternative—to find a positive political philosophy of western assistance so that the program of foreign aid may be based not solely on expediency, self-interest, Communist competitiveness or the cold war, but upon conviction and principle. Such a program should not be beyond the West's political imagination. On the contrary, it can be argued that it is a logical development of our existing social traditions in the West.

Long before the Communists appropriated it, the solidarity of mankind was a firm base of western, Christian tradition. Today, under the shadow of the hydrogen bomb and atomic fall-out, we have at least a physical solidarity of potential destruction. And if we are one world in physical vulnerability, our only hope is to become one world in moral responsibility as well.

Within the national community, we have discovered, in the last century, one key to a shared sense of moral solidarity in the principle of "the general welfare"—in other words, in an agreed sharing of wealth between well-to-do and underprivileged. This technique only waits to be extended, as a matter of conviction and principle, to the world of nation-states which now make up one neighborhood in our shrinking, atomic world.

The formula devised and proved workable after the war in the United Natoins Relief and Rehabilitation Administration is probably the best mechanism to express the new solidarity. One percent of national income contributed to backward areas from the wealthy West—the percentage which they have, without planning or policy, in fact expended in the last decade—would meet world needs today and would expand further as national incomes continue to bound up around the Atlantic.

But the mechanism is less important than the conviction, accepted by electorates and by their representatives, that in the 20th century, in a world made one by science and technology, communities claiming Christian inspiration and inheriting the humanism of western tradition must extend their sense of solidarity beyond national frontiers. In the words of the poet, Auden, "We must love each other or die."

And, as so often happens when principle takes the place of expediency and good will of fear, we should find that such a change of emphasis would go far to counter what is practically unsatisfactory and discouraging in our present programs. A settled policy of aid, based upon a predetermined percentage of national resources, would make possible the long-term planning of aid which President Eisenhower has declared to be necessary for the program's full effect.

The decision to extend aid as a matter of conviction and principle removes the effort from competitive bidding in the cold war and the scale of aid would be determined not by Russian offers and cajolements but by settled western practice. The accent on the cold war could fade because it would no longer be essential to secure ap-

propriations under the forced draught of fear. Above all, the link with war and atomic weapons and military preparedness could be broken because the program would exist independently of any threats of aggression and would continue equal and unshaken in times of crisis as in a calm world and a long peace.

Such a change of emphasis might not overnight dispel the memories of centuries of western imperialism or reassure Asia entirely on the purposes and policies of the powerful West. But in a decade or more, when time had reinforced the principle, and foreign aid had become an orderly procedure, unhurried, unquestioned, and unafraid, it would be found that Asian suspicions and Western frustrations had alike given ground before the new worldwide experiment in partnership and good will.

I Speak for Democracy

EXTENSION OF REMARKS
OF
HON. HARRIS ELLSWORTH
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks, I wish to include the following essay entitled "I Speak for Democracy," written by Miss Sydney Fox, a student at the North Bend High School, North Bend, Oreg. The essay was prepared for the I Speak for Democracy contest sponsored by the Junior Chamber of Commerce of North Bend:

You know who I am.

I lie hidden in your hearts, in the hearts of men and women everywhere.

You don't know me for the color of my skin, my religious creed, my noble title—my name isn't the first word spoken by a newborn babe or am I the cry of the laborman, but you know me, you know me for what I have given to you, the people. Your trust is in me for I have lit the flame of freedom and equality, and I cannot, I will not, be extinguished.

Though I have marched on century after century I came forth only 180 years ago when, your ideas smothered, your tongues bound, and your every action watched by a country far across the sea, you cried out. Your souls begged for freedom and the battle cry became, "Give me liberty or give me death." Like a tree with its many branches spread out I gave strength to a crippled nation and hope to that tired, unknown soldier who fought for his country because he believed in me. I became your challenge, your motto, and your risk, and together we have succeeded. Together we have not followed the usual courses of a nation, to rise and then fall, because you have stood by me both in time of peace and in time of war.

Unlike the store owner, who on opening day gives something free to the patrons, I give everything free and I give the same quantity and the same quality to each and every one of you. As a child you have played with your dolls and your trains, and believed in Santa Claus. You had security. You had me. The government is not chosen by a select few but by you, the people, for I have entrusted to you the power of decision. Use it wisely. The street the city council member walks on, his neighbor, the Swedish farmer also uses—you are entitled to hear the truth, and not only what one voice wants you to hear—whether you be Catholic or Protestant, your vote is of equal value—because you are the son of an Italian shoemaker does not mean that your children and your children's children must be shoemakers—the boy next door may be your best friend or your worst foe—because you are crippled your voice of opinion is not deprived of you—because you are an atheist you will not be imprisoned—because you are wise does not mean you can degrade the ignorant, for I walk beside all of you, the sailor, the carpenter, the handyman, the truckdriver, the disabled, the bankers, the car salesman, the cattleman, and all of you enjoy the same rights, the same punishments, and the same rewards.

My trade name, freedom, has been tried and tested for more than 175 years by the American people. It is a better brand than any put out by other nations because it's ingredients, people, government, and society, are combined in the right formula to make the best compound, freedom and equality. Follow me and your paths will be trodden, your heads will lift higher, your smiles will be happier, and your hearts prouder.

Those nations which regard me trivial now, some day shall not because the hearts of the people shall speak. My purpose shall ring from every nation and they will take me as their leader, as freedom's holly light, for the people know I'm right, they know I'm just, for I am democracy.

SYDNEY FOX.

Dr. Sidney Mandell Never Told Heroic War Deeds for Which Country Honored Him

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I felt the RECORD should contain this glorious story of heroism written by Gene Flinn, of the Jersey Journal, one of the leading newspapers of New Jersey. Mr. Flinn is performing a remarkable service by recounting for posterity the unforgettable deeds of the heroic dead.

Dr. Sidney Mandell's life above all should be recorded in the CONGRESSIONAL RECORD for his brave, loyal, and distinguished service to the Congress and to the country. Dr. Mandell was decorated with the second highest honor our Nation bestows—the Distinguished Service Cross as well as the Purple Heart and Bronze Star. His family, his community, and his country mourn his loss. We are grateful for his service. So Dr. Sidney Mandell, physician to the wounded, counselor to the bereaved, hero humble but unequaled, has heard the last bugle call. He will be mourned by the many, as he was loved by all.

The article follows:

DR. SIDNEY MANDELL NEVER TOLD HEROIC WAR DEEDS FOR WHICH COUNTRY HONORED HIM—RECEIVED DSC, PURPLE HEART, BRONZE STAR

(By Gene Flinn)

Although he had earned the second highest honor our Nation bestows upon her heroes—the Distinguished Service Cross—for extraordinary courage under enemy fire while attending wounded during the Battle of the Bulge, the family and friends of Dr. Sidney Mandell have never known the details of his heroism.

He never spoke of it. Few people were even aware that the easygoing, soft-spoken physician had wont this great honor. And when the subject came up, he would usually dismiss it quickly by saying:

"Many, many other men should have won it instead of me."

While caring for the wounded, Dr. Mandell—he had been a captain in the Army—had become one of them, having been wounded by shrapnel. Besides the Purple Heart, he had been awarded the Bronze Star for gallant deeds, which he likewise chose to keep to himself.

Although France had brought him glory, Britain brought him happiness. For it was there in 1943 that he married his sweetheart, whom he had met 9 years prior to this, while attending medical school at Edinburgh University in Scotland. His bride was the daughter of one of his professors.

Dr. Mandell, who died Sunday in his 43d year, and whose funeral was held Monday, was drawn to medicine and had dreamed of being a doctor even in his high-school days—before he had become one of the youngest graduates of Dickinson High School in his native Jersey City. He was 15 years old at his commencement.

"Sid used to play doctor when he was a boy," his brother, Murray, declared while sitting shiva for Dr. Mandell at the latter's Union City residence last night. "He was interested in boxing when he attended New York University, but his heart was always set on being a physician."

Besides his practice, Dr. Mandell served as chief anaesthetist at Fairmount Hospital. And his many patients felt that as he deadened pain with anaesthetics in the operating room, he eased suffering with kindness in his general practice.

His knowledge of languages—he spoke Italian, German, Polish and Spanish—proved an asset in treating recent immigrants.

One Italian-born woman, who had difficulty with English, once said of him:

"First, I was so frightened. But the doctor—he bring happiness. His voice is sofe—and he speaks my language."

And the doctor spoke everybody's language, according to a nurse who worked for him.

"He was always even-tempered and I never saw him become excited," he said. "And all the doctors and nurses who knew him were very fond of him."

When he was not occupied with his work, Dr. Mandell spent every available hour with his family—his wife, Roberta, and two daughters, Vicki, 7, and Bonnie, 4.

"He always set aside Sunday for his family," Mrs. Mandell said. "And one of the last things he did before he was seized with his sudden heart attack was drive Vicki to Sunday School."

Dr. Mandell never saw his daughter again. For the man who had given heart to so many others, in doing so, had exhausted his own.

President Eisenhower's Announcement

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. YATES. Mr. Speaker, this week the business on the floor was the upper Colorado River project, but it was the announcement by President Eisenhower of his willingness to run for reelection that captured the primary attention of

the Members of Congress. "Now," said a Member from Minnesota jubilantly, "if we can only get rid of Secretary Benson, we are in."

Congressman LEON GAVIN, of Pennsylvana, was listening to the testimony of a witness before his armed services subcommittee when suddenly the chairman banged the gavel and declared:

Gentlemen, the President has just announced his candidacy for reelection.

GAVIN was startled. No one had entered the room—no phone had rung. Was the chairman psychic? Then he looked more closely at the chairman and saw the answer. In the chairman's pocket was a small transistor radio to which he had been listening.

Another Congressman told of the confidence of Senator THEODORE FRANCIS GREEN, of Rhode Island, that the President would run. "Why, he is a young man," said GREEN, who ran successfully for reelection to the Senate 2 years ago at age 87. A short time ago GREEN used to wrestle for exercise, but now limits himself to walking to and from the Capitol, which is approximately 4 miles from his place of residence. He said he expects to run for reelection even after he is 100, but he is bothered by one thought: "How would the people of Rhode Island accept the candidacy of a man who is 105 years of age?"

In a speech to the House immediately following the announcement, Minority Leader JOE MARTIN, of Massachusetts, expressed delight with the decision and said he knew the President would run again if he could. Majority Leader JOHN MCCORMACK wondered as to the wisdom of the decision in view of the grueling demands of the presidential office.

And so, at long last, the die has been cast. Millions of Americans—Democrats and Republicans alike—who prayed for the President's recovery at the time he suffered his heart attack 5 months ago, will continue to pray for his good health and for many more years of life for him. Obviously, Mr. Eisenhower must be much more careful and restrained than in the past. He must be wary of the advice of political strategists who may require him to flex his muscles and run through obstacle courses in order to prove his physical fitness. In 1944 President Roosevelt indicated that he was not going to make a strenuous campaign for reelection. However, when stories of his failing health began to crop up, his advisers suggested that it would be a good idea for him to show that he really was physically qualified to again be President. Thereupon, Mr. Roosevelt undertook an exhausting program of traveling, of meetings, of campaigning. He sat in an open car in cold, pouring rain. Presumably his health was excellent, and he was reelected. Yet, in a few months, at age 63, he was dead.

I hope that the heat of the coming campaign will not provoke Mr. Eisenhower's advisers to suggest comparable tests of physical endurance for him. After all, he is a candidate for the Presidency—not the Olympic team. The task of running the President's office is rigorous enough without having to undergo spectacular demonstrations of physical prowess. In his book The American President, Sidney Hyman states:

According to the Hoover Commission in 1951, the President is responsible in one way or another for the work of 9 major departments, 104 bureaus, 12 sections, 108 services, 51 branches, 460 offices, 631 divisions, 19 administrations, 6 agencies, 16 areas, 40 boards, 6 commands, 20 commissions, 19 corporations, 5 groups, 10 headquarters, 2 authorities, and 263 other miscellaneous and often overlapping bits of Government machinery.

If the President handles this job, he will be doing well.

During the Civil War, when he could no longer tolerate the seemingly endless "waiting campaign" of Gen. George B. McClellan, President Lincoln relieved him of command of the Army and replaced him with Gen. Joe Hooker. When Lincoln told Hooker he wanted action, Hooker tried to comply by creating the impression of tremendous activity. Even his dispatches from the field began with the heading, "Headquarters in the Saddle." But his futile efforts did not impress Lincoln. "The trouble with Hooker," Lincoln remarked sadly, "is that he has his headquarters where his hindquarters ought to be."

As an old military man himself, General Eisenhower must appreciate that political strategists frequently resemble military strategists in being unable to distinguish their headquarters from their hindquarters.

More Scientists in Remaking for United States

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent being granted me heretofore so to do, I am pleased to include a copy of Concerning America's Future Scientists, together with a reprint from the Science Teacher entitled "National Enrollments in High School Science."

As one of my committee memberships in this great legislative body is the Armed Services Committee, from information which I am sure all members of that committee have, and probably all Members of Congress interested have, it appears that we in the United States have not kept pace in the matter of science students. And since it appears that so very much of the progress and problems of the immediate years ahead sound in or are involved in the matter of nuclear power and other scientific developments, it would, therefore, appear that this and similar conventions are of utmost importance to our national safety, security, and economic soundness.

The articles are as follows:

CONCERNING AMERICA'S FUTURE SCIENTISTS: FACTS ABOUT THE FUTURE SCIENTISTS OF AMERICA FOUNDATION

YOUTH, SCIENCE, AND AMERICA'S FUTURE

How many young people cross college graduation platforms before a new engineer comes along to accept his diploma? In 1950, it was 8.8; in 1951, 9.3; in 1952, 10.9; in 1953, 12.6; and 1954, 13.1. The total number of college graduates also decreased during each of these years.

Eighty to ninety percent of all students take science in the junior high-school grades. About two-thirds of all students continue their study of biology in the 10th grade. And then the big drop occurs. Less than 1 in 4 of our 18-year-olds has had as much as 1 course in chemistry, 1 in 5 a course in physics, and 1 in 10 a mathematics course beyond algebra or geometry.

The demand for well-trained, stimulating science teachers is greater than it has ever been.

THE FOUNDATION'S ROLE

This Foundation endeavors to do what industry, professional societies, and science teachers think needs to be done to increase the number of capable young people who will continue toward engineering, scientific, and technical careers including science and mathematics teaching.

Although teachers occupy a very strategic position for counseling students, they cannot carry the expense of career guidance materials and services. In many cases, the teachers themselves need programs to renew their training and bring them up to date on subject matter.

These are reasons why the Future Scientists of America Foundation turns to industry for help. Many companies and technical societies have invested several thousand dollars in the Foundation's program during the past 3 years. The Foundation continues to be a source of new ideas. Interested organizations review all plans and approve exploratory runs of promising ideas. The Foundation reports the results back to the Nation's teachers and to other interested groups.

WHAT OF TOMORROW: THE APPROVED 1956 PROGRAM

1. Science teacher recruitment ($7,500): Approximately 50,000 copies of the booklet, Careers in Science Teaching, will be needed by counselors in the Nation's high schools and colleges.

2. Tomorrow's scientists ($2,000): A new 8-page monthly publication will be tested with an experimental run of 4 issues in the spring semester of 1956. This student paper will contain stories featuring the work of today's scientists, the methods they use, and how their training and experience enable them to develop success with these methods. The new publication may be an effective way to keep young people interested in science.

3. Let's help America's science teachers find science-related summer jobs in industry ($1,000): This program continues to receive widespread endorsement. The foundation will continue to keep it under study and to publicize its values. Ways to bring teachers and potential employers together will be explored.

4. Research ($12.500): A major effort will be made to develop a complete name and address list of the Nation's science teachers to help the foundation administer its own programs and to help other organizations contact America's science teachers.

The foundation will submit its programs to an advisory panel composed of 3 high-school teachers in each of the 48 States. Informal questionnaires will be used to identify urgent and important additional areas of needed services.

Staff members will attend conferences to share the experiences of the foundation with

other groups and seek more effective ways to administer the foundation's programs.

5. Career counseling materials and services ($7,500): Teachers continue to find this bibliography of industrially sponsored materials and services to be very useful. A 1956–57 edition will be prepared; about 40,000 copies will be distributed.

6. Science achievement awards for students ($15,000; this amount already assured for 1956 by the American Society for Metals): The foundation will continue this program and seek to expand it. Students who submit clear, accurate, and well-illustrated reports of their projects will receive appropriate awards.

7. Student chart-making contest ($1,000): Young people will be encouraged to reveal the important work scientists do and the methods they use. The foundation will offer awards to students who, individually or in their classes, design informative and attractive charts featuring these qualities.

8. Fellowships for summer conferences ($10,000 per conference; a 1956 west coast conference is already assured by the Crown Zellerbach Foundation): The values of the "research team" type of science teachers summer conference demonstrate that this type of program should be continued. Several conferences in 1956 are needed to deal with problems such as how student projects can serve as stepping stones toward careers in science, the design of additional laboratory exercises, and the applications of mathematics in teaching and learning science.

9. Science teacher summer research assistantships ($2,000): Results from the 1955 pilot run of this program strongly suggest that it should be repeated and expanded in 1956. More application forms should be printed and distributed. The results should be evaluated in greater detail and published more widely.

10. Office expense ($1,000): The Foundation will cover its expenses of correspondence, telephone, and occasional miscellaneous supplies.

THE ORGANIZATION

Legal status: The Foundation is an activity of the National Science Teachers Association. In turn, this association is a department of the National Education Association, chartered by Congress in 1857. The association is covered by its own constitution and a board of directors elected by its membership. The programs of the Foundation are under the immediate guidance of an administrative committee appointed by the president of the National Science Teachers Association.

Tax exemption: A ruling dated April 29, 1954, clarified the extension of NEA's tax exempt status to include NSTA and the Foundation. Quoting this ruling, "contributions made to the Science Teachers Association and/or the Foundation are deductible by the donors in computing their taxable net income in the manner and to the extent provided by section 23 (o) and (q) of the Code." The Internal Revenue Bureau does not list individual activities of exempt organizations. Being subsidiary to NEA, neither NSTA nor the Foundation appears as such in the Cumulative List of Exempt Organizations.

Accounting and auditing: All moneys received and disbursed by the Foundation pass through the NEA division of accounts. These accounts are audited annually by Wayne Kendrick & Co., Rust Building, Washington, D. C. Bookkeeping within the Foundation is audited by a committee appointed by the president of the Association.

Checks to the Foundation can be made out to the Future Scientists of America Foundation or, if it is more convenient for tax accounting purposes, to the National Education Association to be credited to the account of the Future Scientists of America Foundation.

Administration: Program planning and development are supervised by a 9-member administrative committee composed of the National Science Teachers Association executive committee plus 5 persons appointed by the president. This committee's decisions and recommendations can be reviewed, approved, or vetoed by the association's board of directors. Advice is sought from and annual reports are submitted to a board of consultants composed of one member from each of the contributors to the foundation.

Staff: The executive secretary of the National Science Teachers Association is the primary executive officer of the foundation. Development of the foundation's program is assigned to appropriate members of the NSTA staff. Contributions to the foundation are assessed 20 percent to reimburse partially the NSTA for staff and administrative costs.

THE RECORD, 1955

1. Careers in science teaching: Ten thousand copies of the original edition and 15,000 copies of the 1955 revised edition were distributed to teachers and counselors.

2. Encouraging future scientists: Materials and Service Available in 1955–56: The revised third edition of this bibliography was dristributed to 18,000 teachers, counselors, and others.

3. West-coast science teachers' summer conference: Thirty-two teachers received $200 fellowships and participated in this conference. Two additional teachers enrolled. Over 55 research scientists were interviewed in 33 laboratories. The teachers learned about new developments in science and, especially, how mathematics is used by research personnel. Several hundred mathematics exercises related to science were written. A selected group of these appears as a 16-page supplement in the Science Teacher for February 1956.

4. FSA-American Society for Metals science achievement awards: This program is designed to encourage students to report their experimental work in science. It reached nearly 20,000 students in 1955. Over 1,300 completed project entries were received. Awards were presented to 105 winners; honorable mention certificates were given to an additional 350 students.

5. If you want to do a science project: This new publication encourages more students to do projects that can be stepping stones to scientific and engineering careers. It features the pattern or design of the practicing scientists' projects. Copies were distributed free to membership in the association. A total of 12,000 copies were distributed.

6. FSA-American Society for Metals recognition awards for teachers: Entries in this program are being abstracted and will be published in an early issue of the Science Teacher.

7. Science student chart-making contest: Of the 506 charts submitted in this program, 30 were exhibited at the convention of the National Science Teachers Association and awards given to the best 10.

8. Let's help science teachers find science-related summer jobs: Publicizing this program and inviting reports from 200 selected firms indicated that the practice is catching on and that more and more teachers are receiving the benefits of this program.

9. High school science teachers summer research assistantships: Three hundred and sixty-three teachers applied for this program and 43 were selected by the colleges and universities for work on 18 campuses. Teachers learned about new developments in science and participated in research techniques. They commended it highly. Participating universities appreciated the opportunity to work with high-school teachers.

10. Direct educational activities: Staff members took part in many conferences involving hundreds of science teachers and representatives of groups concerned about science teaching or the technical manpower problem. There was a marked increase in correspondence from students, teachers, teacher training institutions, parents, and represenatives of industry and technical societies.

FSAF receipts and disbursements in 1955 (projected to Dec. 31, 1955)

Total sum contributed by 27 companies, corporations, and societies in 1955	$46,275.00
Balance carried forward from Dec. 31, 1954	6,180.34
Total financial resource the Foundation has had during 1955	52,455.34
Spent for summer conference fellowships for teachers	7,250.00
Spent for student awards	5,232.10
Spent for teacher recognition awards	1,200.00
Spent for printing, booklets, application forms, entry materials, etc	13,000.00
Mailing costs	3,000.00
Administrative service charges on special projects	3,207.50
Staff salaries [1]	11,839.13
Office supplies	1,500.00
Travel and related costs of providing direct educational and development activities	3,000.00
Projected balance available	6,226.61

[1] After 1955, this item will be included in the basic NSTA budget.

[Reprinted from The Science Teacher]

NATIONAL ENROLLMENTS IN HIGH SCHOOL SCIENCE

(By Kenneth E. Brown)

The critical shortage of scientists has caused many persons of national influence to quote statistics on the number of pupils enrolled in high school science. Many times the statements seem to be contradictory. What is the cause of these apparent discrepancies? There may be two causes. The data may be out of date or they may be misinterpreted.

A casual glance at the table below might lead one to think that the number of high school pupils taking chemistry has decreased over the years. This is far from the facts. Since 1900, the enrollments in chemistry have increased twelvefold; the percentages have declined.

Percent of pupils in the last 4 years of public secondary day schools who are enrolled in certain courses in science, 1889–90 to 1954–55

Year	Percent of pupils		
	Biology	Chemistry	Physics
1890 [1]	----------	10.1	22.8
1900	----------	7.7	19.0
1910	1.1	6.9	14.6
1915	6.9	7.4	14.2
1922	8.8	7.4	8.9
1928	13.6	7.1	6.8
1934	14.6	7.6	6.3
1949	18.4	7.6	5.4
1954–55 [2]	19.6	7.3	4.6

[1] Biennial Survey of Education in the United States, 1948–50, ch. 5, Washington, U. S. Government Printing Office, 1951, p. 107. (Federal Security Agency, Office of Education).

[2] Estimate based on this study.

The number of pupils in high school has increased rapidly over the years; therefore, the percentage of pupils in a subject may have decreased and the actual number of pupils increased. This condition exists in chemistry. In biology, both the number and

percentage have increased. In physics, the enrollment in 1900 was 98,846 and in 1954 there were 302,800 pupils. During this period the number of pupils taking physics more than tripled, but the percent of pupils declined to 4.6. Of course, we would never expect 100 percent of the pupils in the last 4 years of high school to be enrolled in physics since those in grades 9 and 10 would not be eligible. In fact, a percentage of 19 is equal to the enrollment of the 12th grade—the grade in which physics is usually taught.

Instead of using all the pupils in the last 4 years of high school as a base for computation, perhaps it would be easier to understand if the base were the number of pupils in the grade in which the subject is usually taken. For example, the number of pupils enrolled in physics in the fall 1954 was 4.6 percent of all the pupils in high school. Also it was equal to 23.5 percent of the number of pupils in the 12th grade. It is true that all the pupils enrolled in physics were not from the 12th grade. Some were from the 11th grade. Also some of the 12th grade pupils in 1954 took physics the previous year. However, it is reasonable to assume that 23.5 percent is approximately the percentage of high-school graduates in 1954 who have had physics.

Using the grade level enrollment at which the subject is usually take as the base, the percentages of pupils enrolled in certain science courses in the fall of 1954 are given below.

(a) The enrollment in biology (1,293,900) is equal to 72.6 percent of the number of pupils in the 10th grade.

(b) The enrollment in chemistry (482,700) is equal to 31.9 percent of the number of pupils in the 11th grade.

(c) The enrollment in physics (302,800) is equal to 23.5 percent of the number of pupils in the 12th grade.

Similar data on enrollments in high-school mathematics in the fall of 1954 are:

(d) The enrollment in elementary algebra (1,204,500) is equal to 64.5 percent of the number of pupils in the ninth grade.

(e) The enrollment in geometry (664,100) is equal to 37.4 percent of the number of pupils in the 10th grade.

The data above are based on a study[1] of a 10 percent randomly selected sample of public secondary day schools.

Local No. 3, International Brotherhood of Electrical Workers

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1956

Mr. MULTER. Mr. Speaker, the Reader's Digest for January 1956 contains the following interesting report by Mr. Lester Velie on the 30,000-member union in New York City known as Local No. 3, of the International Brotherhood of Electrical Workers. I am pleased to call the article to our colleagues' attention:

THE UNION THAT GIVES MORE TO THE BOSS
(By Leslie Velie)

There is a union whose members are taught that, to get more, you must give more.

So the workmen knock themselves out to discover timesaving devices. They vie for prizes, offered by their own union, to discover a machine that can do the work of eight men. They fire their own loafers and train their own incompetents to produce more.

Their bosses have learned the same thing. So they retaliate with free college scholarships for the workers' children, bargain-priced apartments, and the highest hourly earnings in the world—$3.50 plus $1.54 in benefits, $5.04 total.

The union is Local No. 3 of the International Brotherhood of Electrical Workers, whose 30,000 members are responsible for the intricate electrical innards of New York City. They have evolved a unique union-management partnership.

"How do you pay such wages without going broke?" I asked a contractor.

"See this cement floor?" he said, getting to his knees. "Several years ago, if you wanted to hack a channel and lay a wire in it, you'd do it like this." He pounded an imaginary chisel with an invisible mallet. "Took 4 hours," he said. He leaped to his feet and bent over an imaginary electric drill. "Brrr, brrr," he rattled. "Takes only 20 minutes. And," he added, "we get an honest union, no pay-offs; and honest work, no loafing. You don't know what that means to a contractor."

The respect that local No. 3 enjoys is awesome. Employers hang the union leader's picture on their office walls. Members jam 4,000-seat halls to follow their union's meetings. A Cornell University labor expert, Prof. Maurice F. Neufeld, writes a book to extol the union's model day-to-day workings.

Twenty years ago this union was one of America's worst. So often did its meetings break up in riots that as many police came to meetings as members. In the factional turmoil, two members were shot. The parent union had held no convention for 12 years. Charges were made that local officers looted the union till and shook down employers. When outraged rank-and-filers sued for an accounting, they found that records had been destroyed—and that $500,000 had been siphoned off through phony legal fees alone.

For the dramatic regeneration of this union, one man is responsible. He is Harry Van Arsdale, Jr., a broad-shouldered New Yorker whose father was a member of the union for 50 years. At 49 he has wise old eyes, a tired voice and hair that is prematurely gray. For presiding at the rebirth of a union isn't easy.

The redemption of local No. 3 began in 1933 when Van Arsdale achieved the local's top job, business manager. His philosophy was radical to labor in 1934. He urged his men: "You produce more, and I'll get you more."

Van Arsdale's first target was the ancient practice of featherbedding—doing unnecessary work, or no work at all—to stretch out the job. Electricians had insisted on taking apart factory-made switchboards and rewiring them on the site. Van Arsdale stopped this costly nonsense.

Under his union's old rules, three or more men put up temporary lights on a construction job, then, as "maintenance men," sat around idle. Van Arsdale put them to work. And he told the boss: "From now on you decide how many men a job needs—not the union."

Van Arsdale took to showing up at construction sites at 8 a. m. when work began, or at noon when the men knocked off for lunch. Time chiselers at both ends were hauled before the local's executive board. "What do you want to do, loaf or earn more?" the men would be asked. "We're bucking for a raise, but you're not helping us get it."

Incompetence was an even more serious matter. Van Arsdale set up a union school, soon had 1,600 men—1 for every 4 members, at that time—hitting the books at night to increase their skills at a wide variety of electrical jobs.

Recently a local No. 3 vice president guided me through the newly rising 24-story coliseum where his men were installing cables and fixtures. "Look at this automatic pipe-threader," the union man said. "Used to take a man an hour to thread a length of pipe by hand. Now look. The machine does the job, untended, in a few minutes."

He pointed to a winchlike device pulling cable through a conduit. "Used to take 7 or 8 strong men to pull wire by hand," he said. "Now 1 man and this machine can do it. One of our boys invented it when we put on a drive for ideas."

When Van Arsdale became business manager he called in the local's president. "Are we going to steal—or be honest?" he asked in his dry, nasal voice.

"Be honest."

"Good, then let's start letting the members know what's happening with their money. We'll mail them regular financial statements—in detail, and easy to understand."

Under Van Arsdale's prodding, officers took to reporting union spending at monthly meetings, a voucher at a time: $5 for pencils, $20 for washroom tissue—and on and on for as many as 600 items. Members had to come and listen—or pay a 50-cent fine.

Prior officers had built a fat treasury through high dues and stiff fines. Van Arsdale slashed dues. "A bulging union treasury raises temptations," he said. "We'll run on a deficit and assess you as necessary."

Van Arsdale compares a union leader's calling with that of a clergyman. He should live no better than his members and not count the hours he puts in for his flock. Van Arsdale's pay of $175 for a 7-day week is little more than the $140 his rank-and-filers earn for a 5-day week, although his members are willing to pay him more. His home is a ramshackle cottage he helped his father build.

Business agents had made a good thing out of bribes from employers for favoring them with good workmen. Van Arsdale asked employers to set up a joint union-employer hiring office with him. This supplied electricians by rotation and cut out the grafting business agent.

For the men in his union, Van Arsdale sought the security he never had in his own childhood. Together, his union and the employers fashioned a grass-roots system. His men had pensions, free dental care, and medical checkups years before the rise of welfare funds and fringe benefits. They were the first building-trades men to get paid vacations. Van Arsdale asked the employers to form a joint boss-union committee to administer the welfare system so that they would be a part of it and would plan with the union instead of fight it.

"Why not set up our own union-boss social-security headquarters," he urged, "with a board of directors, 12 from the union, 12 from the contractors—with an employer as chairman—to run the show?" The result was the joint industry board of the electrical industry, the first of its kind. Union men and bosses on the board took to calling themselves "The Team." Employers vied with union men to kick up new ideas.

One idea was to give local No. 3's members low-cost apartments. They'd provide a good investment for accumulating pension funds—not to mention jobs for electricians.

Together, employers and union men combed the city for sites. When members bought $300,000 of housing bonds to help pay for the land, employers matched it. Together they got the apartments built.

When Van Arsdale suggested a convalescent home for union members, the team borrowed from its pension funds again to buy a 300-acre Long Island estate. The 60-room mansion had been empty for years and required a basement-to-attic cleaning and outfitting. The team's chairman, A. Lincoln Busch, president of an electrical concern, took on the housekeeping job.

"I got my hands in the dirt," he says with satisfaction. "We ripped up rotting linoleum and my daughter picked the furnishings."

When the home opened, Contractor Busch continued his housekeeping. Fortnightly he drops in at the place, starts with the back stairs, inspects the kitchen, the closets.

"It's my baby," he says happily.

Not long ago Van Arsdale, whose education didn't go beyond high school, started talking to the team about the benefits of a college education.

"Education for whom? And how much will it cost us?" asked the contractors, who by now could scent a Van Arsdale idea a mile off.

"For our members' brightest kids," said the union man. "And here's how it can be done: Every employer who does a million dollars or more of business a year gives a $5,280 scholarship. We'll let Columbia University pick the winners."

Today the contractors are sending 67 sons and daughters of local No. 3 members to colleges to become doctors, engineers, teachers. Recently, two contractors whose business is less than a million dollars yearly asked permission to give scholarships, too. One told this writer:

"I have a son who's an engineer—used to carry a card in Van's union—and a daughter who's a schoolteacher. They think so much of Van, they insisted I give a scholarship. If I didn't, they said they'd do it themselves, out of their own earnings."

Two years ago New York's electrical contractors accepted Van Arsdale's most daring idea: Annuities for men who work with their hands. With this scheme, Van Arsdale rounded out a storm shelter which makes the New York electrician the most protected wage earner in the Nation. His employers have piled up some $17 million of pension and annuity funds for him. After a lifetime of protection against illness, accident, and unemployment, he retires at 65 with an income of $240 monthly (including social security).

In the late thirties local No. 3 had reached out to take in the unskilled workers in electrical manufacturing plants, some of whom were then earning as little as $16 a week. The union won wage increases for them that boosted electrical manufacturers' costs, and out-of-town competitors began to undersell the New York manufacturers. Van Arsdale and the contractors took steps that plunged them into hot water.

Local No. 3's electricians refused to install out-of-town wire and equipment. The contractors went right along by refusing to buy. The boycotted manufacturers hit back with a million-dollar suit. They charged local No. 3 had built a "Chinese Wall" around New York; behind it, they said, flourished a monopoly. The Department of Justice indicted the union on antitrust conspiracy charges.

Van Arsdale cut his own and other officers' pay two-thirds to help pay defense costs. The Chinese Wall charge was true, he admitted. "But we have a legal right to do it," he argued. "We're protecting union members' jobs against nonunion competition from out of town." The United States Supreme Court, in 1946, agreed with him. The manufacturers dropped their suit. The Justice Department withdrew its indictments. (In 1947, the Taft-Hartley Act outlawed the sort of boycott Van Arsdale had practiced; electrical equipment now flows freely into New York City.)

Van Arsdale has now expanded his one-time 6,000-member union into a combined skilled-trade and factory-worker local of 30,000 members. The benefits he had won for the electricians were filtering down to lower-paid, unskilled members organized in separate divisions in the union. He had built an impeccably honest, democratic union, on good terms with employers. Last October he and the electrical contractors invited me to observe their most intimate rite—the negotiation of a new contract. They had been friendly partners during the year. But now they squared off in a struggle that revealed both the strength and the weakness of the high-wage, high-benefit structure they'd built.

Von Arsdale asked for a 10 percent wage boost—35 cents an hour. Since benefit payments are geared to wages, there'd be an added dime an hour in benefits as well.

His electricians, Van Arsdale argued, were doing something no other building-trades men would do—adding 2 hours to their day at straight time.

The contractors, worried and tense, posed their chief problem: "How long can we go on passing higher wages and benefits costs to our customers without hurting business?" This question haunted 7 hours of heated bargaining. When the session was over, and Van Arsdale had won a compromise settlement, he brooded over it.

"We've got to find more ways to get costs down," he said. He was worried about the contractors.

In an interview next morning, Van Arsdale was still mulling over higher wage costs to the contractors.

"There's no law that says we can't come back in the next go-around and take a cut if living costs drop," he said, "To get more, you must give more. That works both ways. Next time it may be our turn."

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

Appendix

Electoral College Reform

EXTENSION OF REMARKS
OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 14, 1956

Mr. MUNDT. Mr. President, one of the sprightly, interesting, newer magazines in America is entitled "Know the Facts." It is published under the capable editorship of Martha Rountree.

In the March issue of Know the Facts, Mr. President, appeared a factual and informative analysis that very commendably discusses some of the reasons for electoral-college reform and some of the proposed reforms.

Since that piece was written, however, the Senator from Texas [Mr. DANIEL], the Senator from South Carolina [Mr. THURMOND], the Senator from Tennessee [Mr. KEFAUVER], and I have held innumerable conferences among ourselves and with many others who have also devoted much study to electoral-college reform. As the result of these conferences, we expect to introduce tomorrow or Friday a new approach to this problem which merges the proposals known as the Daniel-Kefauver amendment and as the Mundt-Coudert amendment into a single amendment providing each State its choice between the two alternative proposals. I sincerely hope our new amendment may be adopted and submitted to the several States for their approval.

I think the article in Know the Facts magazine will be informative to all members of the Senate. It is completely objective, and contains interesting information.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ELECTORAL COLLEGE A HAS-BEEN?

SOLEMN CEREMONY

By midnight of election day 1956, or certainly not many hours thereafter, all of America and most of the world will go to bed knowing who will be the 35th President of the United States.

Once every 4 years, electoral votes are cast in State capitals in December. Between January 4 and 10 in 1957, an impressive ritual (the counting of each State's electoral votes) will be performed in the United States House of Representatives at a joint session of Congress. The President of the Senate will take over the Speaker's chair. Page boys solemnly will carry two mahogany boxes forward to the Speaker's dias. Each party will appoint "counters" who will occupy desks just forward of the presiding officer.

Then, that officer soberly will open the mahogany boxes, extract sealed envelopes, open them and pass them forward to the counters. They will record the electoral vote of each State and announce it.

Everybody then will know officially what everyone already knew on election midnight in November.

Useless ritual

After a century of arguing, scholars and practicing politicians agree that the electoral college has outlived its usefulness, and that something better must be found.

The big question: What is better?

The answer: There are many reform plans but no agreement on which is the best.

How does a United States President get elected?

Officially he is elected by the electoral college and not by popular vote.

What is the electoral college?

It is not a grassy green quadrangle on a campus, it has no buildings or bylaws.

In theory, it is a system under which a group of national electors chosen by the individual States elect the President of the United States. In practice, it has become only a useless ritual.

Who dreamed it up?

The Founding Fathers of this country, in 1787.

Why?

They thought that to establish the most powerful and highest office in the land as the free choice of the masses would promote faction and demogogery.

They believed it would give the people, in the person of the President, an overpowering ally in their political struggle with the "intelligent" and "propertied" gentry.

Therefore they carefully contrived the electoral college system to protect the Presidency from falling into the hands of the rabble.

AUTHORITY FOR THE ELECTORAL COLLEGE

Article II, section 1, of the Constitution provides for the election of the President and Vice President through the electoral system, and outlines how the number of electors shall be determined. In 169 years, only one major change has been made: Jefferson's Republicans, in 1804, put through the 12th amendment to the Constitution requiring separate votes for President and Vice President (instead of the second highest candidate becoming Vice President) in order to insure that both officers would be of the same political party.

Rejects

Virginia's delegates to the Constitutional Convention proposed that Congress pick the President. This was rejected because it was obvious that such a process would give excessive power to the larger States and would also make the President subservient to the national legislature, which ultimately would be destructive to the balance-of-power system they were constructing.

Massachusetts proposed that the governors of the States elect the President. This too was rejected as destructive of the cherished principle of Federalism.

A compromise

The Constitutional Convention compromised. The President would be chosen by national electors who, in turn, would be chosen by the people in a manner specified by each State legislature.

This gave the people an important but indirect voice in choosing a President. The electors would serve as a sort of national jury, exercising free choice in casting their Presidential ballots. It was thought this system would insure that the President would be chosen by the wisest and best minds of the States; that he would be kept independent of the national legislature; and that he would be severed from the masses.

Alexander Hamilton, who distrusted the people, wrote in his 68th Federalist paper: "* * * the immediate election should be made by men most capable of analyzing the qualities adapted to the station, and acting under circumstances favorable to deliberation, and to a judicious combination of all the reasons and inducements which were proper to govern their choice. A small number of persons, selected by their fellow-citizens from the general mass, will be most likely to possess the information and discernment requisite to such complicated investigations."

How was it supposed to work?

The electors would meet in their respective States, cast their ballots and mail them to the presiding officer of the Senate who would, on the appointed day, tally the votes. The long time lapse between the balloting and tallying would be required to get the ballots to the national Capital (few roads, slow mails).

On paper the system looked perfect. In practice, it worked effectively only twice in history (the two unanimous elections of George Washington).

Rise of parties

The rise of political parties, which began with the Jefferson-John Adams battle of 1796, the formulation of programs and platforms, and the establishment of party presses, by 1801 had reduced the electoral college to a shadow in Government. The nomination of candidates by party caucuses and by national conventions completed the substitute process.

Hollow honor

Today, few people pay any attention to the electors who are placed on the ticket in return for financial support or performance of political chores. The honor is a hollow one; electors are seldom known and almost never remembered.

Automatons

Electors now are supposed not to exercise independent judgment. They are chosen not to have minds of their own but to do the bidding of other minds. Since 1820, it has been almost an unwritten law that an elector vote strictly according to his party.

Half the States do not even place the names of the Presidential electors on the ballots; a vote cast for either ticket is a vote for the party's electors, whoever they may be, and concurrently an instruction to the elector to vote as he is pledged.

Independent judgment

There were 12,463 votes cast in the electoral college between 1820 and 1952.

In only five cases did an elector exercise independent judgment.

William Plumer, of New Hampshire, a Monroe elector in 1820, cast his ballot for John Quincy Adams who was not even a candidate, on the grounds that only Washington should have a unanimous vote. Three New York electors in 1824 violated their instructions to vote for Henry Clay. In 1948 one Tennessee elector bolted the Truman-Barkley ticket to vote for a Dixiecrat, J. Strom Thurmond.

Conspicuous failures

Here are some typical failures that have given critics of the electoral college system ammunition to support their arguments for electoral reform:

1796: This contest left the Presidency in the hands of John Adams and the Federalists, the Vice Presidency to Thomas Jefferson and his Republicans, thus dividing up the Executive.

1800: Jefferson and Burr tied for President with 73 electoral votes each. The election went to the House and that body was deadlocked between Jefferson and Burr for 35 ballots.

1824: Andrew Jackson was the popular vote choice by a 50,000 margin but was unable to get a majority in the electoral college. When the election went to the House, a cabal was formed between the followers of Jackson's opponent, John Quincy Adams, and Henry Clay. Clay threw his influence to Adams and procured his election. Jackson's Democrats contended they were cheated out of the Presidency.

1876: Samuel J. Tilden, Democrat, had a plurality of 250,000 votes over Republican Rutherford B. Hayes. Disputed and competitive returns were made from Florida, Louisiana, Oregon, and South Carolina. The Constitution prescribes no method of settling such disputed electoral returns. A bipartisan commission was set up which gave the electoral votes of all four States to Hayes.

1888: Grover Cleveland, Democrat, led Benjamin Harrison, the Republican candidate, by 100,000 votes in the popular poll, but was defeated in the electoral college vote, due to a peculiar distribution of votes in the college.

Winner take all

Political scientists say the electoral college system actually operates to disfranchise millions of voters, under the winner-take-all system.

Minority voters in a State are left out in the cold. Bloc voters and city machines determine the winner.

What is it?

The winner-take-all system is simply this: A State, for example, may cast 500,000 Republican votes to 444,000 Democratic votes or vice versa. It has 16 votes in the electoral college. All 16 votes go to the Republican candidate, and 444,000 Democrats are blacked out of exercising any voice in picking the President, even though whole congressional districts or most of the State divisions may have gone Democratic by considerable margins.

In 1884, Grover Cleveland had a majority of only 1,100 votes in New York and took all of the State's 36 votes.

In 1932, Herbert Hoover was given 5.4 million votes in the Middle Western States. But he did not get 1 electoral college vote from these States.

In 1948, Harry S. Truman, with a 2 million nationwide majority, received credit for over 5 million votes in the electoral college for 3 States which he had carried by less than 60,000 (California, Illinois, Ohio). A change of 30,000 votes in the right proportion in those 3 States would have shifted 78 electoral votes and negated a 2 million national majority for Truman under the winner-take-all system.

Big stakes

The electoral college system gives undue political weight to the larger States. They have first call on the nominations and the greatest weight in conventions and elections. In recent history only 2 candidates have come from small States: Landon, from Kansas, in 1936; Truman, from Missouri, in 1948.

Remedies

Scores of remedies have been proposed and as many discarded. The Senate Judiciary Committee has before it for study several reform proposals. In general they follow these lines:

Choosing of electoral votes by congressional districts and two at large (proposed by Senator KARL MUNDT, Republican, South Dakota, and Representative FREDERIC R. COUDERT, Jr., Republican, New York): electors would be chosen in the same way that Senators and Representatives are elected. This would break up the winner-take-all system, since the choice would be confined to each congressional district.

Direct election of the President and Vice President (proposed by Senator WILLIAM LANGER, Republican, North Dakota): This calls for abolition of the electoral college.

Promotional division of electoral votes (proposed by Senators PRICE DANIEL, Democrat, Texas, and ESTES KEFAUVER, Democrat, Tennessee): This system, brought up before many Congresses, received attention as the Lodge-Gossett (ex-Senator Henry Cabot Lodge, Jr., Republican, Massachusetts, and ex-Congressman Edward Gossett, Democrat, Texas), resolution of the 80th and 81st Congresses. The electoral college would be abolished, but States would still retain electoral votes equal to their total number of representatives in the House and Senate. This vote would be divided between candidates of parties according to the percentage of popular vote they received, figured to the third decimal point.

This proposal, reported out of committee to the Senate, has been cosponsored by such Senators as Democrats HUBERT HUMPHREY, of Minnesota and RICHARD NEUBERGER, of Oregon and Republicans EVERETT DIRKSEN of Illinois and WILLIAM JENNER of Indiana, who represent the extremes of both parties.

Action

A compromise proposal combining features of both the Mundt-Coudert and Daniel-Kefauver proposed constitutional amendments has now been drafted for consideration by the Senate.

However, even though the Senate should approve an amendment to change the electoral college system, there is little likelihood that the House will take any action on this in 1956.

When and if Congress does pass such an amendment to the Constitution, it would of course have to go to the States for ratification, a time-consuming process.

Which means that in the next Presidential election year (1960), everything will no doubt be status quo.

Address by Hon. William Langer, of North Dakota, Before West Virginia Bar Association

---

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 14, 1956

Mr. LANGER. Mr. President, a short time ago I delivered an address at the 71st meeting of the West Virginia Bar Association. I ask unanimous consent that the address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

JUVENILE DELINQUENCY

(By Hon. WILLIAM LANGER, United States Senator from North Dakota)

Mr. President, Senator Revercomb, and friends, I can't remember when I have had a more gracious welcome than I have had from your president, U. G. Young. He fixed up my room most beautifully, and in addition to the flowers and fruit, he had two bottles which apparently contained some kind of stuff that my friend Chappie Revercomb likes.. [Laughter.]

When Mr. Revercomb came to the Senate, I had already beeen there for some years. I well recollect the first day he appeared in the Judiciary Committee, to which he was assigned. A bunch of us were sitting around, waiting for a quorum to appear, and we commenced to brag about the States from which we came. I told a little story about a man 90 years of age who married a woman 87, out at home, and then advertised they wanted to buy a farm. They specified just how large the farm was to be, and put in this clause, that this farm must be located near a schoolhouse. It didn't bother Chappie one bit—he said, "Out in West Virginia we had a fellow named John Jones. A lawyer appeared from England, looking for a fellow named John Jones, 80 years old, who had inherited $100,000, had inherited a title, and other property. The English lawyer finally located a John Jones, went to his home and said, "Does John Jones live here?" The man said, "Yes." The lawyer said, "How old are you?" The man answered, "I am 60 years old."

The lawyer said, "You are not the man I am looking for. I am looking for a John Jones who is 80 years old." He said, "That's my father; he lives up here about 2 blocks."

The English lawyer went over there; a lady came to the door, greeted him; he said, "Is John Jones here?" She said, "Yes, he lives here, but he isn't in the house now." The lawyer said, "Is he the John Jones that is 80 years old?" She said, "Yes, but he isn't home." "Where is he?" She said, "Well, he's over attending his father's marriage, over here about 4 or 5 blocks." The English lawyer said, "I am certainly surprised at that." The lady said, "You're not as surprised as I am; this is a shotgun marriage." [Laughter.] That is the kind of people Chappie said you have here in West Virginia.

I don't want you misled by the things my distinguished former colleague said about me—I want you to know I was up for disbarment twice—I was accused as county attorney and as attorney general twice; I was arrested as the Governor of North Dakota, tried, and sentenced to 18 months in the penitentiary, but I didn't serve the sentence, we had the right kind of a supreme court. After that I was elected to the supreme court, and to the United States Senate, and there it took me 15 months to get seated. Senator BARKLEY read 34 charges against me, and, of course, I had to hire lawyers to defend me against those charges, and every time you have to hire a lawyer you know what that means. Among the lawyers I hired was John W. Davis. Clarence Darrow had been one of my lawyers, but he had died, was not able to represent me in Washington.

Naturally, I beat those charges in Washington. In any event, I was also impeached one time—or rather, they tried to impeach me, when I was attorney general. They failed to impeach me by one vote.

Having told you that record, I want you to know I carried every county in the State of North Dakota in the last election. I mention that history to you because after I leave here you may run across some of my North Dakota constituents that may tell you my history anyhow, so I thought I would tell you myself.

In this matter of juvenile delinquency, I prepared a very fine speech. I showed it to your president, he looked at it, and said, "Why don't you just tell us about juvenile delinquency, and certain phases of it." So, I am going to do that, and I may read 1 or 2 quotes from my speech.

I want you to know, first of all, as Senator Revercomb said, I was on the parole board of North Dakota ex officio by virtue of being attorney general and governor. The most maligned group of people in the United

States are the parole boards. You sit on that parole board, you do the best you can. You see a young lad come before you, you decide that he will do a whole lot better if he gets out of the penitentiary after he has been there a few months, and then report for a few years to a probation officer.

It is interesting to note, taking the State figures from my State, 99 out of 100 of those people who we parole make a good record. Every once in a while one goes wrong, and that is the one the newspapers write about, that is the one the people all over the country hear about. If I could do nothing else here today I hope to impress on you the fact that the average parole board, particularly the Federal parole boards, go into the matter very, very carefully.

We have a splendid parole board in Washington, which interviews each applicant. I happen to be chairman of the committee—you see, when I was sentenced to Leavenworth for 18 months, I wanted to find out the best job there—and I was very, very much interested in that, and when I came to the Senate I had created the National Penitentiary Committee, of which I have been chairman. We visit and investigate every one of the penitentiaries—with me are Senator Haynes, of Missouri, Mahoney, of Wyoming, and Welker, of Idaho. We go in about 3 o'clock in the morning, go over the food, especially the cereals—every once in a while we get complaints about that. We check into the matter of solitary confinement.

I want to call this to your attention today: Since the creation of this committee by the United States Senate there hasn't been one single riot in any Federal penitentiary. There was an incipient one, while we had the burning of buildings in State penitentiary after State penitentiary, in the Federal Reformatory in Chillicothe; but nothing like the millions of dollars worth of damages, hostages killed and prisoners killed—there hasn't been one, not one riot in any Federal prison.

One reason is we provided that every prisoner can write a letter to any member of the Supreme Court of the United States, or Congressman, or Senator, or to the judge who sentenced him. And Justice Burton told me he received 265 letters last year. An investigation was made of all of them, and they found two innocent prisoners among them and promptly took steps to release them.

On this matter of juvenile delinquency, I don't know how many of you ever visited a reformatory. I visited one near Denver, at Englewood, Colo. I found 208 of the finest young men you ever saw in all your life. I have been to West Point and seen the West Pointers parade. You go to that penitentiary and it is something you are proud of. You find the boys have a haircut every 2 weeks, they are taught to stand up straight. I was told there by the warden that it very, very seldom occurs that any man ever makes a criminal record after he is released from there. They learn the different trades, and the result is they make a living after they are released, and do not return to crime.

While I am on that subject, may I say there is pending in the Senate now a bill to provide the warden with sufficient funds to furnish each man leaving the penitentiary with a suit of clothes, and to hand him a few dollars; the warden is authorized to give that going-out prisoner $200. And Jim Bennett, the Director of the Prisons of the United States Government, has recommended that bill, and we are in very great hopes that bill is passed.

Today we are short of penitentiary room. Every penitentiary is overcrowded, we have 1,500 men sentenced to penitentiaries that we just simply don't know what to do with.

Taking up the matter of juvenile delinquency, I shall mention various subjects in connection with it, so I think it is best to get the facts straight.

One phase that might be tied in with juvenile delinquency are the young, unwed mothers who have babies. There are more than 20,000 babies sold in the black market each year, at anywhere from $2,500 to $5,000 apiece. There isn't a reason in the world why a couple in the United States that wants to get a baby can't get it through a legalized agency in the State. Every State in the Union provides methods of adoption, and have proper institutions to provide babies for adoption.

You will be amazed at the trickery played on some of the unwed mothers in order to be able to obtain babies for the black-market operations. And to the people obtaining babies through these methods, many times after the money is paid, the baby is not delivered. Many times, when they do get the baby, the baby is found to be blind, or there is something else wrong with it physically.

We have cited four lawyers in Chicago engaged in that business, they will have considerable trouble before they get through. In the marketing of black-market babies, some people have made a profit of it. They have institutions where they take babies in, advertise in newspapers, and have couples come over and visit, show them different babies like you would show a horse or a cow, let them pick them out, tell you this baby is $2,500; this one $3,500.

If any of you know anyone who want to adopt a baby, we have a refugee committee, of which I am chairman, that provides for the coming in of 209,000 refugees from West Germany, from the satellite countries of Russia. At the present time there are 4 million refugees in West Germany. If anybody in West Virginia wants a boy or a girl, all they have to do is notify the refugee committee of the United States Senate. The law provides for the bringing in of 5,000 orphans, less than 800 have been brought in in a year and a half.

If any of you know a bachelor that can't find a girl, we can supply him with girls from 18 to 80 years of age. You can bring in a good hired girl or a hired man, you can bring in good farmers or tailors, you can bring in bakers. And you can tell your clients they are not legally responsible for one single dollar a month for those refugees, only morally responsible that they will get them a job and a house to live in.

Going back to juvenile delinquency, I will take up the matter of polygamy. Your President particularly asked me to discuss that today, because sometime ago Senator KEFAUVER asked me to go to New Mexico and Arizona to investigate the juvenile delinquency among the Indians. If you want to see misery and want and starvation, you don't have to go to foreign countries in which we spend millions of dollars, we have them among the Indians of the United States.

Back when the Indian Bureau was organized by Congress, the first Director took it on himself to get as many people under his jurisdiction as possible. We then had 232,000 Indians. For some unknown reason, he decided to get everybody with any Indian blood at all under the rules, and he got graduates of Harvard, Yale, anybody with any Indian blood at all, on the enrolled lists, with the result that finally now we have 400,000 on the lists.

Now, I would say that of all those Indians, the number of those who need help are perhaps 150,000. Yet we are sending billions of dollars all over the world, and don't do anything for these Indians. You will find 800 children in Arizona that never saw a schoolhouse. Over in New Mexico you will find hundreds of children, even up to 16 years of age, who can't talk a word of English. You will find when you go to the schoolhouses—heavens knows you won't find many—you will find the children haven't got a baseball, a football, any sports equipment at all.

You will find that a GI who offered his life overseas, an Indian, who wants to make a living, you will find he can't get a loan like a white GI. He can't borrow money on cattle, on a farm, or on anything else. So that GI looks around for a job. Usually he gets married, and we have those Indian women appear before our committee, they say they want something done about their tribe. They say, "Our husbands go to Nogales, to Tucson, they go 2 weeks or more, than a month, then 2 months, then they never come back, the family is broken up, the children grow up without a father."

You will find some of the Indian women have to carry buckets of water perhaps half a mile or more from the creek—they have no well, no money available for a well. You will find that although the Indian Bureau has been in operation since 1834, 130 years, today the Indians are far worse off than when the Indian Bureau took over.

I was on the Indian Committee, Thomas of Oklahoma was the chairman, and I asked him one day if he could show me one treaty the white men kept with the Indians. He said, "You can't find a single one." North and South Dakota were assigned to the Indians for their own territory, but when gold was discovered in the Black Hills, the Indians were driven out by William Randolph Hearst.

The Indian can't get into the courts, and we created the Indian Claims Commission. There today millions and millions of dollars are spent. That Commission has been there a long, long time, and they tell us the situation is so complicated it is almost impossible after all these years to do justice both to the United States Government and to the Indian.

So when I was investigating the Indians in Arizona and New Mexico, one of the columnists came to me, said, "I wish you would come to Short Creek, investigate the matter of polygamy, we would appreciate it very much." I investigated that, had Governor MacFarland of Arizona with me—a friend of Chappie Revercomb's—we went over to try to make an investigation. The States had tried to make one and got nowhere. Finally they took it to court, and they finally took away 162 children of parents living in polygamy, and turned them over to the welfare board of the State of Arizona. They were in their custody a trifle over a year, then the judge had to run for reelection, he lost, a new judge came in, and the result was he issued an order turning all these children back to their parents over at Short Creek.

Naturally this interested me. I got out 89 subpenas to start my investigation. You see, the State authorities are up against this—these so-called colonies are generally on the edge of a State line, and when the sheriff comes to serve them with a subpena, they go over into Utah; or if they live in Utah, they go over into Arizona.

The governor told me, "Our legislature refuses to pass any legislation on this." Before Arizona was admitted to the Union, they had to have legislation against polygamy to be admitted into the Union. They said they would pass that, and became a State. But they haven't got it yet. The former governor tried to do a marvelous job, he tried to wipe out that situation, but he found a great many witnesses went over the Utah line, where he wouldn't have jurisdiction.

In the Federal court we had no such problem, our subpenas were not bothered by State lines, we just obliterated all State lines in our congressional investigation. I brought these people in, I found a situation there that I never dreamed could exist in my wildest imagination. I found men getting

up testifying, "Sure, I have got five wives, my grandfather and grandmother went to the penitentiary, my father and mother went to the penitentiary, I haven't the least objection to going there." They say, "It's a part of our religion, we intend to obey our religion, even though it conflicts with State law."

When I got back to Washington, I proceeded to make an investigation, through Attorney General Brownell and Senator KEFAUVER—you would be amazed to learn how many States there are where polygamy existed. You would be distresed by the pathetic letters I get. For example, a lady and her husband writing you from California, saying, "My daughter is 13 years of age, and was visiting in Arizona—or some other State—now, she won't come home. We went to investigate, found she is the third wife, polygamous wife, of Mr. So and So."

Well, it is a matter, of course, that may be primarily the duty of the State; but when you go down theer as a public official and investigate it, you are appalled—and I use that word advisedly. It is the problem of the Attorney General of the United States, as well as the attorney general of the various States. But as the county attorney told me, "As soon as my predecessor started to enforce the law, he was defeated for reelection."

Then I want to take up, if I may—because I promised your chairman I wouldn't talk more than 35 minutes—this matter of drugs, of marijuana. This situation is so indescribable you wouldn't believe it. The testimony given before our committee showed it is among the school children—not only in the high schools, but in the 6th, 7th, and 8th grades, and even in the lower grades. Our committee decided to name a special subcommittee, and on that subcommittee were Senator Kilgore as chairman, PRICE DANIELS, of Texas. The Senate allowed them $50,000 for that purpose.

If I might digress a moment, we organized the Juvenile Delinquency Committee 4 years ago, when I was chairman of the Judiciary Committee. The subcommittees that we have created ever since are off-shoots of that original Juvenile Delinquency Committee. While still in the full committee, we went into the matter of drugs. We had the testimony of J. Edgar Hoover and other enforcement officials; I can only say today we are taking excellent care of that situation through the special subcommittee headed by Senator PRICE DANIELS, of Texas; and working with the cooperation of the Food and Drug Department of the United States, I think the situation is coming along in pretty good shape.

From that I want to go into the matter of pornographic literature and pictures. I wish everyone of you in this room could have been with us down at Palm Springs when the sheriff of San Diego, Calif., brought over great gripfuls of literature and pictures seized from teenagers that had gone over across the line into Mexico, over to Tijuana and south of Nogales, Ariz. Those pictures are so undescribably filthy and horrible that you wouldn't believe that any man or woman could possibly deal in them; yet our investigation shows it is a billion dollar a year business in the United States.

One outfit over there in Baltimore, we got hold of their books, they do $150 million in that one concern in that field in 1 year. There are several places in Los Angeles that do a million dollar a year business in that kind of literature and pictures.

Senator KEFAUVER and myself, presiding in the hearings of our committee in New York, saw the spectacle of four leaders in that line of filth claiming the fifth amendment, and the first amendment and the fourth amendment—every one they could think of, in order to keep from testifying before the committee. Of course, we reported them to the Senate, and they were cited for contempt. We wanted to find out how 1 man sent out 400,000 letters to teenagers, saying that for 50 cents, $1, $1.50, $2 $2.50, you can get some lewd, lascivious pictures.

That is one of the great problems, how they send their advertising literature. We find these people get lists of the graduating classes from the 8th and 9th grades, from junior high schools. We find there are outfits that make a practice of getting lists of all those graduating from junior high school to high school, then they apparently mail out that literature to them. We have fathers and mothers complain to us; we had the father and mother of that boy who was killed down in Florida by other teenagers—you remember, you saw it in the newspapers—because of some of the literature these teenagers had received.

You will find that they not only have the literature from Mexico, where they sneak it across the border, but from other countries, they bring it in in airplanes, they bring it in from Paris and other foreign countries. They have regular dealers, it is set up like you would set up a financial institution, with a head office and branch offices. We have a map there that is in evidence that they had showing where the headquarters are, with the red lines extending to every State in the Union to the branch offices. We found in Los Angeles there is a terrific traffic in that literature, we find it in every State, including my own State of North Dakota, where they have agencies set up, sending that filth to the youth of America.

Well, a little while ago Senator KEFAUVER appointed the Lions Club, at Bismarck, N. Dak., to give a verdict on a little over 1,000 exhibits. We have 25,000 or 30,000 letters sent in by parents that caught their children with this literature. Then we met this—a man comes up, he testifies that it is art, that there is nothing lewd or lascivious about it at all. So, you are met by the great problem of censorship. If you don't think that is a great problem, you face it. You see a movie, some organization may want to censor it, other organizations say it is all right. You find the same thing true about the lewd, lascivious literature. We get letters into the office from people who say they have been members of nudist camps, protesting most violently against our committee taking action on these pictures in certain magazines that are supposed to be sponsored by certain nudist organizations.

By far and large, the American people thoroughly understand what the traffic in these pictures and literature is doing to the youth of our country.

So, we have appointed a committee, we had before us the psychiatrists, the socialogical workers—sometimes those fellows get confused, too—I get so confused I can't tell one from another. Sometimes I think the literature and pictures confuse them, when it comes to distinguishing one from another.

So, we asked this Lions Club, which is an outstanding organization in Bismarck, engaged now in putting on the Passion Play in the State of North Dakota—an outstanding organization, consisting of members of the supreme court, former attorneys general, a great many lawyers, bankers, insurance men, farmers, laborers—I think we are going to get a very good cross section—we are going to meet with them a week from Monday, get a jury of 160 men to not only pass upon the obscene literature and pictures, but to recommend legislation to the subcommittee, which in turn will recommend to the full committee, of which your distinguished Senator was formerly a member, to do everything we can to see it is wiped completely out.

J. Edgar Hoover thinks the only way to wipe it out is by education. The American Legion and all the other worthy organizations are working hand in glove with us. We have had the national officers of these various organizations in there, we have had their help and earnest cooperation, because they realize the terrific problems we are up against in this matter.

Now, finally, I don't want to be like WAYNE MORSE, who talked for 23 hours—it's wonderful how a fellow, even after he is out of the Senate, loves to talk and talk. The President is going to stop me—he said, "I stopped a fellow yesterday, I am going to stop you if you talk too long."

I want to say in closing that this matter of juvenile courts is one of the most important matters—it is one of the most important courts you can have in the State of West Virginia. There is a continuous fight in this—there are bills in to reduce the ages of those appearing before those courts, there is a fight to do away with the privacy—they want to have the reporters in there when a boy of 13 or 14 years of age is before the judge they are continually trying to hamstring the juvenile courts.

Never let this happen in your State. The juvenile courts are doing a magnificent job all over America. Judge Ben Lindsey in Denver started us off right on that.

One of the more important witnesses we had before our committee was District Attorney Keating, of Denver. Due to him we passed a bill in the Senate, which provides that a father must support his dependents. Forty-nine fathers in Denver deserted their wives and children, went over into California, or the State of Washington, or over into Oregon, and then it was impossible to bring those men back. We have got a Federal law, already passed in the Senate, to bring those men who desert their family back and punish them. It is known as the "Run-away Fathers' Law." I don't think we will have any difficulty in getting it passed in the lower House—it has the backing of J. Edgar Hoover.

Some of the men marry again, without getting a divorce. Mr. Keating compiled a record to show how he tried to extradite the fellows, and how he failed. Another thing, though, because of the expense involved it is difficult. Then, sometimes they bring a fellow back, he and his wife become reconciled, and the wife wants to drop the prosecution.

We believe if we can enforce the Dyer Act, or if we can get convictions when a fellow sells a second-hand truck and it has a mortgage on it, you can enforce all the other laws which involve State lines. Most certainly the man that is a father and has a dependent wife, the Government should be able to take that man by the neck and say, "You have got to take care of those children."

I do want to, in closing, give you a statement by J. Edgar Hoover. As you perhaps have seen, he gives a number of cases. I know them almost by heart. During the year 1954 the FBI reported the arrest of 269,831 persons under the age of 21. These young people represent 72.6 percent of all persons arrested for auto theft, and 62.9 percent of all persons arrested for burglary. During 1954, 319 young people under the age of 21 were arrested for murder and manslaughter; 2,767 were arrested for aggravated assault, and 40,163 for larceny.

Mr. Hoover says, further, that only one-third of all cases involving those under 21 reach the courts, so you have got the record of nearly 1 million of them being arrested each year.

One more thing, I would like to give you the quotation of Charles Evans Hughes: "The Supreme Court of the United States and the courts of appeal will take care of themselves. Look after the courts of the poor, who stand most in need of justice. The

security of the Republic will be found in the treatment of the poor and ignorant; in indifference to their misery and helplessness lies disaster."

I do want to say that applies to the juvenile courts—if you had made the investigations we have made, you would be battling for it, too.

I can't tell you how much I appreciate the splendid treatment given to me by your President, the pleasures he has afforded me. I remember when the Governor of Texas came to the State of North Dakota. I was going to give him a great, great welcome, so I got all of the service clubs together, we had perhaps 1,000 to greet him. Then I carried it to the extreme, I decided we ought to give him a governor's salute. President Roosevelt had changed that from 17 guns to 19 guns, and I thought that would make a nice welcome for the Governor of Texas. When the train rolled in, I instructed them to fire the cannon 19 times, I told them to "Make it a good one, let's show the Governor of Texas how much we appreciate his visit." Well, when the train rolled in the cannon went "boom," and broke all the plate glass windows on the main street of Bismarck, N. Dak. [Laughter.]

June Young, I want you all to know from the moment I arrived here you have made me feel completely at home, I feel I can talk to this group as if I were talking to the Bar Association of the State of North Dakota. Then when June got my old colleague to introduce me, that was the frosting on the cake.

I want to thank you for your graciousness and kindness, and I am going to take the phrase of the dean, and say to you that you are lawyers and gentlemen. Thank you. [Applause.]

President YOUNG. Senator LANGER, we are deeply grateful for your presence here today, and your address. I really have no apologies to make, I have been instructed by our executive council to streamline these meetings as much as possible. Truly, I didn't know what was in the bottles, they were sent up to you, if you could use them, fine. I want to tell you they haven't been touched yet. I hope they will be later. We can understand your success from your unlimited energy. I know from now on you will have many friends in West Virginia.

On the Right of the Elderly Person Who Is Physically and Mentally Able and Desires to Work

SPEECH
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 9739) making appropriations for sundry independent executive bureaus, boards, commisions, corporations, agencies, and offices, for the fiscal year ending June 30, 1957, and for other purposes.

Mr. THOMAS. Mr. Chairman, so the record will be clear, it should be pointed out that similar language lifting age restrictions on Federal employment was objected to by the gentleman from Kansas [Mr. REES] in the independent offices bill last year, and the language was stricken because it was not protected by a rule.

This year in the consideration of the independent offices appropriation bill for 1957 the gentleman from Kansas [Mr. REES], the gentleman from Iowa [Mr. GROSS], and the gentleman from Georgia [Mr. DAVIS], all members of the House Post Office and Civil Service Committee, objected again to similar language in section 302 which, among other things, repeals the 70-year compulsory retirement provision. The language in the bill was as follows:

SEC. 302. No part of any appropriation hereafter contained in this or any other act shall be used to pay the compensation of any officers or employees who establish a requirement of maximum age for entrance into positions in the competitive civil service: *Provided*, That any requirement of law for compulsory retirement from the competitive civil service solely because of age shall not be effective: *Provided further*, That no person who has reached his 70th birthday shall be appointed in the competitive civil service on other than a temporary basis.

The Committee on Post Office and Civil Service has had all the past 12 months to consider the matter, but on page 3598 of the RECORD of Tuesday, March 6, the gentleman from Kansas states in connection with the language in the bill:

There is no great emergency for including these provisions in the bill we are considering today. Both these matters are being considered or will be considered by the House Committee on Post Office and Civil Service.

The gentleman from Georgia also states on page 3599 of the RECORD that the committee on which he serves plans to go into the matter:

With reference to this provision on page 43 respecting mandatory retirement at age 70, our committee has been waiting for some time for the Kaplan committee report dealing with all phases of retirement, so that we could hold proper hearings and take whatever action the facts justified.

In view of the interest expressed by members of the great Committee on Post Office and Civil Service and their desire to go into the matter thoroughly, the Independent Offices Subcommittee moved to strike out the provision relating to compulsory retirement and permit consideration of other matters in the bill to proceed. This will give the Civil Service Committee another year to consider the matter.

I firmly believe, as a member of the Independent Offices Subcommittee, that the provision recommended makes good sense. If a person is physically fit and mentally qualified to do a job the sole fact that he is 70 years of age should be no bar for employment. Performance should be the test.

In the last 50 years the age of men has increased by 20 years, and the average life expectancy of women has increased by 22 years. It is estimated that there are now 14 million people over 65 and that in the next 20 years the number will increase to over 21 million. This spectacular advance calls for the Government to reappraise its restrictions on employment which deprive the Nation of the benefits that can come from such longer lives. It is up to the Government to assume responsibility and lead the way in removing unreasonable restrictions on employment for mature people, and industry will follow.

Many of the outstanding leaders of the Senate and House of Representatives are 70 years of age or are approaching that age. Look at the loss that would happen to the Nation if they were forced to retire on account of age. Yet there are many people at 50 to 60 today who are well qualified to work but simply cannot get jobs on account of age. They are told they are too old. They should not be forced to retire, but an opportunity for employment should be open.

Under our law no person can be forced to work if he does not want to, and he can elect to quit work or continue. The amendment in question gives to that man or woman who is physically and mentally able to work, and wants to work, that opportunity. It is denied them now. In so denying to the active, energetic elderly person who is able to work and wants to, we will be ruining his health mentally and physically. Many such individuals wind up in hospitals and mental institutions and become burdens on their families and the State. This could be easily avoided by permitting them to work.

We Have the Opportunity To Outlaw Hunger in the United States—Testimony by Hon. Leonor K. Sullivan, of Missouri, Before Senate Committee on Finance

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mrs. SULLIVAN. Mr. Speaker, recently I had the opportunity of testifying before the Senate Finance Committee to urge amendment of the social-security program so as to provide for the establishment of a food stamp plan to distribute surplus food to needy Americans. As many of the Members know, I have been urging such a food stamp plan for 2 years here in the House; unfortunately, in that period of time, the House Committee on Agriculture has not seen fit to report out my bill.

A bill somewhat similar in spirit and in goal is also pending before the Senate Committee on Agriculture, sponsored by 23 Senators. This same bill was reintroduced by its sponsors in the Senate as a proposed amendment to the social-security bill, and that is how it happened to come before the Senate Finance Committee.

In the course of my testimony before the Senate committee, I was asked by Chairman BYRD how many Americans would be eligible for surplus foods under the kind of food-stamp plan I have proposed. I did not, at that time, have the exact figures on the number of Americans who would automatically be covered by my bill's definition of a "needy person," and so I asked permission to submit

that information for the record of the Senate hearing.

Mr. Speaker, I know from the many conversations I have had with individual Members of the House on this plan for distributing surplus food by the use of food stamps that there is a tremendous amount of interest in the idea. I think there would also be widespread interest in the information I have received on the number of people who would be eligible for this help under H. R. 5105 and similar bills, including Senator KERR's amendment proposed to the social-security bill.

For that reason, Mr. Speaker, I submit for inclusion in the Appendix of the RECORD the statement which I delivered before the Senate Finance Committee and, following that, the letter which I filed with the committee giving the breakdown on the different groups which would be covered.

I call attention to the fact that 5,834,912 persons in this country would be immediately and automatically eligible for food stamps for surplus food by reason of the fact that they are on one or another type of welfare assistance—that is, on old-age assistance, aid to dependent children, aid to the blind, aid to the permanently and totally disabled, or are on State general assistance rolls.

I am sure it is not necessary for me to point out to the Members of the House that people on public welfare, including those on the various programs to which the Federal Government contributes, just do not have enough income to afford enough of the right foods for minimum dietary standards. Many of them are actually hungry.

We must, therefore, stop procrastinating on this problem of getting to such impoverished Americans some of this surplus food piling up in our warehouses at a cost to the Government for storage alone of more than $1 million a day.

TESTIMONY BY HON. LEONOR K. SULLIVAN, OF MISSOURI, BEFORE SENATE FINANCE COMMITTEE, MONDAY, MARCH 5, 1956, PROPOSING FOOD STAMP AMENDMENT TO SOCIAL SECURITY BILL

First, I would like to express my appreciation to the busy Senators on this important committee for setting up this special hearing on the idea of adding a food-stamp plan as an amendment to the social-security bill now pending before you. I have noticed in the daily schedule of congressional hearings that this committee has been at work for many weeks on the social-security bill, and I imagine you are all beginning to feel a little weary about H. R. 7225, the social-security bill. On the other hand, I am sure you also feel very acutely the importance of this bill to millions of our fellow citizens, particularly those who would become eligible for social-security benefits before they reach 65, if the bill becomes law in the form in which it passed the House last year.

Of course, in my coming here today to testify I am asking that you improve the bill even more than we did in the House last year, and particularly by adding a provision for the establishment of a food-stamp plan to distribute some of our vast stocks of surplus food to needy Americans.

IMPORTANT THING IS TO GET SURPLUS FOOD TO NEEDY

I think I should point out that in the 2 years or more in which I have been actively seeking to have a food-stamp plan enacted I have introduced a bill which differs quite substantially from the one introduced by Senator KERR and his 22 cosponsors, including Senators FREAR, SMATHERS, and LONG, of this committee. The Kerr bill, of course, is the one which is officially before you today as a proposed amendment to H. R. 7225.

Since my bill is so very much different in details—although not in objective or spirit—I want to make clear that I am most anxious to see a bill enacted on this subject, and the sooner the better. The important thing is to move some of this gigantic mountain of surplus food out of warehouses and onto the tables and into the kitchens of American families not now receiving enough to eat, and certainly not enough of the right foods.

There is no reason for anyone in America to go hungry. And yet we know that the families on general assistance in our States and cities, and those on old-age assistance, or receiving aid for dependent children, are not provided with enough money to enable them to maintain even a minimum decent diet. I have received letters from many such families. Those letters tear at your heart. It is a little hard for such families to feel much concern about Secretary of Agriculture Benson's problems involving too much food when they are not getting enough food.

SULLIVAN BILL DIFFERS FROM KERR BILL

As I said, the bill I have written on this subject—and which, unfortunately, has been languishing in the House Committee on Agriculture—adopts a much different approach from the Kerr bill. My bill provides for the distribution by the Department of Agriculture of surplus foods, which it has on hand or which it purchases, under a variety of programs now in effect. The Kerr bill would not touch the surpluses as such—I mean those in Government possession—but would provide for distribution through the grocery stores of any food declared by the Secretary of Agriculture to be in surplus. Naturally, that would offer a much wider variety. I am interested in the practical—in what can be accomplished. Therefore, if the Kerr bill were agreed to by this committee and by the Senate as an amendment to the Social Security bill, I would be delighted to support it and to urge House concurrence in your amendment to the House bill on social security.

At the same time, I would ask you to keep in mind that if the provisions of the Kerr bill do not win your acceptance on the grounds of cost to the Government—and believe me, I am not suggesting you turn it down on that basis or any other basis—but if it does not win your acceptance on grounds of cost, then I sincerely ask that you still adopt a food stamp plan for the distribution of Government held surpluses. In other words with the food already in Government possession in such tremendous volume—food already paid for and which could be distributed cheaply—cost would not be a serious obstacle. We must devise an intelligent plan for getting this food to Americans in need.

DEPARTMENT OF AGRICULTURE HAS NARROW INTEREST

I just cannot imagine why the Department of Agriculture itself has not come forward with some practical plan—a nationwide plan—for distributing surplus foods to our poor. True, there is a surplus disposal plan in operation, but in my judgment it is a sorry excuse for the kind of plan we really need. The Department of Agriculture seems to feel that its only responsibility in this matter is to dump or get rid of as much food as possible in the quickest bulk distribution manner possible without actually dumping the food in the ocean.

In its work over the years on social-security legislation, this committee knows that we have in this country a hard core of poor—really impoverished—Americans. They are the people who benefit from various programs other than the old-age and survivors insurance program of social security. You are familiar with their plight. You know they are people who cannot get along on the grants they receive. You know also that those on general assistance in the States—for which no Federal funds are made available—are in even worse straits.

OPPORTUNITY TO OUTLAW HUNGER

These are the people who most need the added calories in their diet and the added nutrition which could come from a food-stamp plan for surplus foods. At present, we use a lot of this food in the school-lunch program, and that is just fine. We use some for grants to charitable institutions. We ship as much as half a billion pounds overseas in a 6-month period, that would be at the rate of a billion pounds a year, going to needy persons in 70 foreign countries. Wonderful. That is about four times as much as we distribute to needy persons in the United States under our present hit-and-miss, limited program now operating in certain areas of 37 States, ranging from the 462 eligible persons in Wyoming to the 877,512 eligible persons in Pennsylvania. Actually, millions of American families should be participating in such a plan—as they would if there were a nationwide, practical, well-organized food-stamp plan in effect.

For $1, through CARE, one can provide for the shipment of 22 pounds of surplus food to go abroad, packaged in 3 No. 10 cans. The wonderful CARE organization handles the repackaging into containers suitable for overseas shipment, but the food and much of the cost of shipping it is underwritten by the Government in those cases where the shipments go to countries participating in International Cooperation Administration programs. I am not here to say we should cut that sort of thing out. By no means.

But I do say that we must also attack hunger in the United States—we have the opportunity to outlaw hunger in the United States.

TECHNICAL DETAILS SECONDARY TO NEED FOR ACTION

I urge upon you then, aside from any of the technicalities of distribution, aside from whether it should include all surplus foods through the regular channels of trade or just Government held surpluses, aside from whether we include cotton or not as a surplus for food stamp distribution, aside from whether or not the Agriculture Department or the Department of Health, Education, and Welfare has primary responsibility in the program, aside from any of these technical considerations, that we enact legislation to create a food stamp plan which would automatically aid all families on old age assistance, all those on aid to dependent children, all those on aid to the blind, all those on general assistance, and any other impoverished Americans in need of this food which we have in such abundance and which they cannot afford to buy in proper amount and variety.

By adding such a provision to the social-security bill, this committee of the Senate would be giving a new dimension and a new significance to one of the greatest social programs in our civilization, that is, the social security program. The Senators on this committee already know what social security aid programs—aside from OASI—have meant in every community where they operate. The extreme poverty which leads to hunger and malnutrition, however, while obsolete and out of date and tragically unnecessary, still exists in our midst. Let us end it once and for all.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 6, 1956.

Hon. HARRY F. BYRD,
Chairman, Senate Committee on Finance,
Senate Office Building,
Washington, D. C.

DEAR SENATOR BYRD: During the course of my testimony yesterday before the Senate Committee on Finance on the proposed food-stamp amendment to the social-security bill, you asked me for a figure on the number of persons who would be eligible for surplus food under the kind of food-stamp plan which I have suggested. I did not have the information for the country as a whole, but I did have the figure of 173,000 people on our welfare rolls in Missouri who would be eligible.

After returning to my office, I felt that the figure you requested should be available and should certainly be made a part of the record of your hearings. Consequently, I inquired of the Department of Health, Education, and Welfare to determine the approximate number of people in the United States who would be eligible for food stamps under the criteria in my own bill, H. R. 5105, and also under the criteria of Senator KERR'S amendment to the social-security bill. I was given these figures:

1. Persons on old-age assistance	2,552,832
2. Persons receiving benefits under the aid to dependent children program	2,193,215
3. Persons receiving benefits under aid to the blind programs	104,858
4. Persons receiving aid to the permanently and totally disabled	244,007
5. Persons receiving general assistance—314,000 cases, with an estimated total of	740,000

The total of persons, then, automatically eligible for food stamps under the proposal now pending before your committee as of December 1955, according to the Department of Health, Education, and Welfare, would be 5,834,912.

In addition, under my bill, and also under Senator KERR'S amendment to the social-security bill, an unknown but probably small additional group would be eligible consisting of persons in actual need of welfare assistance but ineligible for such assistance because of State or local law. For instance, in my own State of Missouri general assistance cannot be provided any person who is employable even if unable to obtain employment. There was a substantial number of unemployed in Missouri in 1954, including many persons who were quite destitute but, nevertheless, still ineligible for relief because of that provision of our law. The food-stamp bill, however, would make such persons eligible for surplus food upon proper certification of need.

Not included as such in the figure of 5,834,912 are the 7,900,000 persons receiving benefits under the old-age and survivors insurance program. Unless they were also receiving welfare assistance under one of the five programs enumerated above, they would not be eligible for food stamps under the bill as written.

I would appreciate it very much if this letter could be made a part of the record, and I apologize for not having had the exact figures on eligible persons at my fingertips when I testified.

Sincerely yours,
LEONOR K. (Mrs. JOHN B.) SULLIVAN,
Member of Congress,
Third District, Missouri.

George Dondero: A Good Man and a Great Statesman

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. MACK of Washington. Mr. Speaker, our colleague, GEORGE DONDERO, who for 24 years has ably served Michigan and the Nation in the House of Representatives, has announced he is retiring from Congress at the end of the present term.

No Member of Congress has been more effective in his work and, also, more respected and liked by his colleagues than Mr. DONDERO.

I have had the privilege, during my 10 years in Congress, to serve under Mr. DONDERO on the great House Committee on Public Works, of which he twice—in the 80th and 83d Congresses—was chairman. I have come to know him well and admire him much as have all who know him.

Mr. DONDERO'S colleagues of both parties, I am sure, will be pleased to read this complimentary editorial on Mr. DONDERO which appeared in the March 9, 1956, issue of the Pontiac Press, of Pontiac, Mich.

The editorial follows:

GEORGE DONDERO LEAVES POST AFTER 24 YEARS

After nearly a quarter of a century in the Congress of the United States, GEORGE A. DONDERO announces that he will not be a candidate to succeed himself.

As a matter of fact, Congressman DONDERO has actually been in public life for half a century and now at the age of 72 he feels that he will step aside and turn the problems over to a younger man.

In his announcement, Congressman DONDERO stresses the strength and virility of the two Houses in Washington and the devotion to duty that inspires the members.

Oakland County has been exceptionally well and capably represented. DONDERO has never temporized with people or situations. He has faced every issue squarely and voted in accordance with his best convictions. He has always been cold to pressure and has never been stampeded into precipitate action.

From the outset of his career, the Oakland County Representative threw himself into the St. Lawrence seaway project with sincere enthusiasm. Throughout his long term, he fought unceasingly for this measure. In fact, he was identified throughout Washington as a leading exponent of the measure and when it was finally signed and enacted into law, President Eisenhower presented him with the pen with which he attached his signature.

Also, DONDERO has been an unremitting opponent of communism. The Russians have faced no more implacable foe than our own Representative. His aversion for everything that smacked of the Russians is common knowledge.

Congressman DONDERO stood exceptionally well with his colleagues in both parties. Because of his long residence in Washington, he became one of the veterans of Congress and was one of the best known Representatives in the District of Columbia.

Men like DONDERO who have devoted so generous a portion of their lives to public service deserve the heartfelt thanks of the people, not only in their own district, but from all sections of the country as well.

Congressman DONDERO possesses the remarkable record of 12 successive campaigns for Congress with 12 successive victories. No one ever challenged him successfully. His withdrawal leaves the field open. George Higgins, well-known Oakland County senator in Lansing for many years, is a candidate for the vacancy. Higgins is a veteran campaigner and an experienced legislator. Once before he announced himself, but graciously withdrew when he learned that DONDERO planned to run again.

The 1956 race promises to be fraught with interest. The Democrats may take new hope for they found DONDERO an insurmountable barrier to hurdle.

Minnesota's Congressman McCarthy

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article which appeared in a recent issue of the Sign, a national Catholic magazine, issued monthly.

The following résumé does show why Congressman MCCARTHY, who serves with dignity, has earned the reputation of being one of the outstanding young legislators in the House of Representatives:

MCCARTHY OF MINNESOTA

If EUGENE MCCARTHY, United States Congressman from Minnesota's Fourth District, has any special political affection, it is for Abraham Lincoln. If likes attract, then MCCARTHY'S attachment to Lincoln is readily explained. Like Lincoln, young MCCARTHY presents a tall, gangling appearance. Like Lincoln, MCCARTHY is a man to whom wisdom is not a stranger. And like Lincoln, he can enjoy a good joke, especially one made at his expense.

In Washington, MCCARTHY has earned a reputation as one of the outstanding young legislators in the House. Now near the end of his third term, he has built an enviable record of "right" votes on important issues. Reflecting papal concern for social justice, peace, and international order, MCCARTHY has consistently favored sound legislation for foreign aid, housing, and tax relief for low-income families, emergency immigration legislation, protection of workers' rights, conservation, and against segregation.

When Congress is in session, MCCARTHY'S workday begins well before 9 o'clock. After catching up on the latest national and international news, he begins answering some of the thousand letters a month he gets from constituents. Committee meetings, where most legislative spade work is done, fill the rest of the morning. (In this session, MCCARTHY serves on the House Ways and Means Committee.) At lunch, the Congressman meets with people with whom he must dis-

cuss pending legislation. Afternoons are spent on the House floor until adjournment frees him to attend to other business and greet visiting constituents in his office.

The McCarthys usually spend 5 months of the year in St. Paul, 7 in Washington. The stay in St. Paul is put to good use keeping his political fences mended, working at his office, doing research at the St. Thomas College library, and behaving as a father at home. He is modest about his achievements in the last role: "I suppose I'm all right in a pinch, but I don't claim to be any master at changing diapers."

Four youngsters now populate the McCarthy household: Ellen Anne, 9; Mary Abigail, 7; Michael, 5; and Margaret Alice, a few months. And they keep Abigail McCarthy quite busy. However, she still finds time to be a political help to her husband, speaking occasionally at women's clubs and similar groups. In his first campaign, for example, one woman voter described her influence succinctly: "Mrs. McCarthy and three other women spoke to us about the candidates, but she was the only one who said anything. I voted for her husband."

This year, with two of the children now of school age, Abigail will stay home, while GENE goes to Washington. And it certainly can't hurt MCCARTHY, who will be up for reelection this year, to have such a wife holding down the political fort back home while he makes law in Congress.

Minnesota's Fourth District, which Congressman MCCARTHY represents, is a complicated cross section of workers, small-business men, professional people, and farmers. At times, interests are bound to conflict. When they do, it takes the wisdom of a Solomon to resolve differences. MCCARTHY copes with such situations, as a matter of principle, by deciding in favor of the common good. It is a deeply rooted belief with him that when issues are faced in this light, all but the most partisan can be persuaded to respect, if not support, his stand. To bring his views to the people, he makes use of every opportunity. A typical week end during the congressional recess found him talking to farmers at a State fair, playing baseball with a team called the Old Timers (GENE starred on his college team), and giving a strongly worded speech to the Minnesota AFL in which he attacked GOP policies. In an election year, he believes in keeping his political fences mended.

How Would You Vote?

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. LATHAM. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following questionnaire mailed by me to my constituents:

DEAR FRIENDS: I invite you to be Congressman for a day—to step into my shoes and indicate below by a check mark how you would vote on these current Federal issues.

Since I represent you in Congress and must vote in your behalf, your views will be of great interest and assistance to me. This is the best way I know to make Federal Government more responsive to the ideas of the individual American.

I have deliberately presented these proposals simply, so that they would be unbiased and not an indication of my own feelings.

I shall be very grateful for your cooperation on this project. Your individual opinion will be kept strictly confidential.

FOREIGN AFFAIRS

1. Should economic aid to Europe be increased? _____ Decreased? _____ Discontinued? _____

2. Do you favor the repeal of the Status of Forces Agreement which makes American servicemen overseas subject to foreign laws? Yes _____ No _____

3. Do you favor the bill of Congressman BOSCH to establish a Foreign Service Academy to train personnel for future diplomatic service? Yes _____ No _____

COMMUNISM

4. Do you favor admission of Communist China to the United Nations? Yes _____ No _____

5. Do you believe Russia will make a military attack on the United States? Yes _____ No _____

6. Do you believe that active communism within the United States today is a real live threat to American freedom? Yes _____ No _____

MILITARY

7. (a) Do you favor continued military aid to Europe? Yes _____ No _____

(b) Do you favor military aid to Israel? Yes _____ No _____

(c) Do you favor military aid to the Arabs? Yes _____ No_____

8. Are you satisfied with the handling of our military defenses under the present administration? Yes _____ No _____

DOMESTIC

9. Do you favor the Latham plan to eliminate overlapping and duplication of taxes by Federal Government, States, and cities (i. e., gasoline, tobacco, income)? Yes _____ No _____

10. Do you favor the objectives of the Bricker amendment providing in substance that the provisions of a treaty which conflicts with any provision of the Constitution of the United States shall be of no force and effect? Yes _____ No _____

11. (a) Do you approve of Eisenhower's conduct of the Presidency? Yes _____ No _____

(b) Do you approve of Nixon's conduct of the Vice Presidency? Yes _____ No _____

(c) Would you like to see the administration more conservative? Yes _____ No_____

(d) Would you like to see the administration more liberal? Yes _____ No _____

(e) If you don't like Eisenhower, what opposing candidate would you prefer? _____ _____

12. Do you favor the Ltham bill providing that the sale of narcotic drugs to a minor shall be a criminal offense punishable by death? Yes _____ No _____

13. Do you favor development of Niagara Waterpower by private capital? _____ New York State? _____ Federal Government? _____ (Check one.)

SOCIAL SECURITY, HEALTH, AND WELFARE

15. Do you favor any Federal aid for education? Yes_____ No_____

(a) If so, do you favor such aid for children attending nonpublic schools where the laws of the States of residence permit? Yes_____ No_____

(b) If so, should such aid be denied to States refusing to integrate their student bodies? Yes_____ No_____

16. Do you favor the bill of Congressman BOSCH providing for an increase in the minimum benefit payable under social security to $75 per month, reducing the age to 60 years, and eliminating the limitation on outside earnings after 60 years of age? Yes_____ No_____

17. Do you favor a national compulsory health insurance plan supported by additional payroll taxes? Yes_____ No_____

18. Do you favor more federally subsidized, tax-exempt public housing? Yes_____ No_____

AGRICULTURE

19. Do you favor elimination of the price-support program for farmers? Yes_____ No_____

VETERANS

20. Do you favor pensions of $100 per month for veterans of World War I? Yes____ No_____

21. Should present veterans' benefits be further expanded? Yes_____ No_____

CIVIL RIGHTS

22. Do you favor Federal laws to prohibit discrimination in employment because of race, creed, or color? Yes_____ No_____

23. Do you favor Federal laws to prevent discrimination in employment of those over 45 years of age? Yes _____ No _____

IMMIGRATION

24. (a) Should the McCarran-Walter Immigration Act be repealed? Yes _____ No _____

(b) Do you approve the transfer of unused immigration quotas to countries where quotas are oversubscribed? Yes _____ No _____

(c) Do you favor the elimination of present restrictions on immigration which provide percentage quotas on the various national groups, in accordance with the census of 1920? Yes _____ No _____

GENERAL

25. Should 18-year-olds be given the right to vote? Yes _____ No _____

26. Which of the major political party policies most nearly meet with your own views? Republican _____ Democrat _____ Liberal _____ American Labor _____

Sign this, or not, as you wish. Please return to Congressman HENRY J. LATHAM, room 1118, House Office Building, Washington, D. C. Feel free to use reverse side for comments and remarks. Thanks for your cooperation.

Providence Academy Is the Oldest Permanent School in Washington

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. MACK of Washington. Mr. Speaker, this year marks the 100th anniversary of the founding of the oldest permanent school in Washington. Through this century of time, schools, hospitals, and homes for the aged now range from Alaska to southern California and across Idaho and Montana. These all stem from a small cabin on the first military post in the Northwest where five Canadian sisters hopefully planned works of usefulness and charity.

That this now famous first permanent school in Washington State has been in continuous existence so long testified to the great service it has rendered and to the fact that it has kept pace with modern needs.

The following article from the Vancouver Columbian is a fitting descriptive tribute to their accomplishments:

Providence Academy, Vancouver, is the oldest permanent school of any kind in the State of Washington. Its beginnings date back to 1856.

Bishop A. M. A. Blanchet, bishop of Nisqually, on a visit to Montreal in the fall of 1856, requested the Sisters of Charity of Providence to make a foundation in his diocese to take care of the poor and to teach the white and Indian children.

PARTY SMALL

Mother Caron, superior general, and her council promised five sisters. Mother Joseph of the Sacred Heart was appointed superior. As companions she was given two professed Sisters, Sister Praxedes, of Providence, and Sister Blandine, of the Angels; and two postulants who later became Sister Vincent de Paul and Sister Mary of the Precious Blood. Too, Sister Blandine and Sister Mary, were only 18 years of age. They also brought along a baker, Moise Loisel.

The group numbered eight: Bishop Blanchet and his traveling companion, Father Rosse, the five Sisters, and the baker. Fare for the eight from New York to San Francisco, via the Isthmus of Panama, $1,537.50.

They left Montreal for New York on Monday, November 3, 1856, and were due to sail on the steamship *Illinois* on November 5. Delayed 1 day so as to bring the results of the elections (President Buchanan, elected President) to San Francisco, they reached Aspinwall on November 16, and crossed the Isthmus by rail on the 17th.

ENJOYED "LUXURY"

A luxurious boat, the *The Golden Age*, carried them to San Francisco, where they arrived on December 3. Left San Francisco on December 5, on the *Brother Jonathan*, and after a stormy voyage, crossed the bar of the Columbia on the 7th. Stayed overnight at Astoria, and reached Vancouver at 3 o'clock on the afternoon of December 8.

Owing to untoward circumstances no convent had been prepared for the Sisters. On December 9 they were busy making their temporary quarters habitable.

Then the two young Sisters began their studies; another took over the management of the kitchen of the bishopric, while Mother Joseph and her assistant started mending the liturgical linens and the clothing of the bishop and the priests.

READY IN FEBRUARY 1857

On February 22, 1857, the first House of Providence in the West was ready for occupancy. Located on the north side of what is now the Evergreen Highway, about 130 yards inside the West Reserve Street boundary of Vancouver Barracks; 24 by 16 feet, built of unplaned lumber, with 2 rooms below and sleeping quarters, reached by a narrow stairway, above.

School opened in this building on Easter Tuesday, April 14, 1857, with seven pupils. Teacher, Sister Mary of the Precious Blood, a native of New York; tuition, $6 a quarter.

In addition to the duties enumerated above, the Sisters had also visited the sick in their homes and taught catechism to Catholics of all ages.

On March 15, 1857, Emily Lake, a mulatto orphan not yet 3 years old, was brought to the convent and the Sisters realized that they must prepare to care for orphans. Two separate departments developed: 1 for boys and 1 for girls, the primary purpose of each being, according to current newspapers, "To bring up and educate destitute orphans of Washington Territory." To help to support these, the Sisters from time to time took up collections throughout the Territory. By 1870 each orphanage housed some 40 children. Carried on for about 60 years, when it was discontinued as a separate institution.

BOARDING SCHOOL BEGAN

With the coming of Susan and Willie Ryan as boarders on May 4, 1857, the foundation of Providence Boarding School was laid. The boarding school has continued since that day. Three departments now: high school, girls; junior, girls and boys.

When school closed in July 1857, the Sisters' house was turned over to the priests, and the Sisters and their charges moved into the more commodious priests' house, annexed to the church on the east side.

Census of 1860 shows that house No. 165 housed 11 Sisters, 22 girls, and 6 female domestics.

PLACE GROWS

Other works were undertaken one by one. By 1863 there had sprung up around the convent a veritable village—seven buildings in all. Two of these were occupied by orphan boys, 1 by orphan girls, 1 by the Sisters and boarding pupils, 1 by the tertiaries and aged women, 1 by the aged men and hired men (also used as a shoeshop), and 1 was used as hospital and bakery.

The Vancouver Register of March 2, 1867, carried discussions of plans for a new brick building 170 by 80 feet, 3½ stories high, the largest school building yet erected in Washington territory. The building, the present Providence Academy, located on 4 blocks bounded by 10th, 12th, Reserve, and C Streets, was not erected until 1873, however. This was built under the personal direction of Mother Joseph, who was architect as well as builder. At the time her building program was considered by many to be too ambitious, but the wisdom of her policy was proven in 1889 when the expansion of the school necessitated a very considerable addition, containing auditorium, classrooms, and boarding school quarters.

NUN FEATURED

The American Institute of Architects holding its 1953 annual convention in Seattle in June, featured Mother Joseph as the region's first architect. (See Seattle Times, June 14, 1953.) Between 1856 and 1901, Mother Joseph had personally planned and supervised the building of 34 schools and hospitals. Now on the Pacific coast the Sisters of Providence operate 58 establishments from Alaska down to Los Angeles. They were the first to pioneer in Alaska having opened as far north as Nome, which later had to be closed because of inaccessibility. Six of the largest hospitals in the West, fully recognized by the American Medical Association are manned by the Sisters of Providence. Each of these maintains accredited training schools for nurses.

Providence Academy has undergone many changes, keeping pace with the times. It is now being transferred exclusively into the high-school level of education, the grade-school students having been housed in two new parochial schools.

"Bread Cast Upon the Waters"

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. CANFIELD. Mr. Speaker, the 1956 campaign of the American Red Cross now stands at the halfway mark, and no more convincing plea for its all-out support could be made than the testimony of one who has learned first hand what the Red Cross means in time of disaster.

I offer such an appeal, as it has been incorporated in the following editorial which appeared in the Passaic (N. J.) Herald-News on Wednesday, March 7:

"BREAD CAST UPON WATERS"

The American Red Cross is conducting two campaigns at the present moment. In communities where it does not join in the united fund or community chest campaigns, it is holding its annual membership drive. In addition, the Red Cross is conducting a drive in all communities to replenish its depleted disaster fund.

A poignant appeal for the Red Cross has been written by a resident of the small New Jersey town of Walpack, situated on the Delaware River. It was devastated by the flood last year. The Red Cross moved in immediately and gave the victims shelter, food, and clothing, assistance in salvaging homes. The Walpack resident continues in a letter to the editor of the New Jersey Herald at Newton:

"Please note, disaster assistance is given, not loaned. * * * It is a catastrophe no picture can convey—to go to bed one night and to awaken to floodwaters on the rampage. You do not think of possessions, but only of the people who need rescue. * * * Later, in retrospect, however, it is difficult not to miss the small treasures one has collected in a lifetime: small pictures, a family Bible, bits of fine china. * * * It is months before one gets over the stunned feeling. I did not cry for 4 months. * * *

"To the disaster sufferers, there is a period of shocked numbness when it is virtually impossible to think, hope, or plan * * * out of the chaos (when the Red Cross arrives) emerges hope, morale, comfort—with the feeling that you are receiving 'bread cast upon the waters' by yourself and everyone who contributes to the Red Cross."

If your community is one in which the Red Cross is seeking members, make sure you are enrolled and remember the disaster fund, too. If your community is not having a membership drive, give to the disaster fund. Cast your "bread upon the waters" to help those like this woman who "did not cry for 4 months" after her home was destroyed.

How Would You Vote?

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. BOSCH. Mr. Speaker, for the information of my colleagues, and under leave to extend my remarks, I include a questionnaire which is to be sent to the registered voters of the Fifth Congressional District of New York:

HOW WOULD YOU VOTE?

DEAR VOTER: This questionnaire is an endeavor to obtain the frank opinions of the constituents in my congressional district. I should like you to carefully consider the propounded questions and to them exercise your freedom of expression as though you were the Congressman. It appears to me to be the one way in which you, the people, can make known your feeling on these national and international problems.

I deeply appreciate the interest and consideration which you evidence in responding to these various questions of public interest.

FOREIGN AFFAIRS

1. Should economic aid to Europe be increased? ____ Decreased? ____ Discontinued? ____

2. Do you favor the repeal of the status-of-forces agreement which makes American servicemen subject to foreign laws? Yes ____ No ____

3. Do you favor the Bosch bill to establish a Foreign Service Academy to train personnel for future diplomatic service? Yes ____ No ____

COMMUNISM

4. Do you favor admission of Communist China to the United Nations? Yes ____ No ____

5. Do you believe Russia will make a military attack on the United States? Yes ____ No ____

6. Do you believe that active communism within the United States today is a real live threat to American freedom? Yes ____ No ____

MILITARY

7. (a) Do you favor continued military aid to Europe? Yes ____ No ____

(b) Do you favor military aid to Israel? Yes ____ No ____

(c) Do you favor military aid to the Arabs? Yes ____ No ____

8. Are you satisfied with the handling of our military defenses under the present administration? Yes ____ No ____

DOMESTIC

9. Do you favor the plan of Congressman LATHAM to eliminate overlapping and duplication of taxes by Federal Government, States, and cities (i. e., gasoline, tobacco, income)? Yes ____ No ____

10. Do you favor the objectives of the Bricker amendment providing in substance that the provisions of a treaty which conflict with any provision of the Constitution of the United States shall be of no force and effect? Yes ____ No ____

11. (a) Would you like to see the administration more liberal? Yes ____ No ____

(b) Would you like to see the administration more conservative? Yes ____ No ____

(c) Do you approve of Eisenhower's conduct of the Presidency? Yes ____ No ____

(d) Do you approve of NIXON's conduct of the Vice Presidency? Yes ____ No ____

(e) If you don't like Eisenhower, what opposing candidate would you prefer? ____

12. Do you favor the Bosch bills to prescribe greater minimum visibility for landings and takeoffs for aircraft and the prohibition against jet planes at our New York airports? Yes ____ No ____

13. Do you favor the bill of Congressman LATHAM providing that the sale of narcotic drugs to a minor shall be a criminal offense punishable by death? Yes ____ No ____

14. Do you favor development of Niagara waterpower by private capital? Yes ____ No ____ New York State? Yes ____ No ____ Federal Government? Yes ____ No ____

15. Do you favor an increase in postal rates to meet the Post Office Department deficit? Yes ____ No ____ If not, should this be paid out of general United States Treasury funds? Yes ____ No ____

SOCIAL SECURITY, HEALTH, AND WELFARE

16. Do you favor any Federal aid for education? Yes ____ No ____

(a) If so, do you favor such aid for children attending nonpublic schools where the laws of the States of residence permit? Yes ____ No ____

(b) If so, should such aid be denied to States refusing to integrate their student bodies? Yes ____ No ____

17. Do you favor the Bosch bill providing for an increase in the minimum benefit payable under social security to $75 per month, reducing the age to 60 years, and eliminating the limitation on outside earnings after 60 years of age? Yes ____ No ____

18. Do you favor a national compulsory health insurance plan supported by additional payroll taxes? Yes ____ No ____

19. Do you favor more federally subsidized, tax-exempt public housing? Yes ____ No ____

AGRICULTURE

20. Do you favor elimination of the price-support program for farmers? Yes ____ No ____

VETERANS

21. Do you favor pension of $100 per month for veterans of World War I? Yes ____ No ____

22. Should present veterans' benefits be further expanded? Yes ____ No ____

CIVIL RIGHTS

23. Do you favor Federal laws to prohibit discrimination in employment because of race, creed, or color? Yes ____ No ____

24. Do you favor Federal laws to prevent discrimination in employment of those over 45 years of age? Yes ____ No ____

IMMIGRATION

25. (a) Should the McCarran-Walter Immigration Act be repealed? Yes ____ No ____.

(b) Do you approve the transfer of unused immigration quotas to countries whose quotas are over subscribed? Yes ____ No ____.

(c) Do you favor the elimination of present restrictions on immigration which provide percentage quotas on the various national groups, in accordance with the census of 1920? Yes ____ No ____.

GENERAL

26. Should 18-year-olds be given the right to vote? Yes ____ No ____.

27. Which of the major political party policies most nearly meet with your own views? Republican ____ Democrat ____ Liberal ____ American Labor ____.

Sign this, or not, as you wish. Please return to Congressman ALBERT H. BOSCH, Room 1115 House Office Building, Washington 25, D. C. Feel free to use reverse side for comments and remarks.

Tracing the Origin of Irish Names

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following interesting article from the Lawrence Sunday Sun, Lawrence, Mass., by Capt. William A. O'Reilly, retired, of the Lawrence, Mass., Fire Department:

IRISH FOUGHT FOR CENTURIES TO HOLD RACE IDENTITY—INVADED AND SUBJUGATED, THEY LOST THEIR LANDS, BUT DESPITE FANTASTIC PERSECUTIONS EMERGED WITH THEIR ANCIENT NAMES ALMOST INTACT SAVE FOR "TWISTS"

At all times, the subject of genealogies commands the utmost respect of both rich and poor alike on account of the intimacy it bears upon individuals, tribes, peoples, nations, and, not the least, families.

So it was in the past and so it shall be. The ancient Irish were not behind other nations in this respect; for those of the lowest rank among a great tribe retained their complete line of descent with the same care that to other nations was reserved only for the rich and the great, for it was from his own genealogy that each man held his right of property, which no one could lawfully possess if he was not of the same clan as the chief.

As such, this remained in force in Ireland up to the end of the 16th century, when, due to the conquests and devastations of the land for years by Henry I, Elizabeth I, and subsequent confiscations by Cromwell and the Williamite invasions (William of Orange), when there occurred a tremendous influx of newcomers or adventurers from other lands whose only interest was to attain for their patronage to the invaders grants of the lands confiscated, a striking example of which is the so-called Plantation of Ulster.

(EDITOR'S NOTE.—The author of this erudite article on the origin of Irish genealogies and Irish patronymic prefixes has been, for many years, a student of this history of the land of his forefathers. His research has carried him back over the centuries in tracing the origin of Irish names and the difficulties encountered by that race in maintaining their identities in times of extreme stress as a conquered nation and as a persecuted people.)

Such was the method used by the English Crown to liquidate their debts to the financial backers of numerous wars, the partitioning of the confiscated Irish lands in Ulster, as well as throughout all of Ireland, and after complete subjugation had been effected.

In all nations and in all ages there have been distinctions among families. Some were designated as "De" or "Von," "Don," "Mac," or "O." The "Mac" remained most particularly to the Scotch, while Ireland retained both the "Mac" and the "O." Without the "Mac" or the "O" the Irish have no name, according to the verse, viz:

"By Mac and O you'll always know
True Irishmen, they say.
But if they lack the O or Mac
No Irishmen are they."

THE ORIGINS

The Irish race, peculiarly and distinctively a civilization of clans built around the family type, had from the earlier ages a system through which the individual members of the families and clans were named as the result of some epithet, implying certain personal peculiarities, such as the color of hair or beard, specific accidents of deformity or abnormality; mental or physical qualities such as bravery, courage, fierceness or other characteristics, all of which is attested the forms of the ancient names.

Surnames originated in Ireland during the reign of King Brian Boru (who is the progenitor of the O'Brien clan) early in the 11th century, when it was royally decreed that every Irish family and clan should assume a particular surname in order to protect the genealogy of the various Irish tribes.

"MAC" AND "O"

Each family was at liberty to adopt a sirname from some particular ancestor and as a consequence such names were chosen after some chief of their tribe who was noted for his valor, wisdom, piety, or some other great or distinctive quality or other outstanding accomplishment and, in addition to his own proper name, each member of the family took as a common designation the name of their father, grandfather, or other remote ancestor, in the first instance prefixing the word "Mac" which indicates the son of, and in the other two cases prefixing "Oau," which is pronounced "Ow" in Gaelic. The "Oau" is

modernized into "O'," the apostrophe designating the omission, and which signifies grandson or descendant of. But in all instances the genetive case of the progenitor's name always followed the "Mac" and the "O'." Some Irish families, particularly those whose antecedents were among those who remained in Ireland, after the Norman invasion, use the prefix "Fitz," which is synonymous with "Mac."

A great many of the ancient Irish families' descendants have, of their own choice, omitted the use of the "Mac" and the "O'." Others of them, due to circumstances over which they had no control, have surnames so twisted and mistranslated from the original Gaelic that it is often very difficult to determine whether those families are of Irish, English, of French descent or extraction.

HENRY INVADES

The invasion of Ireland by the English was accomplished as the result of a "bull" dated in 1115 and presented as having been issued by the then reigning Pope Adrian IV, himself an Englishman named Nicholas Brakespeare, who, history says, in the exercise of his temporal powers, granted sovereignty of Ireland to Henry II, King of England. King Henry did not immediately assert any pretentions to the English sovereignty of Ireland, but in 1167 began the invasion. It has many times been urged that the Papal "bull" was a forgery.

During the reign of James I of England, which followed the complete subjugation of Ireland, an attempt was made by clumsy translations to get rid of Gaelic surnames in an effort to destroy the Irish nationality.

MADE ILLITERATE

After the great body of the Irish people had been made almost wholly illiterate, they being unable to write either English or Gaelic as a result of England's prescription against education in Ireland, the Irish names were curiously mutilated by the new land proprietors and their agents to whom the confiscated properties had been conveyed, by the English Crown, and possessing neither of themselves or by their agents any knowledge of Gaelic, had no other way to guide them in the writing of the rent-rolls than their own mispronouncing of the names of the Irish as spoken in the Gaelic tongue. Thus, the confusion resulting in the same name being spelled and pronounced differently in many different localities.

In 1465 (reign of Edward IV) an English statute was enacted compelling every Irishman, under penalty of similar confiscations and punishments, to adopt forthwith a certain designated English sirname from a prescribed list, such as of a town, or color, or art, or science, like Smith, Carpenter, Cook, Baker, Butler, and others.

Significantly, a full measure of success for this action was never realized.

Oil Leases on Wildlife Refuge Lands

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 14, 1956

Mr. MURRAY. Mr. President, a great many people have been shocked by the revelation that during the period of a supposed stop order, the Department of Interior has granted more than 50 oil leases on wildlife refuge lands, part of them without even notifying the Fish and Wildlife Service which has jurisdiction over the lands.

A very illuminating article entitled "Where the Deer and the Antelope Don't Play" appears in the March 5, 1956, issue of the New Republic magazine. It is by Mr. Warren Unna, of the Washington Post and Times Herald staff, and summarizes developments during hearings held by the Committee on Merchant Marine and Fisheries of the House of Representatives.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHERE THE DEER AND THE ANTELOPE DON'T PLAY

(By Warren Unna)

While 264 wildlife refuges—covering 10 million acres of land on the continental United States—may seem small stuff to all but irrepressible conservationists, statements before the House Committee on Merchant Marine and Fisheries on how the Interior Department's Fish and Wildlife Service is run might well be a tip-off on how some other Federal agencies are managed these days. In essence the testimony showed:

Interior Secretary Douglas McKay's so-called stop order against private oil leasing on the national wildlife refuges—which was in effect between August 1953, and December 1955—was a bald euphemism. More leases were granted to private oil companies during the 28 months of "no" leases than in all the other 34 years of refuge history.

The Fish and Wildlife officials responsible for leasing apparently have been walking around the Interior Department with blinders. By their own admission, they first became aware of the existence of the leases when copies were being shown to the House committee.

At least two oil companies have received waist-bowing treatment from the Department in gaining approval of leases before regulations permitting them had even been promulgated.

Under new regulations issued by Interior, oil leasing on national wildlife refuges is trumpeted as being under tighter and more effective control. In practice, the regulations are apparently a blatant come-on to the oil industry. The essential purpose of the refuges—conservation of flora and fauna—now seems to be almost secondary to development of their underground mineral wealth.

The cry against the giveaway of wildlife refuges began almost from the momont the Republicans came to power, when Albert M. Day, a 35-year-long career man, was replaced as Fish and Wildlife Service Director and the job made subject to political appointment. Day is said to have then asked: "Well, was it the Alaskan salmon fisheries that got me or the California duck hunters?" The answer supposedly came back: "It was a mixture of scales and feathers, Albert."

For reasons best known to himself, McKay's former Under Secretary, Ralph A. Tudor, wrote in the Saturday Evening Post on November 27, 1954, that Day was fired because of complaints from a group of California bankers who disliked Day's duck-hunting regulations.

Day was replaced by John L. Farley from Tudor's own State of California, and Secretary McKay proceeded to issue his stop order on further oil leasing on the refuges—ostensibly to tighten up the regulations. As late as last October 27, Secretary McKay assured a Corvallis, Oreg., audience: "I can tell you flatly that no new regulations will be authorized unless they give far more protection to our refuges than they did before the stop order."

Last December 2, Mr. McKay's stop order was revoked and new regulations finally promulgated. In essence, they promised that 12 of the 264 refuges would be inviolate from all leasing and the others would entertain leasing only under controlled conditions. The only trouble with that was that these refuges had never been sullied with oil derricks anyway. These 12 refuges had never even been thought to have had mineralization. Some 28 others which Fish and Wildlife first asked Interior to consider inviolate (and then voluntarily withdrew) are, however, suspected of having oil deposits. Moreover, the controlled conditions for leasing that are permitted under the new regulations will be supervised solely by the Director of the Fish and Wildlife Service—the office which McKay had the foresight to put under political appointment.

On January 20, Wesley A. D'Ewart, Assistant Interior Secretary for public-land management, told the House committee that 89 oil and gas leases on national wildlife refuges had been granted since 1920—all but 25 of them in the 28-month period of McKay's so-called stop order.

Donald J. Chaney, Assistant Interior Solicitor for Fish and Wildlife Service matters, later told the committee there had been some interbureau conferences in the month since D'Ewart's testimony; it now had turned out that 82 leases had been issued since 1920. Chaney said his new list included leasing on big game refuges and cooperative lands, as well as wildlife refuges—yet his Land Management had issued six leases without knowing they were on refuges.

On February 21, C. R. (Pink) Gutermuth, vice president of the Wildlife Management Institute, a Washington conservationist who has been calling the shots on the oil-lease euphemisms since they began, told the committee Interior has actually issued 577 oil leases since 1920, all but 11 of them during the 28-month McKay stop-order period.

The Fish and Wildlife Service officials themselves showed undeniable interest in the statistics their superiors at the departmental level were reeling off to Congress.

J. Clark Salyer, Chief of the Service's Refuge Branch, testified it was possible more leases may come to light—he had no way of knowing.

Arthur F. Reamer, Chief of the Service's Lands Branch, began testifying that he had never told Committee Counsel Bernard J. Zincke that Interior had issued 54 of the oil leases during McKay's stop-order period without letting either him or the Service know. Zincke looked quite disturbed when he said this, so Committee Chairman HERBERT C. BONNER, Democrat, of North Carolina, made Reamer stand up and swear he was telling the truth. Reamer then testified both D'Ewart's and Chaney's lists of refuge leases were first seen by him as they were handed (not by him) to the committee stenographer for inclusion in the record. Reamer explained that since he was supposedly the Government's chief bookkeeper on refuge leases, he asked each of the Interior officials if they could spare a copy for his own perusal.

Now who stands to gain from these refuge oil leases? So far testimony has shown there are at least two oil companies.

1. The Frankfort Oil Co., of Bartlesville, Okla., a subsidiary of Seagram's distilleries, has been awarded to 12,000-acre lease in Louisiana's Lacassine National Wildlife Refuge, a waterfowl area.

Testimony before the House committee showed Refuge Chief Salyer twice last year had turned down applications for leasing in the Lacassine. "Then we had a visit from President Schwengel," he declared. President Schwengel is Frank R. Schwengel, Sea-

gram's top executive, a retired major general and reportedly a World War I comrade in arms of Mr. Eisenhower's. Salyer said "the Secretary's office" arranged an appointment for Schwengel to see him August 30.

When they met, Salyer quoted Schwengel as saying: "He was very much interested in wildlife, in fact he had his wife maintain a private sanctuary in New York * * * but he was also interested in oil too."

Salyer said Schwengel phoned him with final details on the lease application last November 15. Two weeks later, Interior wrote Samuel Nicasian, Schwengel's Washington attorney, declaring the company's operating plan for developing oil on the Lacassine refuge was acceptable. This was last December 1. The next day, December 2, Secretary McKay issued his new refuge-leasing regulations making the Lacassine lease possible. The lease was formally issued December 6 and backdated for bookkeeping purposes of Schwengel's Frankfort Oil Co., to December 1, Salyer explained.

The 5-year-long, 5-year renewable Frankfort Oil lease was issued on a noncompetitive contract at the minimum 50-cent-per-acre fee and 12.5 percent royalty. Noncompetitive leases are granted under these terms in areas where there are no known oil deposits. Michael Hudoba, secretary of the Outdoor Writers Association of America, told an Interior conservation group meeting a while back, 60 percent of the general Lacassine area is under active mineral development.

2. The Shell Oil Co. of California has been awarded 54 leases in Nevada's 134,000-acre Railroad Valley waterfowl and antelope refuge.

Under questioning, Assistant Interior Solicitor Chaney said he guessed the leases had been negotiated despite existence of McKay's stop order. Representative BONNER then wondered if the 4,000 other applicants who were anxious for Railroad Valley leases might not have also wanted to learn that the Secretary's stop order was being given such a loose interpretation. Chaney subsequently said he was in error in helping to draft an October 1953, interoffice memorandum which declared the Railroad Valley leases to Shell technically invalid because the Fish and Wildlife Service and Interior's Geological Survey did not work together preparing them.

Historically, the Nation's 264 refuges have been off-limits to oil exploitation with two exceptions: in cases where previous owners never did surrender their mineral rights to the refuge land; and in cases where the Government entered into cooperative agreements with peripheral oil companies to prevent these companies from sucking out all the oil underneath the Government's land.

Representative HENRY S. REUSS, Democrat, of Wisconsin, has termed the present situation "a veritable orgy of lease-granting."

"The Department of the Interior is plainly laboring under the delusion that Congress has required it to grant oil leases, rather than merely authorized it to grant or refrain from granting leases as it deems best."

The House Committee on Merchant Marine and Fisheries has closed its hearing on the subject and now will consider endorsement of a bill requiring the President (Eisenhower this time, not Schwengel) to declare refuge leases necessary "for the common defense and security" before Interior can go on handing them out to the oil industry.

Mergers in the Textile Industry

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following informative article by Solomon Barkin, director of research, Textile Workers Union of America, CIO, entitled "New Industrial Giants in the Textile Industry."

Born in New York, Mr. Barkin has served on the War Production Board; the Committee on Savings Statistics, Board of Governors of the Federal Reserve System; Board of Trustees, National Planning Association, and Committee on Research of President's Conference on Industrial Safety.

The article follows:

NEW INDUSTRIAL GIANTS IN THE TEXTILE INDUSTRY

(By Solomon Barkin)

The merger movement which swept the textile industry immediately after the war gained additional impetus during the last 3 years. This exceedingly competitive decentralized industry has been largely transformed into a highly concentrated one. The importance of the textile giants has grown not only because they have engulfed existing corporations, but also because the industry has been concurrently shrinking as mills and equipment have been scrapped in large volume. Competition has been measurably reduced in many significant areas. But these mills have hitherto been unable to utilize their positions to direct prices because of the prolonged weaknesses in the market, the volume of alternative products, and the increasing capacity induced by rising productivity and foreign imports. Moreover, the leaders of these corporations have been largely preoccupied with the reorganization of their internal structures and the full exploitation of the Federal tax laws for immediate tax gains. Nevertheless, recent improvements in market prices have shown their potential capacity for such control.

A STUDY OF THE FACTS SHOULD INDICATE THE TREND OF TEXTILE STOCKS

The consummate effect of the past and current merger movements has been to create a total of 43 major textile interests, defined as companies employing 3,000 or more employees. One of them does over a half-billion dollars of business a year, and five do more than a quarter of a billion dollars of business. Some 28 of the 43 not involved in recent mergers had attained their preeminent position during the amalgamations of the war and postwar periods. Most of these, however, are concerns which already dominated specific markets or are associated with particular consumer interests such as rubber companies, thread distributors, and merchants. The other 15 interests have been most active in recent mergers.

The total employment of these 43 interests in the basic textile industry, which includes the spinning, weaving, and finishing divisions, is 352,000 out of a total of 671,000 production workers, or 52 percent. They operate 14½ million out of a total of 24 million spindles, and 305,000 out of a total of 508,000 looms. They have 522 plants, including finishing mills.

In appraising the significance of these corporations, note should be taken of the fact that they have not entered divisions such as sales, yarn, and specialty weaving, where small concerns predominate. These consolidations are even more impressive because the textile industry is basically a service to the apparel, household, and industrial products manufacturers and does not feed a homogeneous market as does the automobile industry. Nor does it enjoy the advantage of producing a huge output for a single narrow market as do the rubber and synthetic-yarn industries. Its market is highly unstable and fractionalized. Styles and tastes change frequently. New designs and modes demand new fabrics and products. New living habits are demanding new household goods. New conceptions create growth companies.

The present merger movement has accentuated the integration of operations effected during the earlier consolidations and has contributed several new features which are changing the industry. First, the present mergers consist largely of the acquisition of existing major corporations. Unlike past consolidations, which brought single plants or minor combinations together, the present movement combines industrial giants. The number on top is being shrunk. The big are growing bigger. Second, the companies are growing through acquisitions rather than through the construction of new mills. Very few new plants have been built in this industry. Since the close of the war only 5 new integrated cotton mills and 1 cotton-yarn mill have been built and 2 are now under construction; and only 6 new integrated rayon plants with 14 specialized weaving plants. In the woolen industry only 2 new combing and 18 new yarn and weaving plants have been built. All of these are small units.

Third, often mergers have been inspired by the desire to exploit Federal tax laws to secure financial betterments for both the buyer and the seller rather than by a belief that they are necessarily more efficient. The present movement has to an extraordinary degree fed on the difficulties of rayon and woolen and worsted weaving mills which have been losing markets, and cotton plants which have been suffering from competitive products such as plastics, paper, and synthetics. Instead of trying to rehabilitate the properties and organizations if they had been losing money, the new interests tend to close many if not all of the mills, consolidate the holdings and shrink the operations. Their primary interest has been in immediate financial benefit.

Fourth, a number of the buying interests have used the profits from these operations to invest in non-textile properties, thereby diverting a large volume of funds and talents from this industry.

Fifth, the integration has extended operations forward to an increasing degree. Mills which had only been spinning and weaving

organizations have frequently acquired finishing operations so that they could control these processes and tend to serve the final market. The gray goods field is contracting. This trend has been reinforced by the desire of selling organizations of the large corporations to market finished goods. Some of the large mills have been acquiring or forming factoring organizations. In most instances, the factoring units have been absorbed from among the existing ones. The large mills are now better able to entrench themselves through the control of credit facilities. Sixth, the new corporations have aimed at diversifying their operations to include a large number of products and fibers. It is now commonplace for the larger textile corporations to process both cotton and wool and a wide range of the synthetic fibers. The top organization is no longer tied to a single fiber as had previously prevailed.

The influence of these giants has multiplied, not only because they have been growing in size but also because the industry has been shrinking, thus lessening the number of listed corporations. Total production has remained relatively stable during the postwar years, but employment, mill equipment in place, and the number of mills in the industry have continued to decline. Total broad woven fabric production has been stabilized at between 12 and 13 billion yards per year since 1947 despite the rise in population from 144 million in 1947 to 165 million at the present time. The shrinkage in exports diverted about one billion yards from the export to the domestic market. But the basic reason has been the decline in domestic textile production. Actually, per capita textile fiber consumption for the years 1951–54 was 34 pounds as compared with 35.8 pounds for the years 1947–50. Per capita fiber consumption dropped slightly despite the 11-percent rise in per capita real, disposable income from 1947 to 1954. Now, imports are threatening the industry's position in the domestic market.

While production has remained relatively stable, man-hour productivity has been rising markedly. The yardage output per man-hour in 1947 was 7.8 but it has risen to 10.8. in 1954 and will exceed 11.3 yards in 1955. The annual rate of increase in man-hour productivity has exceeded 5 percent. The effect on employment has been most marked. From a total of 785,000 production workers in 1948 in the yarn and broad woven fabric industry, employment declined to 568,000 in 1954 and now stands at 565,000. The contraction has been approximately 220,000, or 28 percent, at a time when total output has remained relatively stable.

NUMBER OF MILLS CLOSING

The rising productivity has created a marked redundancy in equipment and plant structure. In the basic textile industry, we have a record of 541 mill closings where 147,000 persons were normally employed during the period from 1946 through the first half of 1955. Of this number, 248 mills employing 65,000 persons were in the cotton-rayon division, 218 mills employing 70,000 were in the woolen and worsted industry, and 75 mills employming 11,350 were in the dyeing and finishing industry. Indications of the extent of the scrapping of equipment is provided by the information that we now have 1.1 million fewer cotton spindles, 16,000 fewer looms in the cotton and synthetic divisions, and 13,000 fewer looms in the woolen and worsted industry than in 1947.

During the war and early postwar periods, mills were bought to meet the pressing needs for production, to safeguard sources of supply, or to prevent the purchase by competitors of mills which customarily furnished goods to a buyer. In more recent years, buyers have acquired mills to diversify their operations through the integration of mills producing different lines. This trend has been most evident in the absorption of woolen and worsted mills by corporations which formerly predominated, either in the cotton or rayon divisions. In other instances, mills have been acquired to fill out the line for the selling division.

Merchandising units have been bought to expand merchandising skill and to absorb additional outlets for the existing productive capacity. Companies have been bought to secure trademarks or brand names. One purchasing corporation later sold the clothing division of a woolen and worsted corporations it had acquired with a contract prescribing that 65 percent of the new clothing company's piece goods requirements would be filled by the fabric corporation. In a few instances mills have been bought to eliminate competitors or to acquire predominant positions within the market.

But the most extraordinary incentive for these acquisitions has been provided by the tax laws. The capital gains provisions have been a particularly strong inducement. They have provided a means of converting ordinary business income and inflated business values into capital gains to be taxed at a 25 percent rate, except for the period from 1951 through 1953, when it was 26 percent. During the war and early postwar periods, they laid out a way of avoiding the excess profits tax for companies with low capitalizations. Older owners or trustees could sell the mills for high prices and avoid the high income taxes. The purchasers found such acquisitions profitable because they could pay off the sellers with liquid funds already available in the firm's treasury or from subsequent profits and then also enjoy the benefit of a high tax basis established by the new purchase price.

The carryover provisions of the Federal tax laws have enabled many managements to withdraw before they faced up to their problem. These provisions have been seized upon by speculators to acquire properties in which they had no real interest but which provided them with a means of reducing their tax burden. The provisions have been converted into a mechanism for salvaging or enhancing the claims of the present owners of shrinking businesses and granting tax privileges to the buyers. Many spectacular consolidations in the textile industry have been designed for this purpose. One large merger of three textile corporations resulted in a tax-loss credit of over $30 million, which immediately inspired the purchase of a number of profitable nontextile firms. A number of financial syndicates have operated consistently by buying up textile companies with loss carryovers and then utilizing them to offset profits earned in other enterprises. Invariably these coroporations have liquidated all or most of the textile properties they acquired.

Other technical devices have been employed in this industry to acquire corporations, drain their financial assets, and then liquidate them for the private profit of the buying group, without concern for the communities and people affected. The abuses in the use of the tax-exempt funds of charitable funds were partially stopped as a result of the exposures by Senator Tobey of the machinations of Royal Little and his set of trusts. But others have continued to exploit financial resources in a less callous manner to buy mills and to finance their moves. Pension trusts are also being used for this purpose. The large funds operated by the financial manipulators are being readily employed and have stimulated these merger movements.

These mergers have had a most serious effect upon the industry. Being motivated by desires for immediate profit and personal drives for power, rather than long-term goals, they have not usually led to soundly-planned or built organizations. The large number of consolidations of recently merged organizations speaks of the haste with which they were got together and the inability of the new operators to surmount the problems they faced. They had been designed for speculative profit and not for the building of new, strong, competitive groupings. Further evidence of the destructive rather than constructive purpose is found in the practice of a number of financial operators to use their profits for investments in nontextile developments. This has hurt the value of some corporations and lessened constructive research.

Mergers have definitely accelerated the process of mill closings. The new owners have invariably been less willing to invest in their rehabilitation and modernization. In many instances they have no experience in operating or merchandising and therefore are not prepared for this type of undertaking. The large number of closings following the acquisitions speak of the financial purposes underlying the transactions. The mergers have also been to the disadvantage of established textile areas, such as New England, since the new mill organizations have been directed by southern-oriented executives.

In many instances the mergers have destroyed existing executive, technical, and merchandising organizations and resulted in the loss to the industry of considerable skill and accumulated know-how. These merchandising and distribution staffs have been disbanded and the contraction in the organizations through consolidations have left many of them stranded.

FEW NEW CONTRIBUTIONS

The large organizations have made only the most modest contributions in the form of new products and machines. They have not provided new leadership needed by the industry in the form of a whole host of new products or even offered substantial support for research, either of a fundamental or immediate nature. The textile spinner and weaver continue to rely, as of old, on the textile machine manufacturers, synthetic yarn producers, raw material interests, and chemiacl concerns for innovations. Very few new persons have been added to top management to provide vigorous leadership although the merger movement has produced a high turnover of management personnel within the individual organizations. Instead of reducing the ravages of poor management and inappropriate product merchandising approaches, they have manified the harm they can do. They have not undertaken thorough product, process, or machinery research to find new outlets or markets for the textile output.

The new large companies have been exercising an increasingly pervasive influence over the price structure. The weaknesses of the market and the volume of imports have frequently robbed them of the controls they would have liked to exercise. The highly unstable character of demand for products as well as the high degree of substitutability of products have made control less possible, but prices have been more stable than previously. There has been a tendency for prices to be firm at the levels of the efficient operations maintained by these large concerns.

CONTROL DIFFICULT TO EFFECT

The influence on production has been most decided. While in the years past, control over production has been difficult to effectuate, it is more evident in the past few years. In 1948–49, a reduction of production took place without obvious concert because the large firms could effect it through direct orders to their plants and by influencing the remainder of the industry. Similarly, in 1954 production was curtailed at their direction.

The influence of the big corporation extends beyond the mills which they themselves operate because their selling houses also represent independent mills. They are, therefore, able to determine and guide price and production policies. Instead of being merely

commission hungry, as they had been in the thirties, the selling houses with substantial mill interests are more concerned with guiding the independent mills toward identical production and price policies.

The large organization has gained a distinct competitive advantage. They are able to average out the experiences of different products and markets. Small mills tied to specific products must fare as well as they can with their specific product. In the weakened markets of recent years the latter were the casualties. The large organization has also absorbed the business of the big buyers, such as chain stores, wholesalers, and other big users, who prefer the big units as counterparts for their own large operations. They have organized offices throughout the country so that they have preempted the market outside the central textile cities. The elimination of the small independent selling houses has narrowed the opportunities for the small mill.

One unfortunate effect of the present growth in the size of textile companies is that they have discouraged the development of new ideas for styling and products. It is commonly observed that "a great many of the fabrics produced today are not unlike the old constructions and colors our parents were familiar with." The insistence upon mass production has snuffed out the interest in innovation. Many observers attribute the failure of the industry to expand to this indisposition to search for new products and outlets.

The large corporation, of course, also exercises its power outside the market. It has been most influential in controlling the social climate of the communities in which its plants are located.

Big business has been stimulated by opportunities for great profit in the textile industry through the exploitation of fabric shortages during and immediately after the war and the utilization of tax loopholes throughout the entire postwar period. The industrial giants have grown primarily through mergers and acquisitions rather than internal growth. They have not stimulated the expansion of the industry nor found new outlets for its products. Some large organizations have shown ineptitude and incompetence and have brought ruin in their wake. Others have established only mediocre records. Few have made outstanding economic contributions or operated skilled research departments. Some have been able to grow because of the bargaining power within the market which has enabled them to preempt significant outlets and push out the independent mills. They have had advantages in price and new raw materials and finishes which have enabled them to keep ahead. But they have not measured up to the most important tests of helping the industry expand and prosper. The result has been that they have increasingly controlled the remaining textile market without making real contributions to it. Textiles of the future must be the outcome of research and new products.

The major impetus to these mergers has been tax loopholes of various types. As a result, many uneconomic mergers have been effected. The large mill organization has yet to establish its record of economic superiority over the smaller ones, although its bargaining leverage has given it great power for domination of many practices and activities in the industry and lowered the survival potential of smaller companies. The economic impact of the concentration is currently being felt in those product classifications where favoraable market conditions now prevail. Study and new fabrics would do much toward stimulating and bringing a new horizon to the textile industry.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

SENATORS WITH RESIDENCES IN WASHINGTON

OFFICE ADDRESS: Senate Office Building, Washington, D. C.

[Streets northwest unless otherwise stated]

Vice President, Richard Nixon

Aiken, George D., *Vt*——Carroll Arms.
Allott, Gordon, *Colo*——
Anderson, Clinton P., *N. Mex.*—6 Wesley Circle.
Barkley, Alben W., *Ky*——

Young, Milton R., *N. Dak*—Quebec House So.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Anderson, Eastland, Clements, Humphrey, Scott, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, ———, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Johnson of Texas, Barkley, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Morse, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Thurmond, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Scott, Bible, Neuberger, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Thurmond, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, ———, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, Symington, Thurmond, McNamara, Neuberger, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dilli, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Second judicial circuit: Mr. Justice Harlan. Vermont, Connecticut, New York.

Third judicial circuit: Mr. Justice Burton. Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

Revision of the Election Laws—Editorial Comment

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, March 15, 1956

Mr. JOHNSON of Texas. Mr. President, the mounting editorial support for a realistic revision of our election laws is convincing evidence that the American people feel keenly the need for reform in this field. These editorial expressions on behalf of the measure sponsored by 85 Senators have appeared in every section of our country. Influential newspapers as far apart as Georgia and Colorado, Ohio and Texas, and North Carolina and Illinois have placed themselves on record.

I ask unanimous consent to insert in the Appendix of the RECORD editorials bearing on this subject from the Rockford (Ill.) Star, the Toledo Blade, the Charlotte (N. C.) Observer, the Albany (Ga.) Herald, the Denver Post, and the Houston Chronicle.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Rockford (Ill.) Star of March 3, 1956]

FULL REPORTING

A drive to put needed controls on lobbying and campaign contributions is gaining headway in the Senate in the wake of the Case incident. Senate Democratic Leader LYNDON JOHNSON, of Texas, has introduced a sound biparisan bill which would require full reporting of campaign contributions. Senator HENNINGS, of Missouri, who doesn't think the Johnson bill goes far enough, is pushing a separate measure which would apply to primary as well as general elections. HENNINGS makes the point that in the traditionally Democratic South, primary elections are decisive.

JOHNSON has a large number of Republicans as well as Democrats in the Senate committed to support his measure, which he drew up in consultation with Senate Republican Leader KNOWLAND and others. In addition to its full-reporting provisions, the Johnson bill would raise spending ceilings on general elections for Federal officers, and would grant income-tax deductions up to $100 on campaign contributions. The latter provision is designed to encourage a greater spread of contributions among rank-and-file members of the political parties.

While not applying to primary elections, the bill would require candidates for Federal office to file with Congress copies of whatever campaign statements they must file under State law, including primary campaign statements. Thus the measure would provide a compromise settlement of the objection that application of such a bill to primary elections is an invasion of States' rights.

The Johnson bill is a very sensible measure, which warrants the full support of both parties in Congress. It would bring organizations, such as the political-action committees, which make heavy campaign contributions, out into the open. Their contributions would be a matter of public record, as they should be.

[From the Toledo Blade of March 5, 1956]

TOWARD HONEST ELECTIONS

To all intents and purposes campaign spending for Federal office is now unregulated under laws which are, as one Senator put it, as full of holes as the kitchen colander. The Federal Corrupt Practices Act and the Hatch (Clean Politics) Act are not only easily evaded but many contend that they invite evasion, even necessitate it, by their impractically low ceilings on expenditures.

In the honest-elections bill that Senate Majority Leader LYNDON JOHNSON has introduced with bipartisan support, the idea is to raise the limits and turn on the lights. The Johnson bill would legalize campaign spending at realistic levels—i. e. something approaching what is spent anyhow. At the same time, it would tighten up on the coverage of the law and make for more adequate reporting on just who spent how much for whom.

Under this measure, the campaign expense yardstick would be 20 cents a vote rather than the present 3 cents. Senatorial candidates could spend at least $75,000 rather than the present maximum of $25,000, House candidates at least $15,000 rather than a $5,000 maximum. National committees using the 20-cent scale would be able to spend legally about $12 million apiece against the present $3 million limit. State and local committees, at present unlimited, would be able to spend about $12 million. The primaries which are tantamount to election in many States would continue to go unregulated by Federal statute on spending.

In addition to these features having to do with overall spending, the Johnson bill includes such features as exempting donations up to $100 from income tax in order to encourage small contributors; throwing light on wealthy contributors by requiring all individuals who donate more than $5,000 in a campaign to total and report their gifts; and making free and equal radio time available to presidential candidates of major parties. And—an important contribution—the bill acts to prevent the use of numerous independent committees supporting a Federal candidate as a device to avoid spending curbs.

At best it would appear that this measure is a beginning, as its sponsor acknowledges, of the needed reform of electoral laws. There have been in recent years other beginnings, all fruitless. A thorough revision of the statutes was proposed in 1947 by Senators who investigated campaign expenses for 1946 and their proposals were still bottled up when the 1948 election rolled around. The heavy spending in Ohio's Taft-Ferguson race of 1950 intensified efforts to overhaul the regulations but the 1952 elections (with spending on presidential and congressional races reported at $23 million and estimated as high as $150 million) and the 1954 congressional elections passed without action.

Since this Congress has been so embarrassed by the reprimand implicit in President Eisenhower's veto of a natural gas bill carrying the taint of influence by campaign contribution, perhaps the legislators will finally, for their own protection, make a start toward getting election finances fully out in the open.

[From the Charlotte (N. C.) Observer of March 6, 1956]

SENATOR JOHNSON TACKLES A TOUGH ONE

The efforts of Senate Democratic Leader LYNDON JOHNSON, of Texas, to get bills passed reforming both election contribution practices and lobbying methods are at least commendable.

The Federal Government and the States have passed almost innumerable laws against the corruption of elections and improper lobbying. Then, in the course of time, an incident like that connected with the natural-gas bill shows how ineffective the control measures are.

Mr. JOHNSON says he wants a good law to control lobbying. But just what comprises a good law?

It would, of course, bring under surveillance the professional lobbyists at Washington. Present laws do that. But would it require an accounting of taxpayers' money spent by the procession of mayors and other local officials who lobby for various causes?

As to campaign funds, nobody has yet found a way to prevent a friend of a candidate from spending money independently to help his favorite, though all the formal donations are strictly accounted for.

Our best wishes go to Senators JOHNSON and KNOWLAND in their efforts to get an effective law. They can improve existing statutes, but the battle for clean elections and untarnished legislative processes is an unending one.

[From the Albany (Ga.) Herald of March 3, 1956]

THE HONEST ELECTIONS BILL

The intense interest of Congress in the so-called honest elections bill is concomitant with the investigation being conducted on a broad front into lobbying and the use of "big money" to influence the votes of legislators, stemming from the incident of Senator CASE and debate on the natural gas bill. The bipartisan measure, largely engineered by Senate Majority Leader LYNDON JOHNSON and Minority Leader WILLIAM F. KNOWLAND, places particular emphasis on a full reporting of political contributions by individuals and serves the public interest well by providing truthful accounting for campaign receipts and expenditures. In effect it remedies the weak-kneed existing law with its outmoded limits on campaign spending, so much so, as a matter of fact, that by comparison with the obsolete ceiling in the present law, the new limits seem excessively generous. Yet the fact must be borne in mind that the current statute has never been wholly effective. It has restricted the spending of each candidate and political committee without any control whatsoever on the number of such committees that may be established in behalf of a single candidate. The new bill closes this loophole by requiring the reporting of all contributions for each candidate by a single agency.

The present limit on spending by senatorial candidates ranges from $10,000 to $25,000, with 3 cents per vote being the basic measuring stick. Under the Johnson-Knowland

bill, the minimum limit imposed on candidates in the smaller States is $75,000, with an escalator clause up to 20 cents per vote permitting the spending of $1.3 million in the case of populous States such as New York. For House candidates, the limit would be boosted from $2,500, or 3 cents a vote, to $15,000, or 10 cents a vote.

These new figures, while apparently drastic on their face, are in line with what candidates actually have spent in recent years. The 20-cent formula would restrict the Republican and Democratic National Committees to spending $12 million each in a presidential campaign, but State and local committees could also spend up to $12 million. All donors whose contributions totaled more than $5,000 would make consolidated returns, showing the recipients of their gifts, thus providing a ready index to any major effort to influence congressional votes through the lavish distribution of campaign contributions.

Yet, the bill is realistic enough to recognize that campaign contributions do not grow on bushes, and while attempts are being made to strike a blow at gifts from special interests, an equal effort is being devoted to encouraging more numerous donations from the rank and file of citizens interested in better government. Thus the measure would permit taxpayers to deduct from their taxable income up to $100 in political contributions, with the theory being that contributions on this level would not be large enough to create any sense of obligation on the part of the candidate to the donor. Indeed, some legislators may find in this provision a veritable political declaration of independence. Too, the bill would permit radio and television networks to give free time to major candidates without extending similar favors to "fringe" or "splinter party" office seekers, also easing the high cost of campaigning.

Both the spirit as well as the letter of the proposed new law would seem to operate in the best interests of the American public. We can hope that Congress will accord it speedy approval.

[From the Denver Post of March 11, 1956]

CONGRESS SHOULD SPEED ELECTION LAW REFORM

There's a strong disposition in Congress to whip up a quick-acting poultice for the sore spot disclosed by recent revelations about campaign contributions, and let the real cure wait until later. It is a case of doing something right now, so that congressional candidates can show evidence in this year's campaign that they cannot be influenced or obligated by admiring or expectant special interests.

The need for speedy action has been emphasized by the partisan wrangling in the bipartisan special committee named to take a full-scale look at campaign contributions and their relation to lobbying, and to report whether new and more biting laws are needed. That committee is fussing around about procedure—with an eye on eventual party credit for whatever results are achieved. It is clear that it won't produce remedial legislation applicable to the 1956 campaign.

Two proposals to deal both realistically and righteously with campaign funds have been presented. One is the bill of Senator HENNINGS of Missouri, the other the Knowland-Johnson bill which is jointly sponsored by 49 Senators—1 more than a majority of the 96 Members.

The principal difference between them is that the Hennings bill would apply in all respects to primary elections involving Federal office, as well as to general elections, while the Knowland-Johnson measure would require only limited details about primaries.

Inasmuch as primaries—where candidates are either nominated or eliminated—are basic to the final decision, campaign contributions play a highly important part in them. But sentiment on Capitol Hill about that takes refuge behind the fact that, as to this year, many primaries will occur before any safeguarding legislation can be passed. So why not leave the primaries out of it for now, to be dealt with in the recommendations of the special investigating committee?

Both pending bills contain sound provisions. They would raise the ceilings on campaign funds, which under existing law are substantially below the present day costs of campaigning. Boosting them into line with the facts of political life would cut down both temptation and necessity to evade the law by subterfuge.

The Knowland-Johnson measure would permit a small deduction of campaign funds from taxable income; it would more clearly define the rights of candidates under the Federal Communications Act to free time on radio and TV.

Both measures would tighten requirements for full, detailed reports on general election funds, so as to disclose attempts to skirt the law.

Neither bill would wholly frustrate the intentions of individuals or groups that, in spite of the three existing laws on the subject, make a calculated effort to influence legislation by means of campaign fund generosity. But as a preliminary and temporary improvement in the situation either the HENNINGS or the Knowland-Johnson proposal should promptly be enacted, without in the slightest degree relieving the special investigating committee from its duty to disclose all pertinent facts about campaign funds, their size and sources, and to prepare remedial legislation for deficiencies in existing statutes.

[From the Houston Chronicle of March 5, 1956]

JOHNSON HONEST-ELECTIONS BILL WOULD BE FORWARD STEP

The honest-elections bill introduced by Senator LYNDON JOHNSON, of Texas, is devised to let the public know before voting time how much money is being spent in congressional races and to set realistic spending limits—limits that will not invite evasion of the law.

Under JOHNSON's plan candidates for the Senate and House would be permitted to spend 20 cents per vote cast in any election in the State in the previous 4 years.

In the case of Texas that would mean senatorial and congressman-at-large candidates this year could spend as much as $247,490 and $232,240, respectively.

In the case of New York, senatorial candidates could spend well over $1 million. The minimum limitation on spending in senatorial races would be $75,000 in the smallest States, and the minimum for House races $15,000.

Harris County, the Nation's largest congressional district in population, cast 242,000 votes in 1952. Consequently candidates for Congress from this district could spend $48,400 this year.

These figures appear large, and they are. However, JOHNSON considers them realistic in view of mounting costs of campaigns which in recent years have been further boosted by television appearances. He adds that such spending limits would not invite evasion of the law, as present limits do.

The Federal Corrupt Practices Act of 1925 sets limits of $10,000 for Senate candidates in the smallest States and up to $25,000 in the largest.

Such low limits give an unrealistic picture of campaign spending in these days. In the first place the act places no limit on spending by committees. In the second place such items as candidates' traveling expenses, printing and postage, and telephone and telegraph services are excluded.

JOHNSON's bill, which would require a complete accounting of all campaign contributions and expenditures, would require major campaign contributors to make consolidated reports on all gifts.

Good Management

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. WESTLAND. Mr. Speaker, management of our timber resources has progressed from an idea to a program of perpetuating yield and protecting stands of timber awaiting harvest.

This week I received the annual report of the United States Forest Service on the Olympic National Forest in my district. This report has several interesting phases which I believe my colleagues will be interested in reading about.

Timber is a crop. During the past year, the Olympic National Forest harvested 342 million board-feet of timber and other forest products. This cut included considerable salvage work on fire-killed timber. During 1951 and 1952 the forest had a fire kill of 560 million board-feet. The 1955 salvage program completed the utilization of this timber.

Since the annual cut for the forest is pegged at about 300 million board-feet, completion of the salvage operation will level off timber harvest for the next few years to the allowable footage.

Of special interest is the fact that the timber cut from the forest last year went mostly to small logging operators. The volume was handled under 255 different sales. Of these sales, 176, or 70 percent, were for stumpage valued at less than $2,000 per sale. I am gratified to see that our national forests are being managed so that small loggers have an opportunity to participate in the harvest of this valuable resource.

The State of Washington got back about 25 percent of the receipts of Olympic National Forest, with Jefferson County getting 45 percent, or $545,000, Clallam County 33 percent, or $402,568 out of the $1,203,922 available for distribution.

In addition to harvest supervision, the Forest Service continued an active insect- and disease-control program, reseeded 4,335 acres, and maintained a phenomenal fire-control program. Total fire loss for the forest was only 2 acres during 1955—both of the two small fires, I regret to say, caused by unwatched campfires.

Recreation facilities were enhanced by rehabilitation of campgrounds and provision for more water developments on existing campgrounds. The city of Port Townsend has applied for additional

water from the Little Quilcene River to augment their supply.

Some 58 miles of new road were constructed, bringing the total to 394.

All in all, I believe the report shows that under Mason B. Bruce, supervisor, the Olympic National Forest is undergoing excellent management along the lines of multiple use which will provide the most good for the most people from these forest lands.

Amending the Trading With the Enemy Act and the War Claims Act of 1948

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. BURDICK. Mr. Speaker, the bill just introduced by me in the House of Representatives, H. R. 9864, combines the best features, in my opinion, of H. R. 5840 introduced by me on April 26, 1955, at the 1st session of the 84th Congress, and H. R. 6730, the so-called administration bill, introduced by Congressman PRIEST on June 8, 1955. A companion bill to H. R. 6730, viz. the administration bill, was introduced in the Senate by Senator Kilgore on June 14, 1955.

Both H. R. 6730 and S. 2227—the administration bills—contained a $10,000 ceiling on return of vested property to natural German citizens and also contained a similiar $10,000 ceiling on payment of United States citizens' war damage claims against Germany. I believe that these ceilings are indefensible as they evade the moral principles involved in full return of vested properties to natural German citizens and full payment of war damage claims of United States citizens. Furthermore, the administration bills unfortunately provide that the United States war-damage claimant against Germany must have been a United States citizen at the time of loss as well as of the time of claim. This would bar numerous deserving claimants, many of whom served in the United States Armed Forces in World War II.

I am in accord with the administration bills in making no provision for German vested corporate returns so as to eliminate this somewhat complicated and vexatious problem from current legislation and require that it be dealt with properly by separate legislation.

The outstanding features of H. R. 9864 just introduced by me and which were formerly contained in H. R. 5840, are the following:

First. All claimants whose claims are not processed, adjudicated and paid within 2 years after the claims shall have been filed with the Foreign Claims Settlement Commission or within 2 years after passage of the act may institute a civil action de novo in the District Court of the United States for the District of Columbia or in the Court of Claims within 1 year after the expiration of said 2 year period to establish the loss or damage sustained by the claimant. Any claimant aggrieved with any decision of either of said courts shall have the right to have full judicial review of the final decision or judgment of either court.

Second. Any claimant who is aggrieved with any final decision, award or order of the Foreign Claims Settlement Commission in the adjudication of his claim or in the denial of his claim may appeal from such decision to the United States Court of Appeals for the District of Columbia to obtain a complete judicial review of such final decision, award or order as provided by the Administrative Procedure Act.

Third. There is ample provision in section 211 of the bill for financing of the United States citizens' war damage claims primarily out of the $1 billion which is to be covered into a German claims fund representing repayments by Germany for postwar economic assistance, and other sources of funds already realized or appropriated, without imposing any further burden upon the American taxpayer.

My bill provides for the return of property to natural German citizens of West Germany to restore the traditional practice which dominated United States policy prior to the year 1945, viz, the honorable policy of nonconfiscation of private property in war and peace. This is in sound accord with our principles of moral and constitutional law as well as with the basic concepts of international law.

Economic Security for the Family-Size Farming Operation

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. AVERY. Mr. Speaker, under leave to extend and revise my remarks, I would like to discuss provisions of H. R. 9861, a bill which I introduced on March 12, 1956, to restore economic security to the family-size farming operation.

This bill would place the price-support program for certain basic agricultural commodities under a graduated scale ranging from 95 to 70 percent of parity with volume of production the determining factor.

There have been many arguments advanced for rigid 90 percent of parity price supports on the basic commodities as well as justification given for the present flexible supports provided in the amendments passed by the 83d Congress to the Agricultural Act of 1949. We all recognize there is some merit in both plans for a parity base. There is agreement also on the fact the agricultural program since its beginning in 1933 has largely worked in favor of the big operator and corporation farm. In adjusting parity to make the program less attractive to the big operator, the income of the smaller farmer has been reduced at a time when it was unusually difficult for him to adjust to a lower income because of increased operating costs.

In theory, at least, it is the income of the small farmer on the family-size unit that we are attempting to stabilize. With these considerations in mind, I have prepared and introduced H. R. 9861, a bill which would fix parity on a graduated basis which is varied according to the units of production for certain basic commodities.

This bill contains a graduated scale for wheat and corn with price support set at 95 percent of parity for the first 1,000 bushels of grain produced on any one farming unit, 85 percent on the next 2,000 bushels, 75 percent on the next 3,000 bushels, and 70 percent on all grain exceeding 6,000 bushels.

Based on national production averages, this scale would result in payment of 95 percent of parity support for wheat grown on 65 acres or less, which constitutes approximately 38 percent of the total wheat raised in this country. Support would be 85 percent of parity for wheat grown on acreage exceeding 65 but less than 200, which is approximately 24 percent of total production. Wheat grown in the 200–400 acre range is approximately 23 percent of total production and would be supported at 75 percent of parity. Production on more than 400 acres, approximately 15 percent of the total wheat raised, would be supported at 70 percent of parity.

In the case of corn, also based on national averages, the scale would result in payment of 95 percent of parity support for production on less than 27 acres, approximately 25 percent of the total corn raised. Support would be 85 percent of parity for corn grown on acreage exceeding 27 but less than 100 acres, which is approximately 49 percent of total production. Corn grown in the 100–200 acre range is approximately 18 percent of total production and would be supported at 75 percent of parity. Production on more than 200 acres, approximately 8 percent of the total corn raised, would be supported at 70 percent of parity.

H. R. 9861 also contains a graduated scale for cotton and peanuts which specifies 95 percent of parity for the first 12 bales of cotton and first 8,000 pounds of peanuts produced on the farm, 85 percent of parity for the next 24 bales of cotton and next 16,000 pounds of peanuts produced on the same unit, 75 percent of parity for the next 36 bales of cotton and next 24,000 pounds of peanuts produced on the same farming unit, and 70 percent of parity for all production exceeding 72 bales of cotton and all production exceeding 48,000 pounds of peanuts on the same farming unit.

The principle of this graduated parity system is obvious. The small farmer, who is not for the most part a commercial producer, would receive a higher parity for his crop than would the big operator and corporation farm. It would definitely be advantageous to the small farmer. Most Members of Congress have expressed interest in the problems of this group and this legislation would work directly to the end of easing the economic situation of the small

farmer while also reducing the incentive for further overproduction of commodities now in surplus supply. If the number of cooperating farms under this plan is approximately the same as under the present plan, the cost to the Federal Government would remain the same as it now is.

One of the weaknesses of the present price-support program is that it results in the payment of ridiculously high loans to the big operator or corporation farm, the very producer who does not need financial aid. For example, the largest wheat loan to any producer in 1954 was $430,691 paid on 208,881 bushels grown in Montana. The largest corn loan for the same year was $179,127 paid to an Iowa producer on 115,566 bushels. But the whopper of them all was the loan payment of $1,292,472 for 7,554 bales of cotton grown by a Mississippi producer.

I am certain it is not the intent of Congress to make the corporate producer prosper at the expense of the family-size farming operators. As I pointed out previously, efforts to adjust parity to make the program less attractive to the big operator have resulted in a reduction of income for the smaller farmer at a time when it was unusually difficult for him to adjust to a lower income because of increased operating costs. H. R. 9861 would make the program less attractive to the large operator while also bolstering the economic lot of his smaller neighbor. This is in accordance with the request by President Eisenhower in his farm message to Congress that a dollar limit be placed on the size of price-support loans available to any one individual or farming unit. The President pointed out that price-support loans of tremendous size have occurred, and stated that it is not sound Government policy to underwrite at public expense such formidable competition with family-operated farms.

I concur wholeheartedly with the President's views and submit the following table as evidence of weakness in the present support program:

Large 1954 crop loans

UNITED STATES WHEAT LOANS, 1954 CROP

Producer	State	Bushels	Loan
1. Campbell Farming Corp.	Montana	208,881	$430,691
2. Broughton Land Co.	Washington	136,969	208,308
3. Grote Farms	do	122,281	286,830
4. R. H. Phillips	do	111,969	208,830
5. Waggoner Estate	Texas	107,673	244,783
6. E. C. Hay & Sons	Idaho	116,710	243,642

UNITED STATES CORN LOANS, 1954 CROP

1. Adams Bros. & Co.	Iowa	115,566	$179,127
2. Emil Savich	Indiana	88,505	145,148
3. Richard Gumz	do	79,798	130,868
4. Charles R. Bartels	Illinois	49,896	82,757
5. Walton & Case Farms.	Ohio	46,570	77,771

UNITED STATES RICE LOANS, 1954 CROP

Producer	State	Loan
1. Louisiana Irrigation & Mill Co.	Louisiana	$486,725
2. Craighead Rice Mill Co	Arkansas	431,853
3. Southern Rice Co	do	350,824

UNITED STATES COTTON LOANS, 1954 CROP

Producer	State	Bales	Loan
1. Delta & Pine Land Co.	Mississippi	7,554	$1,292,472
2. Chandler Co	Texas	3,945	814,801
3. J. G. Adams & Son	Arkansas	3,908	624,754
4. Buchanan Farms	Texas	2,298	449,661

I submit that H. R. 9861, coupled with provisions of the proposed soil-bank program, would bring lasting beneficial results not only to the agricultural economy but to the national economy as a whole. Briefly stated, here is what I believe this bill would accomplish:

First. Greater long-range benefits to all farmers through stabilization of the economy and immediate financial relief to small operators through support payments this year.

Second. Impartial treatment for all farmers, regardless of the size of operations.

Third. Wheat produced for domestic consumption, such as food, feed, and seed, will be grown by small and medium farming units who come under the high parity price supports provisions.

Fourth. The excessive production by large farming units will fall under lower parity support provisions and will have to be sold in foreign trade at the going market price. This will return surplus commodities to natural economic conditions and should result in reduced production.

Fifth. Large loan payments, which are undesirable from the viewpoint of the taxpaying public and the family-sized farm operators whose livelihood they jeopardize, would be reduced substantially.

Sixth. Lessening of incentive for overproduction of commodities now in surplus supply would result in a large-scale shift in operations by large farming units back to grasses, legumes, and other land uses which come under provisions of the proposed soil-bank program. Resulting reduction in wheat acreage would enable the useful disposal of the Nation's wheat stockpile over a period of years.

Seventh. Curtailment of production incentive would result in a trend back to the average-sized farm, thereby preserving a valuable segment of traditional American society.

Eighth. A stabilized production basis, with excess production turned to world markets, would result in reduced feed-grain prices. This would directly lessen farm production costs, thereby benefiting the entire agricultural economy.

Recognition of Organization of Postal and Federal Employees

EXTENSION OF REMARKS

OF

HON. THOMAS L. ASHLEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. ASHLEY. Mr. Speaker, all new Members of Congress become quickly aware through correspondence with their constituents in the civil service that there is confusion, failure, and injustice in our Federal grievance procedures. Our civil servants find themselves second-class citizens under the present system where they so often have to fight for the fundamental right to be presumed innocent until proven guilty as guaranteed under our Constitution.

In the belief that full recognition of unions is the first step toward minimizing the confusion and injustices now existing, I am today introducing legislation to give them this deserved recognition. Because of the public-service nature of Federal employment, the union rights of these employees are understandably limited in certain respects. But the fact that it is unlawful to strike against the Government should not reduce employee unions to completely impotent and unrecognized representatives of Government employees. Legislation to give full recognition to employee unions for the purpose of grievances and appeals is a must. Some Government departments claim this is already the case in practice, therefore such legislation is not needed. If this is true, or to the extent that it is true, passage of this measure will do no harm. If it is not the case, as I believe, then the legislation which I have introduced to grant this recognition is vitally needed.

Mr. Speaker, this need was brought out in a report of the House Subcommittee on Civil Service during the 83d Congress, when a very detailed and excellent investigation was made of our grievance procedures. The report pointed out:

> There has been too little consultation by departments, agencies, and the Civil Service Commission with established employee groups. * * * The subcommittee had an opportunity to observe at firsthand the work being done by the larger employee organizations, and found that these organizations are a real force for good in keeping purely vexatious and frivolous appeals and grievances at a minimum.

In addition to full recognition for employee unions, it becomes clear that there is need not only for improved administration of present grievance machinery—its simplification and clarification—but new legislation to provide an equal right of appeal for both preference and nonpreference Federal employees within certain limitations. Moreover, it is vital that supervisors be given special training in how to inform their employees of appeals and grievance rights and how to handle grievances properly.

Now I would like to go from this general summary into some detail on this complex subject. After thorough examination and investigation, relying heavily on the yeoman's job done by the House Subcommittee on Civil Service in the 83d Congress, I have found that the following situation seems to exist.

There are literally as many different appeals and grievance systems as there are departments and agencies. The confusion of thinking represented by these many procedures extends, also, to opinions on what should be done to improve them. There is no better exposition of the disparity in administrative handling of appeals and grievances than a simple comparison of the regulations which

provide minimum and maximum rights. Three old-line departments, for instance, have no provision at all for real appeals from removals and suspensions. There is no formal hearing or right to confront and cross-examine an accuser. In these departments the charges and the employee's answer are reviewed at bureau level, in the Office of Personnel, and in the Office of the Secretary before the penalty is finalized. At the opposite extreme we find a large department which some time ago reported an average time for appellate proceedings—complete with hearings, reviews, and rereviews—of about 5 months. While it is understood that this period may have been reduced somewhat in recent months, this Department's program appears rather more extensive and detailed than necessary.

There is singular unanimity of opinion with respect to the undesirability of the existing situation. Almost to a man, top personnel and operating officials have sharply criticized the complexity and prolixity of the present laws, regulations, and procedures.

In testimony before the Subcommittee on Civil Service of the House Post Office and Civil Service Committee, the failure of Civil Service Commission leadership in this field became apparent. Weakness and looseness of the Commission's rules and regulations were held responsible for their failure to act under the implied authority of the Lloyd-LaFollette Act of 1912 and the Veterans Preference Act of 1944.

But the Civil Service Commission is not wholly to blame for the confusion and lack of leadership. During the hearings concern was expressed at the lack of cooperation on the part of some Government agencies in complying with Civil Service Commission directives.

As a result of its study, the subcommittee had among its findings the following:

First. The primary responsibility for the prompt, economical, and just disposition of appeals and grievances rests with each executive department and agency and is an integral part of overall management responsibility. The importance of this principle has never been fully recognized; nor is it spelled out with sufficient clarity anywhere in the present law or regulations.

Second. The executive branch of the Government is without adequate machinery to guarantee equal and fair treatment to all Federal employees in respect to appeals from adverse personnel actions.

Third. The volume and seriousness of appeals and grievances are directly related to supervisory ability and alertness or the lack of it. It has been conservatively estimated that this one factor is concerned in 90 percent of appeals and grievances. There is urgent need for improvement in supervisory training—especially in the understanding and handling of employees' problems.

Fourth. The departments and agencies are not making effectual use of even such appeals machinery as presently exists. This results from lack of supervisory ability mentioned above.

Fifth. There has been too little consultation by departments and agencies—and by the Civil Service Commission—with established employee groups.

Sixth. The subcommittee had an opportunity to observe at firsthand the work being done by the larger employee organizations, and found that these organizations are a real force for good in keeping purely vexatious and frivolous appeals and grievances at a minimum.

Seventh. The Civil Service Commission appeals procedure is slow, cumbersome, and repetitive, has far too many steps and levels of consideration, and in some respects is practically useless. It does not even purport to protect nonpreference employees. The Commission affords protection in a negative fashion for preference employees to the extent that it evades jurisdiction of substantive matters and restricts itself to review of compliance with procedures.

Eighth. There is no adequate provision of law for recompense in all cases of erroneous or improper dismissal, suspension, or demotion of Federal employees.

Mr. Speaker, the facts speak for themselves. Our present grievance and appeals procedures for Federal employees are desperately in need of overhauling. I hope the Post Office and Civil Service Committee will give the House an opportunity to vote on a bill containing the recommendations of its subcommittee. Meanwhile, I urge that the first step be taken for a more fair and workable system by granting full recognition to employee unions, as embodied in the bill I am now introducing.

The Segregation Issue

SPEECH

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. BURDICK. Mr. Speaker, there have been two critical periods in our history. The first was graphically described by the great historian, John Fisk. The period referred to was those years between 1783 and 1789.

The Treaty of Peace in the American Revolution was signed in 1783, and from there on to the inauguration of George Washington as President there was no central government, except the Continental Congress, holding the Colonies together more by sentiment than by law.

During this period John Hanson of Maryland was President of the Congress and signed executive papers, such as they were. John Hanson is referred to as the first President of the United States, and in the limited way, he was.

It was soon discovered that we should have a stronger national government, with powers to tax and raise an army, which the old government did not have. When the Constitutional Convention met at Philadelphia in 1787 there was, at first, no intention of doing anything except to amend the Articles of Confederation. The debates developed the proposition that it was easier to build a new Constitution than to amend the old one. At the conclusion of the proceedings this present Government was born.

The first Congress met in New York in 1789. George Washington was inaugurated as President and the ship of state started on its course, but this period from 1783 to 1789 could well be called the crucial period.

The second critical period covered the period from 1789 to 1865, in which the War between the States was fought. The question of State rights was the issue on which the people were fast separating into two classes, namely, those who favored a strong central government and those who maintained that those rights of States which had not been directly surrendered to the Federal Government were reserved to the States, or to the people. Slavery was a subject that brought out these two views.

During the period from 1845 to 1861 attempts were made on both sides to come to some understanding about this clash between States rights and Federal rights, but as this debate proceeded, the question became more acute and less possible of amicable settlement. Hot tempers exploded in the Congress on both sides, and an amiable understanding became impossible.

To add fuel to the flames of this contest, the Dred Scott decision was handed down from the Supreme Court, headed by Chief Justice Taney of Maryland, which upheld State rights in the matter of slaves.

Another faggot was added to the fire by the publication of the book entitled Uncle Tom's Cabin, written by Harriet Beecher Stowe, sister of Henry Ward Beecher, the great antislavery advocate of the North. At this juncture there was no possibility of a peaceful settlement of the controversy, and the War Between the States engulfed the North and the South. Here we presented to the world a demonstration of how our heralded democracy was in the process of destroying itself. This clash ended when Lee surrendered.

This was indeed a critical period in our history. The unfortunate result of this contest was that slavery was abolished, but the question of what are State rights and what are Federal rights was not settled.

We are now living in a period just a century later, and following the course of history, this era now has all the earmarks of that period preceding the War Between the States. Can it be that we are to have another critical period in this history of the United States?

Since the end of the second critical period many acts of Congress and many decisions of the Supreme Court have gradually but surely granted powers to the Federal Government, and therefore ignored in proportion, the sovereign rights of States.

Our many wars have been strongly in contravention of State rights. When in actual war the Federal Government, which is empowered by the Constitution to defend this country, ignores practically all of the Bill of Rights. Property

can be taken without due process of law; free speech can be denied; a free press can be muzzled; State militias can be drafted into the service, and every citizen, no matter where he is, can be drafted for foreign service without a declaration of war by the Congress. The President, with the consent of the Senate, can enter into treaties that the people know nothing about and have not approved. Relief granted in times of distress always has a string attached to it in provisions that such relief shall be handled by Federal officers within the States. Federal support to education has a Federal string attached to it. The Federal courts take jurisdiction of crimes such as are committed by Indians on Indian Reservations, the crime of transporting stolen goods from one State to another; the transportation of women from one State to another for immoral purposes; crimes committed on Government property within a State; the uncontrolled condemnation of land for military purposes and for the erection of dams; the investigation of election frauds committed wholly within State lines; the passage of mental and public health laws. All these have gradually built up a stronger Federal authority, and submerged State laws to the extent that it can well be said that the tendency is to more and more ignore the States in the interest of the Federal Government.

At this period right now, the Supreme Court has handed down an opinion that segregation laws of the States shall surrender to the will of the Federal Government. Without discussing the merits and demerits of this decision, it certainly is true that this decision has engendered the same feeling in the South that the Dred Scott decision did in the North. I think it just to say that the Negro race has made great advancement since its liberation, and in the Deep South the Negro is making strides that a few short years ago was thought impossible.

The common practice of lynching in the South has greatly lessened in the last 10 years, and this has been brought about by force of public opinion. This public opinion has not all come from the North. If we do not move too fast, and proceed without hysteria, the segregation question can be ironed out without frenzied opposition to the Supreme Court opinion. In the opinion itself, the time element is outlined, indicating that the Supreme Court itself did not contemplate that segregation should be accomplished overnight.

The segregation question might well be the cause of starting another contest between the North and South and, with our history before us, and knowing that hotheads, both North and South, contributed to that disastrous conflict in 1861, we should avoid that course now.

This is the most critical period of all that have preceded it. Here we are, still fighting a cold war, where this Nation should not be divided, and we should bend every effort to remain united. The Communists will take advanage of this troublesome question that has arisen, and will pour oil on the flames of dissension. This situation requires restraint in every direction. The Negroes themselves should exercise restraint and when they know and can see the rapid advance of their race they will not wish to be a party to stirring up a contest between the North and the South. In time, there will be no question about their receiving all the rights and privileges that any other class of citizens enjoys under our Constitution. Much of the trouble about segregation will be ironed out by the South itself, but doing a thing voluntarily and being forced to do it by the power of government are two entirely different things. Speedy action does not conform to the opinion of the Supreme Court, nor is it a wise policy.

Address by Hon. John J. Sparkman, of Alabama, Concerning Recent Announcement by the President

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Thursday, March 15, 1956

Mr. O'MAHONEY. Mr. President, I ask unanimous consent that the able address by our distinguished colleague, the junior Senator from Alabama [Mr. SPARKMAN], delivered over the Mutual Broadcasting Co. last week, be printed in the Appendix of the RECORD. The speech is an analysis of the recent announcement of the President of his availability as a candidate for reelection to the Presidency.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR JOHN J. SPARKMAN, DEMOCRAT OF ALABAMA, OVER MUTUAL BROADCASTING SYSTEM, WEDNESDAY, MARCH 7, 1956

One week ago tonight President Eisenhower was given time on all of the Nation's radio and television systems to announce and discuss his candidacy for a second term on the Republican Presidential ticket.

His decision to make that race confronts the people of this country with challenging questions which are unprecedented—questions which have never before been raised in a Presidential election campaign since we started holding popular elections more than 160 years ago. Some of those questions were discussed by Mr. Eisenhower himself the night of February 29 in his 20-minute explanation of his decision to run again.

It is the duty of the opposition party to discuss, earnestly and honestly, the issues President Eisenhower set forth, and other questions which are properly related to his candidacy. As one who has been chosen as the Democratic Party's spokesman for this occasion tonight, I desire to express to the Mutual Broadcasting System our party's appreciation of Mutual's fair play in granting the Democratic Party equal time to that devoted to Mr. Eisenhower's opening political speech in the 1956 campaign.

PRESIDENT REGARDS HIS HEALTH AS CAMPAIGN FACTOR

To begin, let me say that all Democrats rejoice at the extent of President Eisenhower's recovery from the heart attack he suffered last September 24. All good Americans—and that of course includes all true Democrats—sincerely wish the fullest possible measure of happy years to Dwight D. Eisenhower. Our political references have never and will never lessen that personal regard.

We respect Mr. Eisenhower for the candor he has shown in his report to the people on his condition. We thank him for his frank explanation of the terms on which his candidacy is based, and for his exposition of the conditions attached to his continued occupancy of the Chief Executive's office.

The American public, we are certain, is gratified at the fact that the President did not accept the view expressed by Republican Chairman Leonard Hall that Mr. Eisenhower's health is not a consideration in this campaign. We are glad that the President does not share Mr. Hall's attitude that it is somehow wrong to discuss Mr. Eisenhower's physical capacity for the presidential office which he now seeks to hold for another 4-year term.

Judging by Mr. Eisenhower's own statements about his condition, I am also confident that he does not feel that the question was settled—and the debate closed—when he announced his candidacy as a second-term candidate.

All the Democrats I have talked to regret that there is a health question which is bound to divert attention from the great policy issues which our party intends to raise during the coming campaign. The issue of Mr. Eisenhower's physical fitness for this race and for another 4-year term was not injected into this campaign by the Democratic Party. It was introduced by Mr. Eisenhower himself.

The President first raised the question of his own health in a telegram to the secretary of state of New Hampshire on January 19, in which he said:

"It would be idle to pretend that my health can be wholly restored to the excellent state in which the doctors believed it to be in mid-September."

And then, more significantly, he added:

"My future life must be carefully regulated to avoid excessive fatigue."

If there was any doubt that the President considered his health a major consideration, he dispelled that doubt in his television broadcast to the Nation on February 29. He devoted nearly all of that broadcast to a discussion of his physical condition, and of the restrictions this would impose upon his future conduct of the highest office in the land.

HIS PHYSICAL CONDITION MUST IMPOSE RESTRICTIONS ON PRESIDENT'S ACTIVITIES

What the President was telling the country in that broadcast was this: For the rest of his time in the White House, he will have to conduct the duties of the Presidency on a sharply curtailed schedule. He is quite frankly and openly saying to the country that he can never be a truly full-time President, unrestricted in his activities.

This should bring no personal criticism upon the President, and I do not mean to imply any personal criticism of him. The curtained schedule he outlined to the people is entirely to be expected of a man of his age who has suffered a heart attack. The question the voters must consider, is, Should any man operating under known restrictions upon his activity be chosen for the toughest and most important job in the country? Should we, the citizens of the United States, deliberately choose a part-time President?

The issue raised by the President, then, is "Shall we or shall we not have a part-time President?"

What does this issue mean to us, as citizens, and to our country?

ONLY THE PRESIDENT MAY MAKE FUNDAMENTAL POLICY DECISIONS

First of all, I think this issue raises basic questions about our form of Government as it was designed by the Founding Fathers and set forth in the Constitution. Under the Constitution, "the Executive power shall be vested in a President of the United States of America"—who shall be elected by the people. Of course, the President must appoint associates to help him administer the Government, but the Executive power resides in the President, and no one else. It is important to remember that none of the Cabinet officers is elected by or directly answerable to the people; in fact, nowhere in the Constitution is there any mention of a Cabinet. The same applies to members of the President's personal staff.

It would be idle to think that the President can achieve the curtailed schedule demanded by his doctors simply by dropping social and ceremonial functions from his schedule. He himself spoke of handing over to his associates functions which lie at the very core of the Presidency, and which, under the Constitution, cannot be delegated to nonelected subordinates of the President.

For example, the President spoke of having devoted "much time and effort," during his first 2½ years in office, to the task of "clarifying our own thinking with respect to problems of international peace and our Nation's security * * * problems of the Nation's farmers; the need for highways; the building of schools; the extension of social welfare and a myriad of other items of similar importance."

But then the President goes on to say, "In many cases these things can now be done equally well by my close associates."

ANY DELEGATION OF BASIC POLICYMAKING WOULD SHRINK PRESIDENCY

This basic policymaking function, which Mr. Eisenhower proposes to delegate, is the Presidency itself. To delegate any basic part of this policymaking function, to nonelected subordinates actually means a shrinking of the office of the Presidency. Perhaps some fringe and ceremonial activities can and should be dropped from the President's schedule. But Mr. Eisenhower is talking of transferring much more fundamental functions and powers to his subordinates, and I believe we citizens should think very carefully before we allow such powers to be placed in the hands of nonelected officials who are not directly responsible to us. And we should also be wary of allowing such a fundamental change in the office of the Presidency. As the President himself has said, "The problem is what will be the effect on the Presidency, not on me."

The noted columnist Walter Lippmann has commented that President Eisenhower's television speech to the Nation was "the talk of a man who has managed to say, 'Yes,' but is still full of doubts and misgivings." And, Mr. Lippmann added, Mr. Eisenhower's misgivings were unavoidable. That was so, he said, because—and I quote again:

"Given his age and his illness, the one thing the doctors cannot promise him is that he may count on having the extraordinary energies required by the President of the United States. They may tell him, as they have told him, that by following a regime, the risks of death or disability are no greater in his case than for any other man.

"But the real risk is that of a diminishing Chief Executive in what promises to be increasingly difficult and trying days. Five years are a long time at the President's age, and under our system of government there is no way to delegate the critical responsibilities of the office.

"When the President is diminished, there is no one who can anticipate, seize, and master the great issues. Then the basic line of policy is to muddle through somehow.

"Uncertainty about the Presidency has beclouded all our affairs for several months. The uncertainty has not been cleared away. The debate which has been going on inside the White House and in the President's mind is now to become a public debate in an election year. The people are to decide the most unusual question which has ever been put to a democracy. It is a big gamble."

CONTRACTION OF PRESIDENCY WOULD UPSET CONSTITUTIONAL BALANCE OF GOVERNMENT

Mr. Eisenhower's candidacy also poses the question of how much of the President's authority and responsibility will be diminished through disuse. How much will the Presidential office shrink through failure to take decisions which the President alone can take, decisions which cannot be referred to close associates or deputies?

Any such contraction of the Presidency as is contemplated in the Eisenhower proposal cannot but upset the balances set up in our Constitution for the preservation of popular government.

You know that the central pillar of that system is the separation of powers among the three coordinate branches of our Federal Government—the executive, the legislative, and the judiciary. You know too that each branch must fully discharge the responsibilities it bears under our Constitution if our system is to maintain its proper balance and function efficiently.

When one branch is diminished in any way, a dangerous imbalance is created and a hazardous vacuum begins to develop in our Government.

ALREADY THERE IS A LAPSE IN OUR CONSTITUTIONAL SYSTEM

Unfortunately, there already has been a wide diffusion of the Presidential authority—on a scale unprecedented in our century—under the present administration. President Eisenhower's marked tendency to delegate the Executive leadership to deputies has been increasingly manifest since the beginning of his administration. During the period of hospitalization and recuperation from his heart attack, the diffusion of White House leadership to a sort of regency was necessarily complete. During the period of his resumption of what the White House describes as his normal duties, the absence of a full-time Presidential command has been made apparent. Some of the unhappy consequences of this situation are impressed on the public almost daily in newspaper accounts of incidents reflecting indecision, confusion, and drift, in both our international and domestic affairs.

And now the people are being asked to sanction the indefinite extension of this lapse in our constitutional system, in circumstances which make the hazards larger rather than smaller.

In his television broadcast, Mr. Eisenhower said he thought he could perform as well as ever all the important duties of the Presidency, because "I am actually doing so and have been so for many weeks."

RECENT EVENTS HIGHLIGHT LACK OF LEADERSHIP

Since the President himself has chosen the early weeks of 1956 as the standard by which to judge his performance, let us look closely at the events of those weeks so that each of us can judge whether our country has had the degree of Presidential leadership America will require in the next 5 years.

It was during this period that the United States suffered the embarrassment of reversing itself twice in 2 days on the shipment of tanks to Saudi Arabia. When this incident first broke into the news, the President was away from the White House, and the Secretary of State was not even reachable by telephone. The burden of this particular crisis fell on the Under Secretary of State and the President's Press Secretary. So shaky was our policy about arms shipment to the Middle East that the tank shipment had to be cancelled in the middle of the night—a decision that was reversed only 40 hours later.

This incident is important because such confusion can only arise when there is no firm direction at the very top. If there were clear Presidential leadership in our Middle East policy, there would be no need for the uncertainty, the hesitation, the hasty orders, and counter-orders.

So far as can be discerned, our Government still has no firm policy in the Middle East. Meanwhile, as America drifts, tensions in the Middle East mount. This is but one of many problems whose solution will not await the convenience of our Government.

Another such problem is the new Soviet economic offensive which poses the most urgent new threat the free world has had to meet in its struggle with the Communists for the uncommitted areas. Here again, the President appears to have no clear policy for meeting this threat, and Secretary Dulles has not added to American stature by his recent claims that the West is making big gains and exerting the initiative in the cold war.

An even clearer example of the vacuum of leadingship was Mr. Dulles' "brink of war" misadventure. What caused such consternation throughout the free world was not so much Mr. Dulles' exaggerated claim, but the fact that the policies of the Secretary of State did not seem to square with the stated policies of the President. Then, at a press conference, Mr. Eisenhower was given an opportunity to resolve the matter and reassert his constitutional leadership. But he backed away, because he had not found time to read the Dulles article.

During recent weeks, the President has refused to meet directly the serious charges by General Ridgway that the cuts in our defense forces were dictated by political rather than military consideration.

Meanwhile, the farm crisis has deepened further, but there has been no evidence of Presidential intervention to impart the urgency and imagination needed to meet this emergency.

These are but a few examples of the administration's indecision, and of Mr. Eisenhower's isolation from the stream of events—revealed by the administration's on-again, off-again approach to so many problems. The evidence that Mr. Eisenhower has been a part-time President is confirmed far more by administration indecision and uncertainty than by the fact that the President's workload has been reduced from a 55- to 60-hour week prior to his illness to a 35- to 40-hour week today.

AMERICAN PEOPLE CANNOT SANCTION DEMOTION OF THE PRESIDENCY

The real burden of the Presidency—the policy and command decisions—cannot be reduced. Instead, those burdens are growing constantly, and the evidence of recent weeks tell us that they cannot properly be carried by any President confined to the regime which Mr. Eisenhower must follow.

Mr. Eisenhower's decision to seek another term as President on a limited schedule and under strict medical supervision is, to my mind, contrary to the rule he sets forth in his autobiography, Crusade in Europe.

"The doctors took charge," he writes in an account of a serious illness which struck him while he was our supreme commander in Europe.

"For 4 days they would not let me move," he continues, "and during that time I not

only recovered my health, I learned a lesson I did not thereafter violate: A full measure of health is basic to successful command."

I think we can all agree that if a full measure of health is ever needed anywhere, it is needed in the White House. So, in concluding this talk, I do not hesitate to say that the American people cannot and will not sanction the Republican proposal for a part-time President to deal with full-time problems. They will never agree to demotion of the Presidency at a time when the whole free world looks to the American Chief Executive for strength and leadership.

The Gallant Struggle for Freedom by the People of the Ukraine

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, March 15, 1956

Mr. BUTLER. Mr. President, the gallant struggle which the people of the Ukraine are making against the forces of world communism is a matter of inspiration to us all. I ask unanimous consent that a statement I have prepared emphasizing the Ukrainian people's continuing contribution to the cause of the free world be reprinted in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BUTLER

Throughout the ages man's character has been measured by his ability to overcome the forces pitted against him in his struggle for a better life. All too often his battle has been fought against certain of his fellow men who, for reasons of personal greed, lust, or power have endeavored to destroy our free institutions, deny the teachings of God, and make slaves of all people. The pages of history recount many such individuals who have sought to impose their will upon freedom-loving people. Though successful for a time, inevitably their stranglehold on freemen has been loosened, in most instances through the courage, fortitude, and will of men to be free. We continue to live in a hostile world, and man must still fight for his freedom and independence if we are to achieve a better world for tomorrow when all people will live in peace and harmony with their neighbors in accordance with God's teachings.

Those of us who now enjoy freedom and independence look with sorrow and anguish upon the plight of our close friends, the people of the Ukraine, whose lives must now be lived in anticipation of liberty rather than the enjoyment of it. The annals of mankind contain no greater display of valor and courage than that of the people of the Ukraine in their struggle for freedom. On occasions they have achieved independence only to lose it through no fault of their own. At the present time the oppressive yoke of the Communist dictators weighs heavily upon their shoulders.

Running roughshod over both remembrances of the heroic past and over hopes for a brighter future is the grim reality of the present—the chains of the Communist conspiracy which grips the Ukraine and seeks relentlessly to suck the lifeblood of liberty and national pride from her veins. Diabolical schemes to destroy this freedom-loving and peaceful nation flow interminably from the warped, depraved minds of foreign tyrants.

With a firm knowledge and understanding of these stark realities, with great respect for their devotion to our common cause, the people of the Ukraine have our admiration and esteem. The struggle against tyranny and oppression shall go forward with vigor and strength sustained by their magnificent example—the Ukrainian people's undying and unconquerable will to be free.

4–H Club Activities

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Thursday, March 15, 1956

Mr. STENNIS. Mr. President, because it speaks for itself in tribute to the millions of young men and women throughout the Nation, members of our 4–H Clubs, I as unanimous consent to have inserted in the Appendix of the RECORD an editorial which appeared in the March 6, 1956, edition of the Jackson (Miss.) Clarion Ledger. As long as we have our young men and women participating in 4–H activities, led by the unselfish men and women who direct them, I feel that the future of our form of government is secure.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR STATE'S RICHEST ASSET

National 4–H Club Week always serves as a timely reminder that Mississippi's greatest asset is our youth. The current observance during the week of March 3–11, spotlights varied and extensive 4–H Club activities in our State and throughout the entire Nation.

As the 4–H Club motto suggests, its youthful members "learn by doing." Thanks to this far-reaching program, more than 100,000 Mississippi farm boys and girls are carrying on numerous projects in farming, homemaking, community service, and many others. Actually, 4–H enrollment in this State increased to 104,805 in 1955, and membership is steadily growing. This number includes some top-ranking national champions in various projects.

Today's 4–H Club youth will be tomorrow's Mississippi farmers, homemakers, bankers, doctors, lawyers, and leaders in every phase of our economy. The training they receive now is preparing them for good citizenship as well as for their immediate family and community responsibilities. The 4–H program enables our boys and girls to work together toward a progressive, wholesome, and well-rounded life. By far the most important objectives are to develop sound character and trained leadership.

National 4–H Club Week offers members an opportunity to take stock of past achievements and make greater plans for the future. It also offers the public a chance to become more familiar with this organization, its program and objectives, and to offer practical assistance to those charged with responsibility of administering the program.

There is no finer or more important work anywhere aimed at training young people than the 4–H Club program. It reaches out into every area to bring organized, systematic training at the community level to every youthful member. This comprehensive activity promotes new and better agricultural methods, but its wholesome influence does not end there. Our 4–H Club program also stresses good government, Christian living, self-reliance, and other higher values essential in developing strong character. Reviewing the splendid achievements of 4–H Clubs and their members, none can doubt that our future is in safe hands.

Reaction Among Colored People Toward Supreme Court Integration Decision

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, March 15, 1956

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Negroes Also Surprised, Shocked at Race Discord," published in the March 12, 1956, issue of the Greenville (S. C.) News.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNION NATIVE WRITES—NEGROES ALSO SURPRISED, SHOCKED AT RACE DISCORD

(EDITOR'S NOTE.—Mrs. Maggie F. Jones is a graduate (1898) of world-famous Tuskegee Normal Institute in Tuskegee, Ala. While at school, she worked in the office for Booker T. Washington, founder of the school and probably the best known and most beloved member of the Negro race. Dr. George Washington Carver, distinguished Negro scientist, was conducting his research at Tuskegee at the time. The street on which Mrs. Jones lives was formerly known as Catholic Hill and was named for Carver upon her suggestion. She is a native of Union, S. C., but is a resident of Asheville. The following letter was to the Asheville Citizen.)

We are as deeply shocked and surprised as any other group at the recent cruel happenings in the South. We love our beautiful southland—the climate, the sunshine, the broad expanse of land, the gorgeous mountains, the valleys and plains. Aside from this, we have the constant friendship and help in times of need, distress, sickness, and death of the white people. They send gifts to our weddings—children whom they helped us educate—and to us on holidays. Many of our white friends are resting in peace in the Great Beyond. Rest be to their dear ashes!

You know, on every good farm there are marshy places—fields of stubble, grass, weeds, rotten wood, briars, etc.—that need to be cleaned and cultivated. The same you will find in every State and every county, at home and afar. We thank you for your interest but we do not need your pity. We are an integral part of the South and we ask to help work it out. We love our homes, churches, lodges, schools, colleges, YMCA, YWCA, and all kinds of business—insurance, banks, grocery stores, hotels, jewelry and dry goods stores, farms, real estate—in fact, everything everyone else has, and credit everywhere. We own radio and television sets, automobiles of every make, and what have you. We own more and live better than any of our group anywhere else. We invite the unbelievers to come and see. We will give them a hearty welcome.

What price slavery? You know we have just celebrated the birthday of Hon. Abraham Lincoln for being the signer of our freedom, for which all are sincerely grateful; but we

had friends long before his time that we should never forget as long as this world stands. They are the southern aristocratic Christian slave owners. We have been told that when we were brought from Africa another group owned us first, but the climate was too cold for us and so death took great toll of Negro health. We were sold to the South and we lived and learned all the trades, household work, how to dress, what to eat and cook; farming—how to raise crops, gardening, cattle raising; nursing, making medicine out of herbs and seeds, and so on.

FARED WELL

The house servants fared well. The Christian mistress was very kind and taught them everything good. First of all, they had to forget their mother tongue (own language) and learn English. We speak broken African, not broken English. We are the only group in the United States that does not know one word of its native tongue. We have two groups, some Negroes and some colored people—a new making or product of the United States. I am a Negro, dark brown. Dark brown to black are Negroes. From dark brown to white, with 12 drops of Negro blood, are colored people. All of us go together in the South.

The mistress taught us about the Lord and Savior Jesus Christ, the Holy Spirit, how to believe, and how to pray. Our owners sent us to their church on Sunday to hear preaching, praying, and singing. Our mistress taught a few to read and told them not to tell, because it was not good to let the right hand know what the left was doing. At times, for good work, politeness, and aptness, some were given their freedom and others bought theirs with labor.

The master employed a white man as the manager of the farm and slaves, except house servants. A new type of white man who was very cruel. Then, sooner or later, the war for freedom was on. The South lost. The Negro was set free. The white people lost their wealth, and I presume they felt just like we did when the little savings we had worked for and put in a bank were lost through bank failure. Not a cent did we get. It made the dream of a home of our own fade away.

What did the master do? Not a drop of our blood was shed because of the freedom, not one was killed; but the master called the slaves together, told them they were free, and said, "What are you going to do?" "Marster, us dunno. Ain't nowhares for usses ter go."

"Well, do you want to stay here?" he asked. "You are free and slavery will not be again in my day."

"Yaas Sur, usses goin' stay wid you."

They lived in log cabins—a little village called quarters. The married families stayed in larger places and looked after the girls. And they were married—not by jumping over a broom, as some have said, but by the white preacher.

The next morning the second call was made and the plan that is now called sharecropper was given. The overseer was discharged and the smart, dependable men were issued so many acres of land to work for the year, with all things furnished. They gave land for schools and churches and assisted in every way to give us a start in life. Their children and children's children are our standby to this very day. They sold us every foot of land for houses and farms and went on our notes at banks to build homes. We have paid our debts and served until we have rating anywhere with the proper reference, like any group of honest people.

How do I know this? My grandparents and other ex-slaves told me. For 58 years I have been sewing for aristocratic people—five generations of two Asheville families. For the past 20 to 30 years I have also done work for others, including visitors and citizens of foreign countries. And I am still sewing.

"Trust in the Lord and do good and verily thou shalt be fed."

MAGGIE F. JONES.

ASHEVILLE.

Annual Questionnaire of Hon. Alvin M. Bentley to Constituents in His Congressional District

---

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following result of my annual questionnaire to constituents of my congressional district:

MARCH 14, 1956.

Congressman ALVIN M. BENTLEY, Republican, Michigan, today released the results of his annual questionnaire sent to residents of the Eighth Congressional District of Michigan. Mr. BENTLEY said that he had received about a 15-percent return on the 55,000 questionnaires. Those replying were divided into occupations as follows:

	Percent
Farmers	22
Workers	19
Business	13
Professional	11
Housewife	6
White collar	6
Other	23

The following is the list of questions inclunded in the Congressman's poll and the percentage replying affirmatively to the individual answers (percentages do not usually total 100 because few persons answered all questions):

1. On the question of farm price supports, I am in favor of:

	Percent
(1) Supports at 90 percent of parity	15.4
(2) Flexible supports from 75 to 90 percent of parity	43.9
(3) No supports	30.8

Mr. BENTLEY commented that farmers who replied to this question voted as follows:

(1) 28.2 percent.
(2) 31.1 percent.
(3) 34.6 percent.

2. If there is a surplus in our national budget next year, I favor:

	Percent
(1) Apply the surplus toward retirement of the national debt	64.1
(2) An income tax cut through increasing personal exemptions	27.8
(3) A tax cut through lowering personal tax rates	14.3
(4) Reducing the corporate tax rates	1.9
(5) Cutting excise taxes	6.2

A majority of all groups voted for (1). Several persons voted for more than one answer.

3. In the field of Federal aid to education, I favor:

	Percent
(1) The Federal Government providing school-construction funds to States on a matching basis	33.3
(2) The Federal Government making long-term, low-interest loans to States for school construction	44.5
(3) No Federal aid	20.1

All groups gave a majority to (2).

4. For financing Federal aid to highways, I favor:

	Percent
(1) The issuance of bonds to be retired from future gas and fuel oil taxes	62.2
(2) Tax increases on gasoline, other fuels, trucks, tires, and related products	24.1

All groups gave a majority to (1).

5. Military and economic aid to friendly foreign nations should be:

	Percent
(1) Increased	6.6
(2) Kept at present levels	58.7
(3) Stopped	24.0

All groups gave a majority to (2).

6. New social-security legislation should:

	Percent
(1) Lower the retirement age for women	39.0
(2) Permit increased outside earnings	51.6
(3) Permit disabled workers to get benefits at age 50	52.4
(4) Increase minimum benefits to retired workers	33.8

Farmers and workers gave a majority of their votes to (3); all other groups to (2).

7. If you answer any part of question No. 6, should contributions be raised to keep the system on a pay-as-you-go basis?

	Percent
Yes	68.3
No	16.6

All groups voted in the affirmative.

8. Regarding the McCarran-Walter Act, I favor:

	Percent
(1) Changing its provisions to permit more liberal immigration	11.3
(2) Repealing the act	10.5
(3) Leaving it unchanged	48.3

All groups gave a majority vote to (3). This question was omitted by many.

9. To balance the post-office budget, I favor:

	Percent
(1) Raise first-class rates if necessary	36.3
(2) Raise only second- and third-class rates	50.4
(3) Leave the postal budget in the red but no raises	9.0

All groups voted for (2).

10. The Federal Government should provide low-cost disaster insurance against floods and other catastrophes:

	Percent
Yes	59.0
No	20.7

All groups voted affirmatively.

11. I favor passage of a right-to-work law outlawing the union shop:

	Percent
Yes	64.0
No	20.4

All groups voted in the majority affirmatively. Workers voted 48.3 percent "yes," and 36.0 percent "no."

12. I favor permitting labor unions to use compulsory membership dues for political purposes:

	Percent
Yes	6.4
No	79.2

A majority of all groups voted negatively. Workers voted 9.8 percent "yes" and 79.2 percent "no."

13. Hawaii and Alaska should both be admitted as States:

	Percent
Yes	70.6
No	9.9

All groups voted affirmatively.

14. The Federal Government should control natural gas prices:

	Percent
(1) At the wellhead	26.8
(2) In interstate pipelines	29.0
(3) Not at all	23.8

Farmers and other groups gave a slight majority to (1), all remaining categories an equally slight majority to (2).

15. I think the Federal Government should check the growth in size of:

	Percent
(1) Corporations	49.8
(2) Labor unions	66.6
(3) Government itself	47.7

Mr. BENTLEY commented here: "Many persons voted for 2 and even 3 of these answers. However, all groups gave a majority to (2). The vote among workers was surprising since it was 53.5 percent for (1) and 58.5 percent for (2).' '

The Michigan Congressman concluded by saying:

"The results of this poll are very helpful to me and I wish to express my appreciation to all those who replied. I also want to thank those who included their personal comments and opinions. All of those will be personally answered as soon as possible.

"I would say that the most controversial questions appear to be on the farm program, the type of Federal aid to education, the nature of social-security amendments, postal rates, natural gas control, and certainly the final question, No. 15. During the balance of this session and during the next Congress, if I am reelected, I shall do my best to reflect majority opinion within my district, guided by my own judgment and consideration in all these matters."

Where the "Big Business" Dollar Goes

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. AYRES. Mr. Speaker, in many circles it seems popular today to blast big business just because it is big. These critics fail to mention the benefits derived from business by thousands of employees.

The Goodyear Tire & Rubber Co., through its company publication, the Wingfoot Clan, has done an excellent job of explaining just where each penny of every dollar taken in in 1955 went.

The matter follows:

1955 an alltime record year

We took in $1,376,120,315

THIS IS WHERE IT WENT

	Out of each dollar	Total dollars
	Cents	
Materials (Paid out for rubber, fabrics, chemicals, steel, compounds and other materials purchased from suppliers.)	47.5	654,168,360
Employees (This was paid out for wages, salaries, social security taxes, pension plans and premiums covering group life insurance, hospitalization (including surgical and weekly benefits) for employees.)	29.3	402,955,980
Operating (This amount covered other operating expenses including freight, rent, advertising, insurance and interest on borrowed funds.)	10.4	143,874,950
Taxes (Paid to Uncle Sam and to local, State and foreign governments in income and property taxes (excluding social security and excise taxes).)	6.0	82,573,152
Depreciation (This is the amount reserved for replacing machinery and equipment as it wears out or becomes obsolete.)	2.4	32,882,028
Profits:		
Retained (This amount was retained by management to partially provide for continued growth and the ever-increasing requirements for doing business.)	3.0	40,955,991

Folks Back Home Speak on Farm Problems

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I want to include a poll that has been recently taken by the Ohio Farm Bureau Federation, Inc., D. R. Stanfield, executive secretary, Columbus, Ohio.

On March 13 personal friends from my district—Mr. F. H. Kestner and Mr. John Kemper, of Ashland, Ohio; and Mr. Floyd Troendly, West Lafayette, Ohio—called at my office. We discussed the farm problems, and I now have the current views of the people back home.

On March 14 it was my privilege to attend a breakfast comprised of 50 Ohio Farm Bureau farmers. This group is here in Washington in an attempt to be of every assistance possible to the Ohio Congressmen in trying to solve the farm problem. At the breakfast we heard an excellent statement made by Mr. Stanfield, executive secretary, and others of the farm group. He submitted the figures to us of a recent questionnaire sent out by the Ohio Farm Bureau Federation, Inc., to their members. Below you will find the results of that questionnaire:

1. Do you favor the soil bank as a sound means of reducing surpluses? Yes, 88 percent; no, 12 percent.

2. Are you eligible to participate in the soil bank acreage reserve? Yes, 56 percent; no, 44 percent.

3. Would you participate in the soil bank with the rate of payment at half the loan value? Yes, 58 percent; no, 42 percent.

4. Do you favor striking out the 90 percent rigid price support provision from the proposed bill? Yes, 84 percent; no, 16 percent.

I am sure I speak for the Ohio congressional delegation when I say we extend thanks to the Ohio Farm Bureau Federation, Inc., and greatly appreciate their taking their time to come to Washington offering what, I am sure, are very constructive suggestions.

Public Opinion in the Seventh Congressional District of Virginia

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am inserting a questionnaire submitted to voters of the Seventh District of Virginia, together with the answers thereto.

To each of the 3,668 voters who answered this questionnaire, I am sending a copy of this statement. In addition, I am returning the original questionnaire as filled out by each of them. This is to enable each person to compare his answers with the overall results. It will also asure each person that his answers are confidential.

Many of those answering were kind enough to write some comments. There were four topics which were the subject of more comment than others.

These topics are:

SOCIAL SECURITY

Opinion was sought in the questionnaire on the changes in the social security law in the bill now pending in the Congress. Of the answers received, 2,515 favored the measure and 993 opposed it. Many of those who opposed wrote that they did so because they thought the bill did not go far enough. In addition, over half of those answering the questionnaire wrote in comments advocating various methods of liberalizing the existing law.

It is important that everyone realize that the benefits payable under social security come entirely from the fund paid in by the working people and their employers, and by the self-employed, in the social security tax. In other words, social security is an insurance fund, and if the benefits are larger than the fund will stand, there will be no money to pay them.

For example, in full operation, it would cost nearly $2 billion a year for every year the basic benefit age was lowered from 65. It would be necessary to increase the tax paid by the working people and their employers a total of about 1 percent for each year lowered.

THIRD CLASS MAIL

A total of 3,087 persons favored requiring advertising circulars and letters now sent at reduced bulk rate to pay the full first-class rate. Only 163 were opposed to this.

In January, I introduced a bill to do this. I am regretful that the bill has been opposed by the administration.

RACIAL INTEGRATION OF SCHOOLS

Many answering the questionnaire expressed the hope that Congress would pass a law restricting the effect of the decision of the Supreme Court of the United States.

Southern Congressmen and Senators are in agreement that it is impossible to do this. Indeed, there may be danger that the Congress would enact legislation to carry out the Supreme Court decision.

INCREASED PERSONAL EXEMPTION ON INCOME TAX

Many of those answering wrote comments advocating increase in personal exemption. Those answering the questionnaire also voted 2,961 to 583 against any tax reduction until the Federal budget is balanced.

The Federal budget is not yet balanced, and there would be a loss in revenue to the Treasury of $2,400,000,000 for every $100 that personal exemptions are raised.

It is my sincere hope that soon Government expenditures may be reduced to the point that Congress may enact legislation giving tax relief to those in the lower income brackets.

The questionnaire and the results follow:

	Yes	No	No opinion
INTERNATIONAL RELATIONS			
1. Do you favor continuing military aid to foreign nations presumed friendly to us?	2,423	907	338
2. Do you favor continuing economic aid to foreign nations presumed friendly to us—			
(a) For 1 year?	2,001	905	
(b) On a long-term basis?	814	1,454	
3. Do you approve shifting unused United States immigration quotas to countries which have used up their quotas?	1,095	2,033	540
4. Do you think our immigration quotas should be changed in favor of the nations of southern Europe?	584	2,245	839
5. Do you think the United States should join the Organization for Trade Cooperation, an international agency to administer reciprocal trade agreements?	2,085	745	838
6. By law, a treaty is the highest obligation of the United States. Do you favor the Bricker amendment to the Constitution which would provide that, "No treaty or other international agreement shall of itself be law within the United States, nor shall it enlarge the power of the Congress to enact law?"	1,475	1,281	912
7. In general, do you believe the Nation as a whole would benefit more from—			
(1504) A gradual further decrease in our tariffs?			1,275
(889) Increased tariffs and/or extension of the import quota idea?			
AGRICULTURE			
8. Do you approve of a soil bank plan, which would pay farmers in cash or surplus commodities or both, to take a portion of their producing lands out of field crop production?	1,526	1,754	388
9. Do you think farmers should be permitted to raise outside of quotas as much wheat as they need for feed on the farm?	2,786	679	203
10. Do you approve limiting the amount of price support money available to any one farmer or farm operation?	2,951	397	320
11. Do you favor exempting from the Federal gasoline tax gasoline used by farmers off the highway, such as in farm machinery?	2,611	899	158
12. Do you favor a food-stamp plan, or something similar, to provide for issuance of meat to needy families when meat is in surplus?	2,623	756	289
13. Do you think our farm policy should include price supports on a basis of—			
(a) A return to rigid supports on basic commodities?	641	1,662	1,365
(b) Continuation of the flexible supports on the basic commodities?	2,063	637	968
14. Do you favor extension of the price support system to any agricultural commodities not now covered? State which:	365	2,368	935
FEDERAL FINANCES			
15. Do you believe the Federal budget should be balanced before tax reductions of any kind are considered?	2,961	583	124
16. If it becomes clear that the sentiment in Congress is for some tax relief, even though the budget is not balanced, indicate by numbering in the order of your preference these proposals:			
(209) Reduction or elimination of the capital gains tax.			
(123) Reduction in the corporate income tax.			
(284) Reduction or elimination of Federal excise tax.			
(1,497) Increase in the personal exemptions under the income tax.			
(607) A flat, across the board reduction in the individual income tax.			
(880) A graduated reduction in the individual income tax.			
17. If the budget is balanced, do you think tax reduction should be delayed until some reduction is made in the national debt?	2,326	1,119	223
18. The Post Office Department continued to operate at a heavy loss, although 1st-class mail substantially pays its own way. Do you think an increase in postal rates is preferable to making up the postal deficit out of taxes?	2,538	736	394
19. If so, would you favor—			
(a) A 1-cent increase in the 1st-class rate to help make up the deficit on the other types of mail?	700	1,852	1,116
(b) An increase in parcel post rates?	966	1,503	1,199
(c) An increase in the rates on newspapers and magazines?	2,009	708	951
(d) Requiring advertising circulars and letters now sent at the reduced bulk rate to pay the full 1st-class rate?	3,087	163	418
PUBLIC IMPROVEMENTS			
20. Do you favor a new Federal highway program with emphasis on improving the major through roads of the Nation?	2,132	1,139	397
21. If so, do you think the Federal Government should have the say as to which roads are to be improved?	1,243	1,662	763
22. Would you prefer a new Federal highway program which merely provided more money on the matching basis with the States as at present?	2,155	914	599
23. If we are to have a new Federal highway construction program, superimposed on the existing plan, do you think it should be financed—			
(a) By an increase in the Federal gasoline tax alone?	963	1,486	1,219
(b) By an increase in the Federal gasoline tax and in Federal excise taxes on motor vehicles and motor vehicle parts, such as tires?	1,461	961	1,246
(c) By			
24. Do you believe that trucks pay their fair share of highway costs?	1,010	2,129	529
25. If not, how would you suggest the highway user tax burden be equalized?			
26. Do you favor direct Federal grants to the States for school construction?	1,553	1,809	306
27. If a Federal regulation, or court order, required that such Federal money could go only to integrated schools, would you favor taking the money anyway?	966	2,310	392
LABOR AND SOCIAL WELFARE			
28. Do you favor requiring Federal registration of union pension funds and public disclosure of their finances?	2,960	354	354
29. Do you favor extending the compulsory $1 minimum wage and 40-hour week, with time-and-half for overtime, to retail stores and service establishments, such as hotels, laundries, dry cleaners, shoe-repair shops, etc.?	1,740	1,689	239
30. Do you favor direct Federal insurance to cover losses by natural disasters such as floods, hurricanes, and earthquakes?	1,577	1,744	347
31. If not, do you favor Federal subsidization of such insurance to permit private insurance companies to sell it at low rates?	1,230	1,352	1,086
32. Do you favor extending social security, or an equivalent plan, to professional groups not now covered?	2,146	1,166	356
33. Do you favor making women eligible for old-age insurance benefits under social security at 62, instead of 65, and disabled persons at 50, with an increase of ½ percent in the social security tax?	2,515	993	160
34. Do you favor the Federal Government's subsidizing volunteer hospitalization and surgical insurance plans to permit private companies to sell them at low rates?	1,360	1,935	373
35. Do you favor continuation of the public housing program of the Federal Government?	1,613	1,564	491
36. Do you favor integration of the races in the public schools?	896	2,512	260
37. Do you favor a compulsory FEPC to require that there be no discrimination on account of race in employment or in union membership?	1,265	2,057	346
38. Do you favor a Federal law to supersede State laws as to voting qualifications in order to eliminate poll taxes?	1,092	2,409	167

Desegregation: Facing the Facts

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. UDALL. Mr. Speaker, supplementing the remarks I made on the floor of the House today concerning the southern declaration on school desegregation, I present herewith a perceptive editorial which appeared yesterday in the Christian Science Monitor. In my opinion, this editorial typifies the attitude of moderation which we need in order to move ahead toward a solution of this problem.

The editorial follows:

DESEGREGATION: FACING THE FACTS

"The South," writes an earnest and deeply troubled reader of this newspaper, "will never accept the decision of the Supreme Court against segregation."

"It's just a matter of prejudice," comments a kindly and presumably well-educated New Yorker, thus dismissing the whole matter of southern resistance.

Between such extremes lies the present and the future. And it was to get beneath the excited statements of prosegregation extremists in the South and thus to correct oversimplifications and condemnations emanating from uninformed people elsewhere that the New York Times sent a team of reporters through the southern States. With the same aim this newspaper queried a number of southern leaders and interpreters of public opinion after having its own correspondents report on reactions throughout the South in a series published in 1954 and 1955.

The findings of the Times reporters have just been printed in that paper (and wired to many others); the replies from eight prominent Southerners appeared in this newspaper last week. What is said reinforces conclusions The Christian Science Monitor has been reaching on the basis of information in letters from its readers and the observations of its correspondents and editors:

That the Negro has won a legal victory before the highest court in the land. It sets the record straight for all the world to see. No longer does national law sanction local enforcement of segregation.

That putting that legal principle into practice will require many adjustments and court interpretations to fit local conditions.

That no stereotyped formula of compliance can be forced from without upon a whole region, upon 40 million people, upon tens of thousands of communities. Accommodations to the new order—which would have come in time, Supreme Court decision or no—must be matters of mutual acceptance by the races. And such accommodations will come progressively, first where the mass of the racial problem is least. There will likely be areas of slow and hard adjustment. Americans of both races inside and outside such areas must demand of themselves both understanding and patience.

John H. Popham, the Times' southern regional correspondent, says in his introduction to its survey:

"Any regional reconstruction of race relations will have to be hammered out across the table in thousands of scattered school districts * * * it must always be shaped to the needs and prejudices of the whites and Negroes who must live with it."

And Chancellor Branscomb, of Vanderbilt University, in this newspaper:

"The need now is to develop sentiment over the country which will leave with local authorities, under legal pressure, and with the influence of successful desegregation in border States, the working out of this problem. Self-integration is the only solution."

To develop that sentiment calls not only for both NAACP and citizens' councils to show restraint and statesmanship; it demands that the great number of Americans who most of all want a just and orderly solution speak out strongly for calm and reason and make their influence felt.

South's Men of Conviction Stand Up To Be Counted

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. ABBITT. Mr. Speaker, I am most pleased with the reaction all over the Nation to the clearcut statement of principle enunciated by 101 Members of the Senate and House of Representatives from the South on March 12, 1956.

The expressions that I have heard from many people from the northern and western parts of our country lead me to believe that once the majority of the people in those areas understand the principle involved and the serious consequence to the South they will realize the great harm that has been done and is being done to race relations in the South by the unfounded and misguided decision of the Supreme Court on May 17, 1954, declaring segregation in the public schools unconstitutional.

I am convinced that public sentiment is changing. If we in the South stand together upon principles that we know are right, just, and necessary, we can combat this evil decision and yet save education for our people. The only hope to save public education in Virginia as well as our very way of life is the will and determination of our people to resist tyranny on every occasion and to fight the grasping usurpation of power on the part of those people in this country who would change the habits, customs, mores and traditions of our people. If we are to remain strong, aggressive and continue to progress we must keep intact the integrity and identity of the two races.

We cannot in Virginia afford to compromise this principle. We must stand firm because only by a firm stand can we bring the good people of this Nation to realize what is happening to our very way of life by the grasping usurpation of power by the Court and other arms of the National Government.

I desire to include with my statement a very enlightening editorial appearing in the Nashville (Tenn.) Banner on Tuesday, March 13, 1956, and a very forceful statement by Miss Dorothy Thompson, columnist, which appeared in the Washington Star on March 13, 1956:

[From the Nashville (Tenn.) Banner of March 13, 1956]

SOUTH'S MEN OF CONVICTION STAND UP TO BE COUNTED

With the courage of uncompromising conviction, and the candor that comes boldly to grips with the issues assessed, southern Congressmen of stature have put their hand to a manifesto sternly rebuking the Supreme Court.

As lawmakers, representative of their region, they are standing to be counted. Since the list of signatures first was announced more have come forward to add their names. As individual Congressmen hear from constituents the probability is that still others will elect to be among those present on the side stated.

It is not surprising that Senator ESTES KEFAUVER did not choose to join this formal declaration of principle. He is in that liberal retinue whose big oracles and camp followers are hostile to the States' rights view. In refusing to associate himself with the statement, he is reminding of what he already has said concerning the propriety—as he saw it—of enforcing the Court decree in question, even with troops if necessary.

It is surprising that ALBERT GORE was not willing to join the other southern Senators in a very temperate document—firm in its rebuttal of ideas trespassing constitutional concepts, but respectful in its language. It is the Banner's belief that GORE will find that his silence will not be met with approval by the majority of his Volunteer State constituents.

Likewise the refusal of Representative PERCY PRIEST to sign the statement surprises and disappoints a district entitled to a representative voice on a matter of this importance.

For men who normally are such great party-liners it is odd that they choose to remain out of step with southern Democratic sentiment. It does disturb and disconcert constituents that they haven't seen fit to go along. There is something wrong when public servants can't stand on common ground on issues so fundamental to those they represent.

Actually, the instrument presenting this case was written in a fashion justifying designation in years to come as a paper of state; like other major declarations it effectively, eloquently, diagnoses the record which it indicts. It does not appeal to emotions or to prejudices, but to the law.

It is for the latter reason that sponsors of this statement, along with the South whose legal position on the integration movement it defends, can hope that statesmen of like concern the Nation over will sanction a resolute stand on a matter as primary as the Constitution and rights under it.

Leftwing firebrands must have wished a southern rebuttal as inflammatory as their own wild assaults on the principle stated.

They didn't get that. In fact, those statesmen drawing up this declaration ignored their detractors, and dealt exclusively with the subject at hand. That way they require any official reply that comes to address itself to the charges expressly filed.

Among those Members of Congress thus taking their stand in challenge of school integration by order of the Supreme Court are men intimately acquainted with the Constitution of the United States.

They know it by long study—having lived and served under it; statesmen with implicit trust in its adequately protective base for every valid democratic principle; lawmakers who know the legislative province, and who know that while the boundaries of judicial province are contiguous they are not supposed ever to conflict or transgress.

The Banner has said many times since May 17, 1954, that far more than the South is directly concerned in the matter stated by the Court on that date.

That it was unprecedented was obvious on the face of it—a point reiterated by this weekend declaration citing its abrupt reversal of all previous rulings.

To that startling decision, whose full implications could not register in one brief glance, the Banner reacted with words of caution. It was a time, we said, for calm appraisal.

In that spirit, this community, this State, and by and large the South, maintained their emotional equilibrium, choosing to move intelligently in shaping policy. The desire was to avoid hysteria—and with it mistakes hastily made to be repented at leisure.

The Banner has reminded on a number of occasions that the Supreme Court fixed no timetable for the transformation it was ordering. Nevertheless, such self-appointed wrecking crews as the NAACP moved in to demolish segregation, holding a stopwatch and throwing its weight around.

Southern Congressmen for the most part are not cowed by the NAACP.

They have calmly deliberated the proposition laid down as a constitutional new look just 22 months ago. They jumped off no deep ends. They engaged in no frenzy and in no orgies of reciprocal spitework. They studied the record, the issues, the governmental blueprint—and the foundation upon which as an institution of laws its structure rests. Soberly then they drew up a bill of particulars.

This manifesto is no child's play. If there have been any looking at the issue with an air of aloofness, they have no excuse for that now. The utterance validating the South's case in this formal declaration and definition of rights, is by responsible people. The names among its signatures identify them.

The historic defense of State's rights indeed goes a long way back. Significantly enough, Abraham Lincoln was among those recognizing them and espousing them within the last century.

A feature story in the New York Times of Sunday reminds of that, and it has a peculiar timeliness now.

Just 95 years ago what now is called a "lost amendment" was submitted by Congress to the States. It provided:

"No amendment shall be made to the Constitution which will authorize or give to Congress the power to abolish or interfere within any State with domestic institutions thereof, including that of persons held to labor or service by the laws of said State."

It passed the House February 28, 1861. The Senate approved it March 2, Ohio ratified it May 13, 1861, Maryland January 10, 1862, and Illinois February 14, 1862. Doubt has been cast on the validity of Illinois' action because it was done by convention rather than legislation.

Congressional history shows the amendment was proposed by moderates seeking to steam the wave of secession then engulfing the South in the days preceding the War Between the States. Seven States already had seceded. That the amendment receive the necessary two-thirds approval of both Houses after the Senators and Representatives of seven States had withdrawn was considered remarkable by observers in those days. President Lincoln, in his inaugural address March 4, 1861, seemed to give impetus to the case for ratification. He said:

"And more than this they (the Republican Party) placed in the platform for my acceptance and as a law to themselves and to me the clear and emphatic resolution I now read: 'Resolved that the maintenance inviolate of the rights of the States, especially the right of each State to order and control its own domestic institutions according to its own judgment exclusively, is essential to the balance of power on which the perfection and endurance of our political fabric depends.' I now reiterate those sentiments."

Before further ratification the country was plunged into war.

Yes, there is reason to believe that State's rights have defenders elsewhere in the United States who will stand up with the South and be counted. No issue has been clearer than this one has been made by the manifesto presenting it—that those who run may read.

[From the Washington Star of March 13, 1956]

MISS LUCY AND PUBLIC OPINION: A LAW HAS LITTLE CHANCE OF ENFORCEMENT UNLESS IT HAS SUPPORT OF LARGE MAJORITY

(By Dorothy Thompson)

In a democracy—a state based upon continuing public consent—law must reflect the existing state of consciousness and conscience. Otherwise it will not be voluntarily upheld. Law rests primarily upon public opinion, and only ultimately upon force. If it does not have the voluntary consent of a large majority, it cannot be enforced except by procedures that violate the principle of consent and hence the basis of the state.

Laws can be enforced against individual lawbreakers by indictment, arraignment, and trial. But laws cannot thus be enforced against a nation, state, or community. As Edmund Burke said long ago, "I know no way to bring an indictment against a whole people."

(In despotisms there are ways, but not in states based upon popular consent.)

To indict a nation, state, or community and enforce the law against it, requires war. That is the fallacy of the concept of enforcing peace.

Innumerable historical instances illustrate these axioms. Prohibition of the sale of alvoholic beverages was, for a time, the law of the land, clearly embodied in a constitutional amendment. But the law did not reflect the existing conscience of a majority or large minority. To have enforced it would have required a policeman in every pantry. Ultimately, therefore, the amendment and the law had to be repealed.

Yet there are still total abstainers, and prohibition States and communities where the law is easily enforced because it commands public consent.

The attempt to enforce a Federal law upon States with differing conditions of consciousness and conscience brought on the Civil War—an illustration that one cannot indict, arraign, or try, a community by the normal process of law enforcement.

These reflections are impersonal. They do not register the writer's prejudices or convictions regarding segregation. They are not moral but operational judgments.

The State University of Alabama refused to admit a Negro student and on more or less meretricious grounds. Miss Lucy certainly had "the law of the land" on her side. But she did not have the law or the opinion of the State of Alabama on her side. The issue was not, therefore, between Miss Lucy and the university trustees, but between two powers.

Miss Lucy's application, also, was not that of an individual seeking the right to an education. She could have obtained that at no greater cost in hundreds of other institutions. She appeared, in fact, not as a student but as a tester of the law in behalf of the NAACP.

The university's trustees temporarily refused to receive her on the ground that in the climate of opinion of the community and university they could not answer for her life. This may have been, and we hope was, an exaggeration. Her life could, presumably, have been protected by a bodyguard of Federal police to watch over her day and night. In that case, she would have been, in effect, a prisoner.

But it would still not solve the problem. For entering a university means more than physical presence. It involves acceptance as an equal member of the student community. If anyone, for any reason, is rejected by a community, which by its nature requires intimate association, the possibility of violence is always present. But without violence passive resistance can defeat the content, if not the text of the law.

Law is a series of thou shalt nots. But matters involving intimate human relations require positive affirmations. No law can compel one person to feel affection or even tolerance for another. Passive resistance, which cannot be prosecuted, uses the weapon of ostracism. An ostracized student is not a member of the student body. She is out even if she is in.

The argument that clinched the Supreme Court decision was that segregation produces in our Negro population a psychological injury. But the law cannot deal with psychological injuries. There is no legal way to prevent one human being or many from injuring the feelings of others. The judges may be excellent lawyers. But they were bad psychologists.

Law can refuse to legalize divorce. That of at least one nation does. But no law, nor even the powerful disciplines of the Catholic Church, can enforce cohabitation or marital happiness. To attempt to do so would create a condition of murderous cruelty.

Americans have too strong a predilection to believe that reform can be accomplished by passing a law. Laws reflect reform rather than induce it, and laws that violate the current sense of a community never bring social peace.

Unanimous Resolution of the Lithuanian-American Citizens of Worcester, Mass., Requesting Continuing United States Cooperation for Lithuanian Liberation

---

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1956

Mr. DONOHUE. Mr. Speaker, I am pleased to include at this time the resolution unanimously adopted by the Lithuanian-American citizens of Worcester, Mass., at the meeting on February 12, 1956, condemning the continuing Soviet persecution of Lithuania and other satellite countries and earnestly requesting the continuing assistance of the American Government and people in seeking the freedom of Lithuania and the liberation of all the other countries being held under Russian tyranny.

The resolution follows:

Unanimously voted by the Lithuanian Americans of the city of Worcester, Mass., at the observance of the 38th anniversary of the Lithuanian Independence Day, held under the auspices of the General Committee of Lithuania Societies in the city of Worcester at the Hall of the Lithuanian Naturalization and Social Club, 12 Vernon Street, on the 12th day of February 1956:

"Whereas for almost 16 years Lithuania, native land of hundreds of thousands of American citizens has been suffering under a regime of slavery, terror, and despotism imposed upon her by ruthless Communist imperialism; and

"Whereas the intolerable situation which now prevails in Central and Eastern Europe,

including Lithuania and her two neighbors of Latvia and Estonia, should be of greatest concern to the western democracies as no peace and stability in the world is possible as long as millions of people are held in captivity; and

"Whereas the Soviet rulers have shown so far no willingness or inclination to abandon their policy of aggression and to abide by the basic principles of decency and humanity in international relations, but, on the contrary, they are still feverishly working to create more confusion, unrest, and tension in the world in their preparation to materialize their ultimate goal of world subjugation: Therefore be it

"*Resolved*, That this meeting of Lithuanian Americans of the city of Worcester after having discussed the present international situation, especially with respect to Lithuania, call upon the Government of the United States to continue seeking the liberation of Lithuania and other Communist-enslaved countries by using all available political, diplomatic, and economic means; and be it further

"*Resolved*, That the Lithuanian Americans, convened here today, pledging their loyalty to the Federal Government, voice deep appreciation and gratitude for its many past considerations and its sympathy with the cause of Lithuania's independence.

VYTAUTAS MACYS,
Chairman.
LEONAS KACINSKAS,
Secretary.

Statement of Postmaster General Arthur E. Summerfield

EXTENSION OF REMARKS
OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. CANFIELD. Mr. Speaker, the case for new and realistic postal rates enabling the Post Office Department to operate without a deficit has been made by Postmaster General Arthur E. Summerfield and I agree with our colleage and distinguished gentleman from Tennessee, Chairman MURRAY, of the House Committee on Post Office and Civil Service, when he says:

This statement of the Postmaster General is the clearest, most convincing, and most persuasive statement I have ever heard.

I am sure that the House will recall when we had before us the Treasury Department-Post Office Department appropriation bill for the fiscal year 1957, I described the ever-recurring problem of the deficit and outlined briefly the Department's program to combat it. It is my firm belief, the American people preponderantly want the Post Office Department operated on a business basis as is done in practically all of the major countries of the world. Argentina, I believe, is the only country of any size wherein there is a perennial deficit like our own. It is almost unbelievable that the American taxpayers have had to pay in taxes approximately 5 billion dollars for losses sustained by the Post Office Department in the decade since World War II.

The Postmaster General's statement follows:

TESTIMONY OF POSTMASTER GENERAL ARTHUR E. SUMMERFIELD IN SUPPORT OF H. R. 9228, A BILL TO ADJUST POSTAL RATES, ESTABLISH A COMMISSION ON POSTAL RATES, AND FOR OTHER PURPOSES, PRESENTED BEFORE THE COMMITTEE ON POST OFFICE AND CIVIL SERVICE, HOUSE OF REPRESENTATIVES, MARCH 13, 1956

Mr. Chairman and members of the Post Office and Civil Service Committee:

I. INTRODUCTION

Your postal management has done its best during the past 3 years to improve mail service and lower costs. Our efforts have been helped immeasurably by the valued guidance of the Congress and the splendid cooperation of our half million postal workers. Our programs are well under way and are showing gratifying results.

One major task remains. If we are to continue to assure this expanding Nation the better and enlarged postal services it needs, the serious problem of the huge postal deficit must now be solved.

I want to express my appreciation to this committee for its willingness to again give consideration to the financial plight of the Post Office Department. This is a difficult problem for this committee as well as the Department.

I am most hopeful that together we may reach a solution.

The bill before you represents the judgment of the administration and the Department as to how the Congress can establish a sound fiscal policy for the Department which will strengthen the fiscal integrity of the Government and remove a tax burden from our citizens.

We believe the American people want their Post Office Department to operate on a self-sustaining basis. We are asking the Congress to take a hard look at the present level of postal rates.

In making this presentation to you I realize full well that certain facts are already well known to many members of this committee.

However, to present the complete story, which undoubtedly some new members of this committee have not heard before, I shall attempt to give you in summary the important facts so that they may be evaluated in proper perspective.

For your ready reference and possible future study we have reproduced the large charts I shall refer to in my comments this morning in booklet form. You may find it convenient to refer to them, by number, as I proceed with my remarks.

As shown on chart 1 the record high postal deficit of 1952 has been reduced. But increases in costs of about $200 million a year, resulting largely from wage increases and fringe benefits recently enacted by the Congress, have reversed the downward deficit trend. As this chart clearly indicates, in the next fiscal year the deficit will once again approach the half-billion-dollar level. Without rate increases now, the financial gains we have made will be offset and the postal deficit will once again move upward.

The losses sustained in the decade since World War II total $4.6 billion. These losses, which are five times as great as the deficit accumulated during the decade prior to the war, have become part of the national debt.

Four and six-tenths billion dollars is a staggering sum for the American people to owe for postal services they have received over the last 10 years. It means that each family in the United States owes more than $100 for mail long since read and disposed of. Deferred payment for homes, cars, and refrigerators has a proper place in our economy, but we should not mortgage the future of the American citizen for the price of postage.

Rate increases alone will not provide a complete or lasting solution for today's deficit problem. What is needed is a fiscal program, including rate increases, which will lead to financial stability in the Post Office Department. The President, in a special message to the Congress on January 1, 1955, advanced such a program. The bill now before this committee embodies the major proposals enumerated in his message. If enacted, the bill will do the folowing:

1. Provide interim rate increases as a step toward balancing the postal budget.

2. Establish a permanent ratemaking commission which will prescribe rates of postage under policy guidance of the Congress.

3. Express the determination of the Congress that the post office shall be operated on a sound financial basis.

II. HUGE ANNUAL DEFICITS—A POSTWAR

Before examining the general proposals contained in H. R. 9228, I should like to further emphasize the enormous scope of the postwar postal deficit.

There is widespread misunderstanding concerning the causes, the dimensions, and the historical facts concerning the postal deficit. Many people mistakenly believe that the Post Office has always operated at a heavy loss. The fact is that oppressive postal deficits are an unfortunate phenomenon of the postwar years alone.

Chart 2 reveals in simple graphic form the overwhelming disparity between the average prewar and the average postwar deficits. As you can see, from 1900 to 1940 the average annual deficit was about $33 million. During the decade following World War II, the average annual deficit increased to about $460 million—almost 14 times as great as the prewar average.

In recent years, heavy expenditures by Government for national defense and other essential purposes have tended to make us indifferent to figures running into billions of dollars. Perhaps the real cost of the postwar postal deficit is more apparent in terms of what that money might have bought for the American people. This appears on Chart 3.

The aggregate postwar deficit of $4.6 billion could have made a very substantial contribution to national defense. It might have added 150 destroyers to the fleet or provided funds for 20 new bomber wings with a total of a thousand planes. Or it might have equipped 23 infantry divisions with modern arms and equipment.

In terms of our badly needed road program, the postwar postal deficit might have built 46,000 miles of new roads exclusive of right-of-way.

Many opponents of rate increases seek to justify large postal losses as a contribution to the educational and cultural advancement of the American people. I certainly favor better public education, but I seriously question that subsidized postal rates are the best means to this end. Let me show you—on chart 4—what a direct expenditure of this sum for educational purposes might have meant for the American people.

Four billion six hundred million dollars might have built 6,000 high schools or 13,000 badly needed elementary schools. It could have provided 4-year scholarships in science and the arts to a million deserving young Americans otherwise not financially able to receive the benefits of higher education. In terms of the dissemination of printed matter, this sum could have built 13,800 public libraries for the use of all Americans, young and old alike, or more than 7,000 libraries on the campuses of small colleges and universities whose facilities have been long outgrown.

If doubt still exists concerning the need for rate adjustments, I am certain that it will be quickly dispelled by chart 5 which is now before you. This chart tells a story which every American should know. The anual postal deficit in this Nation is three and one-half times as great as the combined postal deficits of the world's free nations.

And, ladies and gentlemen, the people of this great Nation have the right to ask—"Why?"

It may appear to members of this committee that I am belaboring the magnitude of the postwar postal deficit but I am convinced that its true dimensions are not known and understood by the public. I hope that the Congress, in behalf of the American public, will take immediate and positive action to reduce it to manageable proportions.

III. CAUSES OF THE POSTWAR DEFICIT

I should like now to deviate a moment in anticipation of a question which surely has occurred to each of you: "What has caused the postal deficit to increase so alarmingly in the postwar period?"

The Post Office Department operates in the same economic climate as other Government agencies, private businesses and the households of America. Costs increased sharply for business, Government and households alike in the postwar years and the Post Office was affected in the same measure as indicated on chart 6.

Since 1945, annual postal costs have increased by $1.6 billion. The largest part by far of this increase was due to labor costs.

The increases in wages and employee benefits enacted by the Congress since 1945 are listed on the next chart (7). The Congress has granted postal workers six increases in wages since the end of World War II which, together with fringe benefits, have added more than a billion and a quarters dollars to our annual operating costs.

These increases were just and necessary to keep postal wages on a par with wages paid for similar skills by industry.

However, while postal wages were increasing as indicated, the Congress raised postal rates to provide only $286 million in additional revenues.

Simply stated, the deficits of recent years are the direct result of the disparity between increases in costs and increases in rates of postage. For all practical purposes, our rate level today is little changed from the level of 1932.

This is illustrated on chart 8.

Since 1932, the level of postal costs has increased 107 percent but postal rates have lagged far behind. Despite sharp increases in cost, letter rates are the same today as they were in 1932.

Third-class mail, consisting largely of advertising matter, has increased only 38 percent.

Second-class rates were increased by 30 percent in 1951, but it should be noted that this increase merely offset rate decreases granted in previous years. As a result, publishers' second-class rates today are only 3 percent above the level of 1932. As a matter of further interest, I might point out that the rates in 1932 were the same as the final level of rates effected by the act of October 3, 1917, when zone rates on advertising were initiated.

The failure to adjust rates of postage to offset unavoidable changes in cost is the main reason for the record total deficit of $4.6 billion in the last 10 years.

IV. COMMONSENSE PRICING

The need for additional revenues is obvious. However, differences exist as to how these increases shall be apportioned among the various classes of mail.

The Congress, recognizing the need for a more systematic approach to rate making, authorized the Department to establish a divison of postal rates. This was accomplished in May 1953.

We employed a small staff of rate experts to develop a system of pricing which would provide proper and adequate revenues for each class of mail.

These experts reported that such a pricing system already exists and is widely used by the courts, regulatory agencies and such business-type branches of the Federal Government as the Alaska Railroad, the Panama Canal Company, and others.

They refer to this system as differential pricing but I prefer to think of it as "common sense" pricing.

Differential pricing is a process of establishing charges based on differences in the various services. These differences relate to very realistic elements of cost which are not subject to cost accounting procedures. They relate, also, to market characteristics of each such service which bear no relations to cost.

Rate proposals submitted to the Congress in the past have been challenged repeatedly due to the overemphasis of costs in the pricing of postal services. Cost alone is not an acceptable basis for rate making. Cost ascertainment is a tool of management which should not be confused with rate ascertainment.

The complex subject of cost ascertainment and its application to rate-making procedures will be discussed in considerable detail by the Deputy Postmaster General, Mr. Maurice H. Stans, whose testimony will follow mine.

The proposals under consideration conform to sound principles of differential pricing. While a detailed statement in support of each of the specific rate provisions contained in H. R. 9228 will be presented by Mr. Albert J. Robertson, Assistant Postmaster General and Controller, I should now like to discuss briefly its principal provisions.

V. THE FIRST STEP—RATE ADJUSTMENTS

The bill consists of two titles. Title I provides for general rate adjustments. Title II establishes a permanent rate-making Commission and prescribes in detail the framework of policy within which the Commission shall function.

First-class mail

One of our proposals calls for an increase in first-class letter rates. There is a good reason for this proposal.

First-class mail is a prime postal service, receiving preferential treatment every step of the way. The security, privacy, and priority of service received by first-class mail are premium-service factors. Premium service is a more valuable service and we believe that those who receive the greater benefits of letter mail should pay a larger share of postal costs.

Even at the new rate we are recommending for letter mail I believe the public in general—the first-class postal patron—also the voter—will agree that it would be the biggest bargain in America to purchase a 4-cent stamp and to know that a 1-ounce letter can be handed to your carrier at your door—or dropped in any collection box any place in the United States—and be delivered safely and expeditiously either across town or across the United States.

In fact, the thoughtful citizen must wonder why letter rates have not been raised in almost a quarter of a century. He knows that the nickel telephone call, the 10-cent loaf of bread, and 50-cent haircut are prices of a past era—and yet, letter stamps are still 3 cents.

The ability of the postal patron to absorb a 1-cent increase in letter mail is manifest, as shown on chart 9. Since 1932, per capita disposable income has increased more than 300 percent.

The prices of telephone and telegraph messages have also increased. Prices are up all along the line but letter rates are the same as they were in 1932.

Ladies and gentlemen, the Post Office is not an institutional relic. It is a dynamic business-type organization serving a progressive American economy. The letter rate should not be based on the historical environment of the early 1930's.

The Post Office operates a vast communications system for the exchange of information and ideas among our people. But the telegraph and telephone industries also provide networks of communications. Is it reasonable and consistent to subsidize the mails as a contribution to "public welfare" while taxing those who use the others?

The responsibilities we share for the sound fiscal management of the Post Office compel us to exact revenues from each class of mail equal to the value of the services performed for that class. One might think from adverse comment against a letter-rate increase that these proposals reflect a reversal of congressional policy. The facts show otherwise.

The Congress itself has established the policy that first-class mail, which receives preferential treatment, should make a revenue contribution above cost. In 1932, the Congress reiterated its faith in this historic doctrine by increasing the revenue contribution of first-class mail from 12 to 46 percent above cost and maintaining it at approximately this level until World War II. We wholeheartedly endorse this policy. It is the foundation of "common sense" pricing and is equitable in terms of value received. The present proposals will merely continue this policy.

Every citizen is aware that if postal expenses are not recovered from those who use the mails, they must then be paid by the taxpayer. Let's take a closer look at this proposition on chart 10.

If letter rates are advanced 75 percent of the additional revenues will be derived from business users of the mails and 25 percent from individuals for their personal mail.

Now, what would be the situation if postal rates are permitted to remain at their present inadequate levels? The postal deficit will then be borne, for the most part, by those who pay Federal income taxes. Over 60 percent of total Federal income taxes are paid by individuals, while the portion paid by corporations is only 40 percent.

In brief, ladies and gentleman, low letter rates maintained by taxes work to the disadvantage of the individual. The large users of the mails benefit.

In view of all these facts, the proposal to increase the letter rate by 1 cent per ounce appears to be moderate, fair and reasonable.

Second-class mail

We come next to second-class mail, a classification which has always been carried at a substantial loss.

I should like to comment first on the increase in second-class rates enacted by the Congress in 1951. As shown on chart 11 this adjustment has produced additional annual revenues of about $12.8 million. However, while second-class mail was producing $12.8 million in additional revenues, the cost of providing this service increased by $56.4 million a year—or better than a 4 to 1 ratio. On this basis alone, a rate increase is overdue in second-class mail.

But there is another and even more urgent consideration portrayed on chart 12. The proposed rates will increase revenues from second-class mail by about $17 million. This is actually less than the increased costs of postal pay and fringe benefit legislation recently enacted by the Congress. These additional costs amount to about $21 million a year for second-class mail only.

The service which is extended to newspaper and magazine publishers is made up of several operations, each of which costs money. Labor and transportation alone add up to 93 percent of total expenditures.

Now, let me show you a familiar sight—the mailman starting on his rounds. (This is 12–A in your booklet.)

We selected one at random here in the city of Washington and analyzed the mail he was going to deliver that day. Here is what we found:

Seventeen percent of the weight consisted of letter mail.

Fourteen percent of small parcels.

Eleven percent of advertising matter moving at third-class rates.

The balance of 58 percent consisted of magazines and newspapers.

That these figures are fairly typical is indicated by the fact that in fiscal 1955 the weight of second-class mail was 59.1 percent of the total weight of all mail other than parcel post.

From a standpoint of manpower it is obvious that carrying magazines around a mailman's route presents more of a problem than handling first-class mail.

Here is a copy of one of the magazines in his pack. This one tips the scales at about a pound. The mail circulation of this magazine is currently somewhat over 4½ million per week, which means that the post office must handle and transport, in the course of a year, somewhat more than 117,000 tons of this magazine to all parts of the United States.

In fiscal 1955 it cost the Post Office Department—which at the present time means the American taxpayer—$235 million more to deliver second-class publications than was received from them in payment of postal rates.

The question we must face is this: With due regard for public welfare, how much of this cost should the taxpayer absorb—and how much can fairly be charged to the publications?

Here is a 1932 issue of one of these publications. I direct your attention to the price printed on the cover: 5 cents. Here is a current issue of the same publication. The price printed on the cover of this one is 15 cents. Apparently, public welfare suffered no setback from this price increase, since the circulation today is more than 4½ million compared with a circulation of about 2¾ million in 1932.

As a matter of further interest, the advertising revenue for this publication in 1932 was about $22 million—while the advertising revenue in 1955 is reported to be about $83 million.

Now, I have no criticism of these figures. But it is difficult to understand why a publication which has tripled its newsstand price, and has had almost a fourfold increase in advertising revenue, should continue to receive postal service at 1932 rates.

May I hasten to add that the situation of this magazine is not unique but was selected as being fairly typical.

Almost all publications have shared in the growing volume of magazine advertising which reached an all-time high in 1955. It is also true that virtually all major publications have increased their newsstand prices since the 1930's.

There is still another point involved. In spite of magazine price increases, total circulation of all magazines has soared—reaching a record high in 1955. No one can seriously contend that increases in the selling prices of publications—ranging as high as 300 percent—have been a deterrent to total magazine circulation. The continuing increase in circulation—despite higher prices—proves beyond all doubt that the people are willing to pay a price sufficient to cover all costs—including fair postal rates.

I strongly believe in the American pricing system. This pricing system has resulted in the highest per capita output that the world has ever known. The pricing policies adopted by newspapers and magazines in their general business dealings conform to that system. I do not believe—and never will—that a profit-motivated publisher who is turning out a good product cannot pay a fair price for the postal services he receives—and, ladies and gentlemen, the rates we are recommending for second-class matter are extremely moderate.

There is one final point I should like to raise regarding the rates on periodical mail.

You are all aware that some people contend that the Post Office Department was established to carry letter mail and therefore all other classes of mail should pay only the additional operating costs incurred in their handling. We do not subscribe to this theory but let us examine it as it applies to second-class rates of postage.

In its report of March 24, 1954, the Senate Advisory Council estimated the additional operating costs incurred in providing second-class service to be $107 million. At the present time we estimate that these incremental costs applicable to second-class mail are about $150 million a year. Nevertheless, using the Council's estimate as a base, second-class mail revenues in 1955 were at least $50 million below these incremental costs and more than $221 million below fully allocated costs.

The proposals relating to second-class rate adjustments will not even recover this understated out-of-pocket loss of $50 million. This is important, for past discussions have been confused by contentions that Congress has adopted the policy that publications should be subsidized in the public interest.

Whether or not that is the case, even after these rate proposals become effective second-class mail will still be carried far below cost. The only question is—how much below cost is fair and equitable to all concerned?
